into with six other booksellers (G. Strahan, C. Rivington, P. Vaillant, J. Brindley, S. Baker, and J. Osborn, jun.), whose profits on the business were so injudiciously retrenched, that the avowed purposes of the society were entirely frustrated. In 1742, a third method was adopted, and the society chose to become their own booksellers. The experiment was tried with *Ælian De Animalibus*, 4to. in 1743. A few months were sufficient to demonstrate the impracticability of the attempt; and before the year was at an end, they again had recourse to three booksellers, on a plan in some degree enlarged. Thus circumstanced, they published bishop Tanner's *Notitia Monastica*, folio, in January, 1743-4; and professor Stuart's English translation of sir Isaac Newton's *Quadrature of Curves*, in September, 1745. But their finances were then become almost exhausted, after having suspended a subscription of nearly two thousand pounds. The *Bibliotheca Britannica* of bishop Tanner was, however, completed under their patronage, in 1748; but, by *A Memorial of the present State of Affairs of the Society*, April 17, in that year, it appears they had incurred so considerable a debt as to be deterred at that time from proceeding farther in their project of printing.

1736. *The Virginia Gazette*.

1737, Jan. 1. *Died*, RICHARD KNAPLOCK, bookseller, of whom Dunton says—"He printed Mr. Wesley's *Defence of his Letter*, &c., and then, to be sure, he is no dissenter. However, he is a very sober, honest man; and has not one spot in his whole life, except it be the printing that malicious and infamous pamphlet." Mrs. Knaplock, who died Nov. 29, 1772, gave £200 to the poor of the stationers' company.

1737, Jan. 7. *Died*, RICHARD WILLIAMSON, bookseller, Gray's Inn-gate. He was deputy receiver-general of the post-office revenue; and clerk of the mis-sent and mis-directed letters. Like his predecessors, he was also a firm friend to both the Bowyers; and the younger of them, at the distance of more than half a century, evinced his grateful sense of former favours by the following clause in his last will:—"I give to the two sons and one daughter of the late Rev. Mr. Maurice, of Gothenburg, in Sweden, who married the only daughter of Mr. Williamson, bookseller (in return for her father's friendship to mine,) £1000 four per cent. consolidated annuities, to be divided equally between them." Mrs. Williamson was the faithful servant alluded to in the notice of Mr. Sare, at page 628 ante, and was succeeded in business by Mr. Trye, who was the predecessor of the late Mr. William Flexney, who died Jan. 7, 1808, aged 77.

The unsettled state of the reformation under Edward VI. The interruption it met with from queen Mary, with the hand put to it by queen Elizabeth; together with the various fortunes of the Catholic

\* George Faulkner went to London to solicit subscriptions for an edition of Swift's works, which he was then about publishing. On his return to Dublin, intending to pay his respects to the dean, he went, dressed in a laced waistcoat, bag-wig, and other fopperies. Swift received him as a perfect stranger. "Pray, sir, what are your commands with me?" "I thought it my duty, sir, to wait upon you immediately after my arrival from London." "Pray, sir, who are you?" "George Faulkner, the printer!" "You George Faulkner, the printer! Why you are the most impudent, barefaced impostor I ever heard of. Faulkner is a sober, sedate citizen, and would never trick himself out in lace and other fopperies. Get about your business, and thank your stars I do not send you to the house of correction." Poor George hobbled away as fast as he could, and after changing his dress, returned immediately to the deanery. On his return, Swift went up and shook him most cordially by the hand. "My good friend George, I am heartily glad to see you safe returned. Here was an impudent fellow in a laced waistcoat, who would have fain passed for you; but I soon sent him packing with a flea in his ear!"

† I suppose this society for encouraging learning alarms the booksellers; for it must be at last a downright trading society, a mere *Conger* (forgive me if I mis-spell so mysterious a word.—See page 631 ante. I hope you will take care to be one of their printers, for they will certainly be a society for encouraging printing; Learning perhaps may be too far gone, and past all private encouragement."—Mr. Clarke to Mr. Bowyer, early in 1737.

cause during the reign of James I. Charles I. Charles II. and James II. particularly the lives of the most eminent Catholics; cardinals, bishops, clergy, &c. : Also a critical account of the works of the learned; trials of those who have suffered for religion, &c. with the foundation of all the English colleges and monasteries abroad, and a general history of ecclesiastical affairs under the British, Saxon, and Norman periods. By Charles Dod.\* Though bearing the imprint of Brussels, (probably to avoid persecution) it was printed at Sherborne, in Dorsetshire.

This work was published as an antidote to bishop Burnet's work, which bears the title of *A History of my Own Times*, published in 1724, and which gives an outline of the civil war and commonwealth, and a full narration of all that took place from the restoration to the year 1713.

1737. GUSTAVUS WILHELMUS BARON IMHOF, who was governor of Colombo, now the British capital of the island of Ceylon, anxious that the gospel should be made known to the natives, erected a press at Colombo; the first book from which was a *Prayer-book* printed in this year: this was succeeded by a short *Confession of faith*, executed in the next year, immediately after which the editors proceeded to an edition of the *Four Gospels*, which they were enabled to publish in 1739. The whole of the *New Testament*, together with the books of *Genesis* and *Exodus*, in Cingalese, printed at Colombo between 1771 and 1795, are preserved in the Bodleian library.

1737, Sept. 11. Died, JEREMY BATLEY, an eminent bookseller, in Paternoster-row.

1737, Sept. 20. Died, BENJAMIN SPRINT, bookseller, in Little Britain. He was one of the governors of Christ church hospital. Whether he was related to Samuel and John Sprint, noticed at page 641 *ante*, is not mentioned.

1737, Sept. 20. Died, NATHANIEL MIST, printer and proprietor of the *Weekly Journal* bearing his name; a paper that was so obnoxious to the government that it caused him to be several times prosecuted with the utmost rigour of ministerial or parliamentary vengeance.

1737, Nov. 18. Died, THOMAS HARBIN, stationer, in the Strand, famous for his shining black ink.

1737, Dec. 27. Died, WILLIAM BOWYER, sen., an eminent printer of London, where he was born, in 1663; he was the son of John Bowyer, citizen and grocer. In 1679, he was bound apprentice to Miles Flesher, admitted to the freedom of the company of stationers, October 4, 1686, and very soon after became eminent in his profession. His first printing-office was at the White Horse, in Little Britain, and before the close of the year 1699, Mr. Bowyer removed his office into Dogwell court, White Friars, to a house which had formerly been the George tavern; and on the 6th of May, 1700, was admitted a liveryman of the company of stationers. Mr. Bowyer was one of the twenty printers

allowed by the court of star chamber. The great loss which he sustained by burning of his printing-office, in 1713, has already been noticed. He was twice married. By his first wife he had no issue. His second wife was Dorothy,\* daughter of Thomas Dawks, a printer of some celebrity in his day, who in his youth, from 1652 to 1657, had been employed as a compositor on Walton's *Polyglott Bible*.† Mr. Bowyer conducted his business with unremitting attention and unsullied reputation, during the long period of his life, and at his death‡ was succeeded by his son William Bowyer, who had been a partner from June, 1722. It is evident, from his scattered papers, that Mr. Bowyer severely felt the affliction of his parent's loss, by applying to himself the beautiful apostrophe of Æneas to Anchises.

Hic me pater optime, fessum  
Deseris, heu! tantis nequiquam crepte periculis.

In the church of Low-Leyton, in Essex, there is a neat marble monument erected by Mr. W. Bowyer to his father's memory and his own, with the following inscription, written by himself many years before his death:

SUIC MURD AN EXTRA  
VICINUS JACET  
GULIELMUS BOWYER,  
TYPOGRAPHUS LONDINENSIS,  
DE CHRISTIANO ET LITERATO ORBE  
BENE MERITO;  
AN UTRIQUE VICISSIM REMUNERATUS:  
QUIPPE CUNCTIS BONIS ET FORTUNIS SUI  
SORTITO INCENDIO PENITUS DELETTIS,  
MUNIFICENTIA SODALITUM STATIONARIORUM,  
ST OMNIBUS SORORUM FAVOR,  
ASCEPTAS FACULTATES CERTATIM RESTAURAVIT, &  
TANTI HOMINIS VITAE INTEGRUM,

RECONDANT MERCEDES VIRTUTIS  
VIRIDEM DEPOSITUM BENIGNAM, DEC. 27,  
ANNO 1737.  
PATRI, PATRONIS, POSTERISQUE RORUM.

At the east end of the hall of the stationers' company there is a brass plate with an inscrip-

\* She was sister to Ichabod Dawks, printer, who died Feb. 27, 1730, aged 70. She was born March 6, 1665; was first married to Mr. Benjamin Allport, of St. Botolph's, Bishopsgate, bookseller, Oct. 10, 1693, and subsequently to Mr. Bowyer, and died Dec. 27, 1737, aged 63.

† He was the son of an earlier Thomas, who was also a printer. He was born at Kelmscote, in Oxfordshire, Oct. 5, 1636; and was admitted at merchant tailors' school, April 2, 1649.

The following notes are by Ichabod Dawks, the person mentioned in the *Teller*, Nos. 18, 178; and *Spectator*, No. 437.

"In 1651, my father, Mr. Thomas Dawks, began to work at printing, at Mr. Du Gard's. He was married in Dec. 1666. I Ichabod, born Sept. 23, 1661. My dear grandfather, Mr. Thomas Dawks, died May 11, 1679, at Low Leyton. In the year 1673, I began to work with my father, at Mr. Darby's, in Bartholomew close. May 14, 1673, father and I went to work at Mrs. Maxwell's. He was her overseer. Oct. 4, 1673, we went to work at Mrs. Flesher's. May, in the year 1674, my father set up to be a master, in Black Fryars. I Ichabod, married Aug. 3, 1687."

‡ The funeral expenses were £37 10s, at that time no small sum.

§ In grateful remembrance of these ample benefactions, the elder Mr. Bowyer had several metal cuts engraved, representing a Phoenix rising from the flames, with suitable mottoes; which were used by him, and by his son, as ornaments in some of the most capital books they printed. One of these original tail-pieces may be seen in vol. III. page 293 of Nichols's *Literary Anecdotes*.

\* Charles Dod, resided at Harrington, in Worcestershire, and died about 1745.

tion commemorative of his loss by fire, and the munificent donations of the stationers' company and his private friends, to repair his loss. There is also a bust of him taken after his death; and a portrait, from which he appears to have been a pleasant round-faced man. This is a very good picture; and a faithful engraving from it, by Basire, is given in Nichols's *Literary Anecdotes*. Mr. Bowyer was many years a valuable member of the company of stationers.

1737, Jan. 1. *The History of the Works of the Learned*, No. 1. This work first appeared in 1735, under the name of the *Literary Magazine*; or, *Select British Librarian*. It continued to flourish under its new designation till the year 1743, when it closed with the publication of its fourteenth volume. This publication is not to be confounded with that of J. la Crosse, which appeared in 1691. See page 674, ante.

1737, Feb. *Common Sense*. Lord Chesterfield and lord Lyttleton were contributors to this work; and their essays, many of which are upon topics of more permanent interest than politics, add much to the value of the work. It was carried on with considerable success for some years.

1737. *Belfast News Letter*. This was probably the first newspaper established in Ireland, north of Dublin, and perhaps the oldest existing newspaper in that country.

1737, Nov. 5. *The Weekly Essay*, No. 1.

1738, Jan. 14. About two o'clock in the morning, the dwelling-house, and printing-office of John Basket, king's printer, situated in Black Friars, was totally destroyed by fire, the damage of which was estimated at £20,000. Mr. William Bowyer, jun. in remembrance of Mr. Basket's gift to his father, (see page 601 ante) gave him a press complete, and the ironwork of another.

1738, Feb. A motion was made in the house of lords, concerning a libel on several of their lordships, when it was observed by the majority of the house, "That it was not usual to take a printer or publisher into custody, when he appeared and discovered his author."

1738. JOHN PETER ZENGER, of New York, printer, &c. was charged with printing and publishing a false, scandalous, and seditious libel, against the governor and administrator of that province, intitled the *New York Weekly Journal*, and was brought to trial by information. A great anxiety prevailed during this trial, and after a long investigation he was found not guilty, partly through the exertions of Mr. Hamilton, who travelled from Philadelphia for the purpose of defending him; and so pleased was the mayor and aldermen of New York with Mr. Hamilton's abilities, that they presented him with the freedom of the city in a gold box of great value.

1738, March. Died, JOHN DARBY, jun. printer, in Bartholomew-close, who is thus characterized by Dunton:—"Where is a man more careful of his words? or more pious in his actions? I might call him the religious printer. He goes to heaven with the anabaptists; but is a man of general charity. He printed that excellent speech of my lord Russel, and several pieces of

colonel Sydney, and is a true assertor of English liberties. He is no bigot to any party, but can see the truth betwixt two wranglers, and see them agree, even in what they fall out. In a word, Mr. Darbie is blessed in himself (by being cool and temperate in all his passions), and is very happy in all his relations. His wife is chaste as a picture cut in alabaster,—you might sooner tempt a votary, or move a Scythian rock, than shoot a fire into her chaster breast. Sir Roger [L'Estrange], on his bended knees, could not prevail for (so much as) a wanton look."

1738, May 13. HENRY HAINES, printer, sentenced to pay a fine of £200, to suffer two years' imprisonment, and to find security for his good behaviour for seven years, for printing the *Craftsman*.

1738. A pamphlet was published in this year, entitled *A Letter to the Society of Booksellers, on the method of forming a true Judgment of the Manuscripts of Authors*, containing some curious literary intelligence, and is as follows:—"We have known books," says the writer, "that in the manuscript have been damned, as well as others which seem to be so, since, after their appearance in the world, they have often lain by neglected. Witness the *Paradise Lost* of the famous Milton, and the *Optics* of sir Isaac Newton, which last, it is said, had no character or credit here till noticed in France. *The Historical Connexion of the Old and New Testament*, by Shuckford,\* is also reported to have been seldom inquired after for about a twelvemonth's time; however, it made a shift, though not without some difficulty, to creep up to a second edition, and afterwards even to a third. And, which is another remarkable instance, the manuscript of Dr. Prideaux's† *Connexion* is well known to have been bandied about from hand to hand among several, at least five or six, of the most eminent booksellers, during the space of at least two years, to no purpose, none of them undertaking to print that excellent work. It lay in obscurity till archdeacon Echard, the author's friend, strongly recommended it to Tenson. It

\* It is a long time ago since I read Shuckford's *Connexion*. But my opinion of it was then, and I believe it is the general opinion, that it is an injudicious performance. The author attempted a very difficult work, and his abilities were not equal to it. There is no design, that I know of, of continuing it. Rev. Charles Godwyn.

Balliol College, April 16, 1765.

Is not dean Prideaux's *Connexion* a continuation of the above?

† Humphrey Prideaux was born at Padstow, in Cornwall, May 3, 1648. In 1676 he published the *Mamora Oronotensia*, in one volume folio, and in 1681 he was promoted to a prebend of Norwich, of which cathedral he became dean in 1702. Being disabled from public duty, by bodily infirmity, he devoted himself to writing, and produced his *Connexion of the Old and New Testament*, 3 vols. folio, and 4 vols. 4to. When Dr. Prideaux offered his *Connexion* to a bookseller, the latter told the Dr. that it was a dry subject, and the printing could not safely be ventured upon, unless he could enliven it with a little humour! This admirable work, however, has been translated into several languages, and has passed through numerous editions. Dean Prideaux died at Norwich, Nov. 1, 1734, and was buried in the cathedral. He was the author of *Directions to Churchwardens*, 12mo; the *Life of Mahomet*, 8vo; the *Original Right of Tithes*, 8vo, &c. &c.

was purchased, and the publication was very successful. *Robinson Crusoe's* manuscript also ran through the whole trade, nor would any one print it, though the writer, De Foe, was in good repute as an author. One bookseller at last, not remarkable for his discernment, but for his speculative turn, engaged in this publication.\* This bookseller got above a thousand guineas by it; and the booksellers are accumulating money every hour by editions of this work in all shapes. The undertaker of the translation of *Rapin*, after a very considerable part of the work had been published, was not a little dubious of its success, and was strongly inclined to drop the design. It proved at last to be a most profitable literary adventure."

"It would be no uninteresting literary speculation," says D'Israeli, "to describe the difficulties which some of our most favourite works encountered in their manuscript state, and even after they had passed through the press."

When Sterne had finished his two first volumes of *Tristram Shandy*,† he offered them to a bookseller at York for £50, but was refused: he came to town with his manuscripts; and he and Robert Dodsley agreed in a manner of which neither repented. The *Rosciad*, with all its merit, lay for a considerable time in a dormant state, till Churchill; and his publisher became impatient, and almost hopeless of success; but there is no doing without a patron; for of this work, which had so great a run afterwards, only ten copies were sold in the first five days, in four days more six copies were sold! but when Garrick found himself praised in it, he set it afloat, and Churchill then reaped a large harvest.

Burns's *Justice* was disposed of by its author, who was weary of soliciting booksellers to purchase the manuscript, for a trifle, and it now yields an annual income. Collins's *Odes* before the door of his publisher; he moaned and

raved amidst the cloisters of Chichester cathedral, and died insane, in consequence of literary disappointment; however, there was a fine monument raised to his memory. The publication of the *Sermons* of Dr. Hugh Blair,\* was refused by Mr. Strahan; and the *Essays on the Immutability of Truth*, by Dr. James Beattie,† could find no publisher, and was printed by two friends of the author, at their joint expense.

The *Polyeucte* of Corneille,‡ which is now accounted to be his master-piece, when he read it to the literary assembly held at the Hotel de Rambouillet, was not approved. Voiture came the next day, and in gentle terms acquainted him with the unfavourable opinion of the critics. Such ill judges were then the most fashionable wits of France. Corneille suffered all the horrors of poverty. He used to say, his poetry went away with his teeth. Some will think that they ought to disappear at the same time, as one would not give employment to the other.

Samuel Boyse,§ author of the *Deity*, a poem, was a sag author, and, at one time, employed by

\* Hugh Blair was the son of a merchant of Edinburgh, where he was born, April 7, 1718, and educated in the university of his native city. In 1741 he was licensed to preach, and the following year was ordained. In 1757 the university of St. Andrews conferred on him the degree of D.D., and he was the first preacher in Scotland who brought the graces of polite learning to the service of the pulpit. Besides his *Sermons*, which were published in five volumes, he was the author of *Lectures on Rhetoric*, and the *Belles Lettres*, which enjoy a high reputation. Dr. Blair died at Edinburgh, Dec. 27, 1800.

† James Beattie was born at Laurencekirk, Kincardineshire, in Scotland, Oct. 23, 1735, where his father was a farmer, who, however, sent him to Aberdeen university. He obtained a pension of £300 a year from George III. and was created LL.D. Dr. Beattie was the last of those who can properly be placed in the first order of the poets of this time. In 1777, while professor of moral philosophy at Aberdeen, he published his celebrated poem the *Minstrel*, which describes in the stanza of Spencer, the progress of the imagination and feelings of a young and rustic poet. He also wrote several philosophical and controversial works. His poetry is characterized by a peculiar meditative pathos. He died at Aberdeen Aug. 18, 1802.

‡ There were two brothers of this name, both poets of eminence. Peter was born at Rouen, in France, June 6, 1606, and was brought up to the bar. The most famous of his plays is the *Cid*. He died at Paris, Oct. 1, 1684. Thomas, the younger brother, was a member of the French academy, and wrote a *Dictionary of Arts*, in two volumes folio, and a *Geographical and Historical Dictionary*, in three volumes folio. He died in 1709, aged 64.

§ Samuel Boyse was born at Dublin in 1704. At an early age he was sent to Glasgow, where he married a tradesman's daughter before he was twenty. This imprudent step, added to the extravagance of himself and wife, involved him in misery. He published a volume of poems at Edinburgh, addressed to lady Eglinton, who liberally rewarded him; and an elegy on the countess of Stormont, procured him, from lord Stormont, a handsome present. From Edinburgh he came to London, with a recommendation letter, written by the duchess of Gordon, to Mr. Pope, and another to chancellor King, both of which he neglected to deliver. He loved mean company, and indulged in the habits of low life. His principal support was by writing for periodical publications. The wretched situation he was in at this time, is thus described by one who knew him—"He sat up in bed with the blanket wrapped about him, through which he had cut a hole large enough to receive his arm, and placing the paper on his knee scribbled in the best manner he could the verses he was obliged to make." In 1745 he wrote an *Historical Review of the Transactions of Europe*. He also published numerous poems, none of which are now read, except the *Deity*, which is admitted into many collections, and has been praised by two different writers, Fielding and Harvey. He died in 1749, in Shoe-lane, and was buried at the expense of the parish.

\* See page 618, ante.

† "The sermon in *Tristram Shandy*," says Sterne, in his preface to his *Sermons*, "was printed by itself some years ago, but could find neither purchasers nor readers." When it was inserted in his eccentric work, it met with a most favourable reception, and occasioned the others to be collected.

‡ Charles Churchill was the son of a curate of St. John's, Westminster, where he was born in 1731, and educated at Westminster school, but was refused matriculation at Oxford, on account of his insufficiency in classical knowledge. He then returned to Westminster, and married. At the age of 33 he was ordained, and served a curacy in Wales: he turned dealer in cyder; but becoming a bankrupt he returned to London, and succeeded his father. The ultimate success of the *Rosciad* stimulated him to further exertions as a satirist. He gave himself up to dissipation, renounced his clerical profession, discarded his wife, kept a mistress, and joined Wilkes, the patriot of the day. He died at Boulogne, in France, Nov. 4, 1764, and was buried at Dover. Besides his poems, he published some sermons.

§ Richard Burn, D. D. was born at Kirkby Stephen, in Westmoreland, educated at Oxford, and became vicar of Orton, in his native county, and a justice of the peace. Besides his *Justice of the Peace*, he compiled the *Ecclesiastical Law*, for which he was made chancellor of Carlisle. He also wrote part of the *History of Westmoreland*. He died at Orton, November 20, 1782.

¶ William Collins was born at Chichester, Dec. 25, 1720, and was educated at Winchester and Oxford, where he took the degree of B. A. and wrote his *Oriental Eclogues*. His uncle left him £2000, which he did not live to enjoy. He died June 13, 1766. His *Odes* are on the whole sublime.

Mr. Ogle to translate some of Chaucer's *Tales* into modern English, which he did, with great spirit, at the rate of three-pence per line for his trouble. Poor Boyse wore a blanket, because he was destitute of breeches; and was, at last, found famished to death, with a pen in his hand.

Falconer's\* deaf and dumb sister, notwithstanding the success of his poem of the *Shipwreck*, was for some time the tenant of an hospital.

Buchan's† *Domestic Medicine*, which has been one of the most popular works ever published, and yielded immense sums, was sold for £5; and Miss Burney obtained only five guineas for her  *Evelina*.

Savage was in continual distress, independent of an unnatural mother's persecution. He sold his beautiful poem of the *Wanderer* for £10.

Thomson's *Winter* was bought by Andrew Millar, the bookseller, through the intercession of Mallet, for a small sum.

Poor Chatterton,‡ one of the greatest geniuses of any age, and who is styled—

destroyed himself through want, (though insanity would be the better term, since it was in the family,) still left wherewithal, by the aid of friends, to preserve his sister from want and poverty in her latter years.

Christopher Smart, the translator of *Horace*, and no mean poet, died in the rules of the king's

\* William Falconer was born in the county of Fife, in Scotland, of humble parents, and bred to the sea. Though he possessed few advantages from education, he had good natural talents, which he cultivated with assiduity. In 1781 he published a poem on the *Death of the Prince of Wales*; but his reputation rests on the *Shipwreck*, a poem in three cantos, which is highly descriptive and pathetic. It originated in the circumstance of the author's being shipwrecked in a voyage from Alexandria to Venice, when only three of the crew escaped. Falconer also wrote an *Ode to the Duke of York*, which obtained him the post of purser to the Royal George. He likewise compiled the *Marine Dictionary*, &c., and published a poem against Wilkes and Churchill, under the title of the *Demagogue*. He sailed from England in 1769, in the *Aurora*, for the East Indies, but after her departure from the Cape of Good Hope the ship was never heard of.

† William Buchan was born at Acram, Roxburghshire, in 1739, and educated at Edinburgh, with a view to the church, which, however, he quitted for the study of medicine. He settled at Ackworth, in Yorkshire, where he became physician to the founding hospital there. In 1779 he published his popular book, entitled *Domestic Medicine, or a Treatise on the Cure and Prevention of Diseases*. He finally settled in London, where he died Feb. 25, 1805.

‡ Thomas Chatterton was born at Bristol, Nov. 26, 1752, and educated at a charity school, in that city. At fourteen years of age, he was articled clerk to an attorney at Bristol, with whom he continued about three years; yet, though his education was confined, he discovered an early turn towards poetry and English antiquities, and particularly towards heraldry. In April, 1770, he left Bristol, disgusted with his profession, and the loss of life in which he was placed, and went to London, in hopes of advancing his fortune by his pen; he sunk at once from the sublimity of his views to an absolute dependence on the patronage of booksellers. The exertions of his genius brought in so little profit, that he was soon reduced to extreme indigence; so that at last, oppressed with poverty and disease, in a fit of despair, he put an end to his existence, August, 1770, with a dose of poison. Concerning the authenticity of the poems, under the name of Rowley, (that is, whether they are really written by a person of that name, or were only what they are generally considered to be, the forgeries of Chatterton) there long existed a mighty controversy; and the war among the critics has even now scarcely subsided.

bench. Poor Smart\* when at Pembroke college, wore a path upon one of the paved walks.

Joseph Warton informs us, that when Gray published his exquisite *Ode on Eton College*, his first publication, little notice was taken of it.

Butler, the author of *Hudibras*, according to Dennis,† was left to starve, and died in a garret; and Otway, perished through want in an obscure public-house on Tower hill.

Goldsmith disposed of his *Vicar of Wakefield*, for £80, partly from compassion and partly from deference to Johnson's judgment; but Mr. John Newbery, the purchaser, had so little confidence in the value of his purchase that it remained in manuscript until the publication of the *Traveller* had established the fame of the author.

Tannahill;‡ in whose hands the lyre of Scotland retained its native, artless, sweet, and touching notes; and whose songs are distinguished by elevation and tenderness of sentiment, richness of rural imagery, and simplicity of diction, put a period to his existence, principally, because Mr.

\* Christopher Smart, a poet and miscellaneous writer, was born at Shipbourne, April 13, 1722, and died at London, May 12, 1771. Mr. Smart was liberally patronized by Mr. John Newbery, the eminent bookseller, in St. Paul's church-yard.

† John Dennis was born in London in 1657, and became celebrated as a poet, dramatist, and critic. In 1712, he attacked Addison's *Cato*, which occasioned a whimsical pamphlet, called the *Narrative of Dr. John Newbery, concerning the strange and deplorable phrensy of Mr. John Dennis*. He died Jan. 6, 1734. The following epigram was written by Savage, and first published in Johnson's preface to the *Lives of the English Poets*.

Should Dennis publish you had stabb'd your brother,  
Lampoon'd your monarch, or debauch'd your mother;  
Say what revenge on Dennis can be had,  
Too dull for laughter, for reply too mad!  
On one so poor you cannot take the law;  
On one so old your sword you scorn to draw;  
Uncag'd then let the harmless monster rage,  
Secure in dulness, madness, want, and age.

‡ Robert Tannahill was born at Paisley, June 2, 1774; his father was a weaver, and both his parents were much respected for their intelligence and worth; the subject of this slight sketch was the fourth child of six sons and one daughter. After learning to read, write, and cast accounts, Tannahill was sent to the loom, and early began to distinguish himself by writing verses. At this time Paisley was in a very flourishing condition; and dancing parties and rural excursions were frequent among the young people of both sexes, and in these he often joined. He then formed many of those poetical attachments, which he afterwards celebrated in song. About 1800, accompanied by a younger brother, he came to England. Robert obtained work at Bolton, and the other at Preston, where they remained about two years, and then retired home. Tannahill's appearance was not indicative of superior endowment. He was small in stature, and his manners were so retiring, and his reliance on himself so small, that without the assurance of friends, of which he found many, he probably would never have been induced to give to the world many of those pieces which are pronounced to be the very perfection of song writing. A mere enumeration of some of their titles will be sufficient to remind most readers of their excellence. The *Braes o' Balguthrie*; *Gloomy Winter's* now awa; *Byrnie* was the time when he feed w' my father; *London's* bonny Woods and Braes; *Jessie the flower o' Dunblane*; *Och hey! Johnie lad*; *Clean Pease Straw*; *O, are ye sleeping, Maggie*; *Lowland lassie, wilt thou go*; *The Harper o' Mull*; *The Wood of Craigielea*; *The Braes o' Gleniffer*; *The Lass o' Arran-teenie*, &c. &c.—In his disposition he was tender and humane, and extremely attached to his home, his kindred, and his friends. His life was simple and unvaried in its details, but even the uneventful character of his existence renders more striking and more affecting its tragic close, being found drowned May 17, 1810, when he had only reached his thirty-sixth year.

Archibald Constable, bookseller, Edinburgh, unfortunately declined the publication of his poems, though offered for a very small sum.

To those unacquainted with literary history, these statements may seem wonderful, that any difficulties should have been experienced in the first attempt to publish many works which now adorn the republic of letters; yet another instance must be recorded in that exquisite poem, the *Pleasures of Hope* of Thomas Campbell,\* and nothing can be better authenticated than the fact of its having been offered, in vain, to every respectable bookseller both in Glasgow and Edinburgh. Not one of them could be prevailed upon to risk even paper and printing upon the chance of its success; and at last, it was with considerable reluctance, that Messrs. Mundell and Son, printers to the university of Glasgow, undertook its publication, with the very liberal condition, that the author should be allowed fifty copies at the trade price, and in the event of its reaching a second edition, a further gratuity of £10. It was published in 1799.

In the above slight enumeration of the obstacles which the fine compositional of genius, and the elaborate labours of erudition are doomed to encounter in the road to fame, we may raise our regret; but how often are we astonished to find that works of another, and often of an inferior description are rewarded in the most princely manner, some instances of which will be given in another part of this work.

1738, Jan. 6. *The Literary Courier of Grubstreet*, No. 1, edited by Eph. Quibus.

1739, Jan. It appears that several editors of newspapers in the country had formed the idea of inserting short essays upon various subjects, for the amusement or information of the more learned part of their readers. In the *Gloucester Journal* the essays were to be entitled *Country Common Sense*, but the greater portion of its readers were offended at the introduction of the essays as infringing upon the news of the week, that Mr. Raikes was actually compelled to abandon his design. Mr. Abree, proprietor of the *Canterbury News Letter*, was not so easily

intimidated, but proceeded with his essays in spite of all opposition, which at last were well received by all parties.

1739, March 13. *Died*, JOHN OSBORNE, a noted bookseller in Paternoster-row. In 1734, whilst upper warden, Mr. Osborne gave £20 to the company of stationers, which was disposed of for the purchase of a branch for illuminating the hall on public occasions; it was put up at the expense of Mr. William Mount, master. Mr. Osborne was master of the company in 1735. There were at this time three others of the name of Osborne on the livery.

1739. *Died*, JACOB ROBINSON, bookseller, near the Temple-gate, Fleet-street. Dunton says—"Mr. Robinson, a man very ingenious, and of very quick parts. His religion has not destroyed the goodness of his humour, for his temper is easy and unruined, setting on the great pot for them. Dr. Bates made choice of him for one of his booksellers. He published the *Conformist's Plea for the Nonconformists*, and is Dr. Edwards's bookseller." Mr. Robinson\* was on terms of intimacy with Pope, who appointed him his bookseller.

1739, June 14. An act for prohibiting the importation of books, first composed and printed in Great Britain; and for repealing so much of the act of 25th Henry VIII. chap. xv. sec. 4, granting to the lord chancellor, lord treasurer, the two chief justices, the power of regulating the prices of books; and likewise so much of the 8 Anne as relates to the same.

1739, June. *Died*, ARTHUR BETTESWORTH, a wealthy bookseller of Paternoster-row. He left a legacy of twenty guineas to the stationers' company, to be applied to the purchase of a pair of silver candlesticks.

1739, Oct. 14. *Died*, PAUL VAILLANT, bookseller in the foreign trade, aged 67 years.

1739, April 7. *The Newcastle Journal*, No. 1. printed and published by Isaac Thompson and William Cuthbert. This paper was continued until the death of Mr. Thompson, which happened January 6, 1776.

1739. *The Scot's Magazine*, printed and published by Messrs. Murray and Cochrane, Edinburgh. This magazine kept a conspicuous station in the literary world from its commencement till 1817, when it was disposed of by auction.

1739, Nov. 15. *The Champion*, No. 1. The greater part of this work was written by the celebrated Henry Fielding, and was published thrice a week, on Tuesday, Thursday, and Saturday. The last number appeared June 19, 1740, making ninety-four numbers, or two volumes. 12mo. The work has undergone three editions.

1740. The first circulating library established in London, was in this year, by a bookseller of the name of Wright, at No. 132, in the Strand.

\* There can be no doubt that the treatment which Mr. Campbell received on this occasion, sunk deep into his mind; for an anecdote is told of him which proves how strong the feeling of resentment, at the injustice he had experienced, had taken possession of his mind. A few years afterwards, on being asked, at a large dinner party, for a toast, he, without hesitation, to the astonishment of every one present, proposed the health of "Bonaparte," who was then in the plenitude of his power. The exclamation of Oh! oh! resounded from every side of the table, when the feelings of the company were instantly mollified by the poet exclaiming, "Yes, gentlemen, here is Bonaparte, in the character of erudition of booksellers!" It happened that only a few days previous, there had arrived in London the news of the judicial murder of Palm, a bookseller of Nuremberg, in Germany, who had been shot by an express order of Napoleon, for contravening one of his decrees respecting the press of that country.

Thomas Campbell was born at Glasgow, in the year 1777, and studied in the university of that city. When only twenty-two years of age, the above poem was published, which immediately took its rank as one of the finest sentimental poems in the language. *Gertrude of Wyoming*, a tale in the Spenserian stanza, appeared in 1809; *Theodoric*, a tale, in 1814, and some lyrical poems of great beauty, complete the list of Mr. Campbell's poetical productions.

\* Dunton mentions a Mr. Wyat, who served an apprenticeship with Mr. Robinson: "If *Tram* have any truth in it, Mr. Wyat is an honest and ingenious bookseller: but, indeed, it is character enough for him, that he was Mr. Robinson's apprentice. He prints Mr. Dorrington's books. However, a bookseller is not always accountable for the errors and hogtry of his authors."

Franklin, speaking of his residence in London, (1725) says, "while I lodged in Little Britain I formed an acquaintance with a bookseller of the name of Wilcox, whose shop was next door to me. Circulating libraries were not then in use. He had an immense collection of books of all sorts. We agreed that, for a reasonable retribution, of which I have now forgotten the price, I should have free access to his library, and take what books I pleased, which I was to return when I had read them." Among the earliest and most successful rivals of Wright, were the Nobles, in Holborn, and in St. Martin's court; Samuel Bathoe,\* in the Strand; John Bell, in the Strand; and Thomas Lowndes, Fleet-street.

1740, May 15. Died, EPHRAIM CHAMBERS, author of the *Cyclopædia*,† being the first dictionary or repertory of general knowledge published in Britain; and it was called by one who knew well its value "the pride of booksellers, and the honour of the English nation." This work was the result of many years severe application, and was first published in two volumes folio, in 1728, by a subscription of four guineas, with a very respectable list of subscribers. A second edition, with corrections and additions, was printed in 1738;‡ a third in 1739; a fourth in 1741; and a fifth in 1746; and again republished in 1782. With all these successive improvements, it has finally been extended, under the masterly superintendence of its learned and venerable editor, Dr. Abraham Rees, to forty volumes 4to.

Ephraim Chambers was born at Kendal, in Westmoreland, of Quaker parents, who bred him up in the principles of the sect. He was put apprentice to Mr. Senex,§ the celebrated globe-maker and bookseller, in London; and during his abode with that skilful artist, acquired the taste for learning, which continued his prevailing passion during the remainder of his days. His attention was not wholly devoted to his *Cyclopædia*, but joined in other laborious literary undertakings. On Nov. 6, 1729, he was elected a fellow of the royal society. He is represented as a man equally indefatigable, perspicacious, and attentive; yet never acquired much money by his labours; very cheerful, but hasty and impetuous; free in his religious sentiments; kept but little company; and had but few acquaintance. He lived at chambers in Gray's Inn, but died at Canonbury house, Islington, and was buried in the cloisters of Westminster abbey.

\* This very intelligent bookseller died Oct. 9, 1766.

† In his early editions Mr. Chambers retained the title of *Lexicon Technicum*.

‡ In an advertisement to the second edition, he observes the complaints of such readers as might, from his paper of "Considerations," published some time before, have expected a new work instead of a new edition. A considerable part of the copy was prepared with that view, and more than twenty sheets were actually printed off, with a design to have published a volume in the winter of 1737, and to have gone on publishing a volume yearly till the whole was completed; but the booksellers were alarmed by an act then agitating in parliament, which contained a clause obliging the publishers of all improved editions of books to print their improvements separately. The bill passed the Commons, but failed in the Lords.

§ John Senex F. R. S. died December 30, 1746.

1740. J. MICHAEL FUNCKTER, a printer and bookseller of Erfurt, published a small work in German, entitled, *A short and useful introduction to the cutting of plates (or blocks) of wood and steel, for the making of letters, ornaments, and other figures, to the art of baking plaster, of preparing sand moulds for casting letters, vignettes, tail-pieces, medals, and of forming matrices from them*, &c. 8vo.

1740. Printing introduced into the town of TRURO, in Cornwall. The person to whom the town was indebted for this benefit, was Andrew Brice, a printer at Exeter, but not answering his expectations, he shortly afterwards removed the press to Exeter. For a notice of this eccentric printer, see the year 1773, post.

1740. Mr. JOHN BENTHAM appointed printer to the university of Cambridge, which he held till 1763, when he resigned in favour of John Archdeacon.

1740. *The Oxford Journal*. This paper was established by William Jackson, of whom see a notice in the year 1795, post.

1740, Dec. 30. *The Prattle*, No. 1.

1740. *The Halfpenny Post*.

1740. *The Farthing Post*.

1741, Jan. 2. Died, JOHN BARBER, printer to the city of London, and the first of the profession who had the honour of being lord mayor. He is well known to have been a barber's son in the city. Pope has affirmed, however, that

Honour and shame from no condition rise;

and although he afterwards contrived to introduce the subject of our memoir into one of his satirical couplets, yet the history of this individual goes to corroborate the great moral axiom so poetically expressed by his friend. He served an apprenticeship to the printing business in the city, and by a successful train of circumstances, which brought him acquainted with lord Bolingbroke, Swift, Pope, and others of the most eminent writers of the age, he acquired considerable opulence. A remarkable story is told of his dexterity in his profession. Being threatened with a prosecution by the house of lords for an offensive paragraph in a pamphlet which he had printed, and being warned of his danger by lord Bolingbroke, he called in all the copies from the publishers, cancelled the leaf which contained the obnoxious passage, and returned them to the bookseller with a new paragraph supplied by lord Bolingbroke: so that, when the pamphlet was produced before the house, and the passage referred to, it was found unexceptionable. He added greatly to his wealth by the South Sea scheme, which he had prudence enough to secure in time, and purchased an estate at East Sheen, with part of his gain. In principles he was a Jacobite; and in his travels to Italy, whither he went for the recovery of his health, was introduced to the Pretender, which exposed him to some dangers on his return to England; for immediately on his arrival he was taken into custody by a king's messenger; but

was released without punishment. Mr. Barber paid a visit to Paris, and his reception at the French court is copied from a newspaper of that date:—"Versailles, June 22, n. s. This day the hunting horses of one of the aldermen of London arrived here; and to-morrow he is expected himself, to run down a stag with his majesty. The king has ordered prince Charles of Lorraine to entertain him while he stays at the court, and to provide whatever he shall have occasion for."

Mr. Barber was appointed city printer, March 22, 1709. Subsequently to his success in the South-sea scheme, he was chosen alderman of castle Baynard ward; in the year 1729, he served the office of sheriff; and in 1733, was elevated to the high office of chief magistrate. During his mayoralty he was elected president of St. Bartholomew's hospital. It also happened that in his year of servitude, the project of a general excise was brought forward, by his strenuous opposition to which he acquired, for a time, great popularity; though he is accused of having clandestinely procured from Mr. Bosworth, then city chamberlain, the documents which enabled him to make so conspicuous a figure upon that occasion. Of Mr. Barber's public actions, it should not be forgotten that he caused a monument to Butler to be put up in Westminster abbey; upon which event Pope is asserted to have penned the following severe lines, which he proposed should be placed on the vacant scroll under Shakspeare's bust:

Thus Britalo loved me, and preserved my fame  
Pure from a Barber's or a Benson's name!

Mr. Barber presented to the university of Oxford, a portrait of dean Swift, with the following inscription in Latin:

JONATHAN SWIFT,  
Dean of St. Patrick's, Dublin.  
This portrait of the Muses' friend,  
Of a happy turn of wit peculiar to himself,  
That he might in some sort be restored to his Oxford  
Friends,  
Was placed in the wall of the Bodleian gallery,  
A.D. MDCCXXXIX,  
At the desire of John Barber, Esquire,  
Alderman, and some time Lord Mayor of London.

He bequeathed £300 to lord Bolingbroke, £200 to dean Swift, and £100 to Pope. Dying a few days afterwards, he was buried, pursuant to his request, in the churchyard of Mortlake, where his tomb is thus inscribed:

Under this stone are laid the remains of John Barber, Esq. Alderman of London, a constant benefactor to the poor, true to his principles in Church and State. He preserved his integrity, and discharged the duty of an upright magistrate, in the most corrupt times. Zealous for the rights of his fellow-citizens, he opposed all attempts against them; and, being lord mayor in the year 1733, was greatly instrumental in defeating a scheme of a general excise, which had it succeeded, would have put an end to the liberties of his country. He departed this life January 2, 1740-41, aged 65.

Barber was a tory, and claims the distinction of an adherence to his principles when they had ceased to be the order of the day. Conformably with those principles, indeed, he gave monumental celebriousness to Butler, one of the

most interesting champions of church and state, "in the most corrupt times," and when both were exposed to circumstances the most dangerous. His character was otherwise good. His diligence appears to have been great; his conduct respectable; and his property to have been equitably acquired, and benevolently applied.

1741. An edition of the *Hebrew and German* (with the *Greek Testament*) was printed at Zyllichau, a manufacturing town of the Prussian states, in the New Mark of Brandenburg.

1741, Jan. 4. Died, ROBERT GOSLING, bookseller, at the Middle Temple gate. On Dec. 17, 1711, Bernard Lintot bought of Mr. Gosling the seventh share of Captain Cook's *Voyages* for £7. 3s. Sir Francis Gosling, knt. bookseller, banker, and alderman of London, was his son.

1741, Nov. 8. Died, FLETCHER GYLES, an eminent bookseller in Holborn, and treasurer of the charity school in Hatton Garden. He was patronized by Dr. Warburton, and published his *Divine Legation*. He published secretary Thurlow's *State Papers*, assisted by Thos. Ruddiman.

1741, April 13. Died, JOHN STUART, an eminent stationer on London Bridge.

1741, Sept. 8. Died, SAMUEL BUCKLEY, of whom Dunton says,—“Mr. Buckley was originally a bookseller, but follows printing. He is an excellent linguist, understands the Latin, French, Dutch, and Italian tongues; and is master of a great deal of wit. He prints the *Daily Courant* and *Monthly Register* (which I hear he translates out of the foreign papers himself.) But I shan't enlarge on his character (for I never knew him), but will venture to say, as to his morals; he is, or should be, an honest man.” Mr. Buckley is represented in the *Tatler*, No. 18, in the character of a news-writer, as a literary Drawcansir, “who spares neither friend nor foe, but usually kills as many of his own side as the enemy's.” Seven volumes of the original *Spectator* in folio, were published by Samuel Buckley, at the Dolphin, in Little Britain. The *Spectator* being discontinued at the close of the seventh volume, was succeeded by the *Guardian*; and Pope informs us, that Steele was engaged in articles of penalty to Jacob Tonson, for all the papers he published under this last name. The same author says, “the true reason that Steele laid down the *Guardian* was a quarrel between him and the bookseller above mentioned;” he adds, “that Steele, by desisting two days, and altering the title of his paper to that of the *Englishman*, got quit of his obligation.” In 1713 the periodical paper to which Steele gave the title of the *Englishman*, was in the course of publication; it was printed by S. Buckley, in Amen-corner, folio; is dated on the 18th of the June following, in 1714. He was afterwards appointed writer of the *Gazette*, and was put into the commission of the peace for the county of Middlesex. He was a man of excellent understanding and great learning, very sincere where he professed friendship; a pleasant companion, and greatly esteemed by all who knew him.

In 1730 Mr. Buckley issued "proposals for printing by subscription a new edition of *Jac. Aug. Thuanus Historiarum sui Temporis, ab anno Domini 1546 usque ad Annum 1607, Libri 138. Accedunt Commentariorum de Vita sua Libri VI, &c.*" Printed by William Bowyer. The proposals, with a specimen of the work, are delivered, and subscriptions taken, by J. Round, and G. Strahan, in Cornhill; R. Knaplock, D. Midwinter, J. Knapton, W. Innys, and C. Rivington, in St. Paul's church-yard; J. Osborn and T. Longman, in Paternoster-row; J. Pemberton, in Fleet-street; J. Tonson, P. Du Noyer, and N. Prevost, in the Strand; T. Osborne, in Gray's-Inn; by most booksellers in the country; and by the undertaker at his house in Prince's-court, Westminster." This work reflects a considerable degree of credit on Mr. Buckley, and in a letter to Dr. Mead, (who had been very instrumental in promoting the work) has "the pleasure to acknowledge that lord Carteret from time to time had favoured him with his directions and information concerning *Thuanus*, and among other things had the goodness to put into his hands a character of that historian."

In the title-page of each volume, the name of the bookseller only appears, "Excudi curavit Samuel Buckley, 1733." At the end of the first, "Londini imprimbat Henricus Woodfall;" of the second, "Samuel Richardson;" of the third, "Jacobus Bettenham;" of the fourth, "Jacobus Roberts;" of the fifth, "Thomas Wood." No printer's name occurs either in the sixth or the seventh; but the eight first books of volume vii. were printed by Mr. Bowyer; and the remainder, with the whole of the sixth volume, by Edward Owen. These were all very excellent printers. An act of parliament was obtained, "for granting to Samuel Buckley, citizen and stationer of London, the sole liberty of printing and reprinting the *History of Thuanus*, with additions and improvements, during the term therein limited."

Whilst the bill was in parliament, Mr. Buckley published "A short state of the public encouragement given to printing and bookselling in France, Holland, Germany, and London. With reasons humbly offered to the lords spiritual and temporal in parliament assembled, for granting to Samuel Buckley such privilege for *Thuanus* in Latin, as is already granted to every British subject who is possessed of the copy of any book in English." The price to subscribers, small paper, was nine guineas, and large paper, twelve guineas.

In Hornsey church, Middlesex, on the north wall, and close to the pulpit, on the west side, a very neat and elegant mural monument of white marble is thus inscribed:

To the memory of

SAMUEL BUCKLEY;

who, having not only discharged

all the duties of life

with ability, industry, and tenderness to each relation;

but offices likewise of state and trust;

with prudence, fidelity, and gratitude to his benefactors;

concluded his days in the study of letters,

and the enjoyment of honest and honourable friendships.

Sept. 8, 1741, in the 65th year of his age.

1740-1. *A Universal History from the earliest account to the present time*; compiled from original authors. Illustrated with charts, maps, notes, &c. This great work was projected by Mr. James Crokat,\* a bookseller, in Fleet-street; So highly was this great work esteemed, and so anxious were the learned, both at home and abroad, for its publication, that translations and pirated editions of it were printing in France, Holland, and Ireland, as fast as the London edition could be procured. It was at first published periodically, five volumes appeared in 1740-1; the sixth in 1742; and the seventh in 1744. A second edition began to be published in 1747, and was carried on with uncommon success, till the whole was completed in 21 vols. It was again carried forward, and in 1787, it was published in sixty vols. 8vo. at six shillings the volume, bound. The parts assigned to the various authors† were as follow:

Mr. Swinton,‡ the *History of the Carthaginians, Numidians, Manritians, Getulians, Garamantes, Melano Getulians, Nigritæ, Cyrenaica, Marmarica, the Regio Syrtica, Turks, Tartars, and Moguls, Indians, Chinese; Dissertations on the Peopling of America, Dissertation on the Independency of the Arabs.*

Mr. Sale,§ *The Cosmogony, and a small part of the History following.*

Mr. Shelvock, *To the birth of Abraham*, was chiefly written by this gentleman.

Mr. Psalmanazar, *History of the Jews, Gauls, and Spaniards; and Zenophon's Retreat.*

Dr. Campbell,|| *History of the Persians, and of the Constantinopolitan Empire.*

Mr. Bower,¶ *History of the Romans.*

\* Mr. Crokat had also a hand in planning the *Daily Advertiser*. He was the greatest literary projector of the age; and died worth—Nothing! Nicholas.

† The following letter was received by Mr. Nichols from Dr. Johnson only seven days before his death, and is one of the last the doctor ever wrote:

"Dec. 6, 1784. Tholate learned Mr. Swinton of Oxford, having one day remarked that one man, meaning, I suppose, no man but himself, could assign all the parts of the Antient Universal History to their proper authors; at the request of sir Robert Chambers, or of myself, gave the account which I now transmit to you in his own hand, being willing that of so great a work the history should be known, and that each writer should receive his due proportion of praise from posterity.—I recommend to you to preserve this scrap of literary intelligence in Mr. Swinton's own hand, or to deposit it in the museum, that the veracity of this account may never be doubted. I am, Sir,

"Your most humble servant, SAM JOHNSON."

The original of the above letter, agreeably to Dr. Johnson's desire, is deposited in the British Museum. It was also printed, at the time it was sent, by the doctor's express desire, in the *Gentleman's Magazine*, vol. liv. p. 592.

‡ John Swinton was a celebrated English antiquary, born in 1703, and died at Oxford, April 4, 1777.

§ George Sale is well known to the literary world by his excellent translation of the *Azous of Mahomet*, to which he prefixed a curious dissertation. He was well versed in the oriental languages, and died at London, November 14, 1736.

|| John Campbell, LL.D., was born in Edinburgh, March 8, 1708. He was the author of several works of great merit; the principal of which was the *Political Survey of Britain*, two vols. 4to. 1774. He died Dec. 28, 1776.

¶ Archibald Bower, a learned Jesuit, was born near Dundee, in Scotland, 1686. His principal work was a *History of the Popes*. His share of the *Universal History* is said not to add much to his reputation as an author, or advantage to the work. He died September 2, 1760.

1741. Of periodical literature, in its less ephemeral forms, published in the British colonies of North America, we find very little, as might be expected, before the revolution. The following are the earliest, published at Philadelphia, in this year:

*The American Magazine; or, Monthly Review of the British Colonies.* This periodical merely breathed,—it reared its head above the storm,—it drooped—and died.

*The General Magazine*, printed and published by Benjamin Franklin. It owed its birth to some discontent of Franklin at not being admitted into partnership with the above, and scarcely outlived the object of its animosity.\*

1741, July 20. *The Coventry Mercury*, No. 1, published by Mr. Jopson.

1741. *The Gentleman's Diary*.

1741. *The Country Oracle*, published weekly by T. Cooper, at the Globe, Paternoster-row.

1741, Nov. 16. *The Birmingham Gazette; or, the General Correspondent*, No. 1. price three halfpence. This newspaper was commenced by Thomas Aris, who had settled in Birmingham in the previous year, and was, no doubt, from London; for in the *Gentleman's Magazine*, for Feb. 1738, there are some lines, addressed to *Thomas Aris, printer*, written by a Mr. Bancks. There was a Samuel Aris, printer, in Creed lane, who is ranked by Negus as well affected to king George II. Mr. Thomas Aris died July 4, 1761, and the paper is still continued under the title of *Aris's Birmingham Gazette*.

1742, Jan. 22. *Died*, CHARLES RIVINGTON, an eminent bookseller in St. Paul's churchyard. This is the first of a name which has ever since been distinguished as one of the most respectable houses in the trade.

1742. The first letter foundry in Scotland was established at St. Andrew's, by Mr. ALEXANDER WILSON and Mr. BAIN. Most of the printers in Scotland at this time resided at Edinburgh and Glasgow; and their great distance from the London letter-foundries having subjected them to great inconveniences, they had an interest in encouraging the manufacturing of types brought so immediately within their reach. The liberal orders of their typographical countrymen soon showed Messrs. Wilson and Bain that they were engaged in a regular business, the profits of which satisfied their moderate views; and under such encouragement they continued their exertions so as to enable them to supply a great variety of founts. Thus employed, they had lived at St. Andrew's about two years, when the

increasing demand for their types, and the prospect of extending their sales to Ireland and North America, induced them, in 1744, to remove to Gamalachie, a small village, about a mile eastward of the city of Glasgow.

1742. *The Night Thoughts*, by the rev. Edward Young, is entered on the books of the stationers' company as the property of Robert Dodsley. The preface to *night seven* is dated July 7, 1744.

Of the *Night Thoughts*, the most popular work of Dr. Young, and that on which he most valued himself, Dr. Johnson observes, "In this poem, Young has exhibited a very wide display of original poetry, variegated with deep reflections and striking allusions; a wilderness of thought, in which the fertility of fancy scatters flowers of every hue, and of every odour. This is one of the few poems in which blank verse could not be changed for rhyme but with disadvantage. The wild diffusion of the sentiments, and the digressive sallies of imagination, would have been compressed and restrained by regard to rhyme. The excellence of this work is not exactness, but copiousness; particular lines are not to be regarded; the power is in the whole, and in the whole there is a magnificence like that ascribed to Chinese plantation, the magnificence of vast extent and endless variety."\*

1742. *Memoirs of the Press for thirty years past*. By the late Mr. Oldmixon. Published by Thomas Cox, price one shilling.

1742, April 27. *Died*, NICHOLAS AMHURST, editor of the *Craftsman*, one of the most distinguished papers of its time, and which Amhurst carried on for a number of years with great spirit and success in controlling the powers of the administration of sir Robert Walpole. It was more read and attended to than any production of the kind which had hitherto been published in England. Ten or twelve thousand copies were sold in a-day. "Amhurst was the able associate," remarks Davies, "of Bolingbroke and Pulteney; and he had almost as much wit, learning, and various knowledge, as his two partners in the *Craftsman*." Amhurst was a native of Marden, in Kent, and was educated at Merchant Tailors' school, and at Oxford; but after a life of literary drudgery, he died in poverty, at Twickenham, of a broken heart, occasioned by neglect of those whom he essentially served by his pen, and was buried at the charge of his

\* Dr. Franklin relates the following anecdote of one of his journeymen, an excellent workman, who never came to work till Wednesday.—"Francis," said Franklin to him one day, "surely you do not think of the future? If you worked more diligently, you might lay up something against old age." The workman answered, "I have made my calculation: I have an uncle, a druggist, in Cheapside, who has just set up in business with the resolution to work twenty years, till he has saved £4000, after which he intends to live like a gentleman. He thinks to make himself a wholesale gentleman: I will be one by retail; I had rather be so, and do nothing for half the week during twenty years, than be so the whole week twenty years hence."

\* Peter le Tourneur translated this work into the French language, and of which the learned in that country were very fond, for it had a rapid sale; and the eulogy of the French licencer soared above the ordinary and negative praise of finding nothing in this translation "contrary to the Catholic faith." It is related of Tourneur, that he sold this work for the very trifling sum of twenty louis d'ors to madame Ducron, who made, at least, sixty thousand livres of the work; and while he was adding new energy to his native language by this translation, which often soared above the original, he was seldom indulged with a bed on which to repose his wearied limbs. He and his wife were often obliged to leave Paris before night, to seek the most convenient and hospitable hedge in the environs of the capital. Le Tourneur also translated Shakespeare's plays into French, upon which Voltaire bestowed the most infamous epithets, without any apparent cause. Le Tourneur was born in the year 1736, and died in 1768.

printer, Richard Francklin. Mr. Francklin, in printing the *Craftsman*, often experienced the ministerial vengeance by being prosecuted by the crown, and several times confined in the king's bench. It is true, indeed, that several noblemen and gentlemen subscribed the sum of £50 each, as a compensation to Francklin for his losses; but it is as true that no more than three paid their money, of whom Mr. Pulteney was one. It was by the advice of the latter gentleman, that Mr. Francklin was induced to educate his son\* for the church, with a promise of being provided for by Pulteney, who afterwards forgot his undertaking.

1742, May 22. Died, JOHN BASKET, printer to his majesty. He was master of the company of stationers in 1714, and again in 1715. Mr. Basket had the patent of king's printer assigned over to him by the executors of Newcomb and Hills, and having purchased Tooke and Barber's term of thirty years, obtained a further renewal of thirty years, which gave him a total of sixty years, the last thirty of which were conveyed for the sum of £10,000 to Charles Eyre, esq.

1742, June 27. Died, NATHAN BAILEY, author of a very useful Dictionary, and editor of several classics and school books. He died at Stepney.

1742, March 20. *The Westminster Journal*; or, *New Weekly Miscellany*, No. 17, by Thomas Touchet, of Spring-gardens, esq.

1742, March 5. *The Kendal Weekly Mercury*, No. 427. This paper must have commenced so far back as the year 1733. It was printed and published by Thomas Ashburner, in the Fish Market, post folio, price one penny. Mr. Ashburner succeeded a Mr. Cotton in business.

1743, Feb. 23. Dr. Johnson relinquishes his office of composer of the debates of parliament, and was succeeded by Dr. Hawkesworth. "Johnson's portion of the parliamentary debates was collected into two octavo volumes; to which the editor substituted the real for the fictitious speakers; and these debates, like the orations of Cicero and Demosthenes, ought to be studied by the British youth, as specimens of splendid eloquence, nervous argument, and parliamentary decorum."

1743, Dec. 14. "Received of Mr. Ed. Cave the sum of fifteen guineas in full, for compiling and writing *The Life of Richard Savage, Esq.*,"†

\* Thomas Francklin, D. D. was born in London, about 1736, and educated at Westminster and Cambridge. He was chosen professor of Greek in that university. In 1758 he obtained the vicarage of Ware, to which was afterwards added the rectory of Barsted, in Kent. He was also chaplain in ordinary to the king. He died March 15, 1784. Dr. Francklin translated *Phædria*, *Sophocles*, and *Lucian*, into English; and wrote three plays, the *Earl of Warwick* and *Mabius*, tragedies, and the *Contrast*, a comedy. He also published a volume of *Sermons*, and permitted his name to be prefixed to a translation of Voltaire's works.

† Richard Savage was the natural son of the countess of Macclesfield, by earl Rivers, and born January 16, 1697. This unnatural woman caused him to be brought up without a knowledge of his origin, and framed a story of his death, to prevent his father from leaving him a legacy. By the death of his nurse he found some papers which disclosed the secret of his birth and parentage; but every effort to gain his mother's favour was ineffectual; upon this he wrote his best poem, entitled the *Barstard*. Having

deceased; and in full for all materials thereto applied, and not found by the said Edward Cave, I say, received by me, Sam Johnson; Dec. 14, 1743." Walter Harte, the poet and historian, was one of Johnson's earliest admirers. Soon after the *Life of Savage* was published, Harte, dining with Cave, at St. John's-gate, took occasion to speak very handsomely of the work, which was anonymous. Cave, the next time they met, told Harte that he made a man very happy the other day at his house, by the encomiums he bestowed on the author of *Savage's Life*. "How could that be?" said Harte, "none were present but you and I." Cave replied, "You might have observed, I sent a plate of virtuals behind the screen: there skulked the biographer, one Johnson, whose dress was so shabby that he durst not make his appearance. He overheard our conversation; and your applauding his performance delighted him exceedingly."

1743, March 2. *The Boston Weekly Magazine*. This was the third periodical in North America, and it only reached its fourth week. It was printed on a half sheet of 8vo.

1743. *The Christian History*. This was the second magazine issued at Boston, and originated by the revival under Whitfield and his associates: it was published weekly, half sheet 8vo, till 1735.

1743. *The American Magazine and Historical Chronicle*, edited by Jeremy Gridley. This was also published at Boston, and issued monthly for four years. It consisted of fifty 8vo. pages.

1743. *The Merchant's Magazine*; or, *Factor's Guide*. By R. B. merchant, London: published by Mr. Meadows, price three shillings.

1743, Feb. *Old England*; or, *the Constitutional Journal*. This paper was written to oppose the ministry which succeeded to the long reign of sir Robert Walpole. It had many contributors, the principal of whom was William Guthrie; and lord Chesterfield lent his assistance in the early part of its progress. It was issued weekly for several years, and the dispersers of it were often taken into custody, and punished.

1743. Died, THOMAS OSBORNE a respectable bookseller of London. It is said that *Pamela*, the first work in which Mr. Richardson had an opportunity of displaying his original talents, arose out of a scheme proposed to him by Mr.

the misfortune to kill another man in a drunken quarrel, his mother devised every means she could to get him executed; and when he was condemned she endeavoured to prevent his receiving a royal pardon. However his friends procured him a reprieve; and lord Tyroconnel took him into his family, to whom Savage dedicated his poem of the *Wanderer*. But the temper and conduct of Savage were most unfortunate. He quarrelled with his patron and was discarded. Queen Caroline allowed him a pension of £50, which he lost at her death, and was reduced to great distress. He died in prison at Bristol, where he was confined for a trifling debt, August 4, 1743. Savage had a considerable genius, but it was uncultivated. Johnson was almost the only person who had not alienated himself from this unfortunate son of the muses, and he has embalmed the memory of the companion of his midnight ramblings with the most masterly piece of biography in the English language. Of the *Life of Savage*, it is said, that Johnson wrote forty-eight 8vo. pages in one day; but that day included the night, for he sat up all night to do it.

Osborne and Mr. Rivington, of writing a volume of *Familiar Letters to and from several Persons upon Business and other Subjects*; which he performed with great readiness; and in the progress of it was soon led to expand his thoughts in the two volumes of the *History of Pamela*; which appear to have been written in three months.\* This first introduced him to the literary world; and never was a book of the kind more generally read and admired.† It was even recommended from the pulpit, particularly by Dr. Benjamin Slocock, of Christ Church, Surry.

1744. ROBERT FOULIS, who had commenced the art of printing in the city of Glasgow, in 1740, and executed a good edition of *Demetrius Phalerensis*, in 4to; in 1744 produced his celebrated immaculate edition of *Horace*, the sheets of which were hung up, as printed, within the college of Glasgow, and a reward offered to any person who should discover an error. In the course of this year, his brother Andrew was taken into partnership, and these two printers were so industrious that in thirty years time they produced as many well-printed classics, either in Greek and Latin, or in Greek only, as even Bodoni of Parma, or Barbou of Paris, and are as remarkable for their beauty and exactness as any in the Aldine series.

1744. Cicero's *Cato Major*, with explanatory notes by Benjamin Franklin, LL.D., 8vo. London, 1778. The London editor of this work imposed the name of Dr. Franklin on his title-page, in order the better to sell it. But it is well known to be the work of Mr. Logan, in which Dr. Franklin held no other part than printing the first edition at Philadelphia.

1744. It is stated in Crantz's *History of the United Brethren*, that about this year, a small family printing office was set on foot in the palace of Marienborn, belonging to the counts of Ysenburgh Meerholz, in Wetteravia, (which about the year 1737 became the residence of the ordinary of Moravian brethren,) with intent to print, in small quantities, some pieces which were either not at all designed for the public, or not until they were properly examined and amended; and to distribute them solely among the labourers, both for their own private use and for their revival. But yet it could not be entirely prevented that more members of the congregation, also friends, and even enemies, of theirs, got them into their hands, and the last often sooner than the brethren themselves.

1744. JOHN HENRY MILLER, printer, formerly at Zurich, and afterwards at Philadelphia, set up a press at Marienburg, distant about ten leagues from Dresden, in Upper Saxony, where he published a newspaper. His residence in Marienburg, however, was not of long continuance, and after various peregrinations he finally fixed himself in Pennsylvania, where he ended his days in the year 1782.

\* See Aaron Hill's *Letters*, in his Works, vol. ii. p. 298.

† This must be understood of the first and second volumes only, of which five editions were sold in 1741, the year in which it was published.

1744, May 30. DIED, ALEXANDER POPE, whose celebrity as a poet stood without a rival in his own day, and was not eclipsed till those of Byron. He was born in Lombard-street, London, May 22, 1688, where his father carried on the business of a linen-draper; and being a Catholic he was placed at eight years of age under one Taverner, a priest, who taught him the rudiments of the Latin and Greek together. In 1700, his father retired to a sequestered villa which he had purchased in Windsor forest; and there he produced the first-fruits of his poetic genius, the *Ode on Solitude*. The extreme weakness and deformity of his person inclined him to a studious life; and as he did not require to apply to any profession for his support, he was encouraged by his father to become a poet. In 1704, he wrote his *Pastorals*, and the beginning of a poem entitled *Windsor Forest*, which when published, in 1710, obtained a high praise for melody and versification. At the age of twenty-one appeared his *Essay on Criticism*, which, notwithstanding the youth of the author, excited universal admiration. In 1711, when only twenty-three years of age, he wrote two of the most beautiful of all his original poems, the *Rape of the Lock* and the *Elegy on an unfortunate Lady*, printed in 1712. The former of these is a heroic-comical poem, in five short cantos, and contains more fancy than any of the other poems of its author, though it is exerted only on ludicrous and artificial objects. His *Epistle from Eloisa to Abelard*, and the *Temple of Fame* soon followed, and added to his reputation as an author. In 1713, appeared his proposals for a translation of the *Iliad*, in which he met with uncommon encouragement, and it enabled him to purchase a house at Twickenham, whither he removed with his parents in 1715. After completing the *Iliad*, he undertook the *Odyssey*, for which also he experienced a liberal subscription. He was, however, materially assisted in these works by the learning and abilities of others, particularly Broome,\* Fenton,† and Parnell.‡ The notes from Eustathius were chiefly extracted by Mr. Jortin. In 1721, our author published an edition of Shakspeare, which shows that therein

\* William Broome was born in Cheshire, and educated at Eton and Cambridge, and entered into orders. For writing notes on the *Iliad* and translating part of the *Odyssey*, he received £300 and one hundred copies. A difference afterwards taking place between him and Pope, he was placed in the *Dunciad*. In 1723 Mr. Broome was created L. L. D. He obtained the rectory of Pulham, in Norfolk, and the vicarage of Eye, in Suffolk; and died at Bath, November 16, 1745. A volume of his poems has been printed.

† Elijah Fenton assisted Pope in the translation of the *Odyssey*, and was the author of some sprightly verses. Lintot paid him in 1716 for his *Miscellanies*, £21 16s. and for more *Miscellanies*, £13 4s. 3d. He was born at Sibelton, in Staffordshire, May 30, 1683, and educated at Cambridge, but refusing to take the oaths to William and Mary, he obtained no church preferment. He died at East-hampstead, in Berkshire, July 13, 1730. He wrote the *Life of Milton*, and the tragedy of *Marianna*.

‡ Thomas Parnell was a learned divine and ingenious poet; his moral tale of the *Hermit* is still held in estimation. He wrote several papers in the *Spectator* and *Guardian*, and was the intimate friend of Pope and Swift. He was born in Dublin in 1679, and died at Chester in July, 1717.

he consulted his fortune more than his fame. The reputation he had acquired by the success, as well as the merit of his works, procured him numerous enemies among writers of the minor classes, from whom he experienced frequent splenetic attacks. Perhaps it would have been more to his honour had he taken no notice of them; but in 1727, he vented his resentment in a mock-heroic, entitled the *Dunciad*, in which he took more than warrantable revenge; and, what was worse, exposed to ridicule many persons who had not given him any offence. In 1729, by the advice of lord Bolingbroke, he turned his pen to a moral and philosophical subject, the result was his *Essay on Man*, an ethical poem, addressed to that statesman. He next wrote satires, in which he attacked several persons of rank. Pope was engaged in preparing a complete edition of his works, when he was carried off by a dropsy in the chest. He bequeathed the property of his works to Dr. Warburton, who published a collection of them with notes, in 1751, in 9 vols. 8vo. Dr. Joseph War-ton also published an edition, to which he prefixed, what he had before printed, an admirable essay on the *Genius and Writings of Pope*.

Pope professed to have learned his poetry from Dryden, whom, whenever an opportunity was presented, he praised through his whole life with unvaried liberality; and perhaps his character may receive some illustration, if he be compared with his master. Integrity of understanding and nicety of discernment were not allotted in a less proportion to Dryden than to Pope. The rectitude of Dryden's mind was sufficiently shown by the dismissal of his poetical prejudices, and the rejection of unnatural thoughts and rugged numbers. But Dryden never desired to apply all the judgment that he had. He wrote, and professed to write, merely for the people; and when he pleased others, he contented himself. Pope was not content to satisfy; he desired to excel, and therefore always endeavoured to do his best; he did not court the candour, but dared the judgment of his reader, and, expecting no indulgence from others, he showed none to himself: he kept his pieces very long in his hands, while he considered and reconsidered them. In acquired knowledge, the superiority must be allowed to Dryden, whose education was more scholastic, and who before he became an author had been allowed more time for study, with better means of information. The notions of Dryden were formed by comprehensive speculation, and those of Pope by minute attention. There is more dignity in the knowledge of Dryden, and more certainty in that of Pope. Poetry was not the sole praise of either; for both excelled likewise in prose; but Pope did not borrow his prose from his predecessor. Of genius, that power which constitutes a poet; that quality without which judgment is cold and knowledge is inert; that energy which collects, combines, amplifies, and animates; the superiority must, with some hesitation, be allowed to Dryden. It is not to be inferred that of this poetical vigour

Pope had only a little, because Dryden had more, for every other writer since Milton must give place to Pope; and even of Dryden it must be said, that, if he has brighter paragraphs, he has not better poems. Dryden's performances were always hasty, either excited by some external occasion, or extorted by domestic necessity; he composed without consideration, and published without correction. If the flights of Dryden therefore are higher, Pope continues longer on the wing. If of Dryden's fire the blaze is brighter, of Pope's the heat is more regular and constant. Dryden often surpasses expectation, and Pope never falls below it. Dryden is read with frequent astonishment, and Pope with perpetual delight.

The following impromptu on some of the English poets, from Chaucer to Pope, by the rev. William Clarke,\* may not be unacceptable to the literary reader.

See the fathers of verse,  
In their rough uncombed dress,  
Old Chaucer and Gower array'd;  
And that fairy-led muse,  
Which in Spenser we lose,  
By fashion's false power bewray'd.

In Shakspeare we trace  
All nature's full grace,  
Beyond it his touches admire;  
And in Fletcher we view  
Whate'er fancy could do,  
By Beaumont's correcting his fire.

Here's rare surly Ben,  
Whose more learned pen  
Gave laws to the stage and the pit;  
Here's Milton can boast  
His *Paradise Lost*;  
And Cowley his virtue and wit.

Next Butler, who paints  
The zeal-gifted saints;  
And Waller's politeness and ease;  
Then Dryden, whose lays  
Deserv'd his own bays,  
And, labour'd or negligent, please.

There sportively Prior  
Sweeps o'er the whole lyre,  
With fingers and fancy divine;  
While Addison's muse  
Does each virtue infuse,  
Clear, chaste, and correct, in each line.

To close the whole scene,  
Lo! Pope's moral spleen;  
Ye knaves, and ye dunces, beware!  
Like lightning he darts  
The keen shaft at your hearts,  
Your heads are not worthy his care.

1744, Jan. *The Meddler*, No. 1.

1744, April 1. *The Female Spectator*, monthly.

This periodical was the production of Mrs. Eliza Heywood,† and was carried on till March, 1746. As soon as completed, they were immediately

\* Author of *The Connexion of the Roman, Saxon, and English Coins; deducing the Antiquities, Customs, and Manners of each People to modern Times; particularly the Origin of Feudal Tenures, and of Parliaments: illustrated throughout with critical and historical Remarks on various Authors, both sacred and profane.* He was born at Haghmon abbey, in Shropshire, 1696, and educated at Cambridge. He obtained the rectory of Buxted, in Sussex, and in 1738 he was made a prebendary of Chichester. He died at Amport, Oct. 31, 1771.

† Eliza Heywood was the daughter of a tradesman, and born in London in 1693. She early imbibed a taste for dramatic poetry and the stage; and having received a good education, and, though not beautiful, possessing a fine

collected into four volumes 12mo., and have gone through several impressions. The seventh and last was printed in 1771.

1745. *The Biographia Britannica* commenced. This work was undertaken by John Campbell, and published in weekly numbers. It was completed in seven volumes folio. In 1777 a new edition was begun under the superintendence of Dr. Andrew Kippis; it is a work of considerable magnitude, and still holds a respectable station in our national literature.

1745, Oct. 19. *Died*, JONATHAN SWIFT, the celebrated dean of St. Patrick's, Dublin. Of a life so various, and so full of business as Swift's we know not what part we could select consistent with the limits of this work, that would not rather excite curiosity than gratify it. Swift was born in Dublin, November 30, 1667, at No. 7, Hoey's-court. The earlier part of his life was spent chiefly in England, and in connexion with the Whigs; he afterwards became a Tory,\* and was the friend of Pope, Bolingbroke, and other wits of that party. His works are chiefly of a political character, and were written only to serve a temporary end; yet they are such models of satirical composition, that they still continue to form a constituent portion of every good English library. They are written with great plainness, force, and intrepidity, and always advance at once to the matter in dispute. Their distinguishing feature, however, is the force and vehemence of the invective in which they abound; the copiousness, the steadiness, the perseverance, and the dexterity, with which abuse and ridicule are showered upon the adversary. This was, beyond all doubt, Swift's great talent, and

person, she made her appearance on the Dublin stage in 1715. Neither in this attempt, however, nor in writing for the stage, had she any success, and, therefore, turned her attention to novel writing, in which her first productions, entitled the *Court of Caramania*, and the *New Utopia*, owing to their immorality, involved her in considerable disgrace. Her subsequent life and writings, however, amply atoned for the errors of her youth; as she became undeviatingly correct in the former, and in the latter it was her constant aim to inculcate the purest precepts of morality and decorum. Her imagination was fertile, her industry great, and in the course of the last twelve years of her life, she produced, in all, nineteen volumes 12mo., independent of pamphlets and miscellaneous pieces. She died in 1756, in the sixty-fourth year of her age.

\* Hallam, in his *Constitutional History*, thus describes the two great parties which have so long divided the state:—"These parties differ above all in this respect, that to a tory, the constitution merely as such, is an extreme point, beyond which he never ventures to look, and from which he holds it impossible ever to depart, while a whig regards all forms of government as subordinate to the public good, and consequently subject to modification when they cease to answer their ends. Within these limits, to which he confines himself as religiously as the tory to his narrower circumspection, the whig, rejecting all useless innovations, has a natural tendency to, and the tory a marked aversion for, all political amelioration. The one insists with pleasure on the liberty and rights of the human race; the other declaims on the evils of sedition, and the rights of kings. Though both admit as a common principle the maintenance of the constitution, yet the one has particularly at heart the privileges of the people, and the other the prerogative of the crown. Accordingly it is possible that passions and events may conduct the tory to set up a despotism, and the whig to overturn the monarchy. The first is an enemy to the liberty of the press and free enquiry; the second is favourable to both. In a word, the principle of one is conservation, that of the other amelioration."

the weapon by which he made himself formidable. His earliest work of importance was his *Tale of a Tub*, published anonymously in 1704, and designed as a burlesque of the disputes among the Catholics, Episcopalians, and Presbyterians. For some years after, he was employed entirely in political and occasional writings, the most remarkable of which was his pamphlet called *The Conduct of the Allies*, published in 1711, by which he disposed the nation to submit to a peace, then anxiously desired by the ministry. The displacement of his party in 1714, by George I., sent him into retirement in Ireland, and he scarcely resumed his pen till 1724, when he published a series of letters under the signature of M. B. Drapier, already alluded to. By these and other tracts, in behalf of the popular party in Ireland, he became the idol of the common people, and is said to have possessed far more real power than the highest of the constituted authorities. An archbishop, who was also a lord-justice of the kingdom, once taxed him with exasperating the mob; when Swift promptly refuted the charge by saying, "If I had lifted up my little finger they would have torn you to pieces." These writings, however, did not so much proceed from any real sympathy with the people, as from a hatred of the party who had then possession of the government. The most perfect of the larger compositions of Swift, and that by which he will probably be longest remembered, is the extraordinary work called *Gulliver's Travels*,\* which appeared in 1726, and was altogether a novelty in English literature. Its main design is, under the form of fictitious travels, to satirize mankind and the institutions of civilized countries; but the scenes and nations which it describes are so wonderful and amusing, that the book is as great a favourite with children, as with those who delight in contemplating the imperfections of human nature. The curiosity it excited at its first appearance was unbounded; it was the universal topic of discourse; prints from it filled the shop windows; it gave denominations to fashions; and, what is a stronger proof of its popularity, it introduced words which have become a part of the English language. In the latter part of his life, he published another burlesque on the social world, under the title of *Polite Conversation*, being an almost exact representation of the unpremeditated talk of ordinary persons. A still more ludicrous and satirical work appeared after his death, under the title of *Directions to Servants*.† Swift also wrote many letters, which rank among the best compositions of that kind

\* It is said that Swift never received any money for his writings, except for *Gulliver's Travels*; when Pope interfered with the bookseller, and obtained £300 for the copy, which had been dropt from a coach window at the bookseller's door late one night.

† Printed by George Faulkner, Dublin, who, writing to Mr. W. Bowyer, says, "as you are famous for writing prefaces, pray help me to one for *Advice to Servants*." November, 1745. The principal interest which Faulkner could claim in the dean was his having suffered from political prosecution, a fate which, sooner or later, befell most of Swift's publishers.

in the language, and a considerable number of satirical and humorous poems. The chief characteristics of his prose are, the extensive command which he seems to have possessed over the stores of colloquial language, and the nerve and precision with which he employs it. His great art in satire, is to write as if he were a very simple man, and thus to treat vices, follies, and imperfections without the least scruple or disguise, and consequently to display them in their utmost possible deformity.

In the year 1716, Swift was privately married by Dr. Ashe, then bishop of Clogher, to a lady whom he has celebrated under the name of Stella: she was the daughter of Mr. Johnson, steward to sir William Temple, who at his death left her £1000 in consideration of her father's faithful services. She was a person of great delicacy, extremely beautiful, and equally remarkable for the sweetness of her temper and the poignancy of her wit; her understanding was of the first class, her prudence uncommon, and her piety exemplary. She was guided by virtue in morality, and by sincerity in religion. She had great skill in music, and was perfectly well acquainted with all the lesser arts that employ a lady's leisure. The dean became acquainted with her while he lived with sir William Temple. When she left England is not known; but they continued in the same economy after marriage as before; he living at the deanery, and she in lodgings on the other side of the Liffy. He never openly acknowledged her as his wife, nor was there any thing in their behaviour inconsistent with decorum, or beyond the limits of Platonic love. And such care was always taken to summon witnesses, that perhaps it would be impossible to prove their having been ever together but in the presence of at least a third person. A conduct so very extraordinary in itself could not fail of giving rise to various reflections. But this is one of those actions whose true sources perhaps will never be discovered.

In 1736 Swift was seized with a violent fit of giddiness when he was writing a satirical poem, called the *Legion Club*, which was so dreadful, that he left the poem unfinished, and never after attempted a composition of any length either in verse or prose. From the year 1739 till the latter end of 1741, his friends found his passions so violent and ungovernable, his memory so decayed, and his reason so depraved, that they were obliged to keep all strangers from him; for till then he had not appeared totally incapable of conversation; but at the beginning of the year 1742, the small remains of his understanding became entirely confused, and his rage increased absolutely to a degree of madness. In this miserable state he continued for some time; but at last sunk into a quiet, speechless, idiot, dragging out the remainder of his life in that helpless situation. Swift for some years before this terrible catastrophe, was often attacked with giddiness, and found his memory gradually decay, which gave him reason to apprehend his fate. He left all his fortune, which, when some few

legacies were paid, amounted to near £11,000, to build and endow an hospital for idiots and lunatics. A charity remarkably generous, as the unhappy persons who receive the benefit, must for ever remain insensible of their benefactor. Thus died Dr. Swift, whose capacity and strength of mind were undoubtedly equal to any task whatever. His pride, or to use a softer name, his ambition, was boundless; but his views were checked in his younger years, and the effects of that disappointment were visible in all his actions. He was sour and severe, but not absolutely ill-natured. He was sociable only to particular friends, and only to them at particular hours. He was by his abilities rendered superior to envy. He was undisguised and perfectly serene. He performed the duties of the church with great punctuality, and a decent degree of devotion. He read prayers rather in a strong nervous voice than in a graceful manner; and, although he has often been accused of irreligion, nothing of that kind appeared in his conversation or behaviour.\* In his friendships he was constant and undisguised. He was the same in his enmities. He generally spoke as he thought, in all companies, and at all seasons.

1745. The following booksellers appear in the list of bankrupts: CESAR WARD, of York; WILLIAM RAVEN, of St. Andrew's, Holborn, November; and THOMAS HARRIS, of London Bridge, December.

1745, Dec. 24. *The Manchester Magazine*, of this date, gives a circumstantial account of the movements of the army under prince Charles Edward, during its progress to the south. Some of the adherents of the prince, during his stay in Manchester, went to the printing-office of Mr. Whitworth, proprietor of the *Magazine*, and compelled Thomas Bradbury, a journeyman, (in the absence of his master) to print several manifestos and other papers, which were produced on their trial and led to their condemnation. Mr. Whitworth continued his newspaper till about the year 1750, but his death we cannot find.

1745. *The British Courant; or Preston Journal*, printed by James Stanley and John Moou, at their shop in the market-place, Preston. This newspaper is embellished with a wood-cut on each side of the title-page, viz. the holy lamb, couchant, being the arms of the town; and Britannia, the genius of England.

1745. *The Agreeable Miscellany; or, something to please every man's taste*. Printed by Mr. Ashburner, at Kendal, in Westmoreland. This

\* The only preferments which Swift obtained in Ireland, previous to the deanery of St. Patrick's, was Laracor and Rathbegan; the former of which was worth about £200 per annum, and the latter about £60. When he took possession of these two livings, he went to reside at Laracor, and gave public notice to his parishioners, that he intended to read prayers every Wednesday and Friday. Upon the subsequent Wednesday, the bell was rung, and the rector attended at his desk, when, after having sat some time, and finding the congregation to consist only of himself and his clerk, Roger, he began: "Dearly beloved Roger, the scripture moveth you and me in sundry places," and then proceeded regularly through the whole service.

was a small pamphlet-like miscellany, in sixteen 8vo. pages, published once a fortnight, price one penny.

1745. *The Remembrancer*. This was a weekly paper undertaken by Mr. James Ralph, a short time previous to the rebellion, to serve the purposes of lord Melcombe's party; and in his lordship's *Diary* Ralph is frequently mentioned with distinguished approbation.

1745, Nov. 5. *The True Patriot*. This periodical was written by Henry Fielding, who, zealously attached to the house of Hanover and the protestant religion, exerted all his efforts in their cause, and it was not without its effect in exciting the sentiments of loyalty, and a love for the constitution in the breasts of his countrymen.

1745. *The Entertainer*, No. 1.

1746, Jan. 10. In the *Caledonian Mercury* of this date we find the following notice. "The rebels carried off from Glasgow a printing press, types, and other materials for printing (printing Prince Charles's Declaration, &c.) together with servants to work in that way." They took from one printer a press, from another some types, and from a third chases, furniture, &c. This happened when the insurgents were on their final retreat northward.

1746. The following names appear in the list of bankrupts: DAYDEN LEACH, printer, of St. Paul's, Corent Garden; Andrew Johannot, of Eynsford, Kent, paper maker; and William Smith, stationer, of Preston, Lancashire.

1746. HENRY FIELDING produced his immitable novel of *Tom Jones*. Whether we consider the fruitfulness of its invention, the admirable delineation and variety of its characters, the conduct of the story, or the winding up of the whole, it will probably ever continue to be one of the most popular novels ever written. It is said, that Fielding being much distressed, sold the copy to a bookseller for £25, on condition of being paid by a certain day. In the meantime, he showed the manuscript to Thomson, author of the *Seasons*, who was immediately struck with its merit, and advised Fielding by all means to get free from the bargain, which he did without much difficulty. Thomson recommended the work to Andrew Millar, the noted bookseller, and the parties met at a tavern over a beef-steak and a bottle. Mr. Millar began with saying, "Mr. Fielding, I always determine on affairs of this sort at once, and never change my offer, I will not give one farthing more than £200." "£200!" cried Fielding. "Yes," said Millar, "and not one farthing more." Fielding, whose surprise arose from joy, and not disappointment, shook him by the hand, sealed the bargain, and ordered in two bottles of wine. Mr. Millar got a very large sum by the sale of the work. He, at different times during his life, assisted Fielding to the amount of £2,500, which debt he cancelled in his will.

1746, April. *The Aberdeen Journal, or North British Magazine*, published by Mr. James Chalmers, printer to the town and university of Aberdeen. This was the first newspaper or periodical work in the north of the Frith of

Forth, and the origin of it was the account which he printed of the battle of Culloden. From some cause, however, the paper was not finally established till the month of January, 1748.

1746, July 20. *The Fool*, No. 1. This paper, chiefly devoted to politics, was published for about eight months in the *Daily Gazetteer*.

1746, Aug. 2. *The Parrot*. This was the production of Mrs. Haywood and her associates, of the *Female Spectator*. It consists but of nine numbers, which were published weekly, price fourpence, and sold by Mr. Gardyner, Lincoln's Inn Fields.

1746. *Museum; or, Literary and Historical Register*, No. 1.

1747, March 15. *Died*, BENJAMIN NUTT, printer, in the Savoy. JOHN NUTT, bookseller, in the Savoy, died before 1716; his widow, Elizabeth, was living in 1738. EDWARD NUTT was a bookseller, at the Royal Exchange. There was a RICHARD NUTT, a printer, in the Savoy, who died March 11, 1780, aged eighty years.

1747. THOMAS HOWE, a native of Ireland, commenced the art of printing at Basseterre, the capital of the island of St. Christopher's, in the West Indies. The art may have been introduced two years earlier. See an account of George Howe, son of the above, under the year 1824.

1747, Aug. 7. *Died*, MICHAEL MAITTAIRE. He was born in the year 1668, and was no doubt of foreign extraction. He was the second master of Westminster school from 1695 till 1699. To him the republic of letters are indebted for many valuable and correct editions of the Greek and Latin classics.

In 1709 he gave the first specimen of his great skill in typographical antiquities, by publishing *Stephanorum Historia, Vitas ipsorum ac Libros complectens*, 8vo., which was followed in 1717 by *Historia Typographorum aliquot Parisiensium, Vitas et Libros complectens*, 8vo. In 1719, *Annales Typographici ab Artis inventa Origine ad Annum MD. Hagæ Com.*, 4to. To this volume is prefixed *Epistolaris de antiquis Quintiliani Editionibus Dissertatio, clarissimo Viro D. Johanni Clerico*. The second volume divided into two parts, and continued to the year 1536, was published at the Hague in 1722, introduced by a letter of John Toland, under the title of *Conjectura verosimilis de primâ Typographiæ Inventione*. The third volume, from the same press, in two parts, continued to 1557; and, by an Appendix to 1664, in 1725. In 1733 was published at Amsterdam what is usually considered as the fourth volume, under the title of *Annales Typographici ab Artis inventa Origine, ad Annum 1664. Operâ Mich. Maittaire, A.M. Editio novo auctior et emendatior, Tomi Primi Pars posterior*. The awkwardness of this title has induced many collectors to dispose of their first volume, as thinking it superseded by the second edition; but this is by no means the case; the volume of 1719 being equally necessary to complete the set as that of 1733, which is a revision of all the former volumes. In 1741 this excellent work was closed at London, by

*Annalium Typographorum Tomus Quintus et ultimus; Indicem in Tomos quatuor præcunctes complectens*; divided (like the two preceding volumes) into two parts. The whole work, therefore, when properly bound, consists either of five volumes, or of nine; and in nine volumes it was properly described in the catalogue of Dr. Askew, whose elegant copy was sold to Mr. Shaftoe for £10 5s.

1747, Sept. 9. Died, THOMAS RUDDIMAN, jun. principal manager of the *Caledonian Mercury*, to which office he had been appointed when James Grant\* rushed into rebellion, in November, 1745. During these unsettled times the *Caledonian Mercury*† was regarded with peculiar jealousy, and its circulation was much impeded by the ruling powers in Scotland, even after the terrors of insurrection had ceased. For an unlucky paragraph, which had been copied from an English newspaper, in significant italics, was young Ruddiman imprisoned, in December, 1746. The merit and solicitude of his father, obtained his discharge at the end of six weeks imprisonment. But the prisoner had contracted a disease in the tolbooth of Edinburgh, which brought him to his grave at the early age of thirty-three years. His father sought consolation from his piety, as he could find no reparation for this wrong which was done by the jealousy, rather than the injustice of power.

It was stated by Mr. Boswell, "that Ruddiman's son attended the pretender in his marches with his printing-press, and printed his declarations; and that, being for this imprisoned, Mr. Ruddiman, by the advice of lord Achinleck, applied for his discharge to Archibald duke of Argyle, by a letter, in which he called the late rebellion, the *late insurgency*, and by no persuasion, could he be made to alter it." Let us examine, says Mr. Chalmers, this *honest tale* a little. The Ruddimans, indeed, may have printed the pretender's declarations, while his power was irresistible at Edinburgh, while a sergeant and a guard surrounded the printing-house. But, neither the persons nor the press, for a moment attended the insurgents, who had no printer with them when they arrived at Glasgow. Thomas Ruddiman, the younger, was imprisoned, as we have seen, for adopting, at a subsequent period, a harmless sarcasm from an English newspaper.

From the death of his son, Mr. Ruddiman found it necessary to make a new arrangement of his typographical affairs, though it made little change in his usual habits. His daughter Alison, being her brother's executor and heir, became

in this manner proprietor of his share of the printing-house which he had enjoyed since the 13th of August, 1739. But her situation making the business of a printer an unsuitable property, she was thereby induced to convey her interest to her father. On May 16, 1748, Mr. Ruddiman entered into "a contract of copartnery," with his brother Walter, "to carry on the printing business, and the newspaper, as formerly, share and share alike." Considering that this project might be advantageous to their posterity, they now settled the printing-house, and the *Caledonian Mercury*, on their nearest and lawful heirs respectively, in lineal descent.\*

1747, Jan. The *Universal Magazine*, No. 1, published monthly, according to act of parliament, by John Hinton, at the King's Arms, in St. Paul's church yard, London, price sixpence.

At this period, copious, pompous, and florid title-pages, though reprobated by Swift, ridiculed by Arbuthnot, and cautiously launched by every respectable author, had yet, in defiance to common sense, obtained that kind of toleration that we often see given to things of far greater importance. And, it appears, that, a desire to repress it, first gave Mr. Griffiths the idea of the *Monthly Review*; as he says, in his first advertisement, "The abuse of title-pages is obviously come to such a pass, that few readers care to take in a book, any more than a servant without a character." This kind of titular puffing, which, it is said, used to put Mr. John Barber so much out of temper, that he was ready to turn an author out of his shop if the frontispiece of his manuscript exceeded the bounds of moderation. The following title-page of the *Universal Magazine* is a perfect advertisement, and affords a striking contrast to the brief and undescriptive titles which we so often see in modern works :

*The Universal Magazine of Knowledge and Pleasure; containing—*

News,	Geography,	Gardening,
Letters,	Voyages,	Cookery,
Debates,	Criticism,	Chemistry,
Poetry,	Translations,	Mechanicks,
Music,	Philosophy,	Trade,
Biography,	Mathematics,	Navigation,
History,	Husbandry,	Architecture,

and other Arts and Sciences, which may render it instructive and Entertaining to Gentry, Merchants, Farmers, and Tradesmen; to which occasionally will be added an impartial account of Books in several Languages, and of the State of Learning in Europe: also of the Stage, new Operas, Plays, and Oratorios.

It ought to be remarked that this magazine was one of the earliest and most permanently successful rivals of the *Gentleman's Magazine*, and, after extending to one hundred and twelve volumes, it seems to have been discontinued in 1803. In point of literary rank,—in minute researches,—and local illustrations, it never ap-

\* In the typographical annals of Scotland, it is a remarkable fact; that a printing-house, and its materials, did not descend to executors, as chattels, but to heirs, as inheritances. And, owing to this peculiarity in the laws of Scotland, the heirs of Andrew Anderson continued to be the king's printers for upwards of thirty years, during the reigns of Charles II. James II. William III. and Anne.

\* James Grant had an equal share in the *Caledonian Mercury* with Thomas and Walter Ruddiman. Walter was the cashier, and Grant undertook to collect the foreign and domestic intelligence, to attend the press, and publish the paper, of which 1400 were sold every week. On Nov. 1, 1745, James Grant renounced his part, and sacrificing his prudence to his zeal, joined the insurgents, and finally found his safety in France.

† It was deemed prudent to publish the *Mercury* anonymously from Sept. 25, to Nov. 25, 1745; yet Ruddiman did not obtain impunity from his circumspection, and during the calamitous summer of 1745, he retired, from the disturbed scenes of Edinburgh, to the sequestered quiet of the country.

proached the venerable publication which preceded and survived it; still the *Universal* was judiciously planned and respectably executed, and deserved the success which it obtained. It is also recommended to us, by the fact, that it was one of the earliest periodicals not exclusively addressed to "the gentry," and condescended to number "farmers and tradesmen" among those to whom it looked for support.

1747. *Bibliothèque Britannique*. This useful account of English books begins in 1733, and closes in 1747, Hague, 23 vols. It was written by some literary Frenchmen, noticed by La Croze in his *Voyage Littéraire*, who designates the writers in this most tantalizing manner: "Les auteurs sont gens de mérite, et qui entendent tous parfaitement l'Anglois; Messrs. S. B. le M. D. et le savant Mr. D." Posterity, says D'Israeli, has been partially let into the secret: De Missy was one of the contributors, and Warburton communicated his project of an edition of *Velleius Paterculus*.

1748. A trial concerning the right of literary property between the company of stationers of London and the printers of Scotland, the issue of which was unfavourable to the plaintiffs.

1748. HOUBIGANT, the well-known Hebrew critic, set up a press at his country house in the village of Avilly, distant about twenty-five miles from Paris, and there printed his *Hebrew Psalter*, one hundred copies only struck off, which bears the imprint *Lugduni Batavorum*. In 1763 he printed the *Proverbe*, in Hebrew, and also some publications in French.

1748. BENJAMIN MECOM, of Boston, opened a printing-office at St. John's, the capital of the island of Antigua, and commenced the publication of a newspaper.

1748, Aug. 9. ALEXANDER BLACKWELL, M.D. was beheaded at Stockholm, in Sweden. He was the son of the rev. Thos. Blackwell, principal of the Mareschal college, Aberdeen. Having received a liberal education, he studied physic at Leyden, and acquired a proficiency in the modern languages. On his return home he married a gentleman's daughter\* in the neighbourhood of Aberdeen, and proposed practising physic in that part of the kingdom; but in about two years, finding his expectations disappointed, he came to London, where he met with still less encouragement as a physician, and commenced corrector of the press in the office of Mr. Wilkins. After some years spent in this employment, he set up as a printer himself, and carried on several large works, till 1734, when he became a bankrupt. How he passed his time for the next four years

is not precisely ascertained; but in or about the year 1740 he went to Sweden, again assumed the medical profession, and was well received in that capacity; till, turning projector, he laid a scheme before his Swedish majesty for draining the fens and marshes, and thousands were employed in prosecuting it under the doctor's direction, for which he had some allowance from the king. This scheme succeeded so well, he turned his thoughts to others of greater importance, which in the end proved fatal to him. He was suspected of being concerned in a plot with count Tessin, and was tortured; which not producing a confessing, he was beheaded. Dr. Blackwell was possessed of a good natural genius, but was somewhat flighty, and a little conceited. His conversation, however, was facetious and agreeable; and he might be considered on the whole as a well-bred accomplished gentleman. The British ambassador was recalled from Sweden in 1648, among other reasons, for the imputations thrown on his Britannic majesty in the trial of Dr. Alexander Blackwell.

1748, Sept. 27. DIED, JAMES THOMSON, author of the *Seasons*, *Castle of Indolence*, and other poems of merit. He was the son of a clergyman, and born at Edman, in Roxburghshire, September 11, 1700, and educated for the Scottish church; but at an early period of life he removed to London, where, in 1726, he published his poem of *Winter*, which lay unnoticed for a considerable time, when Mr. Michell, a gentleman of taste, promulgated its merit in the best circles, and then all was right, *Summer*, *Spring*, and *Autumn*, successively appeared, and formed what now passes by the general title of his *Seasons*. These poems are in blank verse, and describe the various natural appearances of the year, in a very rich and eloquent, and often sublime style of language. In 1729, he sold *Sophonisba*, a tragedy, and *Spring*, for £137 10s. to Andrew Millar,\* the eminent bookseller; and for the *Seasons*, and some other pieces, he obtained £105 from John Millar, which were again sold to Andrew Millar nine years afterwards, for the same sum; and when Andrew Millar died, in 1768, his executors sold the whole copyright to the trade for £505. Thomson wrote another large poem, entitled *Liberty*, which, being upon an abstract subject, never became popular, though it contains many fine passages. The *Castle of Indolence* was designed as a kind of satire on his own soft and lethargic character, but is nevertheless the most perfect, and perhaps the most poetical of all his compositions. Though slothful in the extreme, he

\* A curious *Herbal*, containing five hundred cuts of the most useful Plants which are now used in the practice of Physick, engraved on folio copper-plates, after drawings taken from the life, by Elizabeth Blackwell. To which is added, a short Description of the Plants, and their common uses in physick, 1739, 2 vols. folio. To the first volume is prefixed a recommendation from the distinguished names of Dr. Mead, Dr. Telsier, Dr. Stuart, Dr. Douglas, Dr. Sherard, Mr. Cheselden, Mr. Miller, Mr. Rand, and Mr. Nickolls, dated Oct. 1, 1735; and another from the president and censors of the college of physicians, dated July 1, 1737.

\* When Thomson first went to London, he took up his abode with Mr. Park Esqerton, bookseller, near Whitehall, and finished his poem of *Winter* in an apartment over the shop. It remained on his shelves a long time unnoticed; but after Thomson began to gain some reputation as a poet, he either went himself, or was taken by Mallet, to Andrew Millar, in the Strand, with whom he entered into new engagements for printing his works, which so much incensed his patron, and his countryman also, that they were never afterwards cordially reconciled, although lord Lyttleton took uncommon pains to mediate between them.

was a very amiable and benevolent man; he was in person large and ungainly, with a heavy unanimated countenance, and nothing in his appearance or manner in mixed society indicating the man of genius or refinement. No poet has deserved more praise for the moral tenor of his works. Undoubted philanthropy, enlarged ideas of the dignity of man, and of his rights; love of virtue, public and private, and of a devotional spirit, narrowed by no views of sect or party, give soul to his verse, when not merely descriptive: and no man can rise from the perusal of his pages, without melioration of his principles or feelings. His death was occasioned by a cold caught while sailing upon the Thames: he was buried under a plain stone in Richmond church.

1748. *Died*, EDMUND CURLL, a noted bookseller, at the sign of the Bible, Covent Garden, rendered memorable by Pope, in his *Dunciad*.

In 1721, upon Curll printing the *Life of the Duke of Buckingham*, and pirating his works, an order was made by the house of lords, declaring "that whosoever should presume to print any account of the *Life*, the *Letters*, or other works, of any deceased peer, without the consent of his heirs or executors, should be punished as guilty of a breach of privilege of this house."

The memory of Edmund Curll has been transmitted to posterity with an obloquy more severe than he deserved. Whatever were his demerits in having occasionally published works that the present age would very properly consider too licentious, he certainly deserves commendation for his industry in preserving our national remains. And it may perhaps be added that he did not publish a single volume but what, midst a profusion of base metal, contained some precious ore, some valuable reliques, which future collectors could no where else have found.

HENRY CURLL, son of the above, was also a bookseller, in Bow-street, Covent Garden. He kept a separate shop in Henrietta-street.

1748, Nov. 7. In the *Boston Evening Post*, edited by Thos. Fleet, already noticed at page 644, ante, is inserted the following humorous advertisement: "Choice Pennsylvania tobacco paper, to be sold by the publishers of this paper, at the Heart and Crown: where may also be had the BVLIS or Indulgences of the present pope Urban VIII. either by the single bull, quire, or ream, at a much cheaper rate than they can be purchased of the French or Spanish priests, and yet will be warrantable to be of the same advantage to the possessors."

These bulls, or indulgences of the pope, were printed on one side of a small sheet; several bales of them were taken in a Spanish ship captured by an English cruiser, and sent into Boston. Fleet purchased a very large quantity at a low price, and printed various editions of ballads on the backs of them. One side of the sheet was blank, and the paper very good; one bull answered for two half-sheet ballads, or songs, such as *Black-eyed Susan*, *Teague's ramble to the camp*, &c.

1748, Nov. 25. Dr. Johnson disposes of *The Vanity of Human Wishes*, to Dodsley, for fifteen

guineas, reserving to its author the right of printing one edition.

1748. SAMUEL RICHARDSON produced the two first volumes of *Clarissa Harlowe*; these were soon succeeded by a third and fourth volume; and then, after an interval of some months, four more volumes completed the narrative. The production of *Clarissa*, perhaps the most pathetic tale ever published, at once elevated its author to the highest rank among novelists, and has secured to him an immortality to which very few writers, in the department which he cultivated, can ever hope to aspire. In the character of *Clarissa*, Richardson has presented us with a picture of nearly female perfection, a delineation which, unless in the hands of a great master, would be apt to produce a formal insipidity; but the heroine of our author passes through such severe trials, through distresses so minutely described, yet so faithfully true to nature, that the interest excited in her behalf rises in every scene, and at length becomes poignantly keen. "It is probable," says Dr. Drake, "that no book, in any language, ever occasioned so many tears to flow, as the *Clarissa* of Richardson." "The tale," says sir Walter Scott, "is very simple; but the scene is laid in a higher rank of life, the characters are drawn with a bolder pencil, and the whole accompaniments are of a far loftier mood."

1748. *The Jacobite's Journal*. This paper appeared on the decease of the *True Patriot*, and was written by the same author.

1748, Oct. *The Mitre and Crown*, No. 1.

1749, May. *The Monthly Review*, No. 1. This work was commenced by Mr. Ralph Griffiths, bookseller, in London, which he edited, with unremitting perseverance, for fifty-four years. The first number was published at the sign of the Dunciad, St. Paul's church yard, whence in 1754 Mr. Griffiths removed to Paternoster-row, and in 1759 into the Strand, still retaining the sign of the Dunciad. In 1764 Mr. Thomas Becket, a very respectable bookseller, in the Strand, became the publisher. When the *Monthly Review* started there was no regular established Literary Review in Great Britain; nor was this one very successful on its first publication. Several times it was about to be abandoned, as Dr. Griffiths often told his friends; but patience, perseverance, and attention, surmounted every obstacle, and procured it a firm establishment. At this period the *Gentleman's Magazine* occasionally noticed works of genius; but much more frequently those of a political or party tendency, in which all the world knows that genius is the last thing expected, or perhaps admired. The *Monthly Review* has this singular circumstance attending its introduction, that it came into the world almost unannounced. In contradiction to the promises, parade, and verbosity, which are generally the precursors of periodical works, the two first lines of an advertisement, which scarcely contains twenty, most truly state, that "Undertakings which, in their execution, carry the designation of their use, need very little preface."

1749, Oct. 19. Died, WILLIAM GED, an ingenious though unsuccessful artist, who was a goldsmith in Edinburgh, deserves to be recorded for his attempt to introduce an improvement in the art of printing, viz., *Stereotype Printing*. In 1781, Mr. Nichols published an interesting pamphlet, entitled *Biographical Memoirs of William Ged*; including a particular account of his progress in the art of block-printing.\* The first part of the pamphlet, as the editor informs us, was printed from a manuscript dictated by Ged, some time before his death; the second part was written by his daughter, for whose benefit the profits of the publication were intended; the third was a copy of proposals that had been published by Mr. Ged's son, in 1751, for reviving his father's art; and to the whole was added Mr. Mores's narrative of block-printing. From this publication it appears, that so far back as 1725, Mr. Ged had begun to prosecute plate making. In 1727 he entered into a contract with a person who had a little capital, but who, on conversing with some printer, got so intimidated, that at the end of two years he had laid out only twenty-two pounds. In 1729 he entered into a new contract with a Mr. Fenner,† Thomas James a type-founder, and John James an architect. On April 23, 1731, the above partners having applied to the university of Cambridge for the privilege of printing Bibles and common Prayer-books, with blocks, instead of single types, a lease was sealed to them on this day, but only two prayer-books were finished, so that the attempt was forced to be given up. It appears that one of his partners was actually averse to the success of the plan, and engaged such people for the work as he thought most likely to spoil it. A straggling workman who had wrought there, informed Mr. Mores, that both bibles and common prayer-books had been printed, but that the compositors, when they corrected one fault, made purposely half a dozen more, and the pressmen, when the masters were absent, battered the letter in aid of the compositors. In consequence of these base proceedings, the books were suppressed by authority, and the plates sent to the king's printing-house, and from thence to Mr. Caslon's foundry. After much ill usage, Ged, who appears to have been a person of great honesty and simplicity, returned to Edinburgh. His friends were anxious that a specimen of his art should be published, which was at last done by subscription. His son, James Ged, who had been apprenticed to a printer, with the consent of his master, set up the forms in the night time, when the other compositors were gone, for his father

to cast the plates from; by which means *Saltus* was finished in 1736. Of this work Mr. Tilloch has a copy, and the plate of one of the pages; as also of another work, printed some years after, from plates of Mr. Ged's manufacture. The book is *The Life of God in the Soul of Man*,\* printed on a writing pot, 12mo., and with the following imprint: "Newcastle; printed and sold by John White, from plates made by William Ged, goldsmith, in Edinburgh, 1742." It is a very neat little volume, and is as well printed as books generally were at the time.

James Ged, the son of William, wearied with disappointments, engaged in the rebellion of 1745, as a captain in Perth's regiment; and being taken at Carlisle, was condemned; but on his father's account (by Dr. Smith's interest with the duke of Newcastle,) he was pardoned and released in 1748. He afterwards worked as a journeyman with Mr. Bettenham, a printer of London, and then commenced master; but being unsuccessful, he went privately to Jamaica, in 1748, where his younger brother William was settled as a respectable printer. His tools, &c. he left to be shipped by a false friend, who most ungenerously detained them to try his own skill. James died in the year 1749, after he left England; and his brother William in 1767.

1750, March 20. *The Rambler*, No. 1. These essays regularly appeared every Tuesday and Saturday for two years, the 208th and last being dated March 14, 1752. To each number was affixed the price of twopence, and it was well and accurately printed by William Faden† on a sheet and a half of fine paper. It was in the *Rambler* that Johnson first presented to the public those peculiarities and prominent beauties of style which immediately distinguished him in so striking a manner from all preceding writers, and which have made so durable an impression upon our language.‡ The slow progress of the *Rambler* towards the possession of that fame which it ultimately acquired, affected not its author in a pecuniary light. He had entered into a contract with Mr. John Payne, a respectable bookseller, of Paternoster-row, who had agreed to give him two guineas for each paper as it appeared, and to admit him to a share of the profits arising from the sale of the collected work. Johnson received regularly, therefore, four guineas a week for two years, an engagement that enabled him to live comfortably, and which, if not productive of much present advan-

\* This work was first published in 1667, by Henry Scougal, a theological writer of considerable eminence. He was the son of Patrick Scougal, who was bishop of Aberdeen from 1664 to 1682. He was born at the end of June, 1650, and died at the early age of twenty-eight, on the 13th of June, 1678.

† During Dr. Johnson's last illness he inquired of Mr. Boswell, "whether any of the family of Faden the printer were living. Being told that the geographer, near Charing Cross, was Faden's son, he said, after a short pause, I borrowed a guinea of his father near thirty years ago; he so good as to take this, and pay it for me."

‡ Mr. Tooke says that, amidst the progress which literature was making at St. Petersburg, translations of the *Rambler* and of Blackstone's *Commentaries* had been made into the Russian language, by the especial command of the empress.

\* See also, *Biographical Memoirs of William Ged*; including a particular account of his progress in the Art of Block-Printing. Newcastle: printed by S. Hodgson, Union-street, and sold by E. Charnley, Big-market, 1819. This small work is very neatly printed, and forms part of a series of typographical tracts, which it was the intention of the editor, Mr. Thomas Hodgson, to publish. It was printed for the Newcastle Typographical Society.

† William Fenner, stationer, who seems to have acted no very honourable part towards Ged, died insolvent in or about the year 1735.

age, was eventually a most lucrative bargain to the publisher. During the appearance of the *Rambler*, in single numbers, Mr. James Elphinstone, a friend of Johnson's, and brother-in-law to Mr. Strahan, the printer, undertook to publish them in Edinburgh, and the following advertisement is copied from an Edinburgh newspaper of this date:

"Just published, on a fine writing paper, and in a small 8vo. size, fit for binding in pocket volumes, *THE RAMBLER*. To be continued on Tuesdays and Fridays. *Nullius addictus, &c.* Edinburgh: printed for the author; sold by William Gordon and C. Wright, at their shops in Parliament-close, price one penny each number, and regularly delivered to subscribers in town, or sent to the country by post."

The *Rambler* is a title, by no means happily chosen, as it corresponds not with the tenor of the work, of which the great characteristic is uniform dignity.

The assistance which Johnson received in the composition of the *Rambler* amounted (with the exception of four billets by Mrs. Chapone,\*) only to four numbers, the productions of Miss Talbot,† Samuel Richardson,‡ and Mrs. Carter.§

"What has once passed the press is irrevocable. Though the printing house may properly be compared to the infernal regions for the facility of its entrance, and the difficulty with which authors return to it; yet there is this difference, that a great genius can never return to his former state by a happy draught of the waters of oblivion."—*Rambler*, No. 18.

On the termination of the *Rambler*, Dr. Johnson says, "I shall never envy the honours which wit and learning obtain in any other cause, if I can be numbered among the writers who have given ardour to virtue, and confidence to truth."

\* Mrs. Hester Chapone was born of a respectable family named Mulso, at Twywell in Northamptonshire, October 27, 1727. She wrote the interesting story of *Fidella*, in the *Adventurer*, and a poem prefixed to the translation of *Epictetus*, by Mrs. Carter. Her literary reputation, however, rests upon her *Letters on the Improvement of the Mind*, addressed to a young lady, and printed in 1778. She also wrote a volume of *Miscellanies*, containing moral essays and poems. Mrs. Chapone died at Hadley, in Middlesex, December 25, 1791, aged 78.

† Catharine Talbot, the only daughter of the rev. Edward Talbot, archdeacon of Berks, was born in the year 1730. She resided chiefly in Lambeth palace, where she received all the advantages of the most accomplished education, and early exhibited strong marks of a feeling heart, a warm imagination, and a powerful understanding. Her chief work is entitled *Reflections on the Seven Days of the Week*, which forms one of the works distributed by the Society for Promoting Christian Knowledge. She died January 9, 1776.

‡ It is a remarkable and curious trait of the age, that the only paper in the *Rambler* which had a prosperous sale, and may be said to have been popular, was one which Dr. Johnson did not write. This was No. 97, which was said to have been written by Richardson. The sale was very inconsiderable, and seldom exceeded five hundred.

§ Elizabeth Carter was the daughter of the rev. Dr. Carter, rector of Deal in Kent, where she was born, December 16, 1717. She acquired a considerable knowledge of the Latin and Greek languages, as appears by her excellent translation of *Epictetus* into English. She wrote two papers in the *Rambler*, and in 1736 she published a volume of poems, many of which are elegant. Miss Carter, who was never married, died in London, December 19, 1806.

Dr. Johnson, in speaking of newspapers, says, "To these compositions is required neither genius or knowledge, neither industry nor sprightliness, but contempt of shame and indifference to truth are absolutely necessary." He then talks of their increase in the time of war, and concludes by affirming "that a peace will equally leave the warrior and the newspaper writer destitute of employment; and I know not whether more is to be dreaded from streets filled with soldiers, accustomed to plunder, or from garrets filled with scribblers accustomed to lie." Again, he says, "If nothing may be published but what civil authority shall have previously approved, power must always be the standard of truth; if every dreamer of innovation may propagate his projects, there can be no settlement; if every murmurer at government may diffuse discontent, there can be no peace; and if every sceptic in theology may teach his follies, there can be no religion. The remedy against these evils is to punish the authors; for it is yet allowed, that every society may punish, though not prevent, the publication of opinions, which that society shall think pernicious; but this punishment, though it may crush the author, promotes the book; and it seems not more reasonable to leave the right of printing unrestrained because writers may be afterwards censured, than it would be to sleep with doors unbolted, because by our laws we can hang a thief."

1749. *The Ladies Magazine*, by Gasper Goodwill, of Oxford.

1749. *Manchester Vindicated*; in a complete collection of the papers published in defence of that town, in the *Chester Courant*, with those on the other side of the question, printed in the *Manchester Magazine* or elsewhere, which are answered in the said *Chester Courant*. Chester: printed by and for Elizabeth Adams, and sold in London by Mrs. Mary Cooper, at the Globe, in Paternoster-row. 324 pages, 24mo. Price 3s.

1750. It appears that a press was at work in this year, at Ragland castle, in Monmouthshire; for a book is extant, called, *A Collection of Loyal Songs, Poems, &c.*, said to be privately printed at Ragland castle, in this year. "A collection of Jacobite poems; although it is stated to be privately printed, I apprehend it was sold, although from the nature of the collection very cautiously."—*Martin's Private Presses*, page 35.

1750, July 12. Died, THOMAS WILLIS, esq., citizen and stationer, who was fined for the office of sheriff. He left 500 to the poor of St. Margaret's, Westminster, not having alms; £500 to the Westminster infirmary; and £6,000 to the farmers about Totbills-fields, who had suffered by the cow distemper.

1750, Oct. 27. Died, THOMAS JAMES, printer, of Cambridge, aged forty: he was buried in the church of St. Michael in that town. Mr. James, Mr. La Butte, and Robert Walker, left London for Cambridge, where they commenced printing a weekly newspaper, and, to establish the sale of it, they printed, in 8vo. lord Clarendon's *History*

of the *Great Rebellion*, and *Boyer's History of Queen Anne*, with neat cuts, &c. which they gave gratis, a sheet a week, till completed.

1750, Dec. 5. *Died*, JAMES BROOKE, esq., who had been sheriff of London, in 1738; gave by his will a legacy of £50 to the poor of the stationers' company, to be distributed at the discretion of the court.

1750, Jan. 31. *The Student*, No. 1. This is a miscellany of great merit, which was published monthly, in numbers, at Oxford. It rejects all politics and party discussion, but embraces a wide field in polite literature, and professes to insert nothing in its pages that had been previously published. It includes many curious documents in history and biography, and a valuable contribution of poetry by some of the first bards of the age, among which are many pieces by Warton.

1750. *The Leicester Journal*. This paper was printed in London, and sent down to Leicester for publication. It appears that the editors of newspapers were often at a stand for matter to fill their columns, scanty as they were; and a singular instance occurs in this paper, that the editor had actually recourse to the bible to help him out, and filled up his empty space from it! He commenced with *Genesis*, and went as far in succeeding numbers as the tenth of Exodus.

1750. *The Dumfries Journal*. This was the fourth town in Scotland distinguished for the establishment of a newspaper. It was afterwards converted into a species of *Magazine*, which was conducted with much spirit by the late venerable Fulton, the celebrated compiler of the school pronouncing dictionary, and a few other youthful and enthusiastic literary associates. It again assumed the form of a newspaper about the year 1775 or 1776, and continued to flourish up till the era of the "reform bill" in 1831, when its conservative principles being no longer popular, it ceased in 1833.

1750. *The Reflector*.

1750, March 20. *The Tatler revived; or, the Christian Philosopher and Politician*, No. 1. stamped, price twopence, Tuesday, Thursday, and Saturday.

1750. *The Westminster Magazine*, by LAUNCELOT POORER-struck, an author, but no Esq.; 4to.

1751. *Died*, WILLIAM WILKINS, printer in Little Britain, who at this period was the printer of five different newspapers; and the favourite printer of the Whig party. On a tablet under a half-length of bishop Hoadly seated, possessed by the company of stationers, is inscribed, "This portrait of Dr. Benjamin Hoadly,\* lord bishop of Winchester, prelate of the most noble order

of the garter, was painted at the expense of William Wilkins, esq. citizen and stationer of London, out of the high esteem and veneration he had for the bishop, on account of his being always actuated by the true spirit of the gospel, and the principles of the Protestant religion, and of his being a firm friend to liberty, religious and civil. Mr. Wilkins left it to the stationers' company after his wife's decease, who departed this life the 29th day of July, 1784."

1751. ANDREW MILLAR, bookseller, in the Strand, gave £1000 to Henry Fielding for his novel of *Amelia*, which he suspecting would be judged inferior to *Tom Jones*, employed the following stratagem to push it on the trade. At a sale made to the booksellers, previous to the publication, Millar offered his friends his other works, at the usual terms of discount; but when he came to *Amelia*, he laid it aside as a work expected to be in such demand that he could not afford to deliver it to the trade in the usual manner; the *sale* succeeded; the whole impression was anxiously bought up, and the bookseller relieved from every apprehension of a slow sale. *Amelia* was dedicated to the author's great friend, Ralph Allen,\* esq. From the period of the publication of *Tom Jones*, the vigour of Fielding's mind sank, though by slow degrees, into a decline; it has, however, the marks of genius; but of a genius beginning to fall into decay. Nevertheless, *Amelia* holds the same proportion to *Tom Jones*, that the *Odyssey* of Homer bears, in Longinus's estimation, to the *Illiad*. In various respects it breathes a fine vein of morality; many of the situations are affecting and tender; and, upon the whole, it is the *Odyssey*, the moral and pathetic work of Henry Fielding.

1751, Aug. BARTHOLOMEW GREEN, a printer from Boston, removed to Halifax, the capital of Nova Scotia, where he erected the first press which appeared in that province, and died soon afterwards. His successor, John Bushell, published in the first week in January, 1752, the first newspaper in Nova Scotia.

1751. Two printers, named MILLER and HOLLAND, supposed to be natives of Germany, introduced a press at Lancaster, the capital of a county in the province of Pennsylvania, North America, where they executed some small works in the German language, and in this or the next year, 1752, published a newspaper in German and English.

\* Ralph Allen, esq. died at Prior Park, near Bath, Jan. 29, 1764, of whom it will be no ostentatious encomium to observe, that he was one of the best and most benevolent of men. His memory will ever be revered by the city and neighbourhood of Bath, to both which he dispensed a variety of acts of liberality; and his name is eternalised in the memorials of that noble charitable foundation the hospital, to which he was a most munificent benefactor. The following inscription, on the tablet of a tower near the park is emphatically expressive of his character:—

"Memoriam optimi viri, Radolphi Allen, positum.  
Qui virtutem veram simplicemque colit, venerat, lex  
saxum."

Dr. Warburton married his niece, Miss Gertrude Tucker, and Prior Park became from that time his principal residence, and ultimately his own property.

\* Benjamin Hoadly, was born at Westerham, in Kent, Nov. 14, 1676. On the accession of George I. he was made bishop of Bangor, which see he never visited, but continued in London preaching and publishing party sermons. One of these, on the *Spiritual Kingdom of Christ*, produced a violent dispute, called the Bangorian controversy. From Bangor he was translated to Hereford, thence to Salisbury, and lastly to Winchester. He died April 17, 1761, and was buried in his cathedral. From the above portrait he appears to have been more than sixty years of age, when the painting was made, and has pleasant full features, shaded by a moderate sized powdered wig.

1751. About this period bookbinders began the *sewn back*, whereby the bands on which the book is sewn, were let into the backs of the sheets, and thus no projection appears, as is seen in all bindings of a previous date. Where it was first used is not known, but it is considered the Dutch binding first gave the idea. Although it was adopted by many of the English and French binders with repugnance, it became fashionable. Bands, or raised cords, were soon only used for school books, which species of binding is now universally known as *sheep bands*. The general kind of binding from this time to the end of the century, was what is termed *calf gilt*, being done all to one pattern, the sides marbled,\* the backs being brown, with coloured lettering pieces, and full gilt. Open backs had been little introduced, and the backs of the books were made remarkably stiff, to prevent the leather from wrinkling when they were opened.

1751, *March*. *The Inspector*. This periodical is a striking proof of the unwearied assiduity of sir John Hill,† that, occupied as he was in writing voluminous productions on natural history, he could find time for the composition of a miscellaneous paper, which he agreed to publish *daily*, and which he executed without the least assistance, for about two years, in the *London Daily Advertiser*. Many of these papers are written with vivacity, and a few exhibit traits of humour, character, and imagination, though, as it might be expected, from the hasty manner in which they were written, they are often loose and slovenly, and frequently ungrammatical.

1751, *Nov. 15.* *Died*, HENRY SAINT-JOHN, viscount Bolingbroke, whose life is one of those lessons by which mankind are taught that genius, learning, wit, and the happiest opportunities for realising all that honest ambition can suggest to a great mind, are bestowed in vain, unless they are accompanied by prudence and integrity of principle. The opinions of posterity as to his character are likely to be as much divided as were those of his cotemporaries; and the safe conclusion that can be arrived at is, that he possessed an extraordinary mixture of good and evil, of greatness and meanness, of that which ennobles,

as well as that which disgraces mortality. He descended from one of the most ancient families in the kingdom, and was born at Battersea, Oct. 1, 1678, educated at Eton, and Christ Church, Oxford. Nature appears to have been scarcely more prodigal in bestowing her favours, than he was in abusing them. A career of wild dissipation left him little leisure for the pursuit of knowledge. His extraordinary talents forced themselves into general notice; his prodigious strength of memory and quick apprehension, his dashing and brilliant style, was the admiration of his friends, and his social disposition rendered their affection equal to their admiration. Formed to excel in whatever he might undertake, he soon became as notorious for his excesses, as he was afterwards eminent for his genius and learning. He entered parliament in the year 1700, for the borough of Wotton Bassett, (a borough in which the family interest of the St. John's was predominant,) and joined the ranks of the Tories. In 1710 he became secretary of state, on Harley\* being made chancellor of the exchequer, and in 1712 he was created viscount Bolingbroke. We have already noticed the origin of the newspaper stamp duty, which took place under the influence of Bolingbroke, and the case is thus stated in Cooke's life of that nobleman: "It was probably the influence of the whig newspapers, in nourishing the hopes of their party, and who proved themselves so numerous, and so powerful, that they could insult and libel the minister with impunity, that induced Bolingbroke to attempt to circumscribe the liberty of the press. The possession of power is in itself a strong temptation to its exercise; and Bolingbroke, the object of attack as a minister and a party leader, forgot the feelings which had induced him, when establishing himself upon the ruins of the former ministry, to pursue their retreat with the bitterest censures, and to heap the most unmanly insult upon their patroness at court. With the writers he could employ upon his side, it might be supposed he would have little to fear from any literary contest; that argument might be safely opposed to abuse, and mere scurrility be despised and forgotten. But Bolingbroke was a minister; he was engaged in a multitude of occupations—some of these were of doubtful propriety, all were capable of attack. The comments upon his conduct were severe, but some of them were probably true; and Bolingbroke, while he could retort the severity, must resent the truth. So important

\* On the invention of this process great caution was used to keep it secret, and books were obliged to be sent to the inventor to be marbled at a high price.

† Sir John Hill was one of the most extraordinary characters of the eighteenth century. He was the son of a clergyman, and born either at Peterborough or Spalding, in 1716. He was educated for the profession of medicine, and at first practised as an apothecary in St. Martin's lane, London. Had his prudence and temper been equal to his industry, his character with his cotemporaries, and with posterity, would have been highly esteemed. The usual consequence of indecent and indiscriminate satire awaited our author; and for a time the profits arising from his pen were so great as, sometimes, to amount to £1500 per annum. He obtained the place of superintendent of the royal gardens at Kew, accompanied by a very liberal salary by lord Bute, under whose patronage he was likewise enabled to prosecute his splendid publication of the *Vegetable System*. About two years previous to his decease, on presenting his botanical works to the king of Sweden, he was made a knight of the polar star. After a life of more notoriety than respectability, sir John Hill died in Nov. 1775.

‡ By some writers the death of Bolingbroke is placed on the 15th of December.

\* Robert Harley, earl of Oxford, was the eldest son of sir Edward Harley, and born in Bow-street, Covent garden, London, Dec. 3, 1661. On Feb. 1, 1701, he was chosen speaker of the house of commons. On March 8, 1711, he was wounded at the council table with a penknife, by the marquis de Guiscard, during an examination upon a charge of high treason. Bolingbroke rose, drew his sword, and ran it into Guiscard. In the same year he was raised to the peerage, and appointed lord treasurer, which office he resigned a few days before the death of queen Anne. In 1715 he was impeached of high treason by the commons, and committed to the tower, where he remained two years, and was then brought to his trial and acquitted. He died May 31, 1744. The earl of Oxford was a magnificent patron of literature, and commenced one of the noblest collections of manuscripts, book, &c. in this country.

were these libellous publications deemed, that the queen concludes one of her messages to parliament by representing the licentiousness of the press. She is made to declare, that by seditious papers and factious rumours, designing men have been able to sink credit, and the innocent have suffered; and she recommends the house to find a remedy.\* That remedy we have already shown was the stamp duty upon newspapers and pamphlets.\* "The insufficiency of Bolingbroke's expedient," continues Mr. Cooke, "soon became apparent to himself, and we find from his correspondence that he was often employed in prosecuting the printers of those papers which were most violent against him. Swift, who certainly should have had a fellow feeling for these libellers, seems not only to have approved, but to have urged this severity.† The printers were often in prison, but discharged upon bail; and the papers still appeared, with their satire more pungent by the treatment the authors were smarting under. The ill success of his prosecutions determined Bolingbroke to attempt an expedient which, had it succeeded, would quickly have stopped the streams of vituperation which flowed from each party. Among the provisions of an act he proposed was one, that every printed book, pamphlet, or paper which was published should bear the writer's name and address: a requisition which must have at once driven from the field of controversy all those men of eminence in the opposite parties who were bold so long as they could mingle masked in the fray, but who would have shrunk from openly exposing their reputations and their persons in so equivocal a contest. No one felt the inconvenience of the threatened measure more forcibly than the author of the *History of the Last Four Years*. His defence of anonymous writing, drawn forth by this occasion, is exceedingly amusing, when we consider the character of the works which he used to send forth, and the peculiar motives he usually had for concealment. This bill, which so powerfully excited Swift's fears for the safety of libellers and the interests of religion and learning, met with such opposition from both parties, that it was suffered to drop in the commons; and the idea of farther fettering the press was abandoned as impracticable." On the accession of George I. the whigs were placed in power, and the seals taken from Bolingbroke: the papers in his office were secured, on which he withdrew to France, where the pretender invited him into his service. In the mean time he was impeached of high treason in England, and the same year he lost the favour of his new connexions. In this situation he set himself about making his peace at home, in which he succeeded, but did not obtain his full pardon till 1723, on which he returned to England, and recovered his family inheritance. The remainder of his life was passed in a state of total exclusion from power; and, under these circumstances, mortified ambition prompted him to join the opposition against sir

Robert Walpole, and to publish many political essays, in the *Craftsman*, in which patriotism was assumed as a mere instrument for annoying his political opponents. He wrote a number of philosophical discussions based on equally unsound principles, and highly adverse to sound religion. When Bolingbroke found that Pope had printed an unauthorised edition of the *Patriot King*, he employed Mallet (1749) as the executioner of his vengeance. Mallet wanted either virtue, or spirit, to refuse the office; and was rewarded, not long after, with the legacy of lord Bolingbroke's works, which were published with a success very inadequate to Mallet's expectation.\*

1761. Alexander Macdonald published his *Gellic Songs*, being the second book which contained any poetry printed in that language.

1752, Jan. 4. *Covent Garden Journal*, published on Tuesdays and Saturdays, No. 1. By sir Alexander Drawcansir, (Henry Fielding,) author of the *Champion*, *True Patriot*, and *Jacobite Journal*.

1752, March 3. *Harrop's Manchester Mercury*, No. 1, printed and published by Joseph Harrop, at the sign of the Printing-press, opposite the Exchange, on Tuesday. No price affixed. At No. 9, the title is changed to *Harrop's Manchester Mercury and General Advertiser*, embellished with a curious wood-cut, representing the interior of a printing-office, and published opposite the clock side of the Exchange. In 1784, Mr. Harrop gave, in weekly numbers, *A new History of England*, 778 pp. to encourage the sale of his newspaper: in an address, at the end of the work, the proprietor says it was at the cost of one hundred guineas.

1752, July 6. WILLIAM OWEN, bookseller, at Homer's head, near Temple bar, was tried at Guildhall, for printing and publishing a libel, entitled the *Case of Alexander Murray, esq.* and acquitted. This was the third great case, where the juries insisted on judging the matter of law, as well as of fact. See *State Trials*.

1752. *The Magazine of Magazines*. In this magazine Gray's *Elegy in a Country Church Yard* first appeared.

1752. *Have at you all; or, the Drury-lane Journal*, to be continued every Thursday, price 3d.

\* David Mallet, or Mallet, was born of poor parents in the city of Edinburgh, about 1700, but surmounted the disadvantage of his birth and fortune. He received a portion of his education at the high school of his native city, and became tutor to the sons of the duke of Montrose, with whom he travelled, and on his return settled in London, where he became an author by profession. In July 1734 he published the ballad of *William and Margaret*, which is still popular. In April, 1734, he obtained the degree of M.A. at St. Mary's hall, Oxford. In 1740 he published a *Life of Lord Bacon*: the duchess of Marlborough left him £1000 to write the life of her husband, which never appeared; and he obtained a considerable pension from lord Bute for defending his administration. He was under secretary to Frederic prince of Wales. He died April 31, 1734, and it was remarked of him, "that he was the only Scot whom Scotchmen did not commend." On which Mr. Steevens remarked, that "he was the only Scotchman he ever knew unregretted by his countrymen." The news of his death was followed by no encomiums on his writings or his virtues.

\* See page 661, ante.

† See page 599, ante.

1752. *An enquiry into the Origin of Printing in Europe*, price 1s. published by Mr. Gibson.

1752. *An Essay on the Original, Use, and Excellency of the noble Art and Mystery of Printing*. London: printed for T. Legg, at the Parrot and Crown, in Green Arbour-court, in the Little Old Bailey. Price four-pence.

This is a small tract of sixteen pages demy 12mo, and, therefore, little can be expected of the *History of Printing*. A high encomium is paid to William Caslon and Son, letter-founders, and to Stephen Baylis, of St. Anne's lane, near Aldersgate, printing ink maker. Of the use and excellency of the art, it is stated, that "Tis by the art of Printing that we come to know the lives and actions of the renowned worthies of the first ages of the world; whereby those things which were transacted five thousand years ago are as familiar to us as if they had been done but yesterday. 'Tis PRINTING that does immortalize the memory of ancient heroes, and transmits their actions to the end of time." The following poem is inserted at the end, which is there stated to have been written many years before, and then out of print. In preserving it, we think no apology will be required, (for as it is stated in the tract,) "being well assured it will be very acceptable to all lovers of the noble art and mystery of printing."

#### A CONTEMPLATION

*On the Mystery of Man's Regeneration, in allusion to the*

#### *Mystery of Printing.*

Great blest Master Printer, come  
Into thy composing room:  
Wipe away our foul offences,  
Make, O make our souls and senses,  
The upper and the lower cases;  
And thy large alphabet of graces  
The letter, which being over set,  
O haste thou to distribute it:  
For there is (I make amount)  
No imperfection in the fount.  
If any letter's face be foul,  
O wash it ere it touch the soul;  
Contrition be the brush, the eye  
Tears from a penitential eye.

Thy graces so distributed,  
Think not thy work half finished:  
On still, O Lord, no time defer,  
Be truly a COMPOSITOR;  
Take thy composing stick in hand,  
Thy holy word, the firmest band;  
For sure that work can never miss,  
That's truly justified in this.

The end of grace's distribution,  
Is not a mere dislocation;  
But that from each part being cited,  
They may be again united.  
Let righteousness and peace then meet,  
Mercy and truth each other greet;  
Let these letters make a word,  
Let these words a line afford,  
Then of lines a page compose,  
Which being brought unto a close,  
Be thou the direction, Lord;  
Let love be the fast-binding cord.

Set, O Lord, O set apace,  
That we may grow from grace to grace;  
Till towards the chase we nearer draw  
The two strong tables of thy law;  
Of which the two firm crosses be,  
The love of man, next after Thee.  
The head sticks are thy majesty,  
The foot sticks Christ's humility;  
The supplication of the saints,  
The side sticks, when our faith e'er faints.

Let the quoin be thy sure election,  
Which admits of no rejection;  
With which our souls being join'd about,  
Not the least grace can then drop out.  
Thy mercies and allurements all,  
Thy shooting stick and mallet call.

But when all this is done we see,  
Who shall the corrector be?  
O Lord, what thou *set* can't be ill,  
It needs then no corrector's skill.

Now, though these graces are all *set*,  
Our hearts are but *white paper* yet;  
And by Adam's first transgression,  
Fit only for the worst impression.

Thy holy Spirit the pressman make,  
From whom we may perfection take;  
And let him no time defer,  
To print us on thy character.

Let the ink be black as jet,  
What though 't is comely yet;  
As curtains of King Solomon,  
Or Kedar's tents to look upon.

Be victory the press's head,  
That o'er oppression it may tread:  
Let divine contemplation be  
The screws, to raise us up to Thee:  
The press's two cheeks (unsubdued)  
Strong constancy and fortitude:  
Our slavish flesh let be the still,  
Whereon to lay what trash you will:  
The nut and spindle, gentleness,  
To move the work with easiness:  
The platten is affliction,  
Which makes good work, being hard set on,  
The bar, the spirit's instrument,  
To sanctify our punishment:  
The blanket a resemblance hath  
Of mercy in the midst of wrath:  
The *frisket*, thy preventing grace,  
Keeps us from many sullied race,  
CAUSE JESUS is the level stone,  
That our hearts must be wrought upon.  
The coffin wherein it doth lie,  
Is rest to all eternity.

The *cramp iron* that it moves on still,  
Are the good motions of the will:  
The *rounce*, the spirit's inspiration,  
Working a holy agitation.

The *girts*, the gift of continence,  
The tether of th' unbridled sense:  
The *winter*, whereon all doth lie,  
Is patience in adversity:  
The *foot step*, humbleness of mind,  
That in itself no worth can find.

If there be such a chance as this,  
That any letter *better'd* is,  
Being come unto thy view,  
Take it out, put it *in new*;  
Or if Satan, that foul fiend,  
Mar, with a pretence to mend,  
And being at thy goodness vex'd,  
Makes blasphemy of thy pure text,  
Find it out, O Lord, and then,  
Print our hearts new o'er again.

O Lord, unto this work make haste,  
'Tis a work that long will last:  
And when this *white paper*'s done,  
Work a *reiteration*.

1752, Oct. 11. Died, THOMAS STACKHOUSE, A. M. a learned and pious, but necessitous divine. He was sometime minister of the English church at Amsterdam, and afterwards successively curate of Richmond, Ealing, and Finchley; in all which places he was much respected. He was perhaps the most laborious writer of his time, and his principal work, the *History of the Bible*, originated in the following singular manner: In the year 1732 was published a pamphlet, entitled *The Bookbinder, Bookprinter, and Bookseller confuted; the author's vindication of himself from the calumnies in a paper industriously dispersed by one Edlin. Together with some observations on the History of the Bible, as it is at present published by the said Edlin.* By the Rev. Mr.

Stackhouse, curate of Finchley, 8vo. In this rare pamphlet the author very feelingly, but spiritedly, exemplifies in himself *the miseries of a poor clergyman*. The brief matter of fact is, that, in May, 1732, Mr. Wilford and Mr. Edlin, "when the success of some certain things published weekly set every little bookseller's wits to work," engaged Mr. Stackhouse to write something which might be published weekly, but what it was they knew not. By Wilford he had been before employed to write "*A preface to Sir William Dawes's Works*;" but "had taken umbrage at Wilford's palming upon the world a *Set of Prayers*, all taken from other authors, merely to lengthen out sir William's *Duties of the Closet*, and make the third volume swell." Edlin "he knew of old, as the merest Marplot that ever took the publication of any work in hand." This precious pair appointed Stackhouse to meet them at the Castle tavern,\* Paternoster-row. "Edlin was for reviving his *Roman History*; and, with heavy imprecations on Dr. Bundy, maintained, that a little brushing up, *i. e.* infusing some life and spirit into Ozell's dull style, the thing would still do in a weekly manner." Wilford would by no means come into that design. His talk ran chiefly on *Devotional Tracts* and *Family Directors*. To compromise the matter, Mr. Stackhouse proposed *A New History of the Bible*; there being nothing of that kind considerable in the English language, and his own studies for some years, whilst writing his *Body of Divinity*, having qualified him for such a work. Proposals were accordingly drawn up; but a disagreement happening between Wilford† and Edlin, Wilford gave up the undertaking; and Mr. Stackhouse was left, much against his will, in the power of Edlin; who "had printed proposals; got credit of paper; brushed up his old battered letter; picked up a poor compositor or two; sent [to Finchley] a few curious books, and began to be very clamorous for copy." Mr. S. had engaged to supply three sheets a week, provided he were allowed to furnish forty or fifty sheets before any part of it was published. He accordingly set to work, and completed the Introduction. But Edlin was impatient to begin; and "what mercy," says Stackhouse, "he intended to have of his poor author, appeared in the very first sheet he sent me to correct, which was very near a whole page above the standard stipulation; inasmuch that, had I submitted to this encroachment, I had lost, on the impression of the whole book, between £40 and £50 copy money." This imposition led to a quarrel, which was compromised by Edlin's giving ten copies of the book, in consideration of the supernumerary lines, "to be presented by Mr. Stackhouse to some bishops who had thought favourably of some of his other writings." After the reconciliation, Edlin sent an instrument to be signed, binding

Stackhouse, his heirs, &c. in a penalty of £50 to write well, and finish the *History of the Bible* for him. But this Stackhouse resolutely declined. For compiling the introduction, few books of any consequence had been wanted; but for the *History* itself Mr. Stackhouse required the ablest commentators upon the whole, and reconcilers and critics upon different texts of scripture; but could obtain from his employer none but bishop Patrick; Edlin suggesting, "that the chief of his subscribers lived in Southwark, Wapping and Ratcliffe Highway; that they had no notion of critics and commentators; that the work should be adapted to their capacity, and therefore the less learning in it the better." When the introduction was finished (of which two numbers were published without acquainting the author) the breach became incurable. No copy was ready of the *History*; and Stackhouse was informed, that, if he did not care to write for Edlin, he had found out another that would. With some difficulty, twelve guineas were obtained for the twelve sheets of introduction; Edlin engaged another author; and Stackhouse, who was happy to escape out of the trammels of a tyrant, engaged to pursue his *History* under the more auspicious patronage of Mr. Batley\* and Mr. Cox,† booksellers of reputation; and the work was accordingly completed in two folio volumes, which afterwards successively passed through numerous editions. The main purport of Mr. Stackhouse's address to Edlin is, to shew on whose side the infraction of the agreement lay;‡ Mr. Stackhouse deserved well of literature—and had a hard fate as to worldly matters, as a small vicarage was his only church perperform. In 1733 he was presented to the vicarage of Benham Valence, alias Beenham, in Berkshire, and was buried in the parish church, as appears by a neat tablet, which preserves his memory.

1752, Oct. 21. *The Gray's Inn Journal*, No. 1. These essays were the production of Arthur Murphy, esq. under the assumed name of Charles Ranger, esq. who, in imitation of the *Spectator*, introduces himself as the member of a "club of originals," yet without making much use of this fictitious assemblage. It was continued weekly, for two years, and each paper is divided into two parts; the first containing an essay on some miscellaneous subject; and the second, under the appellation of *True Intelligence*, including many ironical and humorous strictures on the various occurrences of human life. In humour, invention, and variety, the *Gray's Inn Journal* is often superior to the cotemporary papers of Hill and Fielding.

1752, Nov. *The Scourge*, by Oxymel Bushy, esq. folio, a periodical paper, published on Tuesdays, Thursdays, and Saturdays, at 2d. each number.

1752, Dec. 1 *The Public Advertiser*, No. 1.

\* It was the custom of booksellers, for a very long period, to make all their bargains at a tavern.

† *Memorials of Eminent Persons* was published by John Wilford, in monthly number.

\* Jeremy Batley, bookseller, in Paternoster-row, died September 11, 1737.

† Thomas Cox, an eminent bookseller and exchange broker, died February 3, 1754.

‡ See *Nichols's Literary Anecdotes*, vol. ii, pp. 493-99.

1753, Jan. 4. *The World*, No. 1. This paper was continued weekly, on Thursday, for four years, and terminated on Thursday, December 30, 1756, with two hundred and nine number, and a *World Extraordinary*, written by Horace Walpole. Of each essay 2,500 were printed, and sometimes even a greater number was demanded. It was projected by Edward Moore,\* author of the *Gamester*, a tragedy, assisted by lord Chesterfield and about thirty eminent literary names. It assumed all the variety of the *Spectator*, being wise or witty, grave or gay, sentimental, literary, or humorous, as the subject required. It was also, in another respect, like the *Spectator*; for Mr. Moore, like sir Richard Steele, was lost in the splendour of his auxiliaries.

1753. THE BRITISH MUSEUM established by act of parliament. This national collection of antiquities, books, and natural curiosities, is one of the most valuable and extensive in Europe. It was founded in consequence of the will of sir Hans Sloane,† who left to the nation his museum (which he declared in that instrument had cost him upwards of £50,000,) on condition that parliament paid £20,000 to his executors, and purchased a house sufficiently commodious for it. This proposal was readily adopted: several other valuable collections were united to that of sir Hans Sloane, and the whole establishment completed for the sum of £85,000, which was raised by way of lottery.‡ The additions to the Sloanean museum comprise, the Cottonian library, given by sir Robert Cotton to the public; major Edwards's library of printed books; the Harleian collection of manuscripts; sir William Hamilton's invaluable collection of Greek vases; the Townleian collection of antique marbles; the manuscripts of the late marquis of Lansdowne; the Elgin marbles from Athens; Dr. Burney's classical library; and various other collections. George II. gave the whole of the library of printed books and manuscripts, which had been gradually collected by our kings from Henry VII. to William III. George III. gave a numerous collection of pamphlets, pub-

lished in the interval between 1640 and 1760.\* That monarch also contributed the two finest mummies in Europe; a sum of money, arising from lottery tickets, which belonged to his royal predecessors, amounting to £1,123; a complete set of the journals of the lords and commons; a collection of natural and artificial curiosities sent to him, in 1796, by Mr. Menzies, from the north-west coast of America; and several single books of great value and utility. In 1803, the government deposited in this building many Egyptian antiquities, which were acquired from the French by the capitulation of Alexandria, in 1802. In 1824, a most valuable and extensive library, formed under the direction of George III., was presented to the museum by George IV., and is deposited in a splendid apartment built purposely to contain it. R. P. Knight gave 5,205 valuable Greek coins to the British museum. The Rev. W. H. Carr, 35 ancient pictures. And — White, Esq. £30,000 to build a library room. Numerous collections have been added, at different times, by the trustees of the museum, which is situated in Great Russell-street, Bloomsbury.

The *Synopsis of the Contents of the British Museum*, gives the following account of the Royal Library:—"In this spacious and splendid room is deposited the library formed by his late majesty king George III. which embraces the most extensive and important collection of books ever brought together by any sovereign of the British empire, or indeed of any other country: and this, not confined to publications connected with some particular class of literature, but embracing every species of knowledge. The volumes moreover are, in general, in the best possible condition, and in very frequent instances of the most superb description, being vellum or large paper copies; the whole forming a monument worthy the judgment, the taste, and the liberal mind of the royal founder, and also of the unparalleled munificence of his majesty king George IV., who by the following letter, addressed to the late lord Liverpool, presented this library to the British nation.

"*Pavilion, Brighton, Jan. 15, 1823.*

"Dear Lord Liverpool,

"The King, my late revered and excellent father, having formed, during a long series of years, a most valuable and extensive library, I have resolved to present this collection to the British nation.

"Whilst I have the satisfaction by this means of advancing the literature of my country, I also feel that I am paying a just tribute to the memory of a parent, whose life was adorned with every public and private virtue.

"I desire to add, that I have great pleasure, my Lord, in making this communication through you.

"Believe me, with great regard,

"Your sincere friend,

"G. R.

"*The Earl of Liverpool, K. G. &c. &c.*"

The books are systematically arranged in 304 presses, according to subjects, as correctly as could be accomplished in placing them accord-

\* Edward Moore was the son of a dissenting minister at Abingdon, in Berkshire, where he was born March 22, 1712. He was some years engaged as a linen draper, but relinquished trade for employment more congenial to his talents and inclinations. In 1744 he produced his *Fables for the Female Sex*, which have been allowed a rank only second to those of Gay. From this period his progress as an author was undeviating; and as a poet, a dramatist, and an essayist, he continued through life to amuse and instruct society. It is somewhat remarkable, that when the *World* was published in volumes, Mr. Moore actually died whilst the last number, which details the imaginary death of the author, was passing through the press. He died Feb. 22, 1757.

† Sir Hans Sloane, bart. was an eminent physician and naturalist, born at Killilbegh, in the North of Ireland, April 16, 1666, and died at Chelsea, Jan. 11, 1753. He was the first in England who introduced into general practice the use of bark, not only in fevers, but in a variety of other distempers, particularly in nervous disorders, in mortifications, and in violent hemorrhages. He published the *Natural History of Jamaica*, two vols. folio.

‡ The following sums were voted by Parliament: for the Townley statues £30,000; Lansdowne Manuscripts, £4925; Greville Minerals £8,300; Elgin Marbles 36000; Burney's Library 13500. To print the Codex Alexandrinus £2,000.

\* See page 564 ante.

ing to their sizes upon their appropriate shelves, amounting to full 250,000 volumes in number.

1753. *Died*, ANDREW JOSEPH PANCROCKE, a celebrated bookseller of Lisle, where he was born in the year 1700. He was a person of very considerable learning and talent, and the author of a number of works on subjects of philosophy, history, and belles lettres.

1753, *Sept.* 14. The case of Samuel Richardson, of London, printer, on the invasion of his property in the *History of Sir Charles Grandison*, before publication, by certain booksellers in Dublin. Mr. Richardson had intended to send the volumes of *Sir Charles Grandison*, as he did those of *The History of Clarissa Harlowe*, to be printed in Ireland, before he published them himself in London. Accordingly, when he had printed off so considerable a part of the work, as would have constantly employed the press to which he purposed to consign them, he sent over twelve sheets of the first volume to Mr. George Faulkner; intending to follow it with the rest, as opportunity offered. He had heard an Irish bookseller boast, some years ago, that he could procure, from any printing-office in London, sheets of any book printing in it, while it was going on, and before publication; and Mr. Faulkner cautioning him on this subject with regard to this work, he took particular care to prevent, as he hoped, the effects of such an infamous corruption, as it must be called, since it could not be done but by bribing the journeymen or servants of the London printers. He gave a strict charge, before he put the piece to press, to all his workmen and servants, as well in print (that it might the stronger impress them,) as by word of mouth, to be on their guard against any out-door attacks. This was the substance of the printed caution which he gave to his workmen on this occasion: "A bookseller of Dublin has assured me, that he could get the sheets of any book from any printing-house in London, before publication. I hope I may depend upon the care and circumspection of my friends, compositors and pressmen, that no sheets of the piece I am now putting to press be carried out of the house; nor any notice taken of its being at press. It is of great consequence to me. Let no stranger be admitted into any of the work-rooms. Once more, I hope I may rely on the integrity and care of all my workmen—And let all the proofs, revises, &c. be given to Mr. Tewley [his foreman] to take care of." He had no reason to distrust their assurances; most of them being persons of experienced honesty; and was pleased with their declared abhorrence of so vile a treachery, and of all those who should attempt to corrupt them. Yet, to be still more secure, as he thought, he ordered the sheets, as they were printed off, to be deposited in a separate warehouse; the care of which was entrusted to one, on whom he had laid such obligations, as, if he is guilty, has made his perfidy a crime of the blackest nature.—Peter Bishop, whose business was to read proofs to the corrector, and to employ his leisure hours in the warehouses; and

who (and no other person) being entrusted with the sheets of *Sir Charles Grandison*, as wrought off; and to lay by three sheets of each of the twelve edition, and one of the octavo, for Mr. Richardson's sole use, had an opportunity which no other man, however inclined, could have, to perpetrate this baseness. Mr. Richardson, on suspicions too well-grounded, dismissed Bishop from his service; and after he was gone, having reason to suspect Thomas Killingbeck, one of the compositors, as the confederate of Bishop, and by whose means, he having worked in Ireland, it was easy for him to manage this piece of treachery; and Killingbeck, on examination, gave him cause to strengthen his suspicions; yet asserting his innocence, he proposed to him the said Killingbeck to draw up himself such an affidavit as he could safely take, to exculpate himself. Killingbeck made poor excuses and pretences; but, at last, took till the next morning to draw it up. The next morning he told Mr. Richardson, that he was advised not to draw up such an affidavit; and gave such evasive reasons, as induced every body to believe him guilty. Upon this, Mr. Richardson discharged him from his service. He left his house, pretending, he would draw up something, as he desired; but never since came near it; and is now applying for work elsewhere. Since writing the above, Mr. Richardson has received a letter from Bishop, on occasion of some friend of his advising him to an ample confession; and to depend on that forgiving temper which he had before experienced; in which, among other avowals of his innocence, he thus expresses himself: "I never gave Mr. K. one sheet of *Grandison*; and he must have stole them out of the warehouse; for, upon recollection, the key of the bridge warehouse [in which were the first five volumes], for the conveyency of Arthur [the principal warehouse keeper], who keeps his clothes there, hung upon a nail, in the one pair of stairs warehouse; and any person putting his arm through an opening in the wainscot, and standing on the stairs, may easily reach it [a great negligence, at least, in Bishop, after such warning, and repeated caution]; and 'tis not impossible but Mr. K. might see me take the key from thence, and make use of it at a proper opportunity. If he proves to be the villain (adds Bishop), as I have great reason to think he will, by refusing to take an oath, I hope proper care will be taken to hinder his escape, &c."—If Bishop should be innocent (against other presumptions, from which he will hardly be able to clear himself) it cannot but be observed, that the cause given to suspect unguilty persons is not one of the least mischiefs that attend the baseness of such cruel and clandestine invaders.

Having three printing-houses, he had them composed and wrought, by different workmen, and at his different houses; and took such other precautions, that the person to whose trust he committed them, being frequently questioned by him as to the safety of the work from pirates, as frequently assured him, that it was impossible

the copy of any complete volume could be come at, were there persons in his house capable of being corrupted to attempt so vile a robbery. What then must be his surprise when intelligence was sent him from Dublin, that copies of a considerable part of his work had been obtained by three different persons in that city; and that the sheets were actually in the press? The honest men published their own names, in three different title-pages, stuck up in Dublin, in the following words: "Dublin, Aug. 4, 1753. Speedily will be published, *The History of Sir Charles Grandison*. In a Series of Letters published from the Originals, by the Editor of *Pamela* and *Clarissa*. In seven volumes. Dublin: printed by and for Henry Saunders, at the corner of Christ Church-lane." The second: "Aug. 4th, 1753. In the press, *The History of Sir Charles Grandison*" (as in the other.) "Dublin: printed by John Exshaw, on Cork Hill." The third: "Dublin, Aug. 4th, 1753. In the press, and speedily will be published, *The History of Sir Charles Grandison*," (as in the two others.) "London: printed for S. Richardson:" [vile artifice!] "Dublin: Reprinted for Peter Wilson, in Dame-street." The editor had convincing proofs given him, that one of these men had procured a copy of a considerable part of the work in octavo; another in duodecimo; and that they were proceeding to print it at several presses. Terms having been agreed upon between Mr. G. Faulkner and the editor, in consideration of the preference to be given him (one of which related to the time of publishing the Dublin edition, that it might not interfere with the appearance of the London one) Mr. Faulkner, in consequence of the successful corruption, signified to the editor, that it was needless to send him any more than the twelve sheets he had sent him; and that he had obtained a fourth share of these honourable confederates: but that (to procure this grace, as is supposed) he had been compelled, as he calls it, to deliver up to them, to print by, the copy of the twelve sheets aforesaid, which had some few corrections in them, which occurred on a last revision; but which are of no moment with regard to the history; though possibly this worthy confederacy may make use of those few corrections in those twelve sheets, in order to recommend their surreptitious edition as preferable to that of the proprietor. Of what will not men be capable, who can corrupt the servants of another man to betray and rob their master? The editor, who had also great reason to complain of the treatment he met with in his *Pamela*, on both sides the water, cannot but observe, that never was work more the property of any man than this is his. The copy never was in any other hand: he borrows not from any other author: the paper, the printing, entirely at his own expense, to a very large amount; returns of which he cannot see in several months: yet not troubling any of his friends to lessen his risk by a subscription: the work thus immorally invaded, is a moral work: he has never hurt any man; nor offended these: they would

have had benefits from the sale, which the editor could not have, being not a bookseller; and he always making full and handsome allowances to booksellers. But nothing less, it seems, would content these men, than an attempt to possess themselves of his whole property, without notice, leave, condition, or offer at condition; and they are hastening the work at several presses, possibly with a view to publish their piratical edition before the lawful proprietor can publish his. And who can say, that if they can get it out before him, they will not advertise, that his is a piracy upon theirs? Yet these men know, that they have obtained the parts of the work they are possessed of at the price of making no less than forty workmen, in the editor's house, uneasy, and some of them suspected: of making an innocent man unsafe in his own house: of dishonouring him in the opinion of his employers (who, probably, may not choose to trust their property in the hands of a man, who cannot secure his own from intestine traitors): and the baseness; and whom, in that case, no other master will care to employ. These, among others that might be enumerated, are the mischiefs to which this vile and rapacious act of clandestine wickedness will subject an innocent man. Since the above was written, Mr. Richardson has been acquainted, that his work is now printing at four several printing-houses, in Dublin, for the benefit of the confederacy; viz. two volumes at Mrs. Reiley's; one at Mr. Williamson's; one at Mr. Powell's; one at Mr. McCulloch's; and that they hope at Mrs. Reiley's to get another volume to print; and are driving on to finish their two volumes for that purpose. The work will make seven volumes in twelves; six in octavo; and he apprehends, from the quantity he himself had printed when the fraud was discovered, that the confederacy have got possession of five entire volumes, the greatest part of the sixth, and of several sheets of the seventh and last; but the work being stopped when the wickedness was known, they cannot have the better half of the concluding volume. He is further assured, that these worthy men are in treaty with booksellers in Scotland, for their printing his work in that part of the United Kingdom, from copies that they are to furnish; and also, that they purpose to send a copy to France, to be translated there before publication; no doubt for pecuniary considerations; and in order to propagate, to the utmost, the injury done to one, who never did any to them; and who, till this proceeding, he blesses God, knew not that there were such men in the world; at least, among those who could look out in broad and open day. It has been customary for the Irish booksellers to make a scramble among themselves who should first entitle himself to the reprinting of a new English book; and happy was he, who could get his agents in England to send him a copy of a supposed saleable piece, as soon as it was printed, and ready to be published. This kind of property was never contested with them by authors in England; and it was

agreed among themselves (that is, among the Irish booksellers and printers) to be a sufficient title; though now and then a *shark* was found, who preyed on his own kind; as the newspapers of Dublin have testified. But the present case will show to what a height of baseness such an undisputed licence is arrived. After all, if there is no law to right the editor and sole proprietor of this new work (*new* in every sense of the word,) he must acquiesce; but with this hope, that, from so flagrant an attempt, that a law may one day be thought necessary, in order to secure to authors the benefit of their own labours: nor does he wish, that even these invaders of his property in Ireland may be excluded from the benefit of it, in the property of any of the works to which they are, or shall be, fairly and lawfully entitled. At present, the English writers may be said, from the attempts and practices of the Irish booksellers and printers, to live in an age of *liberty*, but not of *property*.

N.B. This is not a contention between booksellers of England and Ireland, and on a doubtful property; but between a lawful proprietor of a new and moral work—and Let Messieurs Wilson, Exshaw, and Saunders, reflecting upon the steps they have taken, and making the case their own (for they no doubt have servants)—fill up the blank.

1753, Nov. 7. *The Adventurer*. This admired paper was the production of Dr. Hawkesworth.\* It is adorned with many eastern tales, and some valuable critical communications. It was printed on a folio sheet, for J. Payne, at Pope's Head, in Paternoster-row; appeared every Tuesday and Saturday, and closed with No. 140, signed by Dr.

\* John Hawkesworth was born in the year 1719; he was intended for the profession of the law, and placed with Mr. Harwood, an attorney in the Poultry. Soon disgusted with the employment, he deserted it for the more precarious, though more pleasing, occupation of literature. At the age of twenty-five he had obtained no small reputation as a literary character, for at this period, namely, in the year 1744, he was engaged by the editor of the *Gentleman's Magazine* to succeed Dr. Johnson in the complement of the parliamentary debates; then deemed a very important part of that interesting miscellany. He was for four years, also, a poetical contributor under the signature of *Greville*. The success of the *Rambler* as soon as it was collected into volumes, the admiration which he was known to entertain of pursuing the footsteps of Johnson, induced him to project and commence a periodical paper under the title of the *Adventurer*, which rose under his fostering care, and he need not fear a comparison with the *Rambler* and *Spectator*. Dr. Herring being highly pleased with the instructive tendency of the *Adventurer*, conferred upon its author the degree of Doctor of Civil Law. The reputation which he had acquired by these essays, held out strong inducements to the prosecutions of his literary career; and in the year 1756, at the request of Garrick, he turned his attention to the stage, and produced *Zimri*, an oratorio, and other pieces, and there is every reason to suppose that had he pursued dramatic composition, he might have attained to distinguished excellence as a disciple of Melpomene. In April, 1765, he undertook the office of reviewer in the *Gentleman's Magazine*, a department which he filled with great ability until the year 1773. In 1765 he presented to the public a revised edition of *Swift's* works, in 12 vols. 8vo. accompanied by explanatory notes, and a *Life of Swift*, of which Johnson speaks in very liberal terms. The celebrity which Dr. Hawkesworth had now attained, as a literary character, was aided by the friendship of Garrick, who recommended him to lord Sandwich, who was the means of procuring for him one of the most honourable and lucrative engagements that has been recorded in the annals of

Hawkesworth as editor. The price of each essay was twopence, and its sale in separate papers was very extensive. Dr. Johnson contributed twenty-nine numbers to the *Adventurer*, which are distinguished by the letter T; and the sum that he received for their composition, which was two guineas per paper, he presented to Dr. R. Bathurst, who is supposed to have acted as his amanuensis on the occasion.

1753. *The Protestor*. By James Ralph.

1753, Nov. 8. *Died*, SAMUEL ASHURST, an eminent stationer in Paternoster-row.

1754, Jan. 10. *Died*, EDWARD CAVE, projector and proprietor of the *Gentleman's Magazine*. The curiosity of the public seems to demand a history of every man who has, by whatever means, risen to eminence; and few lives would have more readers than that of the compiler of this miscellany, if all those who received improvement or entertainment from him should retain so much kindness for their benefactor as to inquire after his conduct and character. The *Gentleman's Magazine*, which has subsisted so many years, and which still continues to enjoy the favour of the world, is one of the most prosperous and lucrative pamphlets which literary history has upon record.

Edward Cave, according to Dr. Johnson, was born at Newton, in Warwickshire, on the 29th of February, 1691. His father (Joseph Cave) was the younger son of Mr. Edward Cave, of Cave's-in-the-Hole, a lone house, on the Street-road, in the same county, which took its name from the occupier; but having concurred with his elder brother in cutting off the entail of a small hereditary estate, by which act it was lost from the family, he was reduced to follow the trade of shoe-making, in Rugby. He lived to a great age; and was, in his latter years, supported by his son.

It was fortunate for Cave, continues his biographer, that, having a disposition to literary attainments, he was not precluded by the poverty of his parents from opportunities of cultivating

literature. The anxiety of the public to be acquainted with the events which had befallen the navigator of the southern hemisphere, at the commencement of the present reign, was greatly increased by the return of Lieutenant Cook from his first voyage round the globe, in May, 1771; and Government in the following year entrusted to Hawkesworth the task of gratifying the general curiosity. A few attempts, in the mean time, had been made, though with little success, to anticipate the authenticated narrative, which came forth so early as 1773, under the following title:—*An Account of the Voyages undertaken by the Order of his present Majesty for making Discoveries in the Southern Hemisphere, &c. Drawn up from the Journals which were kept by the several Commanders, and from the Papers of Joseph Banks, Esq.* By John Hawkesworth, L.L.D. Illustrated with cuts, and a great variety of charts and maps relative to countries now first discovered, or hitherto but imperfectly known. 4to. 3 vols. In order that a work which might properly be termed *national* should appear with every requisite illustration, government withheld no necessary expense. Dr. Hawkesworth had the princely remuneration of six thousand pounds; and the charts, engravings, and maps, were executed in a very splendid, and, with a few exceptions, in a very correct manner. The first volume includes the journals of Byron, Wallis, and Carteret, and the second and third are occupied by the still more interesting voyage of Cook. Dr. Hawkesworth died November 16, 1773.

his faculties. The school of Rugby, in which he had, by the rules of its foundation, a right to be instructed, was then in high reputation, under the rev. Mr. Holyock, to whose care most of the neighbouring families, even of the highest rank, entrusted their sons. He had judgment to discover, and for some time generosity to encourage, the genius of young Cave; and was so well pleased with his quick progress in the school, that he declared his resolution to breed him for the university, and recommend him as a servitor to some of his scholars of high rank. But prosperity which depends upon the caprice of others is of short duration. Cave's superiority in literature exalted him to an invidious familiarity with boys who were far above him in rank and expectations; and, as in unequal associations it always happens, whatever unlucky prank was played was imputed to Cave. When any mischief, great or small, was done, though perhaps others boasted of the stratagem when it was successful, yet, upon detection or mis-carriage, the fault was sure to fall upon poor Cave. At last, by some invisible means, his mistress lost a favourite cock; and Cave was, with little examination, stigmatized as the thief or murderer; not, indeed, because he was more apparently criminal than others, but because he was more easily reached by vindictive justice. From that time, however, Mr. Holyock withdrew his kindness visibly from him, and treated him with an harshness, which the crime, in its utmost aggravation, could scarcely deserve; and which, surely, he would have forborne, had he considered how hardly the habitual influence of birth and fortune is resisted, and how frequently men, not wholly without some sense of virtue, are betrayed into acts more atrocious than the robbery of a henroost, with the view of pleasing their superiors.

Under pretence that Cave obstructed the discipline of the school by selling clandestine assistance, and supplying exercises to idlers, he was oppressed with unreasonable tasks, that there might be an opportunity of quarrelling with his failure; and even when his diligence had surmounted them, no regard was paid to the performance. Cave bore this persecution awhile, and then left the school, and the hope of a literary education, to seek some other means of acquiring his living. He was first placed with a collector of the excise. He used afterwards to recount, with some pleasure, a journey or two which he rode with him as his clerk; and relate the victories that he gained over his new master, in grammatical disputations; but this place he soon left, and was bound apprentice to Mr. Collins, a printer of some reputation, and deputy alderman. Printing was a trade for which men were formerly prepared by literary education, and which was pleasing to Cave, because it furnished some employment for his scholastic attainments. Here, therefore, he resolved to settle; though his master and mistress lived in perpetual discord, and their house presented no very comfortable abode.

From the inconveniences of these domestic tumults, he was, happily, soon relieved; having, in only two years, attained so much skill in his art, and acquired such confidence with his master, that he was sent, without any superintendent, to conduct a printing-office at Norwich, and publish a weekly paper. In this undertaking he had to encounter some opposition, which, producing a controversy, ended in conferring upon young Cave the reputation of an author. His master dying before his apprenticeship was expired, and finding the perverseness of his mistress to be insupportable, Cave quitted her house upon a stipulated allowance, and married a young widow, with whom he lived at Bow. When his time was out, he worked as a journeyman with the famous alderman Barber, who was so much patronized by the Tories, and whose principles had such an ascendancy with Cave, just at this time, that he was for some years a writer in *Mist's Journal*; which, though he incidentally obtained by his wife's interest a small place in the post-office, he for some time continued; but he by degrees inclined to another party, in which, however, he was always moderate, though steady and determined.

He corrected, during this period, the *Gradus ad Parnassum*, for which he was liberally remunerated by the stationers' company. He also wrote an *Account of the Criminals*, which had for some time a considerable sale; and he published many little pamphlets, which accident brought into his way. He was at length raised to the office of clerk of the franks, in which he acted with great spirit; often stopping franks, which were given by members of parliament to their friends, because he thought too much extension of this privilege to be illegal. Having in this manner ventured to detain a frank that had been given to the celebrated duchess of Marlborough by Mr. Walter Plummer, he was cited before the house of commons; and accused, however, unjustly, of opening letters to detect them. Cave was here treated with great harshness and severity; but declining their questions, by pleading his oath of secrecy, was at last dismissed; and it must be recorded to his honour, that, although he was ejected from his situation, he did not conceive himself to be thereby discharged from his trust, but continued to refuse to his nearest friends any information about the management of the office. By his constancy of diligence, and diversity of employment, he in time collected money sufficient for the purchase of a small printing-office, and began his *Gentleman's Magazine*; a periodical pamphlet, of which the scheme is known wherever the English language is understood. To this undertaking he owed the affluence in which he passed the last twenty years of his life; and the fortune he left behind him, though large, had yet been larger, had he not rashly impaired it by numerous absurd and unsuccessful projects.

In 1741, his wife died of an asthma. He seemed not, at first, much affected by her loss; but, in a few days, he forewent both his appetite

and sleep. After lingering for about two years, with many vicissitudes of amendment and relapse, he fell, by the use of acid liquors, into a diarrhoea, followed by a kind of lethargic insensibility. At the time of his death he had just concluded the twenty-third annual collection. He was buried in the church of St. James's, Clerkenwell; but the following inscription, from the pen of Dr. Haworth, is placed at Rugby, in Warwickshire.

Near this place lies the body of  
JOSEPH CAVE,  
late of this parish,  
who departed this life Nov. 18, 1747,  
aged 79 years.

He was placed by Providence in a humble station; but Industry abundantly supplied the wants of Nature, and Temperance blessed him with Content and Wealth. As he was an affectionate Father, he was made happy in the decline of life by the deserved eminence of his eldest son,

EDWARD CAVE,  
who, without interest, fortune, or connexion, by the native force of his own genius, assisted only by a classical education, which he received at the Grammar School of this town, planned, executed, and established a literary work, called,  
*The Gentleman's Magazine*, whereby he acquired an ample fortune, the whole of which devolved to his family.

Here also lies the body of  
WILLIAM CAVE,  
the second son of the said JOSEPH CAVE,  
who died May 2, 1857,  
aged 62 years;

and who, having survived his elder brother,  
EDWARD CAVE,  
inherited from him a competent estate; and, in gratitude to his benefactor, ordered this monument to perpetuate his memory.

He lived a patriarch in his numerous race,  
And show'd in charity a Christian's grace;  
Whate'er a friend or parent feels, he knew;  
His hand was open, and his heart was true.  
On what he gain'd and gave, he taught mankind,  
A grateful always is a generous mind.  
Here rests his clay! His soul must ever rest,  
Who blest'd when living, dying must be blest.

Cave was a man of large stature, not only tall, but bulky; and was, when young, of remarkable strength and activity. He was generally healthful, and capable of much labour, and long application; but in the latter year of his life he was afflicted by the gout, which he endeavoured to cure or alleviate in a total abstinence from strong liquors and animal food. From animal food he abstained about four years, and from strong liquors much longer; but the gout continued unconquered, and, perhaps, unabated. His resolution and perseverance were very uncommon; in whatever he undertook, neither expense nor fatigue were able to repress him; but his constancy was calm, and, to those who did not know him, appeared faint and languid; yet he always went forward, though he moved slowly. The same chilliness of mind was observable in his conversation: he was watching the minutest accent of those whom he offended by seeming inattention; and his visitant was surprised, when he came a second time, by preparations to execute the scheme which he supposed never to have been heard. He was, consistently with this general tranquillity of mind,

a tenacious maintainer, though not a clamorous demander, of his right. Having in his youth summoned his fellow-journeymen to concert measures against the oppression of their masters, he mounted the imposing stone, whence he harangued them so efficaciously, that they determined to resist all future invasions; and when the stamp-officers demanded to stamp the last half-sheet of a magazine, young Cave alone defeated their claim. He was a friend rather easy and constant, than zealous and active; yet many instances might be given, where both his money and his interest were liberally employed for others. His enmity was, in like manner, cool and deliberate; but, though cool, it was not insidious; and though deliberate, not pertinacious. His mental faculties were slow. If he saw little at a time, however, that little he saw with great exactness. He was long in finding the right, but seldom failed to find it at last. His affections were not easily gained, and his opinions not quickly discovered. His reserve, as it might hide his faults, concealed his virtues; but such he was, as they who best knew him, have most lamented.

1754. JAMES DAVIES set up a press at Newbern, being the first used throughout the whole province of North Carolina, in North America. He appears not to have printed much, except a folio volume of the *Laws of North Carolina*.

1754. J. PARKER, who was the principal master printer in New York, established the second printing-office in the province of Connecticut, at Newhaven, in North America, and the first book printed was the *Laws of Yale college*, in Latin. On the first of January, 1755, he commenced a newspaper at Newhaven.

1754, Jan. 31. *The Connoisseur*, No. 1. This publication was projected and almost entirely written by George Colman\* and Bonnell Thornton,† under the fictitious name of Mr. Town, critic and censor-general, and continued weekly for nearly three years; No. 140, the concluding essay, being dated Thursday, Sept. 30, 1756.

\* George Colman was born at Florence, about 1723, where his father was British resident at the court of the grand duke of Tuscany, and received his education at Westminster and Oxford. Being intended for the legal profession, he entered at Lincoln's-inn, and was afterwards called to the bar; it was long, however, before he deserted the law for the more alluring pursuit of literary fame; and in 1760 he attracted the attention of the public by his *Polly Honeycombe*, which was received with such applause, that, from this period, he became a most assiduous and successful writer for the stage. This fertility in dramatic composition neither originated from narrow circumstances, nor did it preclude his attention to classical studies. The year 1765 produced his *Translations of the Comedies of Terence*, a work of acknowledged excellence, and which acquired him much credit as a scholar and a critic. To his celebrity as a classical scholar, he added greatly, in 1783, by a poetical version of *Homer's Art of Poetry*, with a commentary and critical notes. Mr. Colman died August 14, 1794.

† Bonnell Thornton was the son of an apothecary, and born in London, in the year 1724, and passed with reputation through Westminster, and Christ church, Oxford, where he commenced his literary career in the first number of the *Student*. He soon became celebrated as a poet, an essayist, and a miscellaneous writer. He published a translation in blank verse of seven of the plays of Plautus in two vols. 8vo. He died May 7, 1768, and was buried in Westminster abbey.

The title *Connoisseur*, now generally appropriated to a judge of the fine arts, was, by Messrs. Colman and Thornton, employed in the sense of a critic on the manners and minor morals of mankind; and to this acceptation of the term the motto which they have chosen pointedly alludes, and is still further opened by the subsequent paraphrase as given in their first number.

Non de villis domibuscve alienis,  
Nec male necne Lepos saltet : sed quod magis ad nos  
Pertinet, et necesse malum est, agitamus.—Hœa.

Who better knows to build, or who to dance,  
Or this from Italy, or that from France,  
Our Connoisseurs will ne'er pretend to scan,  
But point the follies of mankind to men ;  
Th' important knowledge, of ourselves explain ;  
Which not to know all knowledge is but vain.

1754, Feb. 16. *Died*, Dr. RICHARD MEAD, a physician of great eminence, and a most generous patron of learning and learned men in all sciences and in every country ; by the peculiar magnificence of his disposition, making the private gains of his profession answer the end of a princely fortune, and valuing them only as they enabled him to become more extensively useful, and thereby to satisfy that greatness of mind which will transmit his name to posterity with a lustre not inferior to that which attends the most distinguished character of antiquity. His large and spacious house in Great Ormond-street, became a repository of all that was curious in nature, or in art ; to which his extensive correspondence with the learned men in all parts of Europe not a little contributed. No foreigner of any learning, taste, or even curiosity, ever came to England without being introduced to Dr. Mead. The clergy, and in general all men of learning, were welcome to his advice ; and his doors were open every morning to the indigent, whom he frequently assisted with money ; so that, notwithstanding his great gains, he did not die very rich. During almost half a century he was at the head of his profession ; which brought him in one year upwards of £7000, and between £5000 and £6000 for several years. He built a gallery for his favourite furniture, his pictures, and his antiquities. His library consisted of 10,000 volumes, and with the prints, drawings, gems, bronzes, busts, and antiquities, produced the following sums at the sale of his effects :

The books sold for.....	£5515	18	11
Medals .....	1977	17	9
Antiques .....	3346	15	6
Pictures .....	3417	11	9
Prints.....	1908	14	6

£16069 8 11

The sale began Nov. 18, 1754, and ended Feb. 19, 1755. It is remarkable that many of his books sold for much more than he gave for them.\* His pictures produced about £600 more than they had cost him. Dr. Mead was twice

\* The following letter, written by Horace Walpole, will serve to explain why, in some cases, at public sales, a book will produce a price far beyond its value, without any sufficient reason being apparent at the time.

"I cannot conclude my letter without telling you, what an escape I had, at the sale of Dr. Mead's library, which

married. By his first lady he had ten children of whom three survived him. By the second lady, he had no issue. Seven days after the world was deprived of this eminent physician, he was buried in the Temple church, near his brother Richard, a counsellor at law. To Dr. Mead there is no monument in the Temple ; but an honorary one was placed by his son in the north aisle of Westminster abbey. He was born at Stepney, August 11, 1673.

1754, March 2. *The Manchester Journal*, No. 1, printed by J. Scholfield and M. Turnbull, at their printing-office, down the Fountain-court, at the backside of the exchange ; and published at their shop in Deansgate, every Saturday morning. No price affixed. Discontinued in 1756.

1754, March 30. The duke of Dorset, lord lieutenant of Ireland, issued a proclamation offering a reward of £500 for the author, and £200 for the printer, for publishing a libel upon the government.

1754, Sept. *The Entertainer*, No. 1, by Charles Mercury, esq. To be continued every Tuesday, price three halfpence ; published by Mr. Mechell.

1754, Oct. 8. *Died*, HENRY FIELDING, author of the novels of *Tom Jones*, *Amelia*, and *Joseph Andrews*, whose extraordinary powers in fictitious narrative "unveiled to the public a vein of humour and invention, and a facility and truth in the delineation of character, which rivalled the happiest effusions of Cervantes and Addison." He was born at Sharpham park, near Glastonbury, in Somersetshire, April 22, 1707. After a classical education at Eton college, he was sent to study the civil law at Leyden, but owing to his pecuniary affairs he returned to England, at the end of two years. Being thus unfortunately circumstanced, Henry Fielding aggravated the evils of poverty by a strong propensity to extravagance and dissipation. Though under age, he found himself his own master, in London, where the temptations to pleasure were numerous, and the means of gratification easily attained. The brilliancy of his talents soon brought him into request with men of taste and literature ; but it was not to men of taste and literature only that his acquaintance was confined. He united with the voluptuous, as well as with the learned and the witty, and plunged into excesses, the bad effects of which accompanied him the remainder of his life. To supply a fund for his indulgences ; he became at the early age of twenty a writer for the stage ; and altogether produced not less than twenty-six comedies and farces, few of which are

goes extremely dear. In the catalogue I saw *Winstanley's Views of Audley End*, which I concluded was a thin dirty folio, worth about fifteen shillings. As I thought it might be scarce, it might run to two or three guineas ; however, I bid Graham *certainly* buy it for me. He came the next morning in a great fright—said he did not know, whether he had done right or very wrong,—that he had gone as far as nine and forty guineas. I started in such a fright ! Another bookseller had, luckily, as unlimited a commission, and bid fifty, when my Graham begged it might be adjourned, till they could consult their principals. I think I shall never give an unbounded commission again, even for *Views of les Rochers* !—Adieu.

"Yours ever,

"HORACE WALPOLE."

now remembered. In 1734 he married a Miss Cradock, of Salisbury, with whom he obtained £1500, and an estate at Stower, in Dorsetshire, of £200 a-year, which, by a profuse expenditure, in about three years he found himself entirely stripped of his wife's fortune and his own patrimony. In 1737 he was entered of the Temple; and his application, whilst a student there, was remarkably intense. After the customary time of probation he was called to the bar. The early taste he had taken of pleasure would sometimes return upon him, and conspire with his spirits and vivacity to carry him into the wild enjoyments of the town.\* Under the pressure of pain and adverse circumstances, Fielding still found resources in his genius and abilities. His pen never lay idle; but was always producing, as it were, extempore, a play, a farce, a pamphlet, or a political newspaper. It may be observed, to the honour of Fielding, that in the prologue to his *Modern Husband* he expresses a sense of the irregularity and indecency of some of his former compositions:

At length, repenting frolic flights of youth,  
Once more he flies to Nature and to Truth:  
In Virtue's just defence aspires to fame,  
And courts applause without the applauder's shame.

By the time that Mr. Fielding had attained the age of forty-three, he had been so incessantly pursued by reiterated attacks of the gout, that he was rendered wholly incapable of continuing any longer in the practice of a barrister; and he, therefore, accepted of an office not a little unpopular, namely, that of an active magistrate in the commission of the peace for Middlesex, a situation which subjected him to the reproach of crimes of which he was innocent. A complication of disorders produced a dropsy, and he was advised by his physicians to undertake a voyage to Lisbon, in hopes that the mildness and stability of the climate might renovate his powers; the experiment failed, and he lived but two months after his arrival in Portugal. Though guilty of numerous errors in the early period of his life, for which he afterwards severely atoned, the morals and religious principles of Fielding were never shaken; for many of his works prove him to have been really a lover of virtue, and a be-

\* Some parochial taxes for Fielding's house, in Beaufort buildings being unpaid, and for which demands had been made again and again, Fielding was at length given to understand, by the collector, who had an esteem for him, that no longer procrastination could be admitted. In this dilemma he had recourse to Jacob Tonson, and mortgaging the future sheets of some work he had in hand, received the sum he wanted, which might be ten or twelve guineas. When he was near his own house, he met with an old college chum, whom he had not seen for many years. They retired to a neighbouring tavern, and gave free scope to their conviviality. In the course of the conversation, Mr. Fielding found that his friend had been unfortunate in life, upon which he immediately gave him the whole of the money he had obtained from Mr. Tonson. Early in the morning he returned home in the full enjoyment of his benevolent disposition and conduct, when he was told that the collector had called for the taxes due on the preceding day. His reply was laconic, but memorable: "Friendship has called for the money, and had it; let the collector call again." A second application to Jacob Tonson enabled him to satisfy the parish demands.

never of revealed religion. "The cultivated genius of Fielding," says Dr. Knox, "entitles him to a high rank among the classics. His works exhibit a series of pictures drawn with all the descriptive fidelity of a Hogarth. They are highly entertaining, and will always be read with pleasure; but they likewise disclose scenes, which may corrupt a mind unseasoned by experience." "As a writer," says Dr. Drake, "he is truly original, and in the comic epopeia without a rival."

1754, Nov. 2. Died, JAMES ROBERTS, a printer of great eminence, aged 85 years. He was three times master of the stationers' company, 1729, 1730, 1731, and resided in Warwick-lane. For Dunton's\* character of Mr. Roberts, see p. 576.

1754, Nov. 1. *The Printer's Grammar; wherein is exhibited, examined, and explained, what is requisite for attaining a more perfect knowledge both in the theory and practice of the art of*

\* John Dunton characterises the following printers:

Mr. BAOWA, in Lodge-street. His father printed for sir Roger L'Estrange; and the son has met with a "Snake in the grass" and other copies that have sold as well. He is a genteel man in his garb, a prudent man in his actions, and a thriving man in his shop, and had he lived in the primitive times, he had been one of the eminent booksellers of that age, as he has the honour to be so in this.

Mr. BRADDYLL is a first rate printer, and has always been a very active diligent man, he is religiously true to his word and faithful to the booksellers that employ him, of which his making no discovery of two thousand books I once burned in an oven is, to me at least, a very pregnant instance, he was once a good friend to sir Roger L'Estrange, when matters looked a little dark upon him. But Mr. Braddyll has met with back enemies, as well as other men, and upon that score he is very tender of giving wounds to others in the same place where he himself has suffered, which is certainly a good improvement of those ill practices. I dealt with him for many years, and have not only found him just, but as well accomplished for all the parts of his business as any other printer I can name.

Mr. ASTWOOD, was my dear neighbor and intimate friend for many years, he printed for me near sixty books, and was constantly engaged in the *Athenian Mercury*. If he had any failing it was that of a little passion, but it was over in a word speaking, and to make amends he was almost perfect in charity, friendship, humanity, justice, and every other virtue, what I speak is from the long intimacy I had with him, but I need not enlarge, for since the death of his son, Mr. John Astwood, he seems no longer to have any commerce with the world, and hath nothing so familiar as a life that is (by his retreat from London to a country village) as it were buried in death.

Mr. BRADSHAW deserves great respect for his dutiful carriage to an aged mother, he has the unhappiness of a little heat of temper, but was perfect we should soon lose his company; it is but justice however to tell the booksellers, that Mr. Bradnell is furnished with a large faith, is a good printer, and truly honest. I take his brother Mr. Moses Bradnell, Mr. Clare, and Mr. Cocket, to be the best compositors in London.

Mr. EDWARD BREWSTER was a master of the company of stationers when I was made a liveryman. He has a considerable estate, is very humble and his usual appellation is "Brother." He is a man of great piety and moderation. He printed the *Practice of Piety, Doctrine of the Bible*, and other useful books. See his gift to the stationers' company, *not safe*.

Mr. HARTWELL, is a modest humble man, and very ingenious in his calling, he makes the best ink for printers of any man in London. There is a peculiar blessing attends him for he does not only thrive in the world but his whole life has been so unblemished that even any herself cannot fix a blot upon him, his religion is that of the church of England, and he is a devout and constant hearer of Dr. Peard; but though he is strict to his own principles; yet towards dissenters he is compassionate and gentle, and homely proud to be of the same judgment with his generous sovereign, and therefore acquiesces in, nay, is extremely satisfied with her majesty's good intentions and legal kindness towards her dissenting subjects, and I do

printing. By John Smith. London, 8vo. Owen. This is the first work printed in England expressly for the use of the profession. The author, JOHN SMITH, who, from his own acknowledgment, appears to have produced his book under

very adverse circumstances, and solely with a view to relieve himself from his embarrassments: It is plain that he only went half way through with his design, since his volume treats only upon the business of a compositor, omitting all

not doubt but he heartily desires a closer union between all such as there is any appearance of accommodation withal, and certainly a "bill of comprehension" would conduce to England's strength and happiness, who must needs have frequent qualms and sicknesses, while little less than two nations are struggling within her,

Mrs. TACY SOWLE. She is both a printer as well as a bookseller, and the daughter of one, and understands her trade very well, being a good compositor herself. Her love and piety to her aged mother is eminently remarkable, even to that degree that she keeps herself unmarried for this only reason, (as I have been informed) that it may not be out of her power to let her mother have always the chief command in her house. I have known this eminent quaker for many years, have been generously treated at her house, and must do her the justice to say, I believe her a conscientious person. If any blame me for being thus charitable, I cannot help it, for I cannot think it a piece of religion to anathematize from Christ all such as will not subscribe to every one of my articles; but am conscious to so many *Errors*, speculative and practical, in myself, that I know not how to be severe towards others, for since Christ's church is not limited to any nation, or party, (as is owned in *Robert Barclay's Apology*, &c. which Mrs. Sowle once presented to me. I do believe sincerity and holiness will carry us to heaven with any woe and with any name, at least I have so much charity as to think all those persons go to heaven, whether they be churchmen, presbyterians, or quakers, &c. in whom I see so much goodness and virtue as is visible in the life and conversation of Mrs. Sowle.

Mr. MILROCK. He was no starter, having lived forty years in the same house, in Jewin-street; he has done his duty in all relations, but most eminently in that of a husband. Those rays of conjugal love which are diffusedly scattered in other men, concentrated in Thomas Milrock. He was fairly married to four wives (for the good man had been shoeing the horse round) and was a tender husband to all: he was free from flattery and affectation, and being a nice conformist the best churchmen did copy from him: his whole life was religiously timed, and it made the sweetest music in the close, for he was patient under all his weakness, and wholly resigned to the will of God: he had a dutiful child in Mrs. Onley, and was very happy in his daughter Briggs; but he is gone to his long home, and "The eye that hath seen him shall see him no more." He died in his 74th year, and having learnt all could here be taught him, he is gone to heaven to see more.

Mr. ONLEY, printer. He is a kind husband, a tender father, regular in his conversation, and being a good master, has the journeyman printers very much at his beck. He will make a book vanish into the world as quick as spirits out of it, and bring it abroad as easily as Leeson draws a tooth, or as easily as a flash of lightning: he has a great respect for all that are related to the noble mystery of printing; and being very ingenious, by his own projections, he keeps two printing-houses constantly at work, in Little Britain, and in Bond's stables, near Chancery-lane.

Mr. RAWLINS, near Paternoster-row, printer, has printed several books for me; he works for very reasonable rates, and it would be a great hardship upon him, I am sure, should you pretend to offer less than he will ask you: he is an honest and a thriving man, and has an excellent choice of good letter: he makes great despatch with any engagement he undertakes, and is very punctual to his word; for he will rather refuse work when it is offered, than not be just to his promise.

Mr. HENRY RHODES has got a considerable estate, his copies having met with good success. He had the good fortune to print the eight volumes of *The Turkish Spy*; *The great Historical Dictionary*; and *The present State of Europe*; which has been continued to fourteen volumes; and the longer it has been published it has been the better received. Mr. Harris and myself brought Mr. Rhodes into the *Monthly Mercury*; but we lost by it five months successively, which made me a little apprehensive of that design, and thereupon threw up my interest in it for £25.

Mr. NOTT. We went joint partners in the parliament lottery; and a prize of ten pounds per annum falling upon my ticket, it renewed our friendship. Upon a long experience of Mr. Nott, I find him to be a just paymaster, and a good publisher. Mr. Nott was originally a printer, and lived with Mr. Jones, in the Savoy, for many years;

and has always had the character of being very discreet and obliging, and now gives as great content to those that employ him as any publisher whatsoever. Mr. Nott resided at the Queen's Arms, in Pall-mall, and was among the early distributors of books by auction.

Mr. LARSON, printer. He was formerly a printer in London, and since has been a famous author; he has perhaps done as much honour to the mathematics, as most persons you can name. There is something masterly in all he writes; as to his *Course Mathematicæ* and his *Panarithmologia*, they will never be equalled.

Mr. MOORE was one of those good-natured printers that worked themselves into debt, so that had his business been less, he would have kept his legs the longer, however, I believe him a very honest mistaken man, and if he is yet living I will drink his health.

Mr. MEAN is a man very fit for his business, and there is always great dependence upon what he says; he is a very obliging and sincere friend; printed for me a while ago, *A Step to Oxford*.

Mr. OAKS, printer. I never meet with him but I make him my acknowledgments for the length and the patience of the credit he has given me, though he will scarce hear the mention of it, so that I am never apprehensive of Mr. Oak's relapsing into debts unless it be "to take a bottle with him," which is a noble charity from creditors to poor debtors, when their spirits run low. Mr. Oak is, without doubt, a printer that is very faithful, generous, and obliging to the last degree.

Mr. KEALE, in Fleet-street. He is a very ingenious, modest, humble man; and has learnt to do much in a little time. He printed that useful book, called, *A Week's Preparation for the Sacrament*, and other excellent books of devotion. In his copy, intitled *Rules in the Church of England*, you are directed to the *Common Prayer* for every hour of the day; and as Mr. Keble has chiefly printed religious books, so he loves serious piety wherever he finds it. Whilst others wrangle about religion, he endeavours to practise it.

Mr. TURNER, near Lincoln's Inn. He prints the *History of Men*, and other good copies, and has an excellent character among booksellers, stationers, and printers; he has a due respect for the clergy, and is himself a true son of the church; but whatever his own opinions are of smaller matters, he thinks well of all whom he knows not to deserve the contrary, though they differ from him; and well of none for being of his party, unless they have other merits to recommend them. He is a man of general charity, (as all true sons of the church are;) and if he continues to thrive as he has begun, he will be alderman Turner in a few years; yet the fortunate blood that has filled his veins, has not swelled his heart, for he is still as humble as ever, and is such a master in the art of obliging as if he thought the only thing valuable in riches is the power they give to oblige. He resided at the Lamb, near the Turnstile, in Holborn.

Mr. LAARW, scolar. He has been my acquaintance for twenty years, and the first printer I had in London. He is of an even temper, not elated when fortune smiles, not cast down with her frowns, and though his stars have not been kind to him (he having had great losses,) yet he has borne all with a great presence of mind. His conversation is extremely diverting, and what he says is always to the purpose; he is a particular votary of the muses, and I have seen some of his poems that cannot be equalled. He formerly wrote a *Vision of Heaven*, &c. (which contains many nice and curious thoughts) and has lately published an ingenious *Essay on the noble Art and Mystery of Printing*, which will immortalize his name amongst all the professors of that art, as much as the essay will the art itself. I ever thought my acquaintance with Mr. Larkin, a special blessing; for, like the glow-worm (the emblem of true friendship,) he has still shined to me in the dark. In a word, Mr. Larkin is sincerely my friend, and was ever so from the first moment I saw him, and which makes me respect him the more, he is the only friend in the world of whom I can positively say, he will never be otherwise, so that Mr. Larkin is my *sister* ego, or rather my very self in a *better edition*; and to sum up his character in nine words, "whatever he does is upon the account of a friend." Mr. Larkin has a son now living of the same name and trade with himself, and four grandsons, which (humanly speaking) will transmit his name to the end of time.

that relates to the completion of printing;—*never mentioning press or pressman*. The following extract from his preface will best explain the situation in which Smith was placed :

"The publication of the following *Essay* is the result of a resolution to make a stand against the joint disasters that long have harassed me, and threaten to pursue me to the last confines of retreat : for though infirmities and ailments are become habitual to me : yet when their concomitant consequences presented themselves more ghastly to me, I was on a sudden prompted to think of guarding against their further encroachments ; but knowing myself unable to do it by the usual exercise of my profession, I concluded to publish proposals for printing this *Grammar* ; which had the good effect, that in a short time so many declared themselves in favour of my undertaking, that I had no room to doubt of succeeding in it. And notwithstanding a considerable number of my subscribers have proved apostates since, the work has nevertheless been continued, and is brought to a conclusion by the aid of the permanent encouragers thereof ; and especially by the interest of some particular well wishers, who have shewn themselves so assiduous in promoting my expectations, that it demands my public acknowledgements. By these helps, and by having been permitted to print at prime cost, I have been enabled to carry this *Grammar* to its proposed length : but how it will be received by those who have not yet examined into the merits thereof, will soon appear by the success of the remaining copies. In the mean time I shall use no art to gain the approbation of those who were under apprehension that this work, being of a troublesome and expensive nature, if it was not done as it *should be*, would be better not done at all : since I am not ignorant, that our ideas of the same thing are not *always* the same ; and therefore hope they will reverse their opinion, and judge more favourable of the whole."—Smith appears to have died in the following year. An abridgment of the above was published in 1787, entitled the *Printer's Grammar*, chiefly collected from Smith's edition, in 8vo.

1754. *The Dreamer*. The author of this paper was Dr. William King,\* principal of St. Mary's hall, Oxford. It occupies an 8vo. volume of 240 pages, independent of a copious index and explanatory advertisement ; it contains a series of dreams, forming an indirect satire on the abuses of religion, literature, and the learned professions. There is much ingenuity exhibited in the conception and conduct of the imagery, and the style is often easy, elegant, and correct.

1754. *The Leeds Intelligencer*. This paper was commenced by Mr. William Wright.

1755, Jan. 5. *Died*, PHILIP ARGELLATI, an eminent Italian printer, and one of the most

learned and laborious editors of his time. He was descended of an ancient family in the city of Bologna, and born about the end of the year 1685. After pursuing his studies with uncommon ardour, he travelled into different countries, when he returned to his native city, and in the year 1717 was elected one of the magistrates, known by the title of the tribunes of the people : when he came to resign his office, he made so eloquent an address, on the duties of a public magistrate, that his successors in office ordered it to be registered among their acts. In conjunction with the learned Muratori he commenced printing at Milan, to revive the art which had so much degenerated at that period in Italy. The emperor Charles VI. to whom he dedicated a work, repaid him by the title of imperial secretary, with a pension of three hundred crowns, which sum the emperor doubled in 1738. This indefatigable typographer continued to execute various editions of works of importance until his death, which took place at Milan.

1755, May. That great national work, Johnson's *Dictionary of the English Language*, completed under the liberal patronage of seven eminent booksellers of London ; viz. Robert Dodsley, Charles Hitch, Andrew Millar, Messrs. Longman, and Messrs. Knapton. Johnson received for his labours the sum of £1575, a reward which, though at that time justly considered ample and munificent, would now be deemed totally inadequate to the time and effort necessarily required for such a work. Johnson was in the vigour of life, and had lived nearly half his days, without friends or lucrative profession, he had toiled and laboured, yet still, as he himself expresses it, was to provide for the day that was passing over him. Of the profession of an unfriended author, he saw the danger and the difficulties. Amburst, Savage, Boyse, and others, who had laboured in literature, without emerging from distress, were recent examples, and clouded his prospect. On the commencement of his *Dictionary*, he was emboldened by his connection with several of the most opulent booksellers in London, to have a better habitation than he had hitherto known. To this time he had lodged with his wife in courts and alleys in and about the Strand and Fleet-street ; but now, for the purpose of carrying on his arduous undertaking, and to be near the printer, he took a house in Gough Square, Fleet-street. What was merely mechanical in the construction of his *Dictionary* he entrusted to six amanuenses, five of whom were Scotchmen. Johnson had supposed, when he began his labours on this subject, that three years of regular application would be sufficient for the performance of the task ; and he therefore gave the proprietors and the public reason to hope for its completion on the expiration of that period. In this calculation he was, however, so greatly deceived, that eight years elapsed before his folios were ushered into the world ; and one consequence of this delay was, that he had spent all the copy-money, which he had been in the habit of re-

\* Dr. William King was born at Stepney, in Middlesex, in 1685 ; he was entered at Balliol college, at Oxford, July 9, 1701 ; took his degree of doctor of laws in 1715, and was appointed principal of St. Mary's Hall, 1718. He was an ingenious theological and political writer, and died December 30, 1763.

siving by drafts, and an additional hundred pounds, long previous to the conclusion of his undertaking. The patience of his employment was, therefore, severely tried; and when the 1st sheet was brought to Mr. Millar, he could not avoid exclaiming, "Thank God I have done with him; a sally which, when repeated to Johnson, he replied with a smile, "I am glad that he thanks God for any thing." For his subsistence during the progress of the work, he had received more than his contract. His receipts were produced at a tavern dinner, given by the booksellers, and Johnson had nothing left but the rowing fame of his work. He was desirous that his *Dictionary* should appear to come from one who had obtained academical honours, and for that purpose procured in the preceding February, through the means of his friend, Mr. Thomas Warton, a diploma for a master's degree, from the university of Oxford. Garrick, on this occasion, wrote the following lines:

"Talk of war with a Briton, he'll boldly advance,  
That one English soldier will beat ten of France;  
Would we alter the boast from the sword to the pen,  
Our odds are still greater, still greater our men:  
In the deep mines of science though Frenchmen may toll,  
Our strength be compar'd to Locke, Newton, and Boyle?  
Let them rally their heroes, send forth all their pow'rs,  
Their verse-men and prose-men; then match them with ours:  
First Shakespeare and Milton, like gods in the fight,  
Save pot the whole drama and epic to flight;  
In satires, epistles, and odes, would they cope,  
Their numbers retreat before Dryden and Pope;  
And Johnson, well-arm'd, like a hero of yore,  
Has beat forty French, and will beat forty more."

Lord Chesterfield\* wrote two essays, in the *World*, in a strain of compliment to the author. Johnson treated this civility with disdain: his

\* Philip Dormer Stanhope, earl of Chesterfield, was born in London, Sept. 22, 1694, and educated at Cambridge; and in 1726, on the death of his father, he succeeded in his titles and estates. In the reign of George I. he was made high steward of the household, and a knight of the garter; and in 1743 was appointed lord lieutenant of Ireland, where he remained about three years. The works of lord Chesterfield may be classed as *Poems, Letters, Political Papers, and Periodical Essays*. The *Letters to his Son* are evidently written to inculcate a system of duplicity and vice; and the opinion which Dr. Johnson produced upon them is but too true, "that they teach the morals of a whore, and the manners of a dancing master." Johnson had dedicated the plan of his *Dictionary* to lord Chesterfield; but the patronage of his lordship was soon discovered by Johnson to be nothing more than a mere name. No two characters, indeed, could be more opposed, and it was not probable, therefore, but they should assimilate either in matter or manner. Proud of all exterior accomplishments, the rigid moralist, he retired and uncourtly scholar, was appealing to a man who placed little value upon any thing that was not subservient to elegance of address, to the blandishments of flattery, and the arts of consummate hypocrisy; who inculcated, in his system of education, as a duty, the vices most destructive of domestic peace and happiness, and who thought it unnecessary, in his plan, to advert either to the principles of religion or morality. From such a man, nearly as deficient in literature as he was in virtue, what could genius and learning, truth and piety expect? Nothing but what they encountered in the person of Johnson, insincerity and neglect. He was speedily taught to explore the mistake which he had made in the choice of a patron, to view his acquirements with contempt, and his principles with abhorrence. He ceased, therefore, to indulge any hopes of support from this quarter, and, gradually prosecuting his laborious task, looked forward solely to the approbation of the public as his best reward.—*Drake*.

observation to Garrick and others was, "I have sailed a long and difficult voyage round the world of the English language, and does he now send out his cock-boat to tow me into harbour?" A work was published called *Lexiphanes*, generally ascribed to Dr. Kenrick, but by others attributed to Dr. John Campbell, in which the author endeavoured to blast the laurels of the lexicographer, but in vain: the world applauded, and Johnson never replied.

1755, June 12. *Died*, PAUL KNAPTON, of the firm of John and Paul Knapton, booksellers, and son of James Knapton, noticed at page 658, ante. He married Elizabeth Chilwell, Feb. 14, 1741.

1755 June 14. *Died*, THOMAS BREWER, an eminent stationer on Ludgate-hill, aged 76.

1755, June 18. *Died*, THOMAS LONGMAN, an eminent bookseller, and founder of the present firm of Longman and Co. who have carried on the business of wholesale bookselling to an extent far beyond what was ever known in the annals of "the Row." The name of Thomas Longman, conjoined with that of J. Osborne, appears amongst the associated booksellers who, in 1729, advertised a new edition of *Thauii Historiorum*, in seven volumes folio. Samuel Buckley and Thomas Longman, in 1734, were the publishers of Dr. John Horsley's\* *Britannia Romana*; and the name of Thomas Longman singly, is subsequently found in some of our most valuable publications. He was succeeded in the business by his nephew, Thomas Longman.

1755, Aug. 31. *Died*, CHARLES DAVIS, one of the earliest booksellers who retailed libraries by marked catalogues. His residence was in Holborn, and he was of considerable eminence in his profession.

1755, Jan. 1. *Man. A paper for ennobling the species*. This paper was published weekly every Wednesday, on a folio sheet, for a twelvemonth,

1755, Aug. 9. *The Monitor; or, British Freeholder*. This was a political paper, and originally planned by the patriotic alderman Beckford.† It was written with considerable spirit and power, and claims for itself the rare merit of impartiality.

\* Dr. John Horsley was educated in the public grammar-school, at Newcastle-upon-Tyne; studied afterwards in one of the Scotch colleges, where he took a degree, and died pastor of a dissenting congregation at Morpeth, in Northumberland, December 13, 1792. Dr. Horsley appears to have been much indebted to Mr. Robert Cax, an eminent printer and publisher at Newcastle, who by his judgment in the compiling, correcting, and getting up of the *Britannia Romana*, added greatly to the merit of that well written book, which gives a copious and exact account of the remains of the Romans in Britain.

† William Beckford was the only man of his time who with firmness, yet with humility, dared tell a king upon his throne (surrounded by his courtiers,) the plain and honest truth, whereby he vindicated the loyalty, while he evinced the independent spirit of the city of London. He died June 21, 1770, aged 65, while serving the office of chief magistrate, with which he had been a second time invested. That his character might be for ever held in the most honourable and grateful remembrance, the corporation erected a statue in Guildhall, and recorded in the inscription the magnanimous speech which he is said to have addressed to the king in vindication of the people's rights to remonstrate to the throne. As a citizen, he was eminently decorated with the virtues of humanity and affability; as a senator (member for London,) watchful over the rights of the people; and as a magistrate scrupulously active in seeing these rights legally executed.

1755, Oct. 16. *The Newcastle Intelligencer*, No. 1. printed and published by William Cuthbert and Co. in Newcastle-upon-Tyne. This paper was printed in small folio, with three columns on each page, and published on a Wednesday. It is supposed that this publication did not continue longer than two or three years.

1755, Nov. *The Old Maid*. This periodical was published weekly, and was the first literary publication of Mrs. Brooke, who assumes the name of Mary Singleton, spinster. It ended July, 24, 1756, with No. 37.

*The Old Maid* is conducted not without spirit and vivacity; her character is tolerably well supported, and the work is diversified by papers of criticism, narrative, and humour.

1755. *Edinburgh Review*. This publication was begun by some literary gentleman in Edinburgh, but of which only two numbers appeared. The first of these articles was a review of Johnson's *Dictionary of the English Language*, which displays considerable acuteness: the other contained some general observations on the state of literature in the different countries of Europe.

1756. *The Critical Review*. This publication was commenced by Dr. Tobias Smollett and Mr. Archibald Hamilton, a very respectable printer. It professed to maintain Tory principles against the Whig review of Dr. Griffiths. Dr. Smollett continued the principal manager of the *Critical Review* till 1763. To speak impartially, Smollett was, perhaps, too acrimonious sometimes in the conduct of this work, and at the same time too sore, and displayed too much sensibility when any of the unfortunate authors whose works he had, it may be, justly censured, attempted to retaliate. He had made some very severe strictures on a pamphlet published by Admiral Knowles, as well as on the character of that gentleman, who commenced a prosecution against the printer, declaring he only wanted to know the author, that if a gentleman, he might obtain the satisfaction of a gentleman from him. In this affair the doctor behaved with great spirit. Just as sentence was going to be pronounced against the printer, he came into court, avowed himself the author, and declared himself ready to give the admiral any satisfaction he chose. The admiral forgot his declaration, and began a fresh action against the doctor, in 1759, who was found guilty, fined £100, and condemned to three months' imprisonment in the king's bench. It is there he is said to have written the *Adventures of Sir Launcelot Greaves*; in which he has described some remarkable characters, than his fellow-prisoners.

1756. Peignot remarks, that a secret printing press was discovered at work at the village of Arcueil about ten miles from Paris, the works executed at which being found to be of a very improper nature, both press and printers were seized, the latter imprisoned, and the former destroyed.

1756. DANIEL FOWLE, a printer formerly residing at Boston, set up a press at Portsmouth, being the first press used in the colony of New

Hampshire. Thomas observes, that Fowle did but little as book-printer, his principal business consisting in publishing a newspaper.

1756, June 5. *Died*, WILLIAM WILKINS, stationer to the office of ordnance, London.

1756, Aug. 11. *Died*, RICHARD WARE, bookseller and stationer, on London bridge.

1756. A press was at work at St. Iago de la Vega, a town which was formerly the capital of the isle of Jamaica, when a weekly newspaper was commenced; and in 1792, the *Laws of Jamaica* were handsomely printed by Alexander Dickman, in two volumes, 4to.

1756, Jan. 1. *The Young Lady*, No. 1.

1756, Jan. *The Universal Visitor*. The chief writers in this periodical were Christopher Smart and Richard Rolt, occasionally assisted by Dr. Johnson, Dr. Percy, David Garrick, and other literary characters. In Boswell's *Life of Dr. Johnson*, the doctor is recorded to have spoken of it in the following terms: "Old Gardner the bookseller, employed Rolt and Smart to write a monthly miscellany, called the *Universal Visitor*. There was a formal written contract, which Allen the printer saw. They were bound to write nothing else; they were to have, I think, a third of the profits of this sixpenny pamphlet; and the contract was for ninety-nine years. I wish I had thought of giving this to Thurlow, in the cause about literary property. What an excellent instance would it have been of the oppression of booksellers towards poor authors!" (smiling.) Davies, zealous for the honour of the trade, said, Gardner was not properly a bookseller. Johnson. 'Nay, sir; he certainly was a bookseller. He had served his time regularly, was a member of the stationers' company, kept a shop in the face of mankind, purchased copyright, and was a bibliopole, sir, in every sense. I wrote for some mouths in the *Universal Visitor*, for poor Smart, while he was mad, not then knowing the terms on which he was engaged to write, and thinking I was doing good. I hoped his wits would soon return to him. Mine returned to me, and I wrote in the *Universal Visitor* no longer.'

1756, March 23. *The Prater*. The author of this paper assumes the name of Nicholas Bubble, esq. and the style is much superior to that of the generality of his cotemporary essayists. It was published weekly, on Saturday, and closed with the thirty-fifth number.

1756. *The Test*, a political paper, written by Arthur Murphy, esq. in support of the ministry then in being. The style is forcible and energetic.

1756, April. *The Literary Magazine*, No. 1.

1756, May 28. *Williamson's Liverpool Advertiser, and Mercantile Chronicle*, No. 1. printed and published by Robert Williamson. In No. 232, Friday, October 31, 1760, is the following advertisement: "The Manchester, Stockport, Buxton, and Derby Flying Machine from London to Manchester performed, if God permits, in three days—fare, two pounds five shillings." Mr. Thomas Billinge became the proprietor of this paper, and it was then called *Billinge's Liverpool Advertiser*, and published on Monday.

1756. From a *complete Catalogus of modern books* published from the beginning of the century to this period, from which "all pamphlets and tracts" are excluded, it appears that 5,280 new works had been published, which exhibits an average of ninety-three new works each year.

1757, Jan. 7. Died, ALLAN RAMSAY, a celebrated poet, and for many years a respectable bookseller in the city of Edinburgh. He was born at the village of Leadhills, in Lanarkshire, Oct. 16, 1686. His parentage was respectable, and his ancestry even dignified. He had the benefit of the parish school till he was in his fifteenth year, but of the progress he had made in his studies, we have no particular account; it certainly made him acquainted with Horace, as is abundantly evident in his poems. In 1701 he was apprenticed to a periwig maker, in Edinburgh, which appears to have been at that time a flourishing profession. There can no doubt that Allan Ramsay served out his apprenticeship honourably, and afterwards for a number of years practised his trade as a master successfully: he possessed independence; and, while, in the company of respectable fellow-citizens, he indulged and improved his social qualities, he, by taking to wife an excellent woman, Christian Ross, the daughter of a writer in Edinburgh, laid the foundation of a lifetime of domestic felicity. It was in the year 1712, and in the twenty-sixth year of his age, that he entered into the state of matrimony; and the earliest of his poetical productions that can now be traced, is an epistle to the most happy members of the Easy Club, dated the same year. This club originated, as he himself, who was one of its members, informs us, "in the antipathy we all seemed to have at the ill humour and contradiction which arise from trifles, especially those that constitute Whig and Tory, *without having the grand reason for it.*" This club was in fact formed of Jacobites, and the restoration of the Stuarts was the *grand reason* here alluded to. In the presence of this club, Ramsay was in the habit of reading his first productions, which, it would appear, were published by or under the patronage of the fraternity. But the rising of Mar put an end to its meetings; and Ramsay, though still a keen Jacobite, felt it for his interest to be so in secret. It was now, however, that he commenced in earnest his poetical career, and speedily rose to a degree of popularity, which had been attained by no poet in Scotland since the days of sir David Lindsay. For more than a century, indeed, Scottish poetry had been under an eclipse, while such poetical genius as the age afforded chose Latin as the medium of communication. Simple, however, and Hamilton of Gilbertfield, had of late years revived the notes of the Doric reed; and it seems to have been some of their compositions, as published in Watson's collection in 1706, that first inspired Ramsay. Unlike the greater number of men of poetical talent, Ramsay had the most perfect command over himself; and the blind groping of the cyclops of ambition within, led him to no premature attempts to obtain distinc-

tion. Though he must have entertained day-dreams of immortality, he enjoyed them with moderation; and, without indulging either despondency or dejection, he waited with patience for their realization. An elegy on Maggy Johnston seems to have been one of the earliest of his productions, and is highly characteristic of his genius; this was speedily followed by that on John Cowper, quite in the same strain of broad humour. The exact time when, or the manner how he changed his original profession for that of a bookseller, has not been recorded; but it was previously to 1718, when he published a second edition of king James's *Christ Kirk on the Green*, that Allan Ramsay had commenced the bookselling business, for it was "printed for the author, at the Mercury, opposite to Niddry's Wynd;" At the Mercury, he seems to have prosecuted his business as an original author, editor, and bookseller, with great diligence, for a considerable number of years. His poems he continued to print as they were written, in single sheets or half sheets, in which shape they are reported to have found a ready sale, the citizens being in the habit of sending their children with a penny "for Allan Ramsay's last piece." In 1720, he issued proposals for publishing the whole of his poems, in one volume 4to. The estimation in which the poet was now held, was clearly demonstrated by the rapid filling up of a list of subscribers, containing the names of all that were eminent for talents, learning, or dignity in Scotland. The volume, handsomely printed by the Ruddimans, ornamented with a portrait of the author, was published in the succeeding year, and the fortunate poet realized four hundred guineas by the speculation. This volume was, according to the fashion of the times, prefaced with several copies of recommendatory verses. In 1725 appeared his dramatic pastoral, under the title of the *Gentle Shepherd*, which met with instant and triumphant success. In this year he removed from Niddry's Wynd to a house at the east end of the Luckenbooths, which had formerly been the London coffee house. Here, in place of Mercury, he adopted the heads of Ben Jonson and Drummond of Hawthornden, and in addition to his business as a bookseller, established a circulating library, which was the first in Scotland. In this shop the wits of Edinburgh continued daily to meet for information and amusement during the days of Ramsay and his successors in trade. He had now risen to wealth and respectability, numbering among his familiar friends the best and the wisest men in the nation. With cotemporary poets his intercourse was extensive and of the most friendly kind. The two Hamiltons of Bangour and Gilbertfield, were his most intimate friends. He addressed verses to Pope, to Gay, and to Somerville,\* the last of whom returned his poetical salutations in kind. In the year 1755, he is supposed to have re-

\* William Somerville, author of the *Chace*, *Hobbinos*, *Field Sports*, and other poems, was born in 1699, and died July 30, 1743. He was buried at Wotton, near Henley in Arden, Warwickshire. Mr. Somerville was an accomplished gentleman, a skilful sportsman, and a justice of the peace.

linquished business. His wife, Christian Ross, seems to have brought him seven children, three sons and four daughters. He died at Edinburgh, and was buried without any particular honours, and with him for a time was buried Scottish poetry, there not being so much as one poet in Scotland to sing a requiem over his grave.

1757, Jan. 19. Died, THOMAS RUDDIMAN, a celebrated printer, grammarian, and critic, of whose talents and learning his works afford the most satisfactory proofs. "Of the number of men," says Mr. George Chalmers,\* "who have benefited our fathers by their studies, and added to the reputation of Great Britain by their learning, few will be found to be better entitled to biographical notice, than Ruddiman, whether we consider the usefulness of his works, the modesty of his nature, or the disinterestedness of his spirit. His personal character was recommended by many virtues, and upon the whole he may be justly considered as an honour to his native country." He was born in the parish of Boyndie, in Banffshire, October, 1674, and was initiated in grammar at the parish school there. In October, 1690, he left his home, without the knowledge of his father, and went to king's college, Aberdeen, in order to gain by competition, a prize, which he had heard was annually given to genius and learning. His sister Agnes put a guinea in his pocket, which being a large contribution, at a needy moment, he always mentioned to her praise, and timely repaid to her offspring.† His father being informed of the place and object of his excursion, hastened to Aberdeen, where he found that his son had gained an establishment by his knowledge, and friends by his conduct. On June 21, 1694, he obtained the degree of master of arts, of which he appears to have been always proud. In April, 1796, he obtained the situation of schoolmaster of Lawrence Kirk, in the Mearns, partly by the recommendation of Robert Young, esq. of Auldbar, in the county of Forfar, in whose family he had been engaged as tutor, though perhaps as much by his own reputation for diligence and learning. Ruddiman did not relinquish his studies when he left the college of Aberdeen, though he was not then twenty years of age. His diligence began early, and continued late in life. In the village of Lawrence Kirk, his diligence naturally pursued the precept which his reading had taught him:

"Exerce studium, quamvis perceptoris artem."

It was towards the end of the year 1699, that an accident opened new prospects to his penetra-

\* The reader is referred to the very ample and excellent life of Thomas Ruddiman, by Mr. George Chalmers, 8vo. 1794, in which will be found a portrait, and a list of capital works from the Ruddiman press, from 1694 to 1765.

In the *Caledonian Mercury* of January 27, 1757, there is a brief, but affectionate, character of Ruddiman, by the rev. William Harper, senior, one of the ministers of the episcopal church, Edinburgh; and in the *Scott's Magazine*, page 64, there is a short account of him and his writings.

† Agnes was married to a person named Reid: she left a daughter, who falling into poverty, was relieved by Ruddiman, through the solicitation of bishop Falconer, in 1761.

ting sight. The celebrated Dr. Pitcairne, being detained by violence of weather at this inconsiderable hamlet, which had not yet a library at the inn, felt the misery of having nothing to do. Wanting society, he inquired if there were no person in the village who could interchange conversation, and would partake of his dinner. The hostess informed him, that the schoolmaster, though young, was said to be learned, and though modest, she was sure could talk. Thus met Pitcairne,\* at the age of forty-seven, with Ruddiman, at twenty-five. Their literature, their politics, and their general cast of mind were mutually pleasing to each other. Pitcairne invited Ruddiman to Edinburgh, offered him his patronage, and performed in the end, what is not always experienced, as much as he originally promised.

On the 2nd of May, 1702, Ruddiman made his first entry as assistant librarian to the advocates' library in Edinburgh.† His connection with the booksellers of that city commenced in 1706; owing to their desire of help, and to his wish for gain. He no doubt felt—

"Cum mercede labor gratior esse potest."

And he was, from this consideration, probably induced to correct, in 1706, sir Robert Sibbald's *Introductio ad Historiam rerum a' Romanis Gætarum in ea Borealis Britanniciæ partæ quæ ultra murum Picticæ est*. From Robert Freebairn, bookseller, Ruddiman received for his assistance

\* Archibald Pitcairne, the friend of Bellini, the precursor of Boerhaave, and the master of Mead, was born at Edinburgh in 1653, and died at the age of sixty-one, Oct. 23, 1713. He studied divinity, and afterwards law, at the university of his native place; but quitted both those professions for mathematics and medicine. After publishing a thesis, in which he endeavoured to prove that the doctrine of the circulation of the blood was known to Hippocrates, he accepted an invitation from the curators of the university of Leyden, to be professor of physic, in 1692. He did not continue at Leyden above a year, but returned to Edinburgh and married. In 1701 he published *Dissertationes Medicæ*, one vol. 4to. of which he printed a more correct edition in 1713. He also wrote some Latin poems of the satirical kind, chiefly against the principal authors of the revolution.

† Sir George Mackenzie, of Rosehaugh, who was born in 1736, and died in 1691, after rising to the head of his profession as a lawyer, and to eminence in literature as a scholar, is entitled to the honour of founding the advocates' library, which took place in the year 1693. Like other establishments, its commencement was inconsiderable, its funds were uncertain, and its progress in utility was slow. But frequent contributions augmented its numerous volumes, both printed and manuscripts. It was first kept in Mills-square; and in May, 1702, it was removed to the parliament-house.

‡ Ruddiman charged Freebairn, for correcting G. D. [Gavin Douglas's *Virgil*] writing the *Glossary*, a hundred pounds Scots, of which he acknowledged to have received forty-eight pounds. By this document is the authorship ascertained, and by this evidence it is proved, that Ruddiman was allowed £8 6s. 8d. sterling, for performing one of the most elaborate works in our language.

In Ruddiman's pocket-book are the following entries: 1703, Received of the university of Glasgow £25 Scots, for transcribing a manuscript called *Extracta ex Chronico Scotiæ*.—24 March, 1704, received of the same £47 Scots, for transcribing the first volume of sir James Balfour's *Annals* of 434 folios. October 1705, received of Mr. Hamilton, £7 1s. for transcribing nineteen sheets of a manuscript.—8 November 1705, I resolved (by God's assistance) to write as much as I am able of the manuscript I shall have occasion to transcribe; and to take exact notice of the progress I make weekly. I design (God willing) to write six sheets a week.

three pounds sterling: the work was printed in folio, Edinburgh, 1706. In every period of his life Ruddiman followed a very laudable practice of making statements of his affairs, that he might frequently see the amount of his credits and his debts. At the end of 1706 he drew up a very exact state of both, whence he perceived, that after making every deduction, he had a clear balance of £28 2s. with just expectations amounting to £236 7s. 6d. Scots. Here is an example of the practice of Ruddiman, which, were it copied, would help the young to enter life with safety, and enable the old to leave the world with comfort! In 1707 he was induced by his habitual activity to commence auctioneer, for which he was well qualified by his knowledge of books and his punctuality in business. He naturally learnt in school-books when he instructed scholars. In 1710, a vacancy happening in the grammar-school of Dundee, the magistrates invited Ruddiman to fill the office of rector. The advocates said, in the mean time, noted his industry, admired his learning, and respected his modesty. With such industry, learning, and modesty they did not like to part, when they heard of his invitation to Dundee. And, considering *his extraordinary care of the library*, with the increase of his trouble, the faculty determined on July 15, 1710, to settle upon him an annual salary of £363 6s. 9d. Scots, or £30 6s. 8d. sterling, in lieu of all fees, except the small gratifications which were in use on the admission of advocates. He would have made greater profits at Dundee, yet, from respect to the faculty he chose rather to accept of their salary, than to relinquish their service. The young may here see another example of modest worth being noticed by the eye of discernment, and rewarded in due season, by the hand of munificence. From his own statement we find that he was growing daily richer; but he who enters the world without a shilling, must labour many an hour before he can acquire the comforts and dignity of opulence. The year 1715 may be considered as the era of Thomas Ruddiman commencing printer;\* his connexion with the booksellers induced him to think that he too might exercise an art the handmaid of that literature to which he had devoted his life. The first production of his press was the second volume of Abercromby's *Martial Achievements*. The editions of the classical authors that issued from Ruddiman's press were in general printed with great accuracy, and often exhibited new readings and amendments of punctuation, in the highest degree creditable to the ingenuity and erudition of the editor, who found leisure for the

preparation of several works of his own, among which may be particularly mentioned, a Latin grammar in two volumes, one of the most learned and elaborate performances in the whole range of philology. He completed the *Diplomata et Numismata Scotiæ*, to which he prefixed an excellent preface. If Glasgow had to boast of the *spotless perfection* of her *Horace*, in 1744, Edinburgh had reason, says that able critic, Harwood, to triumph in the *immaculate purity* of Ruddiman's *Liwy*, in 1751. Published in four volumes, 12mo. Edinburgh, 1751. To his other qualities of prudence, of industry, and of attention, Ruddiman added judgment. He did not print splendid editions of books for the public good. He did not publish volumes for the perusal of the few. But, he chiefly employed his press in supplying Scotland with books, which, from their daily use, had a general sale.

Neither his attention to the library, his cares for the press, nor his application to philology, prevented Ruddiman from contributing at the same time to the labours of other learned men, by the activity of his kindness, and the accuracy of his knowledge. He was always ready to give his help, when his help was asked; "thinking it the duty of every well wisher of learning to contribute, without any mean views, all that he is able to literary works." In this noble spirit it was, that when Mr. Fletcher Gyles, bookseller, London, undertook to publish secretary Thurlow's *State Papers*, Ruddiman contributed his assistance. When the *Typographical Antiquities* were published, in 1749, Ames gratefully recorded the obligations that he owed "to his worthy friend Mr. Professor Ruddiman, who was no small encourager of this undertaking, by the many searches for me, at Edinburgh, and elsewhere." "Though the searches of Ruddiman," says Mr. Chalmers, "did not find all that the records contained with regard to the origin of printing, in Scotland, yet he merits commendation for his useful contributions to that curious work." When Hearne, the antiquary, was preparing his elaborate edition of Fordun's *Scottichronicon*, he experienced the aid of Ruddiman, who collated manuscripts for him and gave him his remarks. Hearne spoke of Ruddiman in his preface, when his *Fordun* appeared in 1722, as his friend, as his learned friend. They were indeed congenial spirits: congenial in their modesty and diligence, in the extent of their learning, and in the utility of their labours.

No amusement, no pursuit, ever prevented Ruddiman from discharging faithfully his duty as keeper of the advocates library, which office he held for nearly fifty years. He had long laboured, with the help of Mr. Walter Goodall, his assistant, in making a catalogue of their books, without which the best library is useless. This catalogue had been for years commodious to the lawyers: but when it was printed in 1742, its usefulness was extended to the learned world.

The prudence of Ruddiman, which was equal to his industry, was meantime careful to accumulate for his family what he had acquired,

\* The articles of copartnership between Thomas and Walter Ruddiman, dated May 15, 1748, recite, that they had begun to print from the year 1715, and that Walter had been an equal sharer in the profits and the loss, though he was only a partner in the materials, but not in the house. Walter was not mentioned in the title-pages of books with Thomas, till August, 1737, when Walter was admitted into partnership in the house, as he had been from 1715, in the materials.

The contemporary printers with Ruddiman were Robert Fleming and Thomas Lemisden and Co., and of booksellers, Messrs. Hamilton and Balfour.

during several years, by his labour. He grew rich without the loss of character, in proportion as he extended his industrious occupations. And by the minute account which he made of his "worldly goods" in August, 1739, he valued his estate at £2,259 19s. 10½d. sterling. We have already shewn the state of his effects in 1706; and when he valued his worldly goods in 1710, he reckoned them at no more than £24 14s. 9d. sterling. In the mean time he had maintained his family, educated his children, and sustained the usual losses of a complicated business. Mr. Chalmers exhibits these statements of considerable riches, at that period, for the benefit of those who may follow the track of Ruddiman, from dependent penury, through the paths of honest diligence, and careful attention, to independent opulence. Having now established his own fame, he turned his thoughts to the introduction of his son into life. With this design he resigned August 13, 1739, his half of the printing business to his son Thomas,\* by his second wife, who was now twenty-five years old, and had been liberally educated; and who had besides been diligently instructed in this ingenious art. Ruddiman, however, allowed his name to continue in the firm of the company in order to give credit to the house. He moreover lent his son, on his introduction into the business, £200 sterling as an additional aid. That resignation, and this loan, must be allowed to have been a handsome provision for his son at that epoch, considering the scarcity of wealth and the facility of subsistence. Mr. Ruddiman was a man of such uncommon temperance, that in the course of so long a life, as to be upwards of eighty-two years of age, he was never once intoxicated with liquor. He loved indeed a cheerful glass; but, when he was wound up by the enjoyment of friendly society to his accustomed exhilaration, he would then refrain from drink; saying, *that the liquor would not go down*. For the last seven years he had lived under the affliction of bodily diseases of various kinds; but his mental powers remained unshaken to the end. He was buried in the cemetery of the Grey Friars church, Edinburgh, but without the affectionate tribute of a tombstone. Cenotaph our "great grammarian" will have none. But his philological labours will communicate "eternal blazon" to his name, after the fall of structures of marble, or pillars of brass, had they been erected by other hands than his own. At the time of his decease he was probably worth in "worldly goods," about £3,000 sterling, exclusive of the *Caledonian Mercury*, and his other printing business. He appears to have been an original member of the *British Linen Company*, which was first established at Edinburgh in 1746. He was of middle stature, and a thin habit, but of a frame so compact as to have carried him on beyond the period which is usually assigned to man. His gait, till the latest period of his life, was upright and active. His eyebrows were arched and bushy: and his eyes were origi-

nally so piercing, that it required steady impudence to withstand their fixed look, or sudden glance. The works of Ruddiman, for which he had made such previous preparation, shew him to have been a consummate master of the Latin language. He was acquainted with Greek, but he pretended to know nothing of Hebrew. He was acquainted with several modern tongues, though which particularly, or to what extent, cannot now be ascertained. His English has ruggedness without strength, and inelegance without precision: but what he plainly wanted in manner, he amply supplied in matter. His writings, whether they were composed in his early youth, or during his old age, are instructive, as might reasonably be expected from his intellect, his erudition, and his diligence. It will easily be allowed that Thomas Ruddiman was the most learned printer that North Britain has ever enjoyed. At the commencement of the seventeenth century, the printers of Edinburgh were generally booksellers, who, having acquired some wealth could purchase a press and employ artificers; but knew no more of books than the title-page, and the price. But, however illiterate, they had the merit of reforming the language, and settling, by silent practice, the orthography of the North. These men who practised the art, without possessing the erudition, of which it is the herald, could not dispute with Ruddiman the palm of literature. Henry Stephens himself would not have complained of Ruddiman as one of those printers who had brought the typographic art into contempt by their illiterature.\* When we recollect his *Gavin Douglas*, his *Buchanan*, his *Grammars*, his *Liroy*, and his *Vindication of Buchanan's Psalms*, wherein competent judges have found the knowledge of a scholar, and the accuracy of a critic, we may fairly place Ruddiman in the honourable list of learned printers, with Aldus Manutius, with Badius Assensius, with Christopher Plantin, and the Stephens's.

In 1806, a handsome tablet was erected to the memory of Ruddiman in the church of the Grey Friars', Edinburgh, at the expense of his relative, Dr. William Ruddiman, late of India. It exhibits the following inscription:—

SACRED TO THE MEMORY  
OF THAT CELEBRATED SCHOLAR AND WORTHY MAN,  
THOMAS RUDDIMAN, A. M.  
KEEPEE OF THE ADVOCATES' LIBRARY NEAR FIFTY YEARS.  
Born, Oct. 1674, within three miles of the town of Banff;  
Died at Edinburgh, 19th January, 1757,  
In his eighty-third year.  
Post obitum, benefacta merent, æternæque virtus,  
Non metuit Styli ne rapiatur aqua.

1757 The title-page of an *English and Swedish Dictionary* by Jacob Serenius, D. D. announces that it was printed at *Hary and Stenbro* near *Nyköping in Sweden*, by Petrus Mamma, director of his majesty's printing-house.

\* See page 675, ante.

\* See a 4to. pamphlet, printed in 1689, entitled:—*Artis typographicae QUEREMONIA, de illitteratis quibusdam typographis, propter quos in contemptum venit. Autore Henrico Stephano.*

1757, Aug. 4. STRAWBERRY HILL press established by Horace Walpole, who in a letter to sir Horace Mann, of this date, says, "In short, I am turned printer, and have converted a little cottage here into a printing-office. My abbey is a perfect college or academy; I kept a painter in the house and a printer." The first production of the press was *Odes of Gray*, with designs from Bentley. The first printer was William Robinson, who did not long remain in the employment. In a letter to the rev. Henry Zouch, dated March, 1759, Walpole says, "At present, my press is at a stop; my printer, who was a foolish Irishman, and who took himself for a genius, and who grew angry when I thought him extremely the former and not the least of the latter, has left me, I have not yet fixed upon another." A very singular letter from this Irishman to a friend, descriptive of Strawberry hill, and its answer, has been printed in the *Letters to sir Horace Mann*, vol. iii. p. 236. Robinson's successor was Thomas Farmer, whose name appears on the title-page of the *Anecdotes of Painters*, 1762; the errors in which edition are attributed to the knavery of his printer, (Robinson,) who ran away. A printer named Pratt, appears to have succeeded Farmer, about 1763, and to have remained about two years, as he is said, by a note in Kirkgate's writing, to have printed the *Poems of lady Temple*, and the *Memoirs of lord Herbert*. Thomas Kirkgate succeeded Pratt, and remained in the employment of Horace Walpole, until the press was abolished. The printing-office, on the death of lord Oxford, was converted by Mrs. Damer into her modelling room. D'Israeli, in the *Calamities of Authors*, says Horace Walpole, conscious of possessing the talent of amusement, yet feeling his deficient energies, he resolved to provide various substitutes for genius itself, and to acquire reputation, if he could not grasp at celebrity. He raised a printing-press at his gothic castle, by which means he rendered small editions of his works valuable from their rarity, and much talked of because seldom seen. The truth of this appears from the following extract from his unpublished correspondence with a literary friend. It alludes to his *Anecdotes of Painting in England*, of which the first edition only consisted of 300 copies. "Of my new 4to. vol. I printed 600; but as they can be had, I believe not a third part is sold. This is a very plain lesson to me, that any editions sell for their curiosity, and not for any merit in them—and so they would if I printed *Mother Goose's Tales*, and but a few. If I am humbled as an author, I may be vain as a printer."

The productions of this press are numerous and well known, and amongst them are found some valuable and interesting works. A list of them was given in the first edition of the *Description of Strawberry Hill*, printed there in 1774; and a more copious and detailed one in the *Bibliomania* of Dr. Dibdin. The impression was often large, amounting to 600, and in one instance to 1000 copies.

1757, Dec. 12. Died, COLLEY CIBBER, poet laureat, who had held that office twenty-seven years, and had become the regular butt for the superior as well as the inferior denizens of Parnassus—for Twickenham as well as Grub-street. Among the innumerable pasquinades which Cibber elicited, one may be given at once brief and pungent:—

In merry old England it once was a rule,  
That the king had his poet and also his fool;  
But now we're so frugal, I'd have you to know it,  
That Cibber can serve both for fool and for poet.

Colley, however, who had at least a sufficient stock of good nature and power of enduring sarcasm, sung on amidst the thick-flying hail of wit with which he was assailed, probably consoling himself with the reflection, that, in the pension and Canary, he had the better part of the joke to himself. He was the son of Gabriel Cibber, a celebrated sculptor, and born in London, Nov. 6, 1671. He served in the prince of Orange's army at the Revolution, and after that went on the stage, but never obtained any considerable reputation as an actor, on which he became a dramatic writer, to help his finances. His first play was *Love's Last Shift*, which was performed in 1695, and met with great applause. His best piece is the *Careless Husband*, performed in 1704; but the *Nonjuror* brought him the most fame and profit. Bernard Lintot gave him £105 for the copyright, and George I. to whom it was dedicated, gave him £200, with the office of poet laureat. William Whitehead was now invested with the vacant office, a gentleman of good education, and whose poetry, at least, displayed literary correctness and taste, if it rose to no higher qualities.

1757. *The American Magazine*, by a society of gentlemen.

Ventatis cultores, fraudis inimici.

Published at Philadelphia: it only found a three months' market.

1757. *The Sentinel*. This was the production of Benjamin Franklin, during his residence in England, as agent for the province of Pennsylvania, and of which about thirty numbers were published. It was on this his second visit to England, not as an unfriended journeyman printer, but as the representative of the first province of America, that Franklin had an opportunity of indulging in the society of those friends, whom his merit had procured him while at a distance. The regard which they had entertained for him was rather increased by a personal acquaintance. The opposition which had been made to his discoveries in philosophy gradually ceased, and the rewards of literary merit were abundantly conferred upon him. The royal society of London, which had at first refused his performances admission into its transactions, now thought it an honour to rank him among its fellows. Other societies of Europe were equally ambitious of calling him a member. The university of St. Andrew's, in Scotland, conferred upon him the degree of doctor of laws. Its example was soon

followed by the universities of Edinburgh and Oxford. His correspondence was sought by the most eminent philosophers of Europe. His letters to these abound with true science, delivered in the most simple and unadorned manner. In the summer of 1762 he returned to America.

1757, March 17. *The Mirror*, No. 1.

1757. *The Leicester and Nottingham Journal*. This paper was printed in Leicester by Mr. John Gregory, and published, at a given hour, in Nottingham, by Mr. Samuel Cresswell.

1757, Aug. *Lloyd's Evening Post*. This paper was commenced by Mr. James Emonson, printer, in St. John's-square, Clerkenwell.

1757, Sept. 17. *The Herald*; or, *Patriot Proclaimers*, No. 1. A political paper of little value.

1757. *The Contest*. This paper was the production of Owen Ruffhead, author of the *Life of Alexander Pope*, 1769, in which he was assisted by bishop Warburton.

1758, Jan. 12. A general warrant was signed by the earl of Holderness, to search for the author, printer, and publisher of a pamphlet, called *A sixth Letter to the People of England*. Jan. 23, by virtue of another warrant, all the copies of the above work were seized, and entirely suppressed. Dec. 5, Dr. John Shebbeare convicted as the author, and sentenced to pay a fine of £5, to stand in the pillory at Charing Cross, to be imprisoned three years, and to give security for his good behaviour for seven years, himself in £500, and two others £150 each. Wilkes says the *sixth Letter to the People of England* contains scarcely one truth: it traduced the revolution, aspersed the memory of king William, vilified kings George I. and II. and bastardized the whole royal family. When Dr. Shebbeare came to stand in the pillory, Mr. Beardmore, the under sheriff, being his friend, caused the upper board of the pillory to be raised to a height convenient for the prisoner, so that the doctor stood at his ease, without bending his neck. Lord Mansfield in consequence ordered the attorney into court, who swore that he saw Shebbeare's head through the pillory, when the chief justice remarked, that it was the most ingenious evasion of perjury he had ever witnessed, and the lawyer was fined in the sum of £50. A servant held an umbrella over his head to protect him from the rain, it being a very wet day; he had on a well combed tied wig, and a drab riding coat, and, remarks an eye witness, looked insolent and impudent.

1758, March 12. *Died*, BENJAMIN MOTTE, an eminent bookseller opposite to St. Dunstan's church, Fleet-street, London. He was successor to Benjamin Tooke, and, like his predecessor, was publisher to Swift and Pope. His *Abridgement of the Philosophical Transactions* is reckoned very incorrect; which having been pointed out by Mr. Henry Jones, in 1731, produced from Mr. Motte, *A Reply to Jones's Preface to his Abridgement*, 1732, 4to.

1758, April 15. Johnson again resumed his pen as an essayist, and on this day commenced another periodical paper, under the title of the

*Idler*. This was not, however, printed singly, like the *Rambler* and *Adventurer*, but appeared every Saturday in the *Universal Chronicle*. It was continued regularly for two years, as long indeed, as the *Chronicle* was enabled to exist, and consists of one hundred and three numbers, of which the last is dated April 3, 1760. In the composition of his *Idlers*,\* Johnson received much more assistance than while writing his *Rambler*; twelve papers were contributed by his friends.

1758. *The Universal Chronicle*; or, *Weekly Gazette*. This paper was projected by Mr. John Newbery, bookseller, in St. Paul's church-yard. In this paper, Dr. Johnson's celebrated *Idler* was first printed; and it is said that he was allowed a share of its profits, for which he was to furnish a short essay on such subjects of a general or temporary kind as might suit the taste of newspaper readers, and distinguish this publication from its cotemporaries. Sir John Hawkins assigns as a reason for Mr. Newbery's wishing to have an essay in his paper, "that the occurrences during the intervals of its publication were not sufficient to fill its columns." "If that was the case," adds Mr. Chalmers, "it is a curious particular in the history of political intelligence. Those who now print weekly papers find it not only difficult, but impossible, to contain half the articles which have entertained other readers during the intervals of publication, and which, from the common impulse of domestic or public curiosity, their readers think they have a right to expect." Let it be remembered, however, that to the editor of a newspaper, the *parliamentary proceedings* were then forbidden fruit.

\* Dr. Johnson published the following curious advertisement in order to suppress the piratical practice of inserting his *Idlers*, without acknowledgment, into other publications:

"London, Jan. 5th, 1759.—(Advertisement.)

"The proprietors of the paper, entitled *The Idler*, having found that those essays are inserted in the newspapers and magazines with so little regard to justice or decency, that the *Universal Chronicle*, in which they first appear, is not always mentioned, think it necessary to declare to the publishers of those collections, that however patiently they have hitherto endured these injuries, made yet more injurious by contempt, they have now determined to endure them no longer. They have already seen essays, for which a very large price is paid, transferred with the most shameless rapacity into the weekly or monthly compilations, and their right, at least for the present, abridged from them before they could themselves be said to enjoy it. But they would not willingly be thought to want tenderness even for men by whom no tenderness hath been shown. The past is without remedy, and shall be without resentment. But those who have been thus busy with their dinkies in the fields of their neighbours, are henceforward to take notice, that the time of impunity is at an end. Whoever shall, without our leave, lay the head of rapine upon our papers, is to expect that we shall vindicate our due, by the means which justice prescribes, and which are warranted by the immemorial prescriptions of honourable trade. We shall lay hold, in our turn, on their copies, degrade them from the pomp of wide margin, and diffuse typography, contract them into a narrow space, and sell them at an humble price; yet not with a view of growing rich by confiscations, for we think not much better of money got by punishment, than by crimes: we shall, therefore, when our losses are repaid, give what profit shall remain to the magdalen: for we know not who can be more properly taxed for the support of penitent prostitutes, than prostitutes in whom there yet appears neither penitence nor shame."

1758. In many of the royal palaces of Europe printing presses have at various times been erected for the amusement of members of the royal families, and at which even kings and princes themselves have condescended to employ a leisure hour. In this year Peignot notices a press in the palace of Versailles, established by Madame la Dauphine, at which she herself assisted in the printing of a French, *Elevations du Cœur à N. S. Jesus Christ*, &c. 1758, 16mo. In 1760, the duke of Burgundy, the king's brother, had a press of his own here, from which issued *Prières à l'usage des enfans de France*, 12mo. The marchioness of Pompadour likewise had a press in her apartments in the same year, 1760, from which she sent forth *Rodogune*, a tragedy, by P. Corneille, with the imprint, *au Nord*, 1760, 4to. at the beginning of which book is a plate engraved by her own hand. Louis XVI. while dauphin, had also a press at Versailles in 1766, from which came *Maximes morales et politiques tirées de Telemaque*, printed by his own hand in 1766, 8vo. of which twenty-five copies were worked off.

1758. *A Catalogue of Books, containing upwards of 4000 Volumes; in which is included the library of the late Dr. Holland, of Chesterfield, in Derbyshire*, &c. (the prices being printed in the catalogue) on Wednesday the 15th March, 1758, by Samuel Fox, bookseller of Derby.

1758. Died, HENRY LINTOT, printer, only son of Bernard Lintot, noticed at page 653, ante. He was born about August, 1709; was admitted to the freedom of the company of stationers, by patrimony, Sept. 1, 1730; obtained the livery the same day; and from that time their business was carried on in the joint names of Bernard and Henry; but the father passed the principal part of his time in Sussex, of which county he was high sheriff. He obtained the patent of law printer about 1748; and in 1754 was elected into the court of assistants of his company. Two days after the death of his father, Henry was appointed high sheriff for the county of Sussex. He married, first, Elizabeth, daughter of sir John Aubrey, bart. of Llantrythed, in Glamorganshire, by whom he had an only daughter and heiress, Catharine, who was married, Oct. 20, 1768, (with a fortune of £45,000) to captain Henry Fletcher, at that time a director of the East India company. Mr. Lintot married, secondly, Philadelphia ———, by whom he had no issue.

1758. In the beginning of this year Smollet published his *Complete History of England, deduced from the descent of Julius Cæsar to the treaty of Aix la Chapelle*, in 1748, in four volumes 4to. It is said that this voluminous work, containing the history of thirteen centuries, and written with uncommon spirit and correctness of language, was composed and finished for the press within fourteen months, one of the greatest exertions of facility of composition which was ever recorded in the history of literature. The history was published in sixpenny weekly numbers, of which 20,000 were sold directly. This extraordinary popularity was

created by the artifice of the publisher. He addressed a packet of the proposals to every parish clerk in England, carriage free, with half-a-crown enclosed as a compliment, to have them distributed through the pews of the church; the result was, a universal demand for the work. Smollett, before he began to publish the work, wrote to the earl of Shelburne, then in a Whig administration, and informed him, that if the earl would procure for his work the patronage of government, he would accommodate his politics to the wishes of ministers; but if not, that he had high promises of support from the other party. Lord Shelburne, of course, treated the proffered support of a writer of such accommodating principles with silent contempt, and the work of Smollett became distinguished for its high Toryism.

1758, Aug. 1. *The Grand Magazine*, No. 1, published by Thomas Kinnersly. This immediately succeeded the *Literary Magazine*, which ended July 1758; and which was avowedly supported by the pen of Dr. Johnson.

1758, Oct. 7. Died, JOSEPH AMES, F. R. S. secretary to the Society of Antiquaries, and author of the well known work, entitled *Typographical Antiquities; being an historical account of Printing in England, with memoirs of our ancient Printers, and a register of the books printed by them, from the year 1471 to 1600, with an Appendix concerning Printing in Scotland and Ireland to the same time*. By Joseph Ames. 4to. London, 1749, printed by W. Faden, and sold by J. Robinson, in Ludgate-street. This work was dedicated to Philip earl of Hardwick, lord high chancellor of England. Joseph Ames was born at Yarmouth, in the county of Norfolk, Jan. 23, 1688. He was originally a plane maker, and afterwards a ship chandler at Wapping, which he carried on till his death. He displayed at a very early age a taste for English history and antiquities. In this predilection he was encouraged by his friends, and after many years spent in the collection of his materials and arranging them, he published his *Typographical Antiquities*. In 1741 Mr. Ames was appointed secretary to the Society of Antiquaries, and this enabled him to pursue his favourite studies with renewed advantages, which were further increased by his election into the Royal Society. Besides his great work, noticed above, Mr. Ames printed a catalogue of English printers from 1471 to 1700, *An Index to Lord Pembroke's Coins*, also, *A Catalogue of English Heads, or an account of about 2000 prints, describing what is peculiar on each*. The last of Mr. Ames's literary labours was the drawing up of the *Parentalia, or memoirs of the family of Wren*. The character of Mr. Ames was remarkable for exemplary integrity and benevolence in social life. "He was," says Mr. Cole, "a friendly good-tempered man, a person of vast application and industry in collecting old printed books, prints, and other curiosities, both natural and artificial."

Mr. Ames's collection of coins, natural curiosities, inscriptions, and antiquities, were sold by

Mr. Langford, Feb. 20-21, 1760. His library of books, manuscripts, and prints, May 5-12, by the same auctioneer. Among the books, was a copy of Tindall's *New Testament*, supposed to be the only copy which escaped the flames when the impression was bought up by order of Tonstall, bishop of London, and burnt.\* It sold for fourteen guineas and a half. A collector in the pay of lord Oxford had bought it for a few shillings, upon which his lordship was so pleased, that he settled £20 a-year upon the man. Mr. Ames had bought it from Thomas Osborne, the bookseller, after he purchased lord Oxford's library.

1758, Dec. 16. Died, JONATHAN TAYLOR, formerly a stationer, who had retired from business to Lyme Regis, in Dorsetshire, where he died. His name is here inserted as a compliment to his intentions. He left to Christ's, Devon, and Exeter and Bath hospitals, and to the society for propagating the gospel, £100 each, the interest of £100 to be divided every Christmas amongst ten poor widows of the stationers' company, the interest of £70 for two boys to be taught navigation at Weymouth; to the mayor and corporation of Dover, a silver punch bowl of 200 ounces, in commemoration of his recovery from a dangerous fit of sickness gained in France; and if a county hospital be erected at Dorchester within seven years, £100, and interest at 4 per cent. But from some informality in his will the legacies were set aside by the lord chancellor.

1758, Dec. 25. Died, JAMES HERVEY, author of *Meditations among the Tombs*, *Theron and Aspario*, and other works of eminence. In learning and genius inferior to few, in benevolence and piety inferior to none. He was born at Hardingsstone, near Northampton, February 26, 1714, and died at Weston Flavel, near the same town, of which place he was rector.

1758. *The New American Magazine*, published monthly, at Woodbridge, in New Jersey, for two years. The editor was Samuel Nevil, judge of the supreme court of New Jersey, speaker of the house of assembly, and mayor of Amboy.

1758. *The New England Magazine of Knowledge and Pleasure*. It contained sixty pages 12mo. and continued only four months.

1759, Feb. 28. Died, THOMAS ASTLEY, a bookseller in very considerable and extensive business, and well known as the publisher of an excellent *Collection of Voyages*.

1759, June 17. Died, CHARLES ACKERS, the original printer of the *London Magazine*. He was many years in the commission of the peace for the county of Middlesex.

1759, June. *The Annual Register; or, a View of the History, Politics, and Literature of the year 1758*, printed for R. and J. Dodsley, in Pall Mall, London. This well-known and valuable work, being the first of its kind, properly so called, that appeared in this country, was projected by Robert Dodsley, the bookseller, in conjunction with Mr. Edmund Burke, who was already well

known in the literary circles of the metropolis as the author of the *Essay on the Sublime and Beautiful*, the *Vindication of Natural Society*, and other anonymous works. There is no doubt that, for some years, the historical narrative was written by Burke, who also probably edited the publication and selected the rest of its contents. He appears to have been paid for his services at the rate of £100 the volume. Mr. Prior, in his *Life of Burke*, has given engraved fac-similes of two receipts signed by him for two sums of £50 paid to him by Dodsley for the *Annual Register* of 1761, the first dated on the 28th of March in that year, and the second on the 30th of March in the year following. Burke took a great interest in the conduct of the *Annual Register* almost as long as he lived; and Mr. Prior states that much of it was written from his dictation for about thirty years.

1759, June 19. Died, DANIEL MIDWINTER, an eminent bookseller, in St. Paul's church-yard, who by his will, dated June 20, 1750, proved February 7, 1757, gave to the company £1000 after the decease of his wife, on condition of their paying £14 a-year to the parish of Hornsey, and the like sum to the parish of St. Faith's, in London, for the purpose of apprenticing from each two poor children (boys or girls) annually, and to buy them some clothes when they go out. The remainder, £2, to be applied towards the expence of a dinner, on the first of December. This sum was paid (after the death of the widow) April 4, 1770.

1759, Dec. 4. Died, NATHANIEL COLE, who had held the office of clerk to the company of stationers from 1726 to Nov. 6, 1759, and was this day elected into the court of assistants. He gave to the company £100; out of which 40s. to be annually added to Cater's dinner, and £100 more "to buy a silver candlestick with, for their table on public days."

1759, Aug. 1. *The Royal Magazine; or, Gentleman's Monthly Companion*, No. 1.

1759, Sept. *Political and Historical Mercury*.

1759, Sept. 20. *The Comptroller*, in French and English, published by John Pridden, bookseller, Ludgate hill.

1759, Oct. 6. *The Bee*. This weekly periodical was the production of Oliver Goldsmith, and was extended but to eight numbers, the last being dated November 24, 1759.

1759, Oct. *The Ladies Magazine*, published by John Wilkie, bookseller, Fleet-street.

1759, Nov. 1. *The Impartial Review; or, Literary Journal*, No. 1.

1759, Dec. 22. *The Weekly Magazine; or, Gentleman and Lady's Polite Companion*; by a society of gentlemen, No. 1.

1760, Jan. 1. *British Magazine; or, Monthly Repository for Gentlemen and Ladies*, No. 1. by Tobias Smollett, M. D. and others.

1760, Jan. 12. *The Public Ledger* (newspaper)

1760, Jan. 28. *The Public Magazine*, every other week, No. 1.

1760, Jan. *The Imperial Magazine*.

1760, Jan. *The Royal Female Magazine*.

\* See pages 235 and 264, ante.

1760, Feb. 1. *The Musical Magazine*, No. 1.  
 1760, March 1. *The Universal Review*; or, a critical commentary on the literary productions of these kingdoms, No. 1.

1760, Aug. 1. *The Lady's Museum*; consisting of a course of female education, and a variety of other particulars for the information and amusement of the ladies; by the author of the *Female Quixote*, [Charlotte Lennox\*] No. 1.

1760, March. *The Friend*, twice a week.

1760, April 1. *The Monthly Melody*, No. 1.

1760, June. *The Christian's Magazine*, edited by Dr. William Dodd, whose dissipated life and disgraceful death are sufficiently known to the public.† He was also the conductor and chief author of the *Visitor*, which was inserted in the *Public Ledger* during the years 1760 and 1761. Dodd was assisted in the composition of these papers by several of his friends, among whom were Mr. Thompson and Mr. Duncombe. The *Visitor*, as it appears in volumes, consists of eighty-five numbers, of which very few rise above mediocrity, either in style or matter.

1760. *The Citizen of the World*, which, though termed *Letters*, have very little claim to that appellation. They are in number one hundred and twenty-two. By Dr. Oliver Goldsmith. He also, in this year, engaged in another periodical work, called the *Gentleman's Journal*, in which he was assisted by the communications of various writers; notwithstanding all their efforts, it soon ceased to exist, dying, as Goldsmith phrased it, "of too many doctors." "The periodical writings of Dr. Goldsmith are possessed of great, and marked excellence. Their style is inferior to no compositions in the language; it is remarkably unaffected, easy, and elegant; whilst, at the same time, it is correct in its construction, and plastic in its powers of adaptation. Wit, humour, imagination, and pathos, by turns relieve and interest the reader of these essays, who experiences during their perusal a singular fascination arising from the peculiar manner or naïveté of the writer."—*Drake*.

1760. *The Schemer*. This paper was originally published in the *London Chronicle*, at various periods, for more than two years; and in

1763 it was reprinted in one volume 12mo. with the following title-page: *The Schemer; or, Universal Satirist, by that great philosopher Heltet Van Skelter*. The author of this whimsical but entertaining work was the rev. James Ridley, author of the *Tales of the Genii*, and the eldest son of the rev. Dr. Gloucester Ridley.\* Mr. James Ridley died whilst attending his duty as chaplain to a marching regiment at the siege of Belleisle in 1761.

1760, Oct. 25. *Died*, GEORGE II. king of England, whose character may be summed up in a few words: he exhibited no glaring vice, nor did he practice any great virtue; neither was he an encourager of literature or the arts. He was born at Hanover October 30, 1683; created prince of Wales on the accession of his father to the English throne; proclaimed king of England June 13, 1727; and crowned with his queen, at Westminster, October 11, in the same year.

In taking a review of the progress of literature during the reign of George II. we shall find that the commercial intercourse of Great Britain had rapidly increased, and had given rise to various alterations in our mode of living, and to characters which had not hitherto subsisted. The dissipation and manners of the metropolis, which during the reign of queen Anne, had few opportunities of spreading far beyond the capital that gave them birth, possessed at this period a free and rapid access to every quarter of the kingdom. The state also both of the capital and the country had received great modification from the wide dissemination of literature. To be acquainted with letters was now no longer a disgrace to the fine gentleman; classical studies, indeed, were deemed necessary to all whose circumstances placed them above manual labour; and ladies, to whom spelling and writing had been formerly acquisitions of great magnitude, were very universal partakers of the most elegant refinements of education; and they had but badly read the signs of the times, who did not perceive that a great moral revolution had commenced in the world, of which the increased influence of the press was at once a cause and effect; a cause, for it had generated a spirit of enquiry, "whose appetite increaseth by that which it feedeth upon;" an effect, for the new wants that were thus created, and opened new marts for the disposal of literary wares—demands, as usual, being followed by supply. This may absolutely be considered as forming a kind of literary epocha. In nothing was this more conspicuous than in the wide and extended distribution of literary intelligence, which is to be attributed, in great part, to the introduction of the monthly magazines; for until newspapers, magazines, reviews, and cyclopædias, were established, the people, even the middle classes, could not fairly be said to have possessed themselves of the keys of knowledge. Previous to Cave's projection, periodicals were few in numbers, and mostly confined to

\* This ingenious lady was born at New York; and besides the *Female Quixote*, was the author of several novels; the *Sister*, a comedy, *Shakespeare illustrated*, three vols. 12mo., *Translations of Sully's Memoirs*, and *Burney's Greek Theatre*. She died January 4, 1804, in distressed circumstances.

† William Dodd was born at Bourne, in Lincolnshire, (of which parish his father was vicar,) May 29, 1730, and received his education at Clare Hall, Cambridge; and in 1753, entering into orders, became a popular preacher in the metropolis. In 1766, he took the degree of LL.D., at which time he was chaplain to the king. The estimation in which he was held by the world, was sufficient to give him expectations of preferment, and hopes of riches and honour, and these he might probably have acquired, had he possessed a common portion of prudence and discretion. But impatient of his situation, and eager for preferment, he rashly fell upon means which in the end were the occasion of his ruin. To extricate himself from those difficulties in which he was involved, he forged a bond for £4,300, upon the earl of Chesterfield, to whom he had been tutor; the fraud being discovered, he was tried and condemned, February 24, 1777, and executed the 27th of June following, at Tyburn. He was the author of several works of merit.

\* Dr. Gloucester Ridley, died November 3, 1774, aged 78 years.—See *Nichols's Literary Anecdotes*, vol. i. p. 641.

news and politics. But the *Gentleman's*, the *London*, and *Universal Magazines*, the *Monthly* and *Critical Reviews*, which soon followed, did an immense deal for literature and the literary character. They took the patronage of letters out of the hands of the great and fashionable, and confided it to the people. From this time periodical literature spread on every side; and by affording a most respectable arena for diffident scholars and young authors, created in the English republic of letters a very ardent spirit of emulation, and disputants in a little circle found in them a vent for their opinions, theological, moral, political, and antiquarian.

It was in this reign that the parliamentary debates first attracted public attention; and it was during the contest between Walpole and his political adversaries, that the eloquence of the senate shone with uncommon splendour. Voltaire, speaking of the English eloquence, as it subsisted in the two houses of parliament, at this period, says, that it excelled that of Greece and Rome. The eloquence of the pulpit forms no great object in this survey, though many of the discourses of our best divines form a valuable part of English literature. Archbishop Secker,\* bishops Conybrare,† Hoadly, and T. Sherlock, were the brightest ornaments of the established church; and, amongst the dissenters, to Dr. Watts‡ may be awarded the high merit of being not only a devout and zealous Christian preacher, but a profound scholar, a natural philosopher, a logician, and a metaphysician. It was reserved for the latter part of the reign of George II. to enable Great Britain to vie with foreign nations, and even with the authors of antiquity in historical writing. To Hume and Robertson we are indebted for so noble a revolution, and in whose steps soon followed Gibbon and Smollett. In biography, few names had yet appeared of any degree of excellence. Johnson's *Life of Savage*, and Middleton's *Life of Cicero*, stand preeminent.

The writers of Scotland particularly applied themselves to metaphysical disquisitions, the cultivation of sentimental ethics, and the progress of society and manners; they possessed a wonderful ardour for literary eminence, and a desire to excel in elegant composition. Ireland

can boast of Abernethy,\* Berkeley,† Clayton,‡ and Leland,§ names that will long be remembered with admiration. Amongst the ladies who distinguished themselves by their learning, perhaps no one was more conspicuous than lady Mary Wortley Montagu.|| In reflecting upon the period thus briefly noticed, it obviously appears to have been an active and busy one, with regard to the cultivation of knowledge and literature, although it received no encouragement either from the throne, or the court. The progress of human knowledge, and the condition of science, learning, and taste, may be ascribed principally to the influence of the press; for by it, and it alone, were the vast number of important subjects able to be discussed, and the discussion effected the revolution in the sentiments of the people.—extraordinary light was thrown on the very first objects that can demand the attention of man. "Sometimes, indeed," says Dr. Southwood Smith, "the tide of improvement, like the tide of the ocean, may appear to have receded; but soon, as if deriving strength from its momentary retreat, slow, majestic, irresistible, it has rolled beyond its former limit; but, unlike its type, it has not returned, and it will not return, to the boundary it has passed."

1761, Feb. 10. Died, MR. CRIGHTON, printer, at Ipswich, in Suffolk.

1761, March 30. Died, THOMAS BASKET, printer to his majesty, London.¶

1761, April 4. Died, MR. SHUCKBURGH, bookseller, Fleet-street, London.

\* John Abernethy was a celebrated dissenting divine, born at Coleraine, October 19, 1699, and educated at Glasgow. He died at Dublin, in 1740.

† Dr. George Berkeley, the learned and ingenious bishop of Cloyne, in Ireland, was born in that kingdom, at Kilerin, near Thomas-town, the 12th of March, 1684, and died Jan. 14, 1753. The excellence of his moral character is conspicuous in his writings, which were chiefly in defence of the Christian religion against Atheists and Infidels. His philosophical discoveries were of great service to mankind. Dr. B. was certainly a very amiable as well as a very great man; and Pope is scarcely thought to have said too much when he ascribes to

"Berkeley every virtue under Heaven."

‡ Robert Clayton, an Irish prelate, was the son of Dr. Clayton, dean of Kildare, and born at Dublin in 1691. Embracing Arianism, he accepted preferment in the church of Ireland, and was successively promoted to the sees of Kilaloe, Cork, and Clogher. In 1746 he made a motion in the house of lords for expunging the Athanasian and Nicene creeds from the liturgy, but it was not seconded. He died of a nervous fever, Sept. 28, 1758.

§ Dr. Thomas Leland, author of a *History of Ireland*; a *Life of Philip of Macedon*; and translator of *Demosthenes*, was born in 1709, and died in 1785.

|| This lady was the daughter of Pierrepont duke of Kingston, and married to Mr. Wortley Montagu, son to the earl of Sandwich. She accompanied her husband on his embassy to the Turkish court, in 1716. From Constantinople she wrote letters to Pope, Addison, and other eminent literati of the time, which are considered at this day as models of epistolary composition. She is also memorable for having first introduced the practice of inoculation into this country, for which thousands have had cause to bless her memory. She was a lady of almost masculine vigour of mind; and after a life marked by a variety of adventures, closed her career August 21, 1762, and was buried in Lichfield cathedral.

¶ The rev. William Norris, F. S. A. and secretary to the antiquarian society, was for some years corrector of the press to Mr. Basket. Mr. Norris was found dead in his bed, in Islington, on the morning of Dec. . . 1792.

\* Thomas Secker, archbishop of Canterbury, was born in 1703, and died August 3, 1768. His Cathedral Lectures and Sermons, published after his death, are masterly compositions.

† John Conybrare was born at Pinhoe, in Devonshire, in 1698. In 1732 he published an answer to Tindal's *Christianity as old as the Creation*, for which he was rewarded the same year with the deanry of Christ Church, Oxford. In 1740 he was made bishop of Bristol, and died in 1766.

‡ Perhaps no author before him ever appeared with reputation on such a variety of subjects as Isaac Watts, both as a prose writer and a poet; and there is no man of whose works so many have been dispersed, both at home and abroad, and translated into such a variety of languages; and whose life and conversation exhibited a pattern of every Christian virtue. "Few books," says Dr. Johnson, "have been perused by me with greater pleasure than Watts's *Improvement of the Mind*; a work in the highest degree useful and pleasing; and whoever has the care of instructing others, may be charged with deficiency in his duty if the book is not recommended." He was born at Southampton, July 17, 1674, and died at Stoke Newington, November 26, 1746.

1761, July 4. *Died*, SAMUEL RICHARDSON, printer in Salisbury Square, London, well known to the literary world as the author of *Pamela*, *Clarissa Harlowe*, *Sir Charles Grandison*, and other eminent works, and whose life affords another instance of the difficulties which may be overcome by perseverance and integrity. He was born in the year 1689, the son of an ingenious and very respectable joiner in Derbyshire, but who could only afford to give him a common education of reading and writing in a country school. It was the intention of the elder Mr. Richardson to have brought up his son *Samuel* to the church; but the occurrences of some severe pecuniary losses compelled him to relinquish the design. In despite, however, of his common education, he early exhibited the most decisive marks of genius; he was of a serious and contemplative disposition, and fond of exercising his inventive powers, among his playmates, in the narration of stories, the incidents of which he threw together with extraordinary facility. He was, likewise, remarkably partial to letter-writing, and to the company of his female friends, with whom he maintained a constant correspondence, and even ventured, though only in his eleventh year, to become their occasional monitor and adviser. At the age of sixteen it became necessary that he should fix upon some occupation for his future life; and, as his father left him to his free option, he decided for the business of a printer; principally induced to the choice by the opportunities that he imagined it would afford him for reading, to which he was strongly attached. He was accordingly apprenticed in 1706 to Mr. John Wilde, of stationers' hall; but he soon found that the advantages which he had so sanguinely expected were illusory; for he himself says, "I served a diligent even years to a master who grudged every hour of me that tended not to his profit, even of those times of leisure and diversion, which the refractoriness of my fellow-servants obliged him to allow them, and was usually allowed by other masters to their apprentices. I stole from the hours of rest and relaxation, my reading times for improvement of my mind; and being engaged in a correspondence with a gentleman, really my superior in degree, and of ample fortune, which, had he lived, intended high things for me; those were all the opportunities I had of my apprenticeship to carry it on; I took care that even my candle was of my own purchasing, that I might not in the most trifling instance, make my master a sufferer (and who used to call me *the pillar of his house*) and not to disable myself by watching or sitting up, to perform my duty to him in the daytime." On the termination of his apprenticeship, which had lasted seven years, he became a journeyman and corrector of the press; an office which he filled for nearly ten years, and on declining which, he acquired his freedom, and entered into business for himself. His first residence was small, and in an obscure court, in Fleet-street, where he filled up his spare hours by compiling indices for the book-

sellers, and writing prefaces, and what he calls *honest dedications*. The industry, punctuality, and integrity of Richardson as a tradesman, were in due time followed by the usual result, a wide-extending reputation and accumulating wealth. He was the printer, for a short period, of the duke of Wharton's *True Briton*, the purport of which was to excite an opposition in the city to the measures of government. The politics of this paper, however, were so violent, at the close of the sixth number Mr. Richardson declined any further connexion with it, having narrowly escaped a prosecution; for, four of the six essays being deemed libels, Mr. Payne, the publisher, was found guilty, while the printer, although intimate with the duke, was passed over, owing to the non-appearance of his name on the title-page. Through the interest of the right hon. Arthur Onslow, speaker, he was employed in printing the first edition of the *Journals of the House of Commons*, of which he completed the first twenty-six volumes in folio, an undertaking for which he at length obtained upwards of £3,000. He also printed from 1736 to 1737 a newspaper called the *Daily Journal*; and in 1738 the *Daily Gazetteer*. He suffered not, however, the pressure of business, though great, and requiring much superintendence, to preclude his mental progress. The literary exertions of Richardson were not altogether confined to novel writing; besides his three great works, already noticed, he had a regular share in the composition of the *Christian Magazine*, by Dr. James Manclerc, 1748; *the Negotiation of sir Thomas Roe, in his Embassy to the Ottoman Porte from the year 1721 to 1728 inclusive*, folio. He also printed an edition of *Æsop's Fables, with Reflections*. A *Collection of the Moral Sentences in Pamela, Clarissa, and Grandison*, was printed in 12mo, 1755. A volume of *Familiar Letters*, which he had laid by for a season, in order to prosecute his *Pamela*. A large single sheet on the *Duties of Wives and Husbands*. *Six original Letters upon Duelling*, printed after his decease in the *Literary Repository* for 1765. No. 67, vol. ii. of the *Ramblers*, were written by Richardson; in the preamble to which, Johnson styles him "an author from whom the age has received greater favours, who has enlarged the knowledge of human nature, and taught the passions to move at the command of virtue." Richardson's reputation is far from being confined to his own country. He has been read in many of the languages, and known to most of the nations of Europe; and has been greatly admired, notwithstanding every dissimilitude of manners or even disadvantage of translation. He has been often compared to Rousseau; and Rousseau was one of his professed admirers. M. Diderot, in his *Essay on Dramatic Poetry*, page 96, mentions Richardson particularly as a perfect master of that art. Whilst thus advancing in his literary career, Richardson was not inattentive to the improvement of that fortune, of which industry and integrity had long before laid the foundation. In 1754 he was appointed master of the station-

ers' company, a situation as lucrative as it was honourable. In 1755 he removed from North End, near Hammersmith, to Parson's Green, where he fitted up a house. In Salisbury-court, London, he took down a range of old houses, eight in number, and built an extensive and commodious range of warehouses and printing-offices. At Midsummer, 1680, he purchased a moiety of the patent of law printer, and carried on that department of business in partnership with Miss Catherine Lintot.\* To his servants he was a kind and generous master, eager to encourage them to persevere in the same course of patient labour by which he had himself attained fortune; and it is said to have been his common practice to hide half a crown among the types in the cases, that it might reward the diligence of the compositor who should first be in the office in the morning. If we look yet closer into his private life, (and who does not wish to know the slightest particulars of a man of his genius?) we find so much to praise, and so little deserving censure, that we almost think we are reading the description of one of the amiable characters he has drawn in his own works. Besides practising a generous hospitality, it must be recorded to his honour, that long before he became an author, he distinguished himself by his kindness in relieving the wants of the sons of genius, which is but too often allied to poverty; amongst others, Johnson† felt his succouring hand in the hour of his greatest need. A love of the human species; a desire to create happiness and to witness it; a life undisturbed by passion, and spent in doing good; pleasure, which centred in elegant conversation—in bountiful liberality, in the exchange of all the kindly intercourse of life,—marked the worth and unsophisticated simplicity of Richardson's character. It is no slight encomium, when speaking of the moral character of a man, that a too great love of praise should be enumerated as its only foible. Of the vanity of Richardson he who peruses his life‡ can have no doubt; but let it be remembered, that he was an object of almost perpetual flattery, and that he had a host of virtues to counterbalance the defect. For some years previous to his death, he had been much afflicted with nervous attacks, the consequence of family deprivations, of intense application, and great mental susceptibility.

\* After Mr. Richardson's death, his widow and Miss Lintot were for some time joint patentees.

† The following letter from Johnson to Richardson, is characteristic, and of a nature peculiarly affecting:

"Gough-square, March 16, 1756.

"Sir,—I am obliged to entreat your assistance; I am now under an arrest for five pounds eighteen shillings. Mr. Strahan, from whom I should have received the necessary help in this case, is not at home, and I am afraid of not finding Mr. Millar. If you will be so good as to send me this sum, I will very gratefully repay you, and add it to all former obligations.—I am, Sir, your most obedient and most humble servant,  
SAMUEL JOHNSON."

"Sent six guineas. Witness, WILLIAM RICHARDSON."  
The witness was Mr. Richardson's nephew and successor in business.

‡ See Mrs. Barbauld's "Biographical Account" of Mr. Richardson, prefixed to six volumes of his *Correspondence*, in 1804. Also Nichols's *Literary Anecdotes*, vols. II. iv. v.

He often regretted, that he had only females to whom to transfer his business. However, he had taken in to assist him a nephew, who relieved him from the more burdensome cares of it, and who eventually succeeded him. He now had leisure, had he had health, to enjoy his reputation, his prosperous circumstances, his children, and his friends; but, alas! leisure purchased by severe application often comes too late to be enjoyed; and in a worldly, as well as in a religious sense.

When we find  
The key of life, it opens to the grave.

His nervous disorders increased upon him; and his valuable life was at length terminated, by a stroke of apoplexy, at the age of seventy-two. He was buried, by his own direction, near his first wife, in the nave, near the pulpit of St. Bride's church. The following epitaph was written by his amiable and learned friend Mr. Carter, but is not inscribed on his tomb:

#### EPITAPH ON MR. RICHARDSON, PRINTER.

If ever warm benevolence was dear,  
If ever wisdom gained esteem sincere,  
Or genuine fancy deep attention won  
Approach with awe the dust—of Richardson.

What though his Muse, thro' distant regions known,  
Might scorn the tribute of this humble stone;  
Yet pleasing to his gentle shade, must prove  
The meaneat pledge of friendship and of love;  
Too oft will these, from venal throngs exiled;  
And oft will innocence, of aspect mild,  
And white-robed Charity, with streaming eyes  
Frequent the cloister where their patron lies.

This, reader, learn; and learn from one, whose we  
Bids her wild verse in artless accents flow:  
For, could she frame her numbers to comment  
The husband, father, citizen, and friend;  
How could her muse display, in equal strain,  
The critic's judgments, and the writer's vein.  
Ah, no! expect not from the chisel'd stone  
The praises given on our hearts alone.  
There shall his fame a lasting shrine acquire;  
And ever shall his moving page inspire  
Pure truth, fixt honour, virtue's pleasing lore;  
While taste and science crown this favour'd shore.

Mr. Richardson was twice married. By his first wife, Martha Wilde, daughter of Allington Wilde, printer, (who died in 1733) in Clerkenwell, he had five sons and one daughter; who all died young. His second wife (who survived him twelve years) was Elizabeth, sister of Mr. James Leake, bookseller, of Bath. By her he had a son and five daughters. The son died young; but four of the daughters survived him. viz. Mary, married in 1757 to Philip Ditcher, esq., an eminent surgeon of Bath; Martha, married in 1762 to Edward Bridgen, esq. F.R. and A.S.S.; Anne, who died unmarried; and Sarah, married to Mr. Crowther, surgeon, of Boswell-court.

1761, Aug. 27. Died, SAMUEL BALLARD, an eminent bookseller in Little Britain, and who was many years deputy of the ward of Aldersgate within.

\* She died January 25, 1731.

† She died November 3, 1773, aged 77 years, and was buried with her husband in St. Bride's church.

‡ Mrs. Ditcher survived her husband; and died at Bath in August, 1783.

1761. JAMES ADAMS, printer, a native of the north of Ireland, introduced the first press at Wilmington, a port and post town in the state of Delaware, North America.

1761, Aug. 5. *Died*, MRS. MARY COOPER, an extensive bookseller and publisher at the sign of the Globe, in Paternoster-row, London. She was the widow of Thomas Cooper, bookseller.

1761. *Died*, JOHN MERES, printer in the Old Bailey. He printed the *Historical Register*.

1761. The stamp duty upon newspapers raised to a penny, £4 1s. 8d. per 1000, being a discount of two per cent. All unsold stamps, whether damaged or otherwise, were allowed as returns. The paper was sold to the public at 2½d.; to the trade at 4s. per quire of twenty-five papers; paper 13s. 6d. per ream.

1761, Oct. 26. *Died*, MR. PENNY, printer to the East India Company.

1761. A college of Jesuits possessed a printing house at Villagarsia, qu. in Spain? in which they published *Opuscula Græca ad usum Seminarii Villagarsiensis*, 12mo, typis Seminarii. The book is licensed by the Provincial of the Jesuits at Valladolid.

1761, *The Norwich Gazette*, printed and sold by John Crouse.

1761, March 17. *The Cottager*, No. 1.

1761, April. *The Library*, No. 1.

1761, March 1. *The Protestant's Magazine*.

1761, April. *The Lawyer's Magazine*, No. 1.

1761, April. *The Mathematical Magazine*, by G. Witchell, T. Moss, and others, No. 1.

1761, June 11. *The Genius*. This paper, the production of George Colman, esq. was originally published in the *St. James's Chronicle*; and in point both of style and matter, it is perhaps superior to the *Connoisseur*, and, therefore, the abruptness of its termination forms a subject of regret. It extended but to fifteen numbers, published at irregular periods.

1761, Oct. 1. *The Court Magazine*, No. 1.

1761, Oct. 17. *The Reasoner*, No. 1.

1761, Oct. 17. *The Free Enquirer*, No. 1.

1762. In this year a schism occurred among the members of the stationers' company, headed by Jacob Ilive, a type-founder and printer. He called a meeting of the company for Monday, May 31, being Whit-monday, at the Dog tavern, on Garlick-hill, to "rescue their liberties" and choose master and wardens. Ilive was chosen chairman for the day; and standing on the upper table in the hall, he thanked the freemen for the honour they had done him—laid before them several clauses of their two charters—and proposed Mr. Christopher Norris, and some one else, to them for master, the choice falling upon Mr. Norris. He then proposed, in like manner, John Lenthall, esq. and John Wilcox, gent. with two others for wardens, when the two first nominated were elected. A committee was then appointed by the votes of the common hall, to meet the first Tuesday in each month at the Horn tavern, in doctors' commons, to inquire into the state of the company; which committee consisted of twenty-one persons, five of whom (provided the master

and wardens were of the number) were empowered to act, as fully as if the whole of the committee were present. July sixth, being the first Tuesday in the month, the newly-elected master, about twelve o'clock came into the hall, and being seated at the upper end of it, the clerk of the hall was sent for and desired to swear Mr. Norris into his office; but he declined, and Mr. Ilive officiated as the clerk in administering the oath. A boy then offered himself to be bound; but no warden being present he was desired to defer until next month, when several were bound, some freemen made, and others admitted on the livery; one of whom, at least, frequently polled at Guildhall in contested elections. Previous to calling the meeting just described, Mr. Ilive published a pamphlet on the *Charter and Grants of the Company of Stationers, with Observations and Remarks thereon*; in which he recited various grievances, and stated the opinions of counsel upon several points. The twentieth page concludes with the line, *Excudebat, edeqat, donabat, Jacob Ilive, Anno M. DCCLXII.* It is not known that any particular notice was taken of these proceedings; or of "this rebellious election of a master and wardens," as Mr. Nichols calls it in his index.

1762, March 29. *Died*, THOMAS PAGE, an eminent stationer on Tower-hill, London.

1762. WILLIAM GODDARD, a printer of New York, introduced the first press into Providence, the chief town of the county of Providence, in Rhode island, North America.

1762. JAMES JOHNSTON, a Scotchman, introduced printing into Savannah, a post town of Georgia, North America.

1762, Nov. 29. PETER ARNET, a feeble old man of seventy years of age, was convicted of writing the *Free Inquirer*, in which was contained some remarks on the five books of Moses, and being deemed blasphemous, he received sentence in the court of king's bench, to be imprisoned one month, to stand twice in the pillory during that time, and afterwards to be sent to Bridewell, and there kept to hard labour for twelve months; to pay a fine of 6s. 8d. and give security for his good behaviour during life; himself in £100 and two sureties in £50 each.

1762, May 29. *The Briton*. This political newspaper was commenced by Dr. Smollett upon the day that the earl of Bute was elevated to the premiership. Smollett had been originally a whig, but gradually became something like a tory, and devoted his talents to the interests of that party in church and state, but with little success. This paper was soon given up.

1762, June. *The North Briton*. Immediately after the publication of the first number of the *Briton*, John Wilkes, esq. started the above paper, and taking the opposite side in politics, became the most eminent party paper of its day. At this time the public was inundated with a swarm of newspapers and essayists, for and against lord Bute's administration. The publication of the *North Briton* was repeatedly suspended by warrants, the imprisonment, outlawry, and exile of

Wilkes, &c. and almost every number was the occasion either of a duel or an action at law. Mr. John Almon, bookseller, who was Wilkes's publisher, was imprisoned more than once; but in 1763, Wilkes set up a press in his own house in George-street, Westminster.

1762, *June*. *The Manchester Chronicle*; or, *Anderton's Universal Advertiser*, price twopence. Printed and published every Tuesday by Thomas Anderton, at the Shakspeare's head, near the Market cross, Manchester.

1762. *The Auditor*, by Arthur Murphy, esq.\* who, in concert with Smollet, undertook the defence of lord Bute's ministry in this paper.

1762. *The Englishman*. This is one of the oldest existing London newspapers; and about 1766 attracted much notice, by the insertion of several satirical articles from the pen of Burke.

1762, *Sept.* *St. James's Magazine*, by Robert Lloyd, A. M.† No. 1.

1762. *The Beauties of all the Magazines*.

1762. *The Investigator*, by Allan Ramsay.‡ This work consists only of four essays, and embraces rather copious dissertations on *Ridicule*, on *Elizabeth Canning*, on *Naturalization*, and on *Taste*. Their primary object is to shew the utility and necessity of experimental reasoning in philological and moral enquiries.

1762. *The Moderator*.

1762. *The Adviser*.

1762. *The Contrast*.

1763, *Jan.* *The Lying Intelligencer*, No. 1. Saturday. Published by Mr. George Nicol.

"And thus do we of wisdom and of reach,  
With windlasses, and with essays of bias,  
By indirections find directions out."

1763, *Jan. 18.* *Died*, Ma. Noon, a respectable bookseller in the Poultry, London.

\* Arthur Murphy was born at Cork, December 27, 1727, at Cloonquin, in Roscommon, Ireland, and was educated at St Omers. Having studied the law he was called to the bar. He was the author of the *Grecian Daughter*, *All in the Wrong*, and other plays which were very popular. He was the intimate friend of Dr. Johnson, Burke, Garrick, Foote, and other eminent men. Mr. Murphy died at Knightsbridge, June 18, 1800.

† Robert Lloyd (son of Dr. Pierson Lloyd, second master of Westminster school, and afterwards chancellor of York, who died Jan. 6th, 1781,) was educated under his father; then of Cambridge. He was for some time one of the masters of Westminster school, but quitting that situation, depended entirely upon his pen for support, and being of a thoughtless and extravagant disposition, became involved in debt, and a prisoner in the Fleet, where he put an end to his existence December 15, 1764. Mr. Lloyd was an excellent scholar, and an easy natural poet.

‡ He was the eldest son of Allan Ramsay, the poet, and born at Edinburgh in 1713. Early displaying a taste for painting, his father was induced to allow him to cultivate the art, which he did very successfully, both in England and in Italy. In 1767 he was appointed portrait painter to the king and queen, and became a great favourite with their majesties, on account of his ability to converse in German. He was frequently of Dr. Johnson's parties, who said of him, "You will not find a man in whose conversation there is more instruction, more information, and elegance, than in Ramsay's." He acquired considerable wealth, which, it appears, he used in a liberal spirit. Ramsay, in short, says Allan Cunningham, "led the life of an elegant accomplished man of the world, and public favourite." Mr. Ramsay died at Dover, August 10, 1784. John Ramsay, his son, entered the army, and rose to the rank of major-general.—See Chambers's *English Scotchmen*.

1763, *April 23.* *The North Briton*, No. XLV. printed for George Kearsley,\* bookseller, Ludgate hill. On April 30, a general warrant was issued by the earl of Halifax, to take into custody the authors, printers, and publishers, of this paper, together with their papers; upon which Mr. Wilkes, the author, was committed close prisoner to the tower, and the use of pen, ink, and paper forbidden;† several persons, together with the following fourteen journeymen printers were taken into custody: James Lindsey, George Morgan, William Gibson, Francis Story, John Christie, Benjamin Bard, John Stroke, Robert M'Laran, Henry Sabine,‡ Whitefield Harvey, Michael Curry, George Saville Carey, William Huckell, and David Ross. These journeymen commenced an action against Nathan Carrington and R. Blackmore, king's messengers, for false imprisonment; when William Huckell, on the 6th July, at Guildhall, London, before lord chief-justice Pratt, obtained £300 damages; and on the following day, James Lindsey, obtained £200 damages, with full costs of suit. By agreement of the council on both sides, this verdict determined all the actions for the same offence, which were twelve. The whole of the damages amounted to £2,900, and expenses. Huckell accepted £175, and the remainder £120 each, and they all agreed to pay their own costs.

1763, *May*. Mr. WILKES erected a printing press in his house in George-street, Westminster, and advertised the proceedings of the administration against himself and the printers and publishers of the *North Briton*, with all the original papers, at the price of a guinea. The *North Briton* again made its appearance. At this press was printed a poem, entitled an *Essay on Woman*, but it can scarce be said to have been published, as only twelve copies were printed for Wilkes and a few of his private friends. "The *Essay on Woman*," says Mr. Kidgell,§ "is a parody on

\* Mr. Kearsley became a bankrupt, and at a meeting of creditors, Mr. Foote, the celebrated comedian and author, appeared, and was of no little service to Mr. Kearsley, by the following observation: "Gentlemen, it is a very common case for a bookseller to be seen among the creditors of an author; but for once, strange to tell, you see an author among the creditors of a bookseller!" December 31, 1764.

† It was to avoid a writ of *habeas corpus* that Mr. Wilkes was committed close prisoner to the tower. John Almon, the bookseller, happening to call upon Mr. Wilkes, the same morning that the messengers entered his house, he was allowed to see Mr. Wilkes and leave the house, upon which lord Halifax blamed the messengers for not taking Almon also into custody.

‡ Mr. Sabine afterwards became the conductor of the *Chester Courant*, and died in that city at a very advanced age, in September, 1800.

§ In July, 1763, appeared *A genuine and succinct narrative of a scandalous, obscure, and exceedingly profane libel, entitled an Essay on Woman, &c.*, by the Rev. John Kidgell. The author attributes the discovery of the *Essay on Woman* to an accident of a proof sheet falling into his hands at the house of a respectable printer, in Fleet-street. It appears that at the house of the printer the journeymen were taking breakfast, (which was then customary,) one of them had worked upon the *Essay* at the house of Wilkes, and taking a proof sheet to put some better in, it was thus discovered by another journeyman, who wished to read it; at length the subject began to be talked about, until coming to the master's ears led him to look at it also; upon which he consulted with Mr. Kidgell, and they thought, by giving information to the secretary of state,

Pope's *Essay on Man*, almost line for line, printed in red. The frontispiece, engraved curiously on copper, contains the title of the poem; the title is succeeded by a few pages, entitled *advertisement and design*. On the title-page is an obscene print, under which is an inscription in Greek, signifying the Saviour of the world. The notes are said by John Almon to have been principally contributed by Mr. Potter. Thomas Farmer, who had conducted the Strawberry hill press, was the printer for Mr. Wilkes.\*

1763, Dec. 10. DRYDEN LEACH, printer, of London, obtained a verdict, and £300 damages at Guildhall, before lord chief-justice Pratt, from three of the king's messengers, for taking him into custody as the supposed printer of the *North Briton*, No. 45.

1763. An act was passed permitting newspapers to be sent and received free by members of both houses of parliament, provided they "were signed on the outside by the hand of the member," or "directed to any member at any place whereof he should have given notice, in writing, to the postmaster-general."

1763. A. STEUART, a roguish printer of Philadelphia, who scrupled not to assume the title of "king's printer," established the second press in the province of North Carolina, at Wilmington.

1763. *The Freeman's Journal*. This paper, which still continues, was established in Dublin by a committee of the united Irishmen appointed for conducting a free press. The management of it was entrusted to Dr. Lucas, a man of great talent and popular influence; and from the elegance of composition and strength of argument (being reckoned by many not inferior to Junius in both respects) manifested in many of the essays, it had a prodigious influence on the higher classes of the public. Dr. Lucas was elected one of the representatives of the city of Dublin, and the remarkable words with which he opened his address after the election, are still well remembered: "Yesterday, I was your equal—to-day, I am your servant." After his death, in 1774, the newspaper became the property of a person named Higgins.

1763. *Saunders's News Letter*. This paper was also established in Dublin about the same time as the *Freeman's Journal*; and from the tact displayed in its management—steering in

a neutral course between the two parties—it for many years maintained an ascendancy both in advertisements and circulation.

1763, July 5. *Terra-Filius*, another periodical paper by the author of the *Genius*, which he published daily during the *Encœmia*, at Oxford, in honour of the peace. Only four numbers appeared, and they are seasoned with a considerable portion of wit and pleasantry.

1764. T. GREEN, from Newhaven, introduced printing into Hartford, the capital of the state of Connecticut, North America. Like most of his brethren printers in America, Green commenced his typographical career by the publication of a newspaper.

1764. W. BROWN and W. GILMORE, printers, established a press at Quebec, the capital of Lower Canada, in North America, which was the first appearance of the art within the whole province of Canada. And it is observed by Mr. Thomas, that no other press existed in the province until the year 1775, when one was erected at Montreal.

1764, March 24. *The Newcastle Chronicle, or General Weekly Advertiser*, printed and published by Thomas Slack. It still continues to be published under its first title by Mr. Slack's grandsons, Thomas and John Hodgson. Mrs. Ann Slack, wife of the above gentleman, was well known in the literary world for her useful performances for the benefit of youth.

1764, May 4. Mr. ARTHUR BEARDMORE, an eminent attorney, received £1000 damages from the king's messengers for false imprisonment for a supposed connection with the *Monitor*. Mr. J. Scott stated that Mr. Beardmore, Mr. Entick, and Dr. Shebbeare, were the authors of this paper, and on December 4, Mr. Beardmore received £1,500 damages from the earl of Halifax, for false imprisonment in the house of a messenger, and on the following day Mr. Entick obtained a verdict for £20, Mr. Fell, bookseller, £18, Mr. Wilson, bookseller, £40, and Mr. Meredith, clerk to Mr. Beardmore, £200, from the earl of Halifax.

1764, June 1. Was executed at Guildhall, before Mr. Bennett, secondary of Wood-street compter, a writ of inquiry of damages, in an action of trespass, wherein Messrs. Wilson and Fell, two booksellers in Paternoster-row, some time since imprisoned for printing some numbers of the *Monitor*, were plaintiffs, and three of his majesty's messengers defendants; when, after many learned arguments by the council on both sides, the jury, to compose which one person was summoned out of each ward in the city of London, withdrew, and in about forty minutes brought in the damages at £600. Mr. Wilson died at an advanced age, July, 1777.

1764, Sept. 5. Died, ROBERT DODSLEY, bookseller, of Pall-mall, London, whose memory will ever be esteemed as a remarkable example of genius, springing up and advancing to usefulness, amidst unfavourable circumstances. He was born in 1703, at Mansfield, in Nottinghamshire, where his father kept the free-school, and

to turn the thing to their pecuniary advantage, but were at a loss to obtain a perfect copy. Another journeyman was found who had worked off the *Essay*, who denied any knowledge of such a work; but being tampered with by threats and promises, he was at length persuaded to betray Mr. Wilkes, by producing a perfect copy. The author of an *Explanatory Letter* to Mr. Kidgell says, and that very truly, that the best way of defeating such a work would have been to have burned the proof sheet, and take no farther notice of it; and condemn very severely the artifices made use of to come at the work. Mr. Kidgell, whose life was not particularly exemplary, was rector of Godstone, in Surrey, where he died about 1793.

\* *Recherches sur l'Origine du Despotisme Oriental*. Ouvrage posthume de M. Boulanger.

"Monstrum horrendum, informe, ingens—"

A Londres, 1763, 12mo. pp. 326. Printed at Wilkes' private press, in George-street, Westminster, by Thomas Farmer.

could only afford to give him a very limited education. He commenced life as a footman to the honourable Mrs. Lowther, and, by his good conduct in that capacity, was as successful in obtaining the esteem of those around him, as he ever was afterwards, when he had moved into more important positions in society. Having employed his leisure time in cultivating his intellect, he began at an early age to write verses, which, being shown to his superiors, were deemed so creditable to his abilities, that he was encouraged to publish them in a volume, under the title of *The Muse in Livery*. This publication was dedicated to his mistress, and came forth under the patronage of a highly respectable list of subscribers. Dodsley afterwards entered the service of Mr. Dartineuf, a noted voluptuary, and one of the intimate friends of Pope; and having written a dramatic piece, called *The Toyshop* (founded upon a play of the preceding century), it was shown by his new master to that distinguished poet, who was so well pleased with it, that he took the author under his protection, and made interest for the appearance of the play upon the stage. *The Toyshop* was acted at Covent Garden, in 1735, and met with the highest success. In a malignant epistle addressed about that time by Curll, the bookseller, to Pope, it is insinuated that this was owing to patronage alone. But nothing can seem more improbable than that Pope and his friends should be deceived as to the merit of this piece, or that they should interest themselves about a production glaringly destitute of merit. The profits arising from this play, and the distinction which it obtained for the author, induced him to enter upon some regular trade: he chose that of a bookseller, as the most appropriate to his taste, and that in which he might expect to turn the favour of his friends to the best account; and accordingly he opened a shop of that kind in Pall-mall. In this new situation, comparatively difficult as it may be supposed to have been, the same prudence and worth which have gained him esteem in his former condition, were not less strikingly exemplified. He was able to secure for himself and his establishment the countenance of many of the first literary persons of the day, including Pope, Chesterfield, Lyttleton, Shenstone,\* Johnson, and Glover,† and also of many persons of rank who possessed a taste for

letters; and thus, in the course of a few years, he became one of the principal persons of his trade in the metropolis. Proceeding at the same time in his career as an author, he wrote a farce entitled the *King and the Miller of Mansfield*, founded on an old ballad of that name, and referring to scenes with which he had been familiar in early life. Animated by a spirit of adventure, uncommon in his own time, he published, in 1744, a *Collection of Plays by Old Authors*, in twelve volumes, duodecimo, prefaced by a history of the stage, and illustrated by biographical and critical notes; the whole being dedicated to sir C. C. Dormer, to whom Mr. Dodsley acknowledges great obligations for the use of materials. Another of the more valuable works projected by Dodsley was the *Preceptor*, first published in 1749, and designed to embrace what was then thought a complete course of education. His *Select Fables of Esop and other Fabulists*, appeared in 1760, and was at once pronounced a work of classical elegance. In 1748, he produced a loyal masque on the occasion of the peace of Aix-la-Chapelle, and two years afterwards, a small prosework, entitled *The Economy of Human Life*, in which the social duties are treated in a style intended to resemble that of the scriptures and other oriental writings. In 1758, he ventured to rise to tragedy, and composed *Cleone*, the fable of which he derived from a French fiction. Though Garrick expressed a mean opinion of the play, and it was consequently taken to Covent Garden, it long drew full audiences, which was in part attributed to Mrs. Bellamy's acting of the heroine. Dr. Johnson admired *Cleone* so much as to say, that, if Otway had written it, no other of his pieces would have been remembered; which being reported to the author, he modestly said, "it was too much." A long and prosperous professional career enabled Mr. Dodsley to retire from business, some years before his death, with a large fortune, which, however, made no alteration upon his modest and amiable character. His humble origin was neither a matter which he was anxious to conceal, nor a subject of vulgar boasting. He did not forget it, nor did he allow it to affect his deportment in a manner that could be disagreeable to others. Mindful, says one of his biographers, "of the early encouragement which his own talents met with, he was ever ready to give the same opportunity of advancement to those of others; and on many occasions he not only acted as publisher, but as patron, to men of genius. There was no circumstance by which he was more distinguished than by the grateful remembrance which he retained and always expressed towards the memory of those to whom he owed the obligation of being first taken notice of in life. Modest, sensible, and humane, he retained the virtues which first brought him into notice, after he had obtained wealth to satisfy every wish which could arise from the possession of it. He was a generous friend, and acquired the esteem and affection of all who were acquainted with

\* William Shenstone, an ingenious poet, was born at Hales-Owen, in Shropshire, in 1714, and educated at Oxford. His works consist of songs, elegies, pastorals, a poem in Spencer's manner, called the *Schoolmistress*, letters, and miscellaneous essays were printed by Dodsley, in three vols. 8vo. His pastoral elegies possess a softness and smoothness of diction in the highest degree pleasing. His life was passed in elegant retirement at his seat called the *Leasowes*, near Hales-Owen, and which he devoted his fortune to improving. He died Feb. 11, 1763. Besides his life by Dr. Johnson, a good account of Shenstone may be found in Dr. Nash's *History of Worcestershire*, vol. 1.

† Richard Glover, author of *Leonidas*, an epic poem, and other works, was born in London, 1718, and was brought up as a merchant under his father, who was in the Hamburgh trade. Mr. Glover distinguished himself as a city politician, in taking the lead of the opposition at elections. In 1761 he was chosen M.P. for Weymouth. He died Nov. 25, 1783, and was buried in Westminster abbey.

him. It was his happiness to pass the greater part of his life in an intimacy with men of the brightest abilities, whose names will be revered by posterity; by most of whom he was loved as much for the virtues of his heart, as he was admired on account of his writings.\*

After a life spent in the exercise of every social duty, he fell a martyr to the gout, at the house of his friend, Mr. Spence,\* at Durham, and was interred in the abbey church-yard, where his tomb is thus inscribed :

If you have any respect  
for uncommon Industry and Merit,  
regard this place  
in which are deposited the Remains of  
Mr. ROBERT DODSLEY :  
who, as an Author, raised himself  
much above what could have been expected  
from one in his rank of life,  
and without a learned education;  
and who, as a Man, was scarce  
exceeded by any in Integrity of Heart,  
and Purity of Manners and Conversation.  
He left this life for a better, Sept. 28, 1764,  
in the 61st year of his age.

Robert Dodsley had quitted business in 1759; but his brother James, who had been his partner, continued the business, and persevered in acquiring wealth by the most honourable literary connexions until his death, in 1797.

1764. During the exile of Mr. Wilkes, there seems to have been a constant correspondence between him and Mr. Almon, the bookseller, of London. He was residing at Paris, when lord Hertford, the ambassador, gave a grand dinner to all the subjects of Great Britain, omitting only Mr. Wilkes. He sent Almon an account of this conduct, and also a ludicrous paragraph relative to the rev. Mr. Trail, a Scotchman, importing, that though lord Hertford was our ambassador, and David Hume his secretary, yet the rev. Mr. Trail administered to the English subjects in spirituals. This paragraph was printed in the *London Evening Post*. The earl of Marchmont moved the house of lords against Mr. Meres, the printer, and the house fined him £100 for it. Several other printers were afterwards fined every session for some years, £100 each time they printed a lord's name. Lord Marchmont began his business. It might, and it ought to have been a question in the house of commons, whether he house of lords had a right to levy money in his manner? But there are very few real friends

\* Is a malignant epistle from Curll, the bookseller, to Pope, in 1737, Mr. Spence is introduced as an early patron of Dodsley :

'Tis kind indeed a *Liberty Muse* to aid,  
Who scribbles farces to augment his trade :  
Where You and Spence and Glover drive the nail,  
The devil's in it if the plot should fail.

The Rev. Joseph Spence, M.A. was fellow of New college, Oxford. In 1748 he was made professor of modern history, and presented to the rectory of Great Horwood, in Buckinghamshire, and in 1754 prebendary of Durham. He wrote *An Essay on Pope's Odyssey*, and a work entitled *Olympia*, or an enquiry concerning the agreement between the works of the Roman poets and the remains of ancient artists, being an attempt to illustrate them on each other. This ornament of polite literature was unfortunately drowned, in a canal in his garden at Byfleet, Surrey, August 28, 1766.

to the liberty of the press. Men sometimes talk of it as an inestimable privilege; but their friendship lasts no longer than the occasion. A man had better make his son a tinker, than a printer or bookseller. The laws of tin he can understand, but the law of libels is unwritten, uncertain, and undefinable. It is one thing to day, and another to-morrow. No man can tell what it is.\* It is sometimes what the king or queen pleases; sometimes what the minister pleases; and sometimes what the attorney-general pleases.—*Memoirs of John Almon, Bookseller, of Piccadilly, London.*

1764, Sept. 20. Died, CHARLES HITCH, Esq., a bookseller of considerable eminence in Paternoster-row, and in the commission of the peace for the county of Essex; was master of the stationers' company, in 1758. He was buried at Eastham. He married Elizabeth, daughter of Mr. Arthur Bettesworth, bookseller. She died in 1777.

1765, Jan. 23. Mr. WILLIAMS, bookseller, in Fleet-street, sentenced by the court of king's bench to pay a fine of £100, to be imprisoned six months in that court, to stand once in the pillory in Old Palace-yard, and to give security in the sum of £1,000 for his good behaviour for seven years, for publishing the *North Briton*, No. 45, in sheets. Mr. Kearsley, for republishing the same in volumes, was discharged on his own recognizances. Mr. Kearsley had a promise made to him by the earls of Halifax and Egremont, that if he would give up the author he should not be prosecuted. On the 14th of February, Mr. Williams was taken in a hackney coach, No. 45, from the king's bench prison, to stand, pursuant to the above sentence, in the pillory, in New Palace-yard, Westminster. Opposite to the pillory were erected four ladders, with cords running from one ladder to another, on which were hung a jack-boot, an axe, and a bonnet; the last with a label, *Scotch bonnet* : the boot and bonnet after remaining some time, were burnt, the top of the boot having been previously chopped off. A gentleman with a purple purse, ornamented with ribbons of an orange colour, began a collection in favour of Mr. Williams, by putting a guinea in himself, by which means Mr. Williams obtained above £200; one gentleman gave fifty guineas. Mr. Williams held a sprig of laurel all the time. The same coach carried him back, and the master of it refused to take any hire.

1765. Died, Mr. EDWARD DODS, bookseller, in Paternoster-row.

1765. NICHOLAS HASSELBOCHT, a pupil of Sauer of Germantown, introduced the art of printing into the city of Baltimore, of Baltimore county, in Maryland, North America. He was well supplied with types for printing, both in the German and English languages; and is said to have meditated the publication of a German version of the bible; a design which, however, was never carried into execution.

\* Any thing, which any man, at any time, for any reason, chooses to be offended with, is a libel.—*Benjamin.*

1766. *The Holy Bible*, with a Commentary, by the rev. Matthew Henry. London: 5 vols. folio. A second edition appeared in 1776.

1765, Jan. *The Royal Granada Gazette*, No. 1, printed by W. Weyland, at St. George's town, the capital of the island of Granada. It appears that there had been a printing-office on the island before this of Weyland's was opened.

1765. *The Freeport Gazette; or, the Dominica Advertiser*, printed by William Smith, at Roseau, now called Charlottetown, the capital of the island of Dominica, in the West Indies.

1765, July. *The Court Miscellany*, No. 1.

1765, Dec. 27. *The Liverpool General Advertiser*, No. 1. bearing the following motto. "By His Majesty's authority. Given at St. James's." This paper was commenced by Mr. John Gore, and printed by Mr. Nevett.

1766, Jan. 23. *Died*, WILLIAM CASLON, who is styled by Rowe Mores "the Coryphæus of letter-founders," though not trained to that business; "which is a handy-work, so concealed among the artificers of it," that Moxon, in his indefatigable researches on that subject, "could not discover that any one had taught it any other, but every one that had used it learnt it of his own genuine inclination." It was by mere chance that Mr. Caslon was led to take up the gauntlet, and avert from England the reproach of a dependence on foreign genius in this grand arena of human skill. It may be both amusing and instructive, to read the rise and progress of his professional life. William Caslon was born at Cradley, a hamlet of Hales-Owen, in Shropshire. He served a regular apprenticeship to an engraver on gun-locks and barrels, and after the expiration of his term followed his trade in Vine-street, near the Minories. In every branch of his art his ability was conspicuous, but his early reputation arose chiefly from the dexterity and genius he evinced in inventing and engraving ornamental devices on the barrels of fire-arms. He did not, however, confine his ingenuity to that particular employment to which he had been brought up, but was occasionally occupied in making tools for bookbinders and for chasers of silver plate. While he was thus engaged, some of his bookbinding punches were noticed for their neatness and accuracy by Mr. John Watts,\* the printer, who conjectured correctly that he was capable of remedying the defects of the existing foundries, and who, by engaging to support him, and introducing him to the leading typographers of the day, induced him to undertake a new one. The elder Mr. Bowyer also accidentally saw in the shop of Mr. Daniel Browne, bookseller, near Temple-bar, the lettering of a book uncommonly neat; and inquiring who the artist was by whom the letters were made, Mr. Caslon was introduced to his acquaintance, and was taken by him to Mr. T. James's foundry, in Bartholomew-close. Caslon had never before that time seen any part of the business; and being asked by his friend if

he thought he could undertake to cut types, he requested a single day to consider the matter, and then replied he had no doubt but he could. From this answer Mr. Bowyer lent him £200, Mr. Bettenham £200, and Mr. Watts £100; and by that assistance our ingenious artist applied himself assiduously to his new pursuit. The three printers above-named were of course his constant customers. In 1720, the society for promoting Christian knowledge deemed it expedient to print, for the use of the eastern churches, the *New Testament* and *Psalter* in the Arabic language. Mr. Caslon was fixed upon to cut the fount, in his specimens of which he distinguished it by the name of "English Arabic." After he had finished the letters of this fount, he cut the letters of his own name in pica roman, and put them at the bottom of one of the Arabic specimens. The name being seen by Samuel Palmer, he advised Mr. Caslon to cut the whole fount of pica. This was accordingly done, and the letter exceeded that of the other founders of the time. But Mr. Palmer, whose circumstances required credit with those whose business would have been hurt by Mr. Caslon's superior execution, repented of the advice he had given him, and endeavoured to discourage him from any further progress.\* Mr. Caslon, being justly disgusted at such treatment, applied to Mr. Bowyer, under whose inspection he cut, in 1722, the beautiful fount of English which was used in printing Selden's works, and the Coptic types that were made use of for Dr. Wilkins's edition of the *Pentateuch*. It is difficult to appreciate the obstacles which Caslon had to encounter in the commencement of his career. He had the candour to acknowledge Mr. Bowyer as his master, and that he had taught him an art, in which, by diligence and unwearied application, he arrived to that perfection, as not only to remove the necessity of importing types from Holland; but in the beauty and elegance of those made by him so far surpassed the best productions of foreign artificers, that the importation of foreign types ceased, and his types, in their turn, were frequently exported to the continent. Beginning early in life, attaining an advanced age, and engraving for himself, he had the advantage of completing his specimen on his own plan. For clearness and uniformity, for the use of the reader and student, it is doubtful whether it has been exceeded by any subsequent productions. From 1720 to 1780 few works were printed with the types of any other foundry, and the editions of that interval will bear a successful comparison with those of any period prior or subsequent for typographical regularity and general respectability of appearance. He has since been excelled in individual founts, but as a whole his foundry is still unrivalled. He was no less esteemed as a good and worthy member of society, than for his eminence in his art. His conduct to his family, his friends, and his workmen, were alike deserving of praise.

\* Mr. John Watts, a printer of first-rate eminence, who has before been mentioned as the able conditor of the *Toussou*, died Sept. 26, 1769, aged 61.

\* This circumstance was verified by Dr. Franklin, who was then working with Mr. Watts, in Little Queen-street, Lincoln's-inn Fields.

Mr. Caslon's first foundry was in a small house in Helmet-row, in Old-street; he afterwards removed into Ironmonger-row, and about 1735 into Chiswell-street,\* where the foundry was carried on at first by himself, and afterwards in conjunction with William,† his eldest son; whose name first appeared in the specimen of 1742. Mr. Caslon's reputation induced his majesty, in or about the year 1750, to place him in the commission of the peace for Middlesex, which office he sustained with honour to himself and advantage to the community; and he now retired from the active part of the business, to what was then called a country house, at Bethnal Green, where he died, at the age of seventy-four; and was buried in the church-yard of St. Luke, Middlesex; in which parish all his different foundries were situated. A monument, erected to his memory, is thus briefly inscribed:

W. CASLON, esq. ob. 23 Jan. 1766, æt. 74.  
Also, W. CASLON, esq. (son of the above)  
ob. 17 Aug. 1776, æt. 58 years.

Mr. Caslon was three times married. The name of his second wife was Longman; of the third, Waters; and with each of these two ladies he had a good fortune. He left two sons and a daughter; William, the elder, succeeded him in Chiswell-street; Thomas, the younger, was an eminent bookseller in Stationers'-court; and Mary, who was twice married, first to Mr. Shewell, a brewer, and afterwards to Mr. Hanbey, an ironmonger of large fortune. There is a good mezzotinto print of Mr. Caslon by J. Faber, from a painting by F. Kyte, inscribed Gulielmus Caslon. It appears by the *Dissertation of Rowe Mores*, page 86, that Mr. Caslon had a brother named Samuel, who was his mould-maker, and afterwards lived with Mr. George Anderton, of Birmingham, in the same capacity.

1766, Jan. 5. Abstract of the account of his majesty's civil government of one year: item, To Mr. Basket for printing £5,846 11s. 5d.

1766. *The Medley*. This periodical, consisting of only thirty-one essays, on various subjects, was

published at Newcastle upon Tyne, and presented by the author to one of the governesses of the lying-in hospital, in Newcastle, to be printed for the benefit of that charity. The number of subscribers was very considerable.

1766, Nov. *The Waterford Journal*, established by Esther Crawley and Son, and published twice a-week, price a halfpenny.

*Ramsay's Waterford Chronicle* was also commenced at this time, and published twice a-week, at a halfpenny.

1766. *Morning Herald*, newspaper.

1766. *The Spendthrift*, No. 1.

1767. In this year the house of lords determined upon printing their *Journals* and *Parliamentary Records*; and it was also strongly urged upon their consideration to print the *Domesday Book*, the most important of the Anglo-Saxon records, that in the event of any accident occurring to the original, so important a national register might not be entirely lost. In consequence of this petition, the treasury board referred the board to the society of antiquaries, as to the means through which it should be published; whether by printing types, or by having a copy of the manuscript engraven in fac-simile. By the examination of several eminent printers, it was learned that according to the first plan, very many unavoidable errors would occur; and a tracing of the record was then proposed to be transferred to copper-plates. An estimate of the expense of this was next ordered by the treasury board, which amounted to £20,000 for the printing and engraving of 1260 copies, each containing 1664 plates; but this sum, however proportionally moderate, was considered too large, and the first plan was again reverted to. It was then proposed by the learned Dr. Morton, that a fount of fac-simile types should be cut under his superintendence, but this scheme was also abandoned, on account of the letters in the manuscripts continually varying in their forms. Notwithstanding this objection, however, there is in the *History of the Origin and Progress of Printing*, by Philip Luckombe, Lond. 1770. 8vo. p. 174, a specimen of domesday type cut by Mr. Thomas Cotterell, the letter-founder; but the fac-simile is unfaithful, and the extract very corrupt. When Dr. Morton's plan was resigned, the publication of domesday was entrusted to Abraham Farley, esq. F.R.S. a gentleman of great record learning, and who had access to the ancient manuscripts for upwards of forty years. His knowledge, however, did not induce him to differ from his original in a single instance, even when he found an apparent error; he preserved in his transcript every interlineation and contraction, and his copy was then placed in the hands of John Nichols, esq. F.A.S. &c. and was finished in 1783, in two volumes, folio, with the types devised by himself, and cut by Mr. Jackson.

1767, March 31. Died, JACOB TONSON, the third bookseller of the name, who is called by Dr. Johnson, "the late amiable Mr. Tonson." He carried on trade, with great liberality, and credit to himself, for above thirty years, in the

\* In the *Universal Magazine* for 1750, there is a view of Mr. Caslon's type foundry, with portraits of six of his workmen. The one marked S is that of Mr. Jackson, and † that of Mr. Cotterell.

Sir John Hawkins, in his *History of Music*, relates the following anecdote of this distinguished and excellent character:—"Mr. Caslon," says Sir John, "settled in Ironmonger-row, Old-street, and being a great lover of music had frequent concerts at his house, which were resorted to by many eminent masters; to these he used to invite his friends, and those of his old acquaintance, the companions of his youth. He afterwards removed to a large house in Chiswell-street, and had an organ in his concert room. After that he had stated monthly concerts, which, for the convenience of his friends, that they might walk home in safety, when the performance was over, were on that Thursday of the month which was nearest the full moon; from which circumstance his guests were wont humorously to call themselves Luna-tics. In the intervals of the performance the guests refreshed themselves at a sideboard, which was amply furnished; and when it was over, sitting down to a bottle of wine and a decanter of excellent ale of Mr. Caslon's own brewing, they concluded the evening's entertainment with a song or two of Purcell's, sung to the harpsichord, or a few catches, and about twelve retired."

† The abilities of this artist appeared to great advantage in a specimen of types of the learned languages, in 1748.

same shop which had been possessed by his father and great uncle, opposite Catharine-street, in the Strand; but some years before his death, removed to a new house on the other side of the way, near Catharine-street, where he died, without issue. Mr. Steevens in a prefatory advertisement to the edition of *Shakspeare*\* in 1778, honoured the memory of Mr. Tonson with the following characteristic eulogium. "To those who have advanced the reputation of our poet, it has been endeavoured, by Dr. Johnson, in the foregoing preface, impartially to allot their dividend of fame; and it is with great regret that we now add to the catalogue, another, the consequence of whose death will perhaps affect, not only the works of Shakspeare, but of many other writers. Soon after the first appearance of this edition, a disease, rapid in its progress, deprived the world of Mr. Jacob Tonson; a man, whose zeal for the improvement of English literature, and whose liberality to men of learning, gave him a just title to all the honours which men of learning can bestow. To suppose that a person employed in an extensive trade lived in a state of indifference to loss and gain, would be to conceive a character incredible and romantic; but it may be justly said of Mr. Tonson, that he had enlarged his mind beyond solicitude about petty losses, and refined it from the desire of unreasonable profit. He was willing to admit those with whom he contracted, to the just advantage of their labours; and never learned to consider the author as an under agent to the bookseller. The wealth which he inherited or acquired, he enjoyed like a man conscious of the dignity of a profession subservient to learning. His manners were soft, and his conversation delicate: nor is, perhaps, any quality in him more to be censured, than that reserve which confined his acquaintance to a small number, and made his example less useful, as it was less extensive. He was the last commercial name of a family which will be long remembered; and if Horace thought it not improper to convey the *Sosii* to posterity; if

rhetoric suffered no dishonour from Quintilian's dedication to Trypho; let it not be thought that we disgrace Shakspeare, by appending to his works the name of Tonson." Mr. Tonson served the office of high sheriff for the county of Surry in 1750; and in 1759 paid the customary fine for being excused serving the same important office for the city of London and county of Middlesex. In 1747 Dr. Warburton's edition of Shakspeare was issued from the press, for which Tonson paid him £500. Though his younger brother, Richard, survived him a few years, he interfered but little with the concerns of the trade, but lived principally at Water Oakley, in the parish of Bray, near Windsor; where he was so much respected, that the election of New Windsor almost compelled him to represent them in parliament; an honour which he enjoyed at the time of his death. In this delightful retreat, where his benevolence and hospitality were long recollected, he built a room lighted at the top by a dome, and an anti-chamber for the reception of the celebrated Kit-cat portraits,\* which descended to him on the death of his brother Jacob. Mr. Tonson did not long enjoy the improvement he had made in his house, and the ornaments he had added to it; being unexpectedly cut off, after a few days illness, to the regret of his friends, and the deep affliction of all his poor neighbours.

1767, Aug. 21. *Died*, THOMAS OSBORNE, a bookseller of great eminence, in Gray's Inn, London, and many years one of the court of assistants of the stationers' company. "Of Tom Osborne," says Dr. Dibdin, in his *Bibliomania*, p. 470, "I have in vain endeavoured to collect some interesting biographical details. What I know of him shall be briefly stated. He was the most celebrated bookseller of his day; and appears, from a series of his Catalogues, in my possession, to have carried on a successful trade from the year 1738 to 1768. What fortune he amassed is not, I believe, very well known: his collections were truly valuable, for they consisted of the purchased libraries of the most eminent men of those times. In his stature he was short and thick; and, to his inferiors, generally spoke in an authoritative and insolent manner.† 'It has been confidently related,' says Boswell, 'that Johnson, one day, knocked Osborne down in his shop, with a folio, and put his foot upon his neck.' The simple truth I had from Johnson himself. 'Sir, he was impertinent to me, and I beat him. But it was not in

\* The prices which the London booksellers have paid to the different editors of Shakspeare, are not generally known, but prove that the poet has enriched those who have impoverished him.

Besides very considerable sums to critics without criticism, and commentators without a name.

At the sale of the effects of Mr. Jacob Tonson, in 1767, one hundred and forty copies of Mr. Pope's edition of Shakspeare, in six volumes 4to. (for which the original subscribers paid six guineas) were disposed of at sixteen shillings (only) per set. Seven hundred and fifty of that edition had then been printed. On the contrary, sir Thomas Hanmer's edition, printed in 1744, which was first sold for three guineas, had arisen to ten before it was reprinted.—*Gentleman's Magazine*, vol. lviii. p. 76.

\* These celebrated portraits became the property of William Baker, esq., M.P. for Hert; whose father, sir William Baker, many years an alderman of the ward of Bassishaw, in the city of London, married the second daughter of the second Jacob Tonson.

† In the latter part of his life his manners were considerably softened, particularly to the young booksellers who had occasion to frequent his shop in the pursuit of their orders. If they were so fortunate as to call whilst he was taking wine after his dinner, they were regularly called into the little parlour in Gray's Inn to take a glass with him. "Young man," he would say, "I have been in business more than forty years, and am now worth more than £40,000. Attend to your business; and you will be as rich as I am."

his shop: it was in my own chamber.' Of Osborn's philological attainments, the meanest opinion must be formed, if we judge from his advertisements, which were sometimes inserted in the *London Gazette*, and drawn up in the most ridiculously vain and ostentatious style. He used to tell the public, that 'he possessed all the pompous editions of Classics and Lexicons.' I insert the two following advertisements, prefixed, the one to his Catalogue of 1748, the other to that of 1753, for the amusement of my bibliographical readers, and as a model for Messrs. Payne, White, Miller, Evans, Priestley, Cuthell, &c.: 'This Catalogue being very large, and of consequence very expensive to the proprietor, he humbly requests, that, if it falls into the hands of any gentleman *gratis*, who chooses not himself to be a purchaser of any of the books contained in it, that such gentleman will be pleased to recommend it to any other whom he thinks may be so, or to return it.'

"To his Catalogue of 1753 was the following:

'To the Nobility and Gentry who please to favour me with their commands. It is hoped, as I intend to give no offence to any nobleman or gentleman, that do me the honour of being my customer, by putting a price on my Catalogue, by which means they may not receive it as usual—it is desired that such nobleman or gentleman as have not received it, would be pleased to send for it; and it's likewise requested of such gentlemen who do receive it, that, if they chuse not to purchase any of the books themselves, they would recommend it to any bookish gentleman of their acquaintance, or to return it; and the favour shall be acknowledged by, their most obedient and obliged,

T. OSBORNE.'

"The Harleian collection of manuscripts was purchased by government for £10,000, and is now deposited in the British Museum. The books were disposed of to Thomas Osborne, of Gray's Inn, bookseller;—to the irreparable loss, and I had almost said, the indelible disgrace, of the country. It is, indeed, for ever to be lamented, that a collection, so extensive, so various, so magnificent, and intrinsically valuable, should have become the property of one, who necessarily, from his situation in life, became a purchaser, only that he might be a vender, of the volumes. Osborne gave £13,000 for the collection; a sum, which must excite the astonishment of the present age, when it is informed that lord Oxford gave £18,000 for the binding only, of the least part of them. In the year 1743-4, appeared an account of this collection, under the following title, *Catalogus Bibliothecæ Harleianæ*, &c. in four volumes (the 5th not properly appertaining to it.) Dr. Johnson was employed by Osborne to write the Preface, which, says Boswell, 'he has done with an ability that cannot fail to impress all his readers with admiration of his philological attainments. The first two volumes are written in Latin by Johnson; the third and fourth volumes, which are a repetition of the two

former, are composed in English by Oldys; and notwithstanding its defects, it is the best catalogue of a large library of which we can boast. It should be in every good collection. To the volumes was prefixed the following advertisement: 'As the curiosity of spectators, before the sale, may produce disorder in the disposition of the books, it is necessary to advertise the public, that there will be no admission into the library before the day of sale, which will be on Tuesday the 14th of February, 1744.' It seems that Osborne had charged the sum of 5s. for each of his first two volumes, which was represented by the booksellers 'as an avaricious innovation;' and, in a paper published in the *Champion*, they, or their mercenaries, reasoned so justly as to allege, that, if Osborne could afford a very large price for the library, he might therefore afford to give away the Catalogue,' Preface to vol. iii. p. 1. To this charge Osborne answered, that his Catalogue was drawn up with great pains, and at a heavy expense; but, to obviate all objections, 'those,' says he, 'who have paid five shillings a volume, shall be allowed, at any time within three months after the day of sale, either to return them in exchange for books, or to send them back, and receive their money.' This, it must be confessed, was sufficiently liberal. Osborne was also accused of rating his books at too high a price. To this the following was his reply, or rather Dr. Johnson's; for the style of the doctor is sufficiently manifest: 'If, therefore, I have set a high value upon books—if I have vainly imagined literature to be more fashionable than it really is, or idly hoped to revive a taste well nigh extinguished, I know not why I should be persecuted with clamour and invective, since I shall only suffer by my mistake, and be obliged to keep those books which I was in hopes of selling.' Preface to the 3d volume. The fact was, that Osborne's charges were extremely moderate; and the sale of the books was so very slow, that Johnson assured Boswell, 'there was not much gained by the bargain.' There will also be found, in Osborne's Catalogue of 1748 and 1753, some of the scarcest books in English literature, marked at two, or three, or four shillings, for which three times the number of pounds is now given."

1767. The *New Testament*, translated into the Gaelic language by the rev. James Stuart,\* minister of Killin, and printed at Edinburgh, at the expense of the "Society in Scotland for propagating Christian Knowledge;" assisted by a grant of £300 from the London society. It was printed in 8vo. with rules for reading the Gaelic at the end.

1767, Sept. Died, JOHN USHER, a journeyman printer, at Amsterdam, in Holland, at the extraordinary age of one hundred and six years.

1767, Dec. Died, JOHN REEVES, an eminent law printer in the Savoy, London.

\* Mr. Stuart died June 30, 1789, in the 99th year of his age, and the fifty-second of his ministry.

1767, Dec. 23. *Died*, JOHN NEWBERY, many years a respectable bookseller in St. Paul's churchyard, London, and who is characterized by sir John Hawkins as "a man of good understanding, and of great probity." He was the first of the profession who introduced the regular system of a juvenile library; and the several little books which he published for "masters and misses," of some of which he was the reputed author, were highly creditable to his head and his heart: he generally employed men of considerable talents in such undertakings. See some particulars of an altercation between Mr. Newbery and Dr. Hill, in *Gentleman's Magazine*, v. xxi. p. 600.

1767. *The Babler*. These essays were written by Mr. Hugh Kelly,\* which he contributed to *Owen's Weekly Chronicle*, during the years 1763, 1764, 1765, and 1766. The subjects are well varied; the moral is, for the most part good; and the style, though not perfectly correct, or much polished, is easy and perspicuous.—*Drake*.

Mr. Kelly also contributed to the same paper, the *Memoirs of a Magdalene*, under the title of *Louisa Mildmay*.

1767. *The Nautical Almanack*, projected by Dr. Nevil Maskelyne.†

1768. *Died*, PETER SIMON FOURNIER, a French engraver, printer, and letter founder, and author of several ingenious treatises on the rise and progress of typography. This eminent artist descended to the very origin of printing, for the sake of knowing it thoroughly; and in 1737 published a table of proportions to be observed between letters, in order to determine the height and relation to each other. His chief work is entitled *Manuel Typographique*, in two

volumes octavo, and it may justly be said of Fournier that his genius illustrated and enlarged the typographic art. He was of the most pleasing manners, and a man of virtue and piety.

1768, May 1. A trial took place before the master of the rolls, wherein the proprietors of the opera of *Love in a Village* were plaintiffs, and a printer who had printed and published a pirated edition of the said poem, was defendant. A perpetual injunction was granted, and the defendant was obliged to account with the plaintiffs for the profits of the whole number printed and sold, although the opera was not, till after the printing of the pirated edition, entered at stationers' hall.

1768. GEORGE ALLEN, esq., of Grange, near Darlington, in the county of Durham, established a press in his own house, and executed several pieces of typographical and antiquarian lore.—See *Martin's Catalogue of Books Privately Printed*. London. 1824.

1768. *Died*, JACOB ILIVE, a printer and type-founder, of Aldersgate-street, London. "Ilive," says Mr. Nichols, "who was somewhat disordered in his mind, was author of several treatises on religious and other subjects. He published in 1733 an oration proving the plurality of worlds, that this earth is hell, that the souls of men are apostate angels, and that the fire to punish those confined to this world at the day of judgment will be immaterial, written in 1729, spoken at Joiners' hall, pursuant to the will of his mother.\* A second pamphlet, called *A Dialogue between a Doctor of the Church of England and Mr. Jacob Ilive, upon the subject of the Oration*, 1733. This strange oration is highly praised in Holwell's third part of *Interesting Events relating to Bengal*. For publishing *Modest Remarks on the late Bishop Sherlock's Sermons*, he was confined in Clerkenwell Bridewell from June 15, 1766, till June 10, 1758, during which period he published, *Reasons offered for the Reformation of the House of Correction in Clerkenwell*. In 1751 Mr. Ilive published a pretended translation of *The Book of Jasher*, said to have been made by Aleuin of Britain.

1768. *The Holy Bible*, with a commentary by Dr. Dodd, from the notes of lord Clarendon, Mr. Locke, &c., three vols. folio. London.

1768. *Died*, SAMUEL FANCOURT, aged ninety years. He was the first promoter of circulating libraries in England.

1768, June 8. *Died*, ANDREW MILLAR, one of the most eminent booksellers in the eighteenth century. Mr. Millar was literally the artificer of his own fortune. By consummate industry, and a happy train of successive patronage and connexion, he rose to the highest station in his profession. He had little pretensions to learning; but had a thorough knowledge of mankind, and a nice discrimination in selecting his literary counsellors; and also fortunate in his assistants in trade. "Millar," says Boswell, "though no

\* Hugh Kelly was born on the banks of the lake of Killarney, in the year 1739, and after a liberal school education, he was bound apprentice to a stay-maker, in Dublin. When out of his time he set out for London, in order to procure a livelihood by his business, but for want of employment, and being a stranger and friendless, he was reduced to the utmost distress for the means of subsistence. Becoming acquainted with an attorney, he was employed by him in copying and transcribing, which he prosecuted with so much propriety, that he earned about three guineas a-week; but this employment, though profitable, could not be agreeable to a man of his original genius and lively turn of mind. From his accidental acquaintance with some booksellers, in 1763, he became the editor of the *Lady's Museum and Court Magazine*, and other periodical publications, in which he wrote so many original essays, and pretty pieces of poetry, that his fame was quickly spread among the booksellers, and he found himself fully employed in various branches of that transitory kind of literature. In 1766 he produced his comedy of *False Delicacy*, which was received with such universal applause, as at once to establish his reputation as a dramatic writer. The success of this play induced Mr. Kelly to continue writing for the stage, for which he produced several comedies, and the tragedy of *Clementina*. Unhappily for our author and his family, the sedentary life to which his constant labour subjected him, proved the bane of his health; for early in the year 1777, an abscess formed in his side, after a few days illness, put a period to his life on the 3d day of February, at his house in Gough-square, in the 38th year of his age. He left behind him a widow and five children, of the last of which she was delivered about a month after his death. Mr. Kelly's stature was below the middle size. His complexion was fair, and his constitution rather inclined to corpulency; but he was remarkably cheerful, and a most pleasing and facetious companion. As a husband and a father his conduct was singularly exemplary.

† Dr. Maskelyne was born in London, Oct. 6, 1732, and died at Flamstead house, Feb. 9, 1811.

\* This talented but eccentric lady was Elizabeth, daughter of Thomas James, noticed at page 567.

great judge of literature, had good sense enough to have for his friends very able men to give him their opinion and advice in the purchase of copy-right, the consequence of which was his acquiring a very large fortune, with great liberality." Dr. Johnson said of him, "I respect Millar, sir; he has raised the price of literature." During the better half of this century, Jacob Tounson and Andrew Millar were the best patrons of literature; a fact rendered unquestionable, by the valuable works produced under their fostering and genial hands. Mr. Millar took the principal charge of conducting the publication of Johnson's *Dictionary*. In 1767 Mr. Millar relinquished his business to Mr. Cadell, who had been his apprentice, and retired to a villa at Kew Green, where he died, and was buried in the cemetery at Chelsea. His widow married sir Archibald Grant, bart., of Monymusk, Aberdeenshire. She died at her house in Pall Mall, Oct. 25, 1788, and left the whole of her estate, supposed to be at least £15,000, to be disposed of at the discretion of her three executors, the Rev. Dr. Trotter, Mr. Grant, and Mr. Cadell. It appears by one of the cases on literary property, that Mr. Millar paid fifty guineas to Dr. Armstrong\* for the copyright of the poem of the *Economy of Love*.

1768, June 18. In the court of king's bench Mr. Wilkes was sentenced as follows:—That for the publication of the *North Britain*, No. 45, in volumes (of which 2000 copies had been printed for sale) he should pay a fine of £500, and be imprisoned ten calendar months; and for publishing the *Essay on Woman*, (of which only twelve copies were printed for the use of so many particular friends,) that he should pay likewise a fine of £500, and be imprisoned twelve calendar months, to be computed from the expiration of the term of the former imprisonment: to find security for his good behaviour for seven years; himself in £1000, and two sureties in £500.†

1768, Aug. 20. Died, JAMES ABREE, printer and proprietor of the *Canterbury News Letter*, aged seventy-seven years, who was for many years the only printer in that city.

1768. The first *Weekly Magazine* in Scotland, was commenced by Walter Ruddiman, jun. at Edinburgh.

1768, Dec. Died, M. DE COIGNARD, a printer at Paris, worth £180,000 sterling.

1768, Jan. 1. *The Miscellany*, No. 1, by Nathaniel Freebody. [Bishop Horne.\*]

1768, July. *The Oxford Magazine*, No. 1.

1768. *Morning Chronicle* newspaper.

1768, Aug. *The Essex Gazette*, printed and published by Samuel Hall, in the city of Salem, the capital of Essex county, in the province of Massachusetts, North America. Mr. Hall had removed from Newport, and had opened his office in the city in the month of April preceding, being the first press erected in the city of Salem, and the third of the province. Salem is said to have been the spot first fixed upon by the small number of persons who became the founders of the colony of Massachusetts. Its original name was Nehum-kek.

1769, Feb. 22. Died, WILLIAM MOUNT, esq. treasurer of St. Thomas's hospital, and eminent for works of charity. He had been master of the stationers' company three years, 1733-36.

1769, April 13. Died, RICHARD MANBY, a bookseller† of great eminence, of Ludgate-hill. He was fined for the office of sheriff; and was master of the stationers' company, to whom he gave £100 for the use of the poor. He died at Walthamstow.

1769, May. Died, EDWARD SAY, many years a respectable printer, and master of the stationers' company in 1763. His son, CHARLES GREEN SAY, well known as printer of the *Gazetteer*, *General Evening Post*, and other newspapers, died November, 1775.

\* George Horne was born at Otham, near Maidstone, in Kent, November 1, 1736. He was successor to Dr. Stanhope, in the deanery of Canterbury, and afterwards bishop of Norwich. His lordship united in a remarkable degree, learning, brightness of imagination, sanctity of manners, and sweetness of temper. Four volumes of his incomparable sermons are published. His *Commentary on the Psalms*, in 2 vols. &c. "will (as the writer of his epitaph expresses it) continue to be a companion to the closet, till the devotion of earth shall and in the hall of jubilee of heaven." Dr. Horne also wrote a celebrated piece of irony, in reply to Adam Smith's sketch of David Hume's life. He died at Eltham, January 17, 1792.

† Dutton characterises the following booksellers:—BENJAMIN ALSOP was a first-rate bookseller for some years, but see the rambling fate of some men: for Ben being a wild sort of a spark, he left his shop to get a commission in Monmouth's army; and, as Ben told me in Holland, had the duke succeeded, he had been made an earl, or a baron at least: i. e. "If the sky had fell he had caught a lark." I succeeded captain Alsop in his shop in the Poultry; and had lived there to this very hour, had I found any pleasure in noise and hurry.

MR. BATHERST. He printed *The Infant's Lover*, and *Art Clericalia*, and has purchased other copies that have sold well. He is scrupulously honest: he never abridged another man's copy, or purchased his author by out-bidding. And his way of traffick is all above-board: for as soon as his tongue is allowed to speak (for there is a small embargo upon it) he betrays the faults of what he sells. And should a child be sent to his shop, he would not take a farthing more than the price.

MR. BRAGG. He was formerly a bookseller, and is now a publisher in Ave-Mary-lane. He has been unhappy, but his soul is too great to be crushed under the weight of adverse storms; yet at the same time, Benjamin Bragg is of a soft, easy, affable temper: and, having learned the art of publishing, and being just in his dealings, is like to have constant employment.

MR. BILLINGSLY, by the Royal Exchange. He had the character of being a very honest, religious man, and (if I do not mistake) was a constant hearer of Mr. Watson for many years. But for what reasons I could never learn, has been disturbed in his mind and very near distraction, but I hear he is thoroughly recovered, and sets an extraor-

\* John Armstrong was born at Castleton, Roxburghshire, in Scotland, where his father was minister. He became an eminent physician in London, and was the author of several books on medicine. In 1744, he published the *Art of Preserving Health*; one of the best didactic poems in our language. Dr. Armstrong was a man greatly beloved by his friends for the goodness of his heart, as well as for his literary talents. He died June 31, 1779.

† The following printed notice was stuck upon the doors of the churches in the city of London one Sunday morning, viz. 1.—"The prayers of the congregation are earnestly desired for the restoration of liberty, depending on the election of Mr. Wilkes." This was the great contest which he had for the county of Middlesex, against the government candidate, and though elected by a great majority, his election was set aside by the house of commons.

1769. *Died*, HENRY WOODFALL, a printer in Paternoster-row, London. He was master of the stationers' company in 1766, and an old member of the common council. He died

of an ordinary example of piety, moderation, temperance, and all other Christian virtues. He was happy in having a wife and son that understood his trade, so that during his long indispotion his shop was still managed to the best advantage.

Mr. BEVER, in Fleet-street. He had ever the character of being a very merciful, just, and peaceable man, never intermeddling with state matters. He is a constant hearer at St. Dunstan's church, and I doubt not, as his charities are free and large, "the blessings of him that is ready to perish will come upon him;" neither are any of his virtues blamished by vanity or affectation, for he is liberal from a principle of conscience, and humble to the last degree. I shall only add, he has a large acquaintance amongst the lawyers, and is himself a very thriving bookseller.

NICHOLAS BONDINOTON. By an industrious management he has gathered a good estate, and makes a considerable figure in the parish where he lives. He deals much in bibles, testaments, and common prayer books. He purchased Mr. Kench's *Treasures of True Godliness* of me, and deals much in the country: but to have done with him, he has the satisfaction to belong to a very beautiful wife.

Mr. BOSWILL, at "The Dial," in Fleet-street. He is a very genteel person: and it is in Mr. Boswill that all qualities meet that are essential to a good churchman or an accomplished bookseller.

Mr. BLAKE. He is the father of the company of stationers for age and experience. He is a fair-conditioned man, very obliging to all his customers, and loves to do business without making a noise of it.

Mr. BLAINE. He is a substantial, honest citizen; devout and religious, without making a trade of it; or, as some of his neighbours in a too literal sense, making "a gain of godliness."

Mr. BURROUGHS, in Little Britain. He is a very beautiful person, and his wit sparkles as well as his eyes. He has as much address, and as great a presence of mind as I ever met with. He is diverting company, and perhaps as well qualified to make an alderman as any bookseller in Little Britain.

Mr. BEARDWELL and Mr. MOXON were partners all the time I employed them: the former is very generous and obliging, and the latter upon all accounts a very fair dealer.

NATHANIEL CROUCH. I think I have given you the very soul of his character when I have told you that his talent lies in collection. He has melted down the best of our English histories into twelve penny books, which are filled with wonders, rarities, and curiosities: for, you must know, his title-pages are a little swelling. I have a hearty friendship for him; but he has got a habit of leaning under his hat, and made it a great part of his business to bring down the reputation of Second Epira!

SAMUEL CROUCH. He is just and punctual in all his dealings: never speaks ill of any man: has a swinging soul of his own: would part with all he has to serve a friend: and that's enough for one bookseller.

THOMAS COCKRILL, senior. He was always up to the ears among great persons and business (perhaps engaging for a third volume): yet I will do my rival that justice to say he was a very religious, charitable man. The printing the *Morning Exercise*, and *Charnock's Works*, brought him into great credit. He was a member of Dr. Annesley's church for many years, and was his true and generous friend to the day of his death. Mr. Nathaniel Taylor was his particular friend, and preached his funeral sermon. In which he gave him an extraordinary character. His kinsman, Mr. Thomas Cockrill, is a living transcript of his uncle's virtues and public spirit.

Mr. CHILD. He is one of a generous and open temper, an easy and free conversation, with abundance of wit, and nice reasoning above most of his brethren, and less could scarce be expected from one that had been a partner with the ingenious Swill.

ISAAC CLAYTON, in Chancery-lane. He is a very chaste, modest man; he counts all public boasting of his virtue but so many penances before the people, and the more you applaud him the more you abash him. He is religiously sober in his own family and amongst his neighbours, and if we follow him to church we shall there find him making a covenant with his eyes. And if such fine things may be said of his chastity, what might I say of his justice, humility, patience, &c., would my room allow it; however I shall add this to his character, that he has the honour to be well known to lawyers of the first rank, and has printed several *Eminent Trials*.

wealthy and respected, leaving a son, Henry Sampson Woodfall, whose memory will always be dear to literature, being well known as the printer of the *Letters of Junius*. These cele-

Mr. DAVIS, in Cornhill.—His loyalty sits like his charity easy and free, and yet steady and unmovable; and being set on the pinnacle of trade (for he lives near the Royal Exchange), every thing he sees informs him.

Mr. D—TON.—He is very happy in a very beautiful wife, and she in as kind of husband: they have lived so happily since their marriage, that, sure enough, the beams of their matrimony were asked in heaven. As Mr. D—ton may value himself upon his beautiful choice, so

That bright soul which heaven has given his spouse  
Makes all her charms with double lustre shine;

and, therefore, as the ingenious Hopkins once said in another case,

"Make benevolent D—ton with the first advance,  
Charming at every step, with every glance;  
Sweet as her temper paint her heavenly face;  
Draw her but like, you give your piece a grace.  
Blind for her all the beauties e'er you knew,  
For so his Venus fam'd Apelles drew.  
But hold—to make her most divinely fair,  
Consult herself, you'll find all beauty there."

Mr. EVERTS, at the Green Dragon. He is exceeding good-natured, free from envy and variety; he is very cheerful and pleasant in conversation, but not talkative; yet has a sudden way of repartee, very witty and surprising. It was in this house that the beautiful Rachel gave me that fatal wound, mentioned in page 47. And I shall ever acknowledge the generous civilities I received from Mr. Everts (and his predecessor the Widow Widows) during the continuance of that youthful amour.

Mr. FOX, in Westminster hall. He is a refined politician, without what some will say it is impossible to be so, and that is—disimulation. When affronts are offered him, he does not (as others,) dissemble them; but, like himself, only scorn and conquer them. And to his knowledge in trade, he has joined no vulgar erudition, which all his modesty is not able to conceal.

Mr. FREEMAN, by Temple Bar. He is of a courteous affable nature, and very obliging to all he has to do withal; and I found (by that small correspondence I have had with him,) he was bred as well as born a gentleman.

Mr. GWILLIM, in Bishopsgate-street. He was originally a clasp maker, but is now a bookseller. He understands the just prices of all books; and, though he is resolved for a while, will go as low as it is possible. He printed the *Whole Duty of Woman*; Mr. Larkin's *Visions of the World to Come*; keeps Bristol fair every year, and is a very thriving man.

Mr. HAWKES.—He is my very old friend and acquaintance. I may say of him as king William said of Mr. Cartwright, "I have known him long, and I know him to be a truly honest man." He printed for that pious and famous divine, Mr. Thomas Brooks, and I have seen the fourteenth edition of one of his books, so that he has got a considerable estate by book-selling; and both he and his aged father before him had the character of being two fair dealers.

Mr. HAWES.—This honest brother has done me justice at St. Alban's, and I will endeavour to do him justice here. He has been a very cordial promoter of *The Reformation of Manners*, and prints many useful pieces for those societies. He has printed several *Treatises of Devotion*, which have been dispersed at a cheap rate. He was concerned in making public Mr. Norris's *Ideal World*. He is just in trade, and knows his business very well.

Mr. HODGSON.—He "calls a spade a spade;" and is so just in his dealings, that I verily think (were it not discretion) he would avoid a witness. His word is his parchment, and his eye his oath, which he will not violate for fear of gain. He has good success in his trade, and has an honest design in every thing he does, dare publish that to the world which others would keep as a secret.

Mr. HANFORD.—I believe him an honest man, and a warm votary for High Church. He printed Mr. Wesley's *Life of Christ*, and makes a considerable figure in the stationers' company.

Mr. WILLIAM HARTLEY, a very comely, personable man. He deals much, and has his shop well furnished with ancient books, that are very valuable. He prints many excellent translations, and has a good acquaintance, amongst whom I would reckon the ingenious Mr. Abel Boyer. He is one that does not forget any favours done to him, but will watch his opportunity to be grateful.

brated letters first appeared January 21, 1769, and the famous letter (35) to the king, December 19, in the same year.

1769. *A Prayer Book*, in the Manks dialect, Isle of Man, bears this imprint.

1769. *The Holy Bible*, with notes by Phillips, two vols. 4to. London. It is entitled the *Royal Imperial Bible*, and is the largest letter of any 4to. printed at this time.

1769, Nov. 10. MA. WILKES obtained a verdict and £4,000 damages against the earl of Halifax, for the seizure of his papers and imprisonment of his person. The king signified that all expenses incurred in consequence of actions or prosecutions relative to the *North Briton*, No. 45, should be defrayed by the crown.

1769. DA. ROBERTSON, the historian of Scotland, obtained from the booksellers, the sum of £4,500 for his *History of the Reign of Charles V.* 3 vols. 4to., then supposed to be the largest sum ever paid for the copyright of a single book. For his *History of Scotland*, published in 1759, he had received £600.

1769. *The American Magazine*, to which was subjoined the transactions of the American philosophical society. Nichola, a Frenchman, its editor, being an academician. It continued only one year.

1769, Jan. *Town and Country Magazine*.

1769. Nov. *The Parliament Spy*, No. 1.

1769. Dec. 9. *The Tuner*, No. 1.

1769. *Nottingham Journal*. Mr. Samuel Cresswell purchased the *Courant* from Mr. Ayscough, and changed the name into the above paper.

1770, Jan. 8. A fire broke out on the premises of Messrs. Johnson and Payne, booksellers, Paternoster-row, which were entirely consumed, together with the house of Mr. Cocks, printer, and damaged the house of Mr. Crowder, bookseller, adjoining. One thousand pound's worth of bibles and prayer books, belonging to the proprietors of the Oxford press, was destroyed.

1770. Feb. 17. In the *London Gazette* of this day, (printed by E. Owen and T. Harrison, in Warwick-lane,) is the following notice:—The public are desired to take notice, that his majesty's printing-office is removed from Blackfriars to New-street, near Gough-square, in Fleet-street, where all acts of parliament, &c., are printed and sold by Charles Eyre and William Strahan, his majesty's printers.

1770. At this time there were only four circulating libraries in London and its neighbourhood.

1770, Feb. 17. *The Whisperer*, No. 1, a violent party paper, written in opposition to the government, under lord North's administration. The author and printer were often pursued by bills of indictment, and warrants for their apprehension. A person, for selling No. 5, was sentenced, in the court of king's bench, to six months' imprisonment; and at the expiration of that time to suffer six months' imprisonment more for selling No. 6, and afterwards to be bound, himself in £200, and two sureties in £50 each, for his good behaviour for two years.

1770, June 2. JOHN ALMON, bookseller, in Piccadilly, was tried in the court of king's bench, and sentenced to pay a fine of ten marks, and to be bound over for his good behaviour two years, himself in £400, and two sureties in £200 each, for selling a copy of the *London Museum*,\* containing, amongst other things, *Junius's Letter to the* &c. &c. The question may be repeated, "Why of all the booksellers in the kingdom was Almon singled out for selling only?" All the booksellers sell magazines, and all the magazines contained *Junius's Letter*.† It appears that his name was put on the title-page without his concurrence; and that when the *Museum* was sent to Mr. Almon's shop, Mr. Almon was out of town; however, he came home in the course of the day, and having heard of the minister's orders to prosecute the printers, he instantly ordered the sale of Miller's pamphlets to be stopped, and the unsold copies to be returned. However, the ministerial runners or informers had been too quick, they had bought one or two copies; and the ministers, as it should seem, being now rejoiced that they had caught their enemy, the prosecution was immediately commenced against him, and though, as the reader sees, his concern with the publication was very small and very remote, yet he was brought to trial before any of the other printers. His conviction they reckoned certain; and that seems to have been the principal object. Even in striking the special jury, there was an obvious partiality; for although the king was party, several servants of the king's household, and gentlemen in the public offices, were allowed to be of the forty-eight. Mr. Almon objected to several of these names, in the order they were mentioned, and said they were servants of his majesty, who was party in the cause; but his objection was overruled; and upon reducing the jury, he was under the necessity of leaving a clerk of the war-office for foreman, as a lesser evil than any of the twelve he was allowed to strike out.

Lord Mansfield, in addressing the jury, said: There are two grounds in this trial for your consideration. The first is matter of fact, whether he did publish it. The second is, whether the construction put upon the paper by the information in those words where there are dashes, and

\* *The London Museum of Politics, Miscellanies, and Literature*. Printed by John Miller, near Paternoster-row; and sold by John Almon, Piccadilly.

† Mr. Almon had published a monthly work called the *Political Register*, which parodied, in some degree, the plan of a magazine; but principally consisted of politics. About the close of the second volume he had inserted a plan for augmenting the army in Ireland. It was the king's own plan, written by himself. He showed it only to general Harvey, who made some corrections in it, but did not take the paper away. In a few days it was printed in the *Register*, as corrected. The day after the publication the king sent Mr. Barnard, jun., to Mr. Almon, to know how he obtained that paper? Mr. Almon declined, in the most respectful terms, giving an answer to the question. But he rightly foresaw that his refusal would inevitably draw on him the resentment of the court, and therefore discontinued the publication. In a short time this apprehension was verified, for *selling Junius's letter*, in which it could scarcely be said that he had even a distant concern. So eager were the court to seize any pretence for prosecuting him.

not words at length, is the true construction; that is, whether the application is to be made to the king, to the administration of his government, to his ministers, to the members of the house of commons, to England, Scotland, America, as put upon it by the information; because, after your verdict, the sense so put upon it will be taken to be the true sense; therefore, if you are of opinion, that this is materially the wrong sense, it will be a reason for not convicting him upon that sense. In the first place, as to the publication, there is nothing more certain, more clear, nor more established, than that the publication—a sale at a man's shop—and a sale therein, by his servant, is evidence, and not contradicted, and explained, is evidence to convict the master of the publication; because, whatever any man does by another, he does it himself. He is to take care of what he publishes; and, if what he publishes is unlawful,\* it is at his peril. If an author is at liberty to write, he writes at his peril, if he writes or publishes that which is contrary to law; and, with the intention or view, with which a man writes or publishes, that is in his own breast. It is impossible for any man to know what the views are, but from the act itself; if the act itself is such, as infers, in point of law, a bad view, then the act itself proves the thing. And as to the terms malicious, seditious, and a great many other words that are drawn in these informations, they are all inferences of law, arising out of the fact, in case it be illegal. If it is a legal writing,† and a man has published it, notwithstanding these epithets, he is guilty in no shape at all.‡

1770, June 13. H. S. WOODFALL, printer and editor of the *Public Advertiser*, found guilty of printing and publishing only, Junius's Letter to the King. This cause was tried in the city of London, before lord Mansfield and a special jury. The jury were nine hours in considering their verdict, which was in effect an acquittal.—July 13, JOHN MILLER, printer, and Mr. BALDWIN, bookseller, were tried for the same offence, and acquitted. Thus it appears, that the original printers and publishers of *Junius's Letter* were tried by special juries of the city of London, and though the facts of printing and publishing were incontestibly proved, the juries conceiving themselves judges of the import of the paper and the intention of the publishers, acquitted them all.

In the trial of Mr. Woodfall, lord Mansfield

\* What is unlawful?—The only statutes against libels viz., 3rd Edw. I. 2nd and 3rd Ric. II. condemn or punish no other than *false news*. They say, "that whoever shall be so hardy to tell, or publish any *false news* or tales, whereby discord or slander may grow between the king and his people, or the great men of the realm, shall be taken and kept in prison, until he has brought him into court, which was the first author of the tale."

† How is any man to know what is a legal writing?

‡ Wilkes, during his exile in France, in a letter to Mr. Almon, makes the following remarks upon booksellers, and the conduct of ministers:—"You booksellers live always in a state of jeopardy, like soldiers fighting for their country. Do you take care of the letters of your friends? You should, from time to time, send to some friend's house such letters as these. You never can trust any ministers in our country. The Whigs in power turn Tories; though, alas! the Tories do not turn Whigs!"

gave the following definition of the liberty of the press: "The liberty of the press consists in no more than this, a liberty to print now without a license, what formerly could be printed only with one."

1770, July 18. It was decided in the court of chancery, that Mr. Taylor, a bookseller, of Berwick-upon-Tweed, should account to the executors of Andrew Millar, for the sale of a pirated edition of Thomson's *Seasons*, Mr. Millar being the proprietor of the *Seasons*. By this decision, the question respecting literary property was finally determined.

1770, Aug. 1. His majesty paid the sum of £100 which had been levied on Mr. Edmunds, late publisher of the *Middlesex Journal*, in which was inserted a protest of the house of lords. The dues to the usher of the black rod were ordered not to be paid.

1770. *Died*. M. URIC, who was the printer of some good Greek and Latin works, at Glasgow, where he died in this year.

1770. Mr. KINCARD, the king's printer for Scotland, brought an action against Colin Macfarquhar, for printing a bible, with notes, called *Ostwald's Bible*.

1770. *Died*, JOHN KNAPTON, a very eminent bookseller in London. He was three times master of the stationers' company, 1742, 1743, 1744.

1770. *Robin Snap*. This was a satirical paper, modelled after the *Tatler*, and published every Tuesday in the city of Norwich, price one penny. The editor engaged the services of the learned and singular John Franshane, the Norwich Polytheist. The work soon died of neglect.

1770. *The Baptist Annual Register*, edited by Dr. John Rippon.

1770, Aug. 23. *Died*, WALTER RUDDIMAN, printer, of Edinburgh, aged eighty-two years, being then the oldest master printer in Scotland. He has already been noticed as partner with his brother Thomas in the *Caledonian Mercury*.\* In the *Scots Magazine* of this year, p. 441, there is a copy of verses, in memory of Walter Ruddiman, by W. O. [Walter Oswald] who had been his apprentice† and journeyman. He is described by a grateful, rather than poetic pen, as

"Of unaffected manners, social, kind;  
The gentlest master, husband, father, friend."

1770, Nov. 1. *Died*, ALEXANDER CRUDEN, author of the well known and valuable *Cow-cordance of the Old and New Testament*, and many years a bookseller in London, as much distinguished for his eccentricity as for learning. He opened his shop under the Royal Exchange, in 1732, and it was here that he composed his

\* In the family of Ruddiman the *Caledonian Mercury* continued, though under various modifications, and during troublesome times, from March 1739, to May, 1773, when it was sold by the trustees of Ruddiman's grandchildren, with the printing-house, and printing materials, to Mr. John Robertson, a printer of sufficient learning, and of opulent circumstances.

† John Richardson, who distinguished himself by his *Persian Dictionary*, and other learned works, served an apprenticeship to Walter Ruddiman.

*Concordance*, which he dedicated to queen Caroline, and was presented to her majesty Nov. 3, 1737, seventeen days before her death. He had formed great expectations from the patronage of his royal mistress, and this disappointment was too much for him. He had shown symptoms of insanity on a former occasion, and he was now reduced to such a state that his friends found it necessary to send him to a lunatic asylum. This interruption did not, however, terminate his literary career. Having made his escape from his place of confinement, he published a vehement remonstrance on the manner in which he had been treated; and at the same time brought an action against Dr. Monro, and the other persons who had been concerned in the affair, in which, however, he was nonsuited. This new injustice, as he conceived it to be, gave occasion to several more pamphlets. After this, he found employment for some years as a corrector of the press—the character in which he had first appeared in London, and for which he was well fitted by his education and acquirements. Very accurate editions of the Greek and Latin classics appeared at this time, printed under his superintendence. But in the course of a few years, his malady returned, and he was again placed in confinement; on his liberation from which he once more tried his old expedient of prosecuting the persons who had presumed to offer him such an indignity, laying his damages on this occasion at £10,000. Being again unsuccessful, he determined as before to publish his case to the world; and accordingly forth came his statement in four successive parts, under the title of the *Adventures of Alexander the Corrector*—a name which Cruden now assumed, not as the reader might suppose in reference to his occupation of inspector of proof sheets, but as expressive of his higher character of censor general to the public morals. His favourite instrument, and chief auxiliary in executing the duties of this office, was a large sponge, which he carried constantly about with him in his walks through town, for the purpose of obliterating all offensive inscriptions which he observed on the walls, especially the famous “No. 45,” the mark of the partizans of Wilkes, to whose excesses he strenuously opposed himself, both in this way and by various admonitory pamphlets. On the publication of the second part of his adventures, he went to court, in the expectation of being knighted; and soon offered himself as a candidate to represent the city of London in parliament. Giving out, too, that he had a commission from heaven to preach a general reformation of manners, he made the attempt first among the gowmsmen at Oxford, and then among the prisoners in Newgate; but in both cases with very little effect. In the midst of these and many other extravagances, he both brought out a second and greatly enlarged edition of his *Concordance*, and pursued his labours as a corrector of the press and fabricator of indices, with as much steadiness as if his intellect had been perfectly sound, and doubtless it was so when properly exercised. He even

managed his worldly affairs with great prudence; and left behind him considerable property in bequests to his relatives. He was found dead on his knees, apparently in a posture of prayer, at his lodgings in Islington; thus happily experiencing, as Milton finely expresses it,

“A gentle waiting to immortal life.”

1770, Dec. 28. *Died*, ALLINGTON WILDE, printer, in Aldersgate-street, London, a very old member of the stationers' company, who was at the time of his death the oldest master printer in England, being upwards of eighty-two years of age. His father died in the year 1731.

1770. ISAAC COLLINS, a printer from Philadelphia, was the first who permanently set up a press at Burlington, the capital of New Jersey, in North America. Printing had been executed at this place so early as 1727, and again in 1765.

1770, July. *The Ladies' Magazine*, No. 1.

1770. *The Historical, Political, and Literary Register*, for 1769. London.

1770. *Bingley's Journal*. William Bingley, the proprietor, editor, and publisher of this paper, was a man of some notoriety in these turbulent times, being strongly attached to “Wilkes and Liberty.” He began his political career, May 10, 1768, by publishing, at a shop, opposite Durham-yard, in the Strand, the *North Briton*, No. 47, in continuation of the celebrated papers under that name by Mr. Wilkes; and, for a letter to lord Mansfield, in No. 50, was called on by the attorney-general to show cause why an attachment should not be issued against him as a publisher; when he wished to have pleaded his own cause, but was not permitted. His intended speech, with the proceedings of the court, are given in No. 51. He was committed to Newgate, whence he addressed, July 1, a remarkable letter to Mr. Harley, then lord mayor, occasioned by some cruel reflections of his lordships, No. 55; another to the *North Briton*, No. 59. In Nos. 64 and 75, he is stated to have been the first person, independent of a court of justice, imprisoned by attachment from the abolition of the court of star chamber. Nov. 7, after having been seventy-two days in Newgate, he was committed to the king's bench, for “not putting in bail to answer interrogatories upon oath.” Assisted, as he doubtless was, by the private advice of some distinguished lawyers, the defence of the English subject's freedom, in his case, is nervously stated in No. 75. The result was, that, on Dec. 5, on entering into recognizance for his appearing on the first day of the next term, he was discharged out of custody. His declaration to the public on this head is in No. 81. Jan. 23, 1769, persisting in his refusal to answer interrogatories, he was remanded to the king's bench, No. 87; and Feb. 17, made a solemn affidavit that he never would, without torture, answer to the proposed interrogatories, No. 91. June 14, 1769, he was brought from the king's bench prison to the common pleas, by *habeas corpus*, to surrender himself to an action of debt, in order to be removed to the Fleet; but,

though it appeared, by the return of the writ, that he was not in execution at the suit of the crown, but in custody to answer interrogatories, the court was of opinion they were not authorized to change the place of his confinement, and he was therefore remanded back. In August that year, he published a new edition of the forty-six numbers of the *North Briton*, with explanatory notes; and "an Appendix, containing a full and distinct account of the persecutions carried on against John Wilkes, esq. With a faithful collection of that gentleman's tracts, from 1762 to 1769. In 1769 he was one of the editors of L'Abbe Velly's *History of France*, of which only one volume was published. In June, 1770, being "suddenly and unexpectedly released from two years' confinement," he commenced the *Weekly Journal*. Mr. Bingley also continued the *North Briton* till No. 218, May 11, 1771; after which day he incorporated those Essays, for a few weeks longer, in his *Journal*; till at length, after having been long flattered, by the party which had made him their tool, with the vain hope of a gratuity of £500, his credit in trade became exhausted, and he suffered for his credulity, by an enrolment in the list of bankrupts.

1771. The printing of the *Debates of Parliament* is a circumstance that deserves to be particularly noticed. We have already given the mode which Cave adopted in the *Gentleman's Magazine*, (see page 656, ante) and which was partially carried on until this time, which at best was very imperfect, and oftentimes very inaccurate. But we are now arrived at the period which deserves to be distinguished, for breaking down the barrier of exclusion to public information. It has already been mentioned at page 713, ante, the injunction of the house of lords against Mr. Meres, printer of the *London Evening Post*, for having printed a silly paragraph in his paper about lord Hertford and his chaplain Trail, and that Mears the printer was fined £100 besides fees, for this trifling offence. This little circumstance gave birth to the great one, of regular printing the whole proceedings of both houses of parliament. Resentment was the first motive. Afterwards the printers were influenced by the hopes of advantage; but in truth, it is not any, for the expense is more than the gain; and if parliament had taken no notice of this hydra, it would have killed itself.

"When the spirit of the nation was raised high by the massacre in St. George's fields,\* the

unjust decision upon the Middlesex election, &c. Mr. Almon resolved to make the nation acquainted with the proceedings of parliament: for this purpose, he employed himself sedulously, in obtaining from different gentlemen, by conversation at his own house, and sometimes at their houses, sufficient information to write a sketch of every day's debate, on the most important and interesting questions, which he printed three times a-week regularly, in the *London Evening Post*. At this time the late printer, Meres, was dead, and the paper was printed by John Miller. During two sessions, this practice of printing sketches of the debates continued, without any notice being taken; and Mr. Almon furnished them constantly, from the best information he could obtain. Though they were short, they were in general pretty accurate; and their accuracy was perhaps the cause of the printer's security. The proprietors of the *St. James's Chronicle*, another newspaper, published three times a-week, observing the impunity with which these accounts of the proceedings of parliament were printed, and perhaps being a little jealous of the success of their rival, resolved upon deviating into the same track. And for this purpose, they employed one Wall, who went down to the house of commons every evening, to pick up what he could in the lobby, in the coffee-houses, &c. It was impossible he should be accurate; however by perseverance and habit, and sometimes by getting admission into the gallery, he improved and judging, in a little time, that he could supply two newspapers as well as one, he amplified his accounts for the *Gazetteer*, after having published the heads in the *St. James's Chronicle*. This encouraged the printers of other papers to follow the example; and Miller resolving not to be behind-hand with his competitors, not only employed persons to go to Westminster to collect the debates for him, but he printed the votes also."

Complaints being made, on the 8th of February, to the house of commons, of the newspapers entitled, the *Gazetteer*, and the *Middlesex Journal*, the former printed for R. Thompson, and the latter for J. Wheble, as misrepresenting the speeches and reflecting on certain members of the house of commons, contemning both its orders and its privileges, and the printers refusing to attend at the bar of the house, pursuant to order, a royal proclamation was consequently issued, dated the 8th of March, authorizing and commanding the forcible apprehension of Thompson and Wheble, for the purposes of legal amenability; a reward of fifty pounds, on the securing of each was at the same time offered.\* Wheble and Thompson were, shortly after, apprehended; but on being brought before the sitting aldermen respectively, Wilkes and Oliver, were at once discharged, and even bound over to prose-

\* Mr. Wilkes having been committed by the court of king's bench, as the officers were conveying him to prison, he was rescued by the mob. After they had dispersed, he went privately to prison, where he was under confinement till the meeting of the new parliament. A tumultuous mob then assembled, with an intention of conveying him in triumph to the parliament house, and on their disappointment became so riotous that an order was given to the military to fire on them. The death of one person, who was singled out and pursued by the soldiers, was brought in by the coroner's jury, wilful murder, and the magistrate who gave the order to fire was tried for the crime, but acquitted. The conduct of the soldiers, on the occasion, received public thanks from the highest authority; whilst the title of the massacre of St. George's-fields was given to the action.

\* On the 13th of March, the printers of the following morning and evening papers were ordered to attend at the bar of the house of commons, viz.:—*Morning Chronicle*, *St. James's Chronicle*, *London*, *Whitehall*, and *General Evening Post*, and the *London Packet*.

cute the individuals by whom they had been captioned.\* John Miller, similarly circumstanced as to parliamentary displeasure, was, meanwhile, taken into custody by a messenger from the house; and the serjeant at arms, who had been apprised of the fact, came himself to demand the bodies of both the messenger and the printer, who had repaired to the mansion-house, on the latter making his appeal to Brass Crosby, the lord mayor. Hereupon his lordship asked the messenger whether he had applied to a magistrate to back the warrant, or to any peace-officer of the city to assist him: he replied in the negative. His lordship then said, that so long as he was in that high office, he looked upon himself as a guardian of the liberties of his fellow-citizens; that no power had a right to seize a citizen of London, without an authority from him, or some other magistrate; and that he was of opinion, the seizing of Miller and the warrant were both illegal: he, therefore, declared Miller to be at liberty, and proceeded to examine witnesses to prove the assault on him by the messenger; which being done, his lordship asked the messenger if he would give bail? if not, he should be committed to prison. The latter, at first, refused to tender bail; but the commitment being made out, and signed by three magistrates, (Crosby, Wilkes,† and Oliver) the serjeant at arms now said that he had bail ready for him; and two sureties were bound in twenty pounds each, and the messenger in forty pounds, for his appearance at the next session at Guildhall. The clerk of the city being brought to the table of the house of commons, was compelled to tear out from his register the leaves on which the above judgments of the magistracy were recorded.

The city of London has at all times taken a leading part in the great contests for political power and privilege; but in no instance has her efforts in these respects been more powerfully felt, or led to more extensive and important consequences, than in the manly and courageous stand that was made by her lord mayor, at this time, against the whole power of government,

\* At the sessions at Guildhall, June 29, 1771, Edward Twine Carpenter, printer, of Hoeler-lane, was tried for an assault in seizing and taking up the person of J. Wheble, printer, according to the royal proclamation for that purpose, when he was found guilty, fined one shilling, and ordered to be imprisoned for two months in Wood-street compter.

† On the 17th of April, 1770, the committee of the bill of rights, having settled all the debts of Mr. Wilkes, he was relieved from confinement on giving a bond for his good behaviour during seven years; and he was afterwards admitted to the office of alderman for the ward of Farringdon-without, to which he had been previously elected. This event was celebrated by a very general illumination, not only in London, but throughout the kingdom. During his popularity every wall bore his name, and every window his portrait. In china, in bronze, or in marble, he stood upon the chimney-pieces of half the houses of the metropolis; he swung upon the sign-posts of every village, of every great road throughout the country. He used himself to tell, with great glee, of a monarchical old lady, behind whom he accidentally walked, looking up, and murmuring within his hearing, in much spleen, "He swings every where but where he ought." Wilkes passed, and, turning round, politely bowed.

directed to put down the liberty of the press, in publishing the parliamentary debates. Jealous of their privileges, and resolved to maintain them, the commons house of parliament ordered the lord mayor (member for Honiton,) together with the aldermen Wilkes and Oliver, forthwith to attend that house, the lord mayor and alderman Oliver in their places as members of the same, to abide the consequences of having withstood the execution of their warrants; and alderman Oliver was voted into the custody of the lieutenant of the tower on the 25th of March; and on the 27th, the lord mayor was also committed to the same place.\* The parliament was prorogued on the 23d of July; when the lord mayor and alderman Oliver being released of course, were carried from the tower to the mansion house with every possible mark of the approbation of their fellow-citizens; and again rewarded by the corporation.† The *liberty of printing the parliamentary debates*, though not formally acknowledged, has, through this important struggle, been virtually secured to us; for parliament, finding its own impotency in this business, abandoned the whole question entirely, and its benefits have since then been experienced by the government itself, in the vast revenue which the newspaper press yields to the state; and also in supporting the liberties of Europe, and those of a still larger portion of the human race. The advantages of the periodical press, says an elegant writer of the present day;‡ are in the vast accumulation of facts which it brings together—in the searching and universal light of publicity which it sheds upon laws, discoveries in knowledge, and advances in civilization. Is one fact valuable to mankind discovered by some scholar in the farthest end of the earth? Ten to one but you will see it first announced in a paragraph of the newspaper. Is there any abuse in the laws?—it is the newspaper press that drags it to day. Is there any invention that will augment our comfort, or sharpen our industry?—it is in the newspaper that it becomes familiar to us all. The newspaper is the chronicle of civilization, the common reservoir into which every stream pours its waters, and at which every man may come and drink. It is the newspaper which gives to liberty its practical life, its constant observation,

\* This commitment gave birth to the following *sonnet* by Wilkes. Crosby was then confined to his bed. A Frenchman asked Wilkes what was the reason of the examination being heard in the lord mayor's bed chamber: the alderman replied, "his lordship only followed the French fashion; he is holding a *bed of justice* to annul the authority of parliament."

† A silver cup of the value of £200, with the city arms engraved thereon, was presented to Brass Crosby, the mayor; and to aldermen Wilkes and Oliver, one each, of the value of £100, as marks of the gratitude of the city of London, for their upright conduct in the affair of the printers. His lordship also received the freedom of the city of London, of the town of Bedford, and of the merchants of Dublin. Addresses were also transmitted to him from several of the civic wards; from the counties of Caermarthen, Pembroke, and Cardigan; from the towns of Newcastle, Stratford-upon-Avon, and from Honiton, which place he represented in parliament.

‡ Edward George Earl Lytton Bulwer, member of parliament for the city of Lincoln, and author of several celebrated novels.

its perpetual vigilance, its unrelaxing activity. The newspaper is a daily and a sleepless watchman, that reports every danger which menaces the institutions of our country, and its interests at home or abroad.\* The newspaper informs

\* The following observations upon newspapers may not be unworthy of notice:—

A newspaper is the history of the world for one day. It is the history of that world in which we now live, and with it we are consequently more concerned than with those which have passed away, and exist only in remembrance; though to check us in our too fond love of it, we may consider, that the present likewise will soon be passed, and take its place in the repositories of the dead.—*Horne.*

Newspapers are a more important instrument than is generally imagined. They are a part of the reading of all; they are the whole of the reading of the far greater number.—*Edmund Burke.*

In barbers' shops and public-houses a fellow will get up and spell out a paragraph, which he communicates as some discovery. Another follows with his selection. So the entire journal transpires at length by piecemeal. Newspapers always excite curiosity. No one ever lays one down without a feeling of disappointment.—*C. Lamb.*

Pleased with each part, and grieved to find an end.—*Rev. George Crabbe.*

The newspapers furnish by far the best vehicles for disseminating important truths and useful information. Other works are repulsive to ignorant men; therefore they are closed books to those who stand most in need of being instructed. Books, how cheap soever, and however popularly written, are not likely to be read by the uneducated. To buy, or to get, and to begin reading a volume, indicates a certain progress in improvement to have been already made. But all men will read the news; and even peasants, farm servants, country day labourers, will look at, nay pore over, the paper that chronicles the occurrences of the neighbouring market town. Here then is a channel through which, along with political intelligence, and the occurrences of the day, the friends of human improvement, the judicious promoters of general education, may diffuse the best information, and may easily allure all classes, even the humblest, into the paths of general knowledge.—*Edinburgh Review.*

A newspaper, by giving line upon line, and precept upon precept, here a little, and there a little, carries knowledge into every corner, that particular species of information which is required for the service of the day. So that if we could command but a free circulation of newspapers, if we could have the rags which make the paper untaxed, and get the paper out of the hands of the manufacturer without the withering mark of the excise-man—if we could get the newspapers without the red marks on its corner, and could also circulate our advertisements, by which the series of knowledge might be communicated to those who read them, without being so grievously burdened by taxation, it is quite impossible that in this place and the adjoining counties, those outrages which have been committed, should have occurred.—*Dr. Attkin.*

The newspaper is the familiar bond that binds together man and man—no matter what may be the distance or climate, or the difference of race. Here it is that we have learned to sympathize with the slave—how to battle for his rights—how to wrest the scourge from his taskmaster. Over land and over sea, the voice of outraged humanity has reached the great heart of England, and raised up a host of freemen as the liberators of the enslaved and tortured negro! Yes; it is in the humble and familiar newspaper, that civilization has united many of the best resources that enlighten, soften, guide, and warm mankind. It is a law-book for the indolent, a sermon for the thoughtless, a library for the poor; it may stimulate the most indifferent—it may instruct the most profound. Such are the real advantages, the substantial utility, of the newspaper press. There, in spite of all its abuses, have made its boast of liberty, the glory of civilization.—*Bywater.*

The periodical press of Great Britain is justly the boast of Englishmen, and the envy and admiration of foreigners. It is the most powerful moral machine in the world, and exercises a greater influence over the manners and opinions of civilized society than the united eloquence of the bar, the senate, and the pulpit. The press has undoubtedly within itself the seeds of indestructibility; but it is, nevertheless, difficult to determine how arduous and protracted may be the contest which it has yet to wage with the prejudiced and despotic rulers of the continent of Europe, before its powers or its liberty be recognized.—*Inquiry into the State of Public Journals, London, 1824.*

legislation of public opinion, and it informs the people of the acts of legislation; thus keeping up that constant sympathy, that good understanding between people and legislators, which conduces to the maintenance of order, and prevents the stern necessity for revolution.

1771, Sept. 8. Died, JOHN PERLE, a considerable bookseller, in Paternoster-row, London.

1771, Sept. 30. Died, JOHN HUGHS, one of the most eminent printers of this century; and who, by talent, diligence, and probity, raised himself from a comparative humble rank to affluence and honour. He was born at Thame, Oxfordshire, in 1703. His father was a dissenting clergyman. He received a liberal education at Eton college, and served a regular apprenticeship to a stationer and printer in London. He first entered into business about the year 1730, in Holborn, near the Green Gate, and removed from thence to a house in Whetstone Park, near Great Turnstile, facing the east side of Lincoln's-inn Fields, and ranked for many years very high in his profession. From his press issued almost the whole of the numerous and valuable publications of the Dodsley's. In 1740, Mr. Hughs incurred the displeasure of the house of commons, by having printed, *Considerations on the Embargo on Provisions of Victual*. The usual proceedings took place—he was ordered to the bar of the honourable house—declared guilty of "a breach of privilege"—committed to the custody of the serjeant at arms—reprimanded on his knees—and discharged.

About the year 1763, he obtained, through the interest of lord North, who had been his school-fellow at Eton, the appointment as printer of the parliamentary papers and journals of the house of commons; by him was thus laid the foundation of a business since brought to a high degree of prosperity. He continued to reside in the house before mentioned, near Great Turnstile; the office extending backwards in the rear of the houses in Turnstile, and forming one side of Tichborne-court. He married a Miss Dampier, whose brother, Dr. Dampier, was successively dean of Durham, bishop of Rochester, and bishop of Ely. His half-brother was the late sir Henry Dampier, knight, one of the barons of the exchequer; who was esteemed an admirable scholar, and stood, perhaps, unrivalled as an ecclesiastical lawyer. After a life of singular industry, integrity, and benevolence, Mr. Hughs died at the age of sixty-eight; leaving a widow with manners as placid as his own, who survived him many years; and an only son, who, after following the laudable example which had been set him, retired from the fatigues of business.

1771, Nov. 1. JOHN EYRE, esq. supposed to be worth 30,000, but of an avaricious disposition, was sentenced to transportation for stealing a few quires of paper. He died on his passage out, and the captain of the vessel found on his person two thousand one hundred guineas sewed in the lining of his coat and breeches, and which sum he deposited in the bank upon his return.—*Query.* To whom did this money belong?

1771, Nov. 8. Died, JOHN WORRALL, a very worthy, industrious, and intelligent bookseller in Bell-yard, Temple-bar, London. His profession was originally that of a bookbinder; but, having been encouraged to open a shop as a bookseller, he took a house in Bell-yard, which had formerly been the Bell inn. In 1731, he compiled and published a very useful work, entitled, *Bibliotheca Legum Angliæ*, of which he printed several editions, in 1735, 1738, 1740, and the last in 1768. He also published another little piece, entitled, *Bibliotheca Topographica Anglicana*, 1736. In 1749, he published, in three volumes folio, the valuable work which bears the name of *Edward Wood's Complete Body of Conveyancing*. By the encouragement Mr. Worrall received, he was soon enabled to gratify his own honourable feelings by an act of strict justice. In the outset of life, having been unsuccessful, he was under the necessity of making a composition with his creditors; but as soon as he was able, he sent for them all, and fully paid them the deficiency. To his only brother, Thomas Worrall, who had been a bookseller at Temple-bar, but unfortunately laboured under a mental derangement, which terminated his life Sept. 17, 1767, John Worrall was particularly kind. He was a very active man; and in early life walked frequently to Reading, (the place of his nativity) on a Saturday, and back again early on Monday. Mr. Worrall had been for several years a widower after having lost eight children, seven of them in infancy. He died at an advanced age, sustaining to the last the character of benevolence and integrity,\* which he had borne through a long life. He left many handsome legacies to numerous relations. Some time before his death, Mr. Worrall gave up the fatigues of business to his partner Mr. B. Tovey; who, in 1775, resigned the trade to his son-in-law, Mr. Edward Brooke; who survived till Jan. 1806. In 1783, Mr. Brooke, as successor to J. Worrall and B. Tovey, published a new and improved edition of the *Bibliotheca Legum*.

1771. *Encyclopædia Britannica*. The plan, and all the principal articles (of this now important work) were devised and written or compiled by William Smellie,† which began to appear in numbers at Edinburgh, in this year, and was completed in three volumes 4to. For editing

and superintending the work Mr. Smellie received only the sum of £200, from its proprietor, Mr. Andrew Bell, engraver, and Colin Macfarquhar, printer. Of the original edition, the entire work of Smellie, it is not exactly known how many copies were thrown off. The second edition, which began in 1776, under the editorship of James Tytler,\* consisted of fifteen hundred copies, and extended to ten volumes 4to. A third edition, in eighteen volumes, 4to. was commenced in 1789, and extended to ten thousand copies.† By this edition the proprietors are said to have netted £42,000 of clear profit, besides being paid for their respective work as tradesmen—the one as printer, and the other as engraver. The fourth edition extended to twenty 4to. volumes, and three thousand five hundred copies. In the fifth and sixth editions, only parts of the work were printed anew; and to these a supplement in six volumes was added by Archibald Constable, after the property of the work had fallen into his hands. A seventh edition, under the editorship of professor Macvey Napier, is now (1838) in the course of publication.

1771, March 23. *Prescott's Manchester Journal*, No. 1, price twopenny, printed and published every Saturday, by John Prescott, in Old Mill-gate, near the cross.

1772. April. M. PIGNORELLI, a Neapolitan gentleman, was beheaded at Rome for his satirical writings against the holy see.

1772. *Essays on the most important subjects of Natural and Revealed Religion*. This work was composed and written by that singular genius, James Tytler, while confined within the precincts of the sanctuary of Holyrood. He had a press of his own, from which he threw off various productions, generally without the intermediate use of manuscript. In a small mean room, amidst the squalling and squalor of a number of children, he stood at a printer's case, composing pages of types, either altogether from his own ideas, or perhaps with a volume before him, the language of which he was condensing by a mental process little less difficult. He is said to have,

\* James Tytler was a man of extraordinary genius and extensive learning; but whose life is a melancholy instance of talents misapplied. A large portion of that additional matter by which the *Encyclopædia Britannica* was extended from three to ten volumes, was the production of Tytler. The payment of this labour is said to have been very small, inasmuch that the poor author could not support his family in a style superior to that of a common labourer. At one time, during the progress of the work, he lived at the village of Duddingston, in the house of a washerwoman, whose tub inverted formed the only desk he could command; and one of his children was frequently despatched with a parcel of copy, upon the proceeds of which depended the next meal of the family. It is curious to reflect that the proceeds of the work, which included so much of this poor man's labours, were, in the next ensuing edition, no less than £45,000. A man who has so little sense of natural dignity as to besot his senses by liquor, and who can so readily make his intellect subservient to the purposes of those who wish to employ its powers, can scarcely expect to be otherwise than poor; while his very poverty tends, by inducing dependence, to prevent him from gaining the proper reward for his labour.—See a *Biographical Sketch of the Life of James Tytler*. Edinburgh: printed by and for Denovan, Lawnmarket, 1805.

† To the third edition Tytler contributed the article on electricity, which is allowed to be excellent.

\* *The Arte Rhetorice, for the use of all such as are studious of Eloquence, sette forth in Englishe*, by Thomas Wilson, 1553. And now newlie sette forth againe, with a Prologue to the reader. Anno Domini, 1587. Imprinted at London, by Iohn Kingston. This curious black letter novel is mentioned principally for the sake of introducing the following very honourable note, written at the back of the title-page:—"Memorandum, the 18th of August, 1740. I bought a small parcel of books of the executors of Mr. Stephens, in Witch-street, for three pounds fifteen shillings; and in this, being one of the said books, I found a book note, dated the 15th August, 1721, for twenty-five pounds, which I returned to the executors; for which they gave me five guineas as a reward, also five shillings for a bottle of wine attending to receive it.

"J. WORRALL."

† William Smellie served an apprenticeship to the printing business in Edinburgh, in which he became eminent; but is better known to the learned world by the many excellent works of which he was the author.—See 1793 post.

in this manner, fairly commenced an abridgement of that colossal work, the *Universal History*: it was only carried, however, through a single volume. To increase the surprise which all must feel regarding these circumstances, it may be mentioned that his press was one of his own manufacture, described by his biographer, as being "wrought in the direction of a smith's bellows;" and probably, therefore, not unlike that subsequently brought into use by the ingenious John Ruthven. This machine, however, is allowed to have been "but an indifferent one:" and thus it was with almost every thing in which Tytler was concerned. Every thing was wonderful, considering the circumstances under which it was produced; but yet nothing was in itself very good. During his residence in the sanctuary, Tytler commenced a small periodical work, entitled the *Weekly Review*, which was soon discontinued.

1772. June. Died, JOHN JAMES, of Bartholomew Close, London, the last of the old race of letter-founders. He succeeded his father in the year 1736. His foundry consisted of the united foundries of

Rolij, the German :

Mr. Grover, the father :\*

Mr. Thomas Grover, the son : among whose stock were the materials of Wynkyn de Worde :

Mr. Moxon :

Mr. Robert Andrews, whose foundry included Mr. Moxon's :

Mr. Silvester Andrews, his son :†

Mr. Head :‡

Mr. Robert Mitchell :§

Mr. Jacob Ilive :

\* John Grover, and Thomas Grover, his son, both whom Ames, who is exceedingly incorrect throughout his work, calls Glover. Their foundry-house was in Angel-alley, in Aldersgate-street. Their foundry is particularized by Mr. Mores, in p. 46. "Mr. Grover's foundry became, at his decease, the joint property of his daughters, and was appraised and valued, in 1786, by Mr. James and Mr. Caslon. Mr. Caslon contracted for the purchase of it; but the daughters, thinking the foundry undervalued, refused to join in the sale; so it remained locked up in the house of Mr. Nutt (who had married one of the daughters) for thirty years; Mr. Nutt, in the mean time, casting from the matrices for the use of his own printing-house. At length, all the daughters of Mr. Grover being dead, the property centred in Mr. Nutt, of whom it was purchased by Mr. John James, in 1738."

† Mr. R. Andrews lived in Charterhouse-street, and he was living in the year 1794. Silvester Andrews, his son, founded at Oxford. Mr. James purchased both these foundries in 1733. The following epitaph (written at Oxford) was no doubt intended for Silvester Andrews:—

Underneath this stone lies honest Syl,  
Who died, though much against his will;  
Yet, in his fame he will survive,—  
Learning shall keep his name alive;  
For he the parent was of letters,—  
He founded, to confound his betters;  
Though what those letters should contain  
Did never once disturb his brain.  
Since, therefore, reader, he is gone,  
Pray let him not be trod upon.

‡ Mr. Head's foundry was in St. Bartholomew's-close. Whose the foundry was originally cannot be ascertained.

§ Mr. Mitchell had been journeyman to Mr. Grover, and succeeded to the foundry of Mr. Head. He removed in Jewin-street, and then lived in Cripplegate, and afterwards in Paul's-alley, between Aldersgate and Redcross-street. His foundry was purchased by Mr. Caslon and Mr. John James, and divided between them.

and of a considerable collection besides, of whose former owners we can say nothing: the stock of many artists, and the labour of many years: a multifarious collection, and such as never before was, nor hardly ever will again be, in the possession of a single person. At Mr. James's death Rowe Mores purchased all the curious parts of that immense collection of punches, matrices, and types, which had been accumulating from the days of Wynkyn de Worde to those of Mr. James. From these a large fund of entertainment would probably have been given to the curious, if the life of Mr. Mores had been prolonged. His intentions may be judged of from his valuable *Dissertation on Typographical Founders and Foundries*; and as no more than eighty copies of that pamphlet were printed, it will always be a typographical curiosity. Mr. John Nichols bought the whole impression at the sale of Mr. Mores's curiosities in 1778; and, after subjoining a small appendix, gave it to the public.

1772. The exact time when the art of typography was introduced into Madras, or Fort St. George, the principal settlement of the English East-India company, cannot be ascertained, but some *Almanacks or Calendars*, so early as this year were executed there. In 1777 a Talmuk version of the *New Testament* was printed at Madras. In 1819 the English church missionary society sent out a press, which has been employed on the revised Talmul version of the holy scriptures.

1772, Jan. 21. *The Scotchman*. This work commenced immediately on the decease of the *Whisperer*, and took the same side in politics, published every Friday.

1772. *The Freeholder*. This collection of political essays was published in Ireland during this year. It is the production of Hugh Boyd, esq.

1772. *Nottingham Chronicle*. This paper was commenced by George Burbage, and continued until the year 1775, when Mr. Cresswell, proprietor of the *Journal*, and Mr. Burbage, compromised their political opposition, and became joint proprietors of the *Journal*. At the death of Mr. Cresswell,\* in 1786, the *Journal* became the sole property of Mr. Burbage, and at his death in 1807, of George Stretton, who had served his apprenticeship to Mr. Burbage, and also married his daughter. On the death of Mr. Stretton, in 1833, the *Journal* became the property of John Hicklin and Co. and is edited by that gentleman, with considerable literary ability.

1772. Dec. 18. *The York Chronicle*, No. 1. printed and published by William Blanchard.

1773, March. Mr. ANERCORN, a German printer, who had been in business in London, but failed, then removed to Altena, in Denmark, where he commenced printing, and began a newspaper upon the English plan. Having republished a plain relation of the Copenhagen revolution, as he found it in the English news-

\* Samuel Cresswell was many years a printer and bookseller at Nottingham, where he was also sexton of St. Mary's parish. He died Aug. 23, 1786.

papers, the very next day he was served with a warrant, his whole property seized, and his person thrown into prison on a charge of high reason.

1773. In this year the whole *Bible*, with the Apocrypha, was printed in the Manks language, in folio, under the patronage of bishop Hildesley,\* at the expense of the Society for promoting Christian Knowledge; and in 1776, the society published another edition of the *New Testament*. This important translation was made principally by the rev. Philip Moore,† and the rev. John Kelly,‡ though different portions of the bible were distributed for translation among such of the insular clergy as were best acquainted with the language.

1773, Aug. 22. *Died*, GEORGE, LORD LYTLETON, of Hagley, in Worcestershire, of very great abilities as a statesman, and of an elegant taste in poetry and polite literature. He was the author of several poems of merit, and some prose works; but his last literary production was the *History of Henry II.* 1764, 4to. elaborated by the researches and deliberations of twenty years, and published with the greatest anxiety. The story of this publication is remarkable. The whole work was printed twice over, a great part of it three times, and many sheets four or five times.§ The booksellers paid for the first impression; but the charges and repeated operations of the press were at the expense of the author, whose ambitious accuracy, cost him at least £1000. He began to print the work in 1755. Three volumes appeared in 1764, a second edition of them in 1767, a third edition in 1768, and the conclusion in 1771-2. Andrew Reid, a man not without considerable abilities, and not unacquainted with letters or with life, undertook to persuade the noble author, as he had persuaded himself, that he was master of the secret of punctuation; and, as fear begets credulity, he was employed, at what price is not known, to point the pages of *Henry the Second*. The book was at last pointed and printed, and sent into the world. His lordship took money for his copy, of which, when he had paid the pointer, he probably gave the rest away; for he

was very liberal to the indigent. When time brought the history to a third edition, Reid was either dead or discarded; and the superintendence of typography and punctuation was committed to a man originally a comb-maker, but then known by the style of Dr. Sanders\* [a Scotch L.L.D.] Something uncommon was probably expected, and something uncommon was at last done; for to the edition of Dr. Sanders is appended, what the world had hardly seen before, a list of errors of nineteen pages.

Lord George Lytton was the eldest son of sir Thomas Lytton, bart., of Hagley, born Jan. 17, 1709, and educated at Eton and Christ church, Oxford. He was a very early writer both in prose and verse. In politics he joined the opposition against sir Robert Walpole: in 1755 was chancellor of the exchequer, and in 1757 he was recompensed with a peerage, and rested from political turbulence in the house of lords.

1773, Nov. 14. *Died*, ANDREW BRICE, printer, at Exeter, aged eighty-three years, who will long be remembered in the west of England, and who was unquestionably one of the most extraordinary characters that ever figured in private life. There is a kind of local celebrity, which, from whatever cause it may spring, entitles the subject of it to the diligent researches of the curious. Characters that have been remarkable for an eccentricity in benevolence, as well as for an innocent and entertaining singularity of manners, are undoubtedly remembered with regard, within at least a narrow circle of fame. Of those who have instructed, or even diverted us, when living, we are willing to perpetuate the history, and to preserve the likeness; and, although we cannot place them foremost on the canvass with sages and heroes, yet, in the back ground, we may still have a pleasure in recollecting their resemblance. However inadequate we have been to the task, still we have endeavoured to bring to the remembrance of their professional brethren, at least, some whose names and local celebrity deserve to be rescued from the hand of oblivion; and perhaps none would be found more worthy in every respect than the subject of this brief memoir. He was born at Exeter, in 1690, of parents that were neither low nor eminent, and who in the early part of his life designed their son for a dissenting minister. With this view, they gave him a

\* When Bishop Hildesley received the last part of the translation, which had been so long the object of his desires, and which occurred on Saturday, November 28th, 1773, a few days before his death, he sang the "Nunc Domini dimittis," or "Song of Simeon," in the presence of his congratulating family, as expressive of his grateful feelings.—*Chalmers's Gen. Biog. Dict.* xvii. p. 479. Mark Hildesley was the son of the rev. Mark Hildesley, rector of Houghton and Witton, in Huntingdonshire, who was born at Marston, in the county of Kent, in 1698, and educated at Cambridge. His first living in the church was the vicarage of Hitchin, and succeeded bishop Wilson, in the Isle of Man. He died Dec. 7, 1773.

† The rev. Philip Moore, was born in 1735. In the earlier part of his life he was chaplain to bishop Wilson. His character appears to have been excellent, at once exemplary and amiable; and his death, which happened Jan. 28, 1783, was very generally and deeply regretted.

‡ John Kelly, L.L.D., was born Nov. 1, 1750, at Douglass, in the Isle of Man, and educated at St. John's, Cambridge. He obtained the vicarage of Ardehly, near Colchester, which, on being presented to the rectory of Copford, in the same neighbourhood, he resigned. He died Nov. 13, 1809.

§ The work was printed by William Bowyer, of White Friars, and published by Mr. Sandby.

\* Robert Sanders (a self-created L.L.D.) was a character of great notoriety in the literary annals of the eighteenth century. He was born in Scotland, in or near Brendal, about 1737, and received a good education, and with some talents and a prodigious memory, after serving an apprenticeship to a comb-maker, he followed the profession of a hackney writer. At what time he came to London is uncertain. He executed a great many works for the booksellers, as *Letter Writers, Histories of England*, in folio and quarto, under various names; but his principal work was the notes he wrote for the bible, which were published, 1773, under the name of Dr. Henry Southwell (who it is said received one hundred guineas for the use of it), while the writer of the notes was paid the poor pittance of twenty-five shillings a sheet; such was the difference between the real and the reputed author. Dr. Sanders died March 24, 1783.

grammatical education, which he considerably improved; but their circumstances in the sequel being too narrow to enable them to complete their wishes, he was obliged, at the age of seventeen, to think of some other avocation. At this time, Mr. Bliss, a printer of Exeter, wanting a person capable of correcting the press, young Brice was proposed to, and accepted by him, as an apprentice, for the term of five years. However, having long before his service expired, inconsiderately contracted marriage, and being unable to support a family of a wife and two children, he enlisted as a soldier, in order to cancel his indentures; and, by the interest of his friends, very soon procured his discharge. Soon after, in 1714, he commenced business for himself, but with fewer materials than can easily be imagined, having but one size of letter, namely Great Primer, for every sort of business, including a newspaper. To supply this deficiency, he carved in wood the title of his newspaper, and, in the same manner obviated every difficulty that could arise from a want of variety in his types. In this manner he conducted business for several years, with great credit to himself. The popular opinion of him now was such, with respect both to the benevolence and activity of his disposition, that he was solicited by the debtors in the city and county prisons to lay before the public the grievances which they laboured under from the severity of their keepers. This solicitation, the period of which was about the year 1722, brings to our recollection that memorable era in 1729, which will be ever dear to humanity, when the house of commons appointed a committee to inquire into the state of the gaols throughout the kingdom. Nor does it appear that the complaints of the debtors of Exeter were without foundation; and, indeed, the deplorable scenes discovered by the committee of the house of commons, in the Fleet prison only, are by no means exaggerated by Thomson in the following pathetic lines in his *Winter* :

And here can I forget the gen'rous band,  
Who, touch'd with human woe, redressive search'd  
Into the horrors of the gloomy jail?  
Unpitied, and unheard, where misery moans,  
Where sickness pines; where thirst and hunger burn,  
And poor misfortune feels the lash of vice.  
While in the land of liberty, the land  
Whose ev'ry street and public meeting glow  
With open freedom, little tyrants rag'd;  
Snatch'd the lean morsel from the starving mouth;  
Tore from cold win'try limbs the tatter'd weed;  
Ev'n robb'd them of the last of comforts, sleep;  
The free-born Briton to the dungeon chain'd,  
Or, as the lust of cruelty prevail'd,  
At pleasure mark'd him with inglorious stripes;  
And crush'd out lives, by secret barbarous ways,  
That for their country would have toil'd or bled.

But benevolence is sometimes too ardent and impetuous in the generosity of exertion; while the intrepid villain, the veteran in guilt, deeply intrenched in the chicanery of law, perceives his numberless resources, and with all the certainty of cool and collected cunning, prepares the legal ambushes for the unwary champion of humanity. In all probability, this observation was within the experience of Mr. Brice, who, having

readily complied with the solicitation of the prisoners, soon found himself harrassed by an expensive law-suit, which terminated in his being cast in damages that he was unable to discharge. To avoid the consequences that might be naturally expected to flow from this severe decision, Mr. Brice, for seven years, was under the necessity of assuming the character which he had been so ardently defending, and of submitting to a voluntary confinement in his own house. This enabled him to conduct his business with his wonted assiduity, without the more disagreeable alternative of a prison from home. But his business as a printer, during this period, did not attract his entire attention. We find him equally active and prolific as an author. Among other pamphlets he published a *Poem on Liberty*, a subject, which we may suppose to have been very near his heart, and in which, as might naturally be expected, there were many severe sarcasms against his late prosecutors. This poem contains some very good lines; but, being written in blank verse, in a quaint style peculiar to himself, in general, did not please. The profits he derived from the publication of this poem were, however, sufficient to enable him to compound with the keepers of the prisons, and to regain his liberty. From this period, his business greatly increased, and he soon after published a collection of stories and poems under the title of the *Agreeable Gallimaufry, or Matchless Medley*, a great part of which were the effusions of his own lively imagination. About the year 1740, he set up a printing press at Truro, in Cornwall (the first in that county) at the same time continuing his business at Exeter. But, his press in Cornwall not answering his expectation, he removed the printing materials to Exeter, and confined all his exertions to that city. Here he was ever the patron of the stage; for, in 1745, when the players were prosecuted as vagrants, and obliged to relinquish their theatre, which was afterwards purchased by the methodists, and converted into their chapel, Mr. Brice stood forth in defence of the players, and published a poem, entitled *The Play-house Church, or new Actors of Devotion*. From this title it may be easily imagined what was the opinion he entertained of this religious sect; and perhaps many good people, from this single circumstance, may conceive very unfavourable sentiments of him. The mob, in fact, were so spirited up by this poetical invective, that the methodists were soon obliged to abandon the place to its former possessors, whom Mr. Brice now protected, by engaging them as his covenant-servants to perform gratis. To these itinerant gentry, the strutting monarchs of an hour, Mr. Brice's house was ever open, and for them his table plentifully supplied; nor did he refrain, on any emergency, to appear in any humorous character. He was as singular in his speech, as remarkable in his manners and dress; which induced Mr. King to exhibit him in the character of lord Ogleby, which Mr. Garrick introduced in the *Clandestine Marriage*. His popularity

with the theatrical gentlemen contributed to per-  
petuate his necessities; yet being of a facetious  
disposition, he persevered in the same line of  
conduct, calling himself *Andrew the Merry*, not  
ferry Andrew. Besides the players, his nume-  
rous poor relations generally surrounded his  
able. To these he was liberal in victuals, but  
always made them procure their own liquor.  
He was frequently embroiled in a paper war,  
and had a vein of satire in his writings that was  
ruly laughable. It was remarkable that more  
women were brought up printers in his house,  
than probably in all England before, it being no  
uncommon sight to see three or four in his office  
at a time. In 1746, Mr. Brice began his *Geo-  
graphical Dictionary*, in folio, and completed it  
in 1757, as far as it now appears. From his pro-  
posals, it seems, that he intended to have added  
very copious indexes to the different subjects;  
but they never appeared. Among his other pub-  
lications was his *Mob-aid*, which met with very  
few admirers. Indeed, in all his works, his style  
is as peculiar as his manners, and they exhibit  
many new-coined words, which in Devonshire are  
still called *Bricisms*. Having carried on business  
for such a length of years as to have become the  
eldest master-printer in England, and having  
married all his children and two wives, a few  
years before his death he relinquished his busi-  
ness to a successor, in consideration of receiving  
a weekly stipend during his life, and retired to a  
garden-house in the vicinity of his native city.  
Having from the earliest part of his life been  
very active among the free masons, of whom he  
was the oldest member in England, they con-  
tinued their attention to him to the time of his  
death, and upwards of three hundred of that  
fraternity followed his remains to the grave,  
accompanied by several hundred of the inhabi-  
tants of the city, an anthem being sung on the  
occasion. His corpse having been removed to  
the new inn Apollo, lay in state there for some  
time; and every person admitted paid a shilling,  
the amount of which defrayed the expense of  
his funeral, in Bartholomew church-yard. Of  
Mr. Brice there are two portraits; one a mezzo-  
tinto, in 4to.; the other, an oval, sitting, "set.  
3, 1773;" also in the *Universal Magazine* for  
December, 1781, from which this notice is taken,  
here is an engraved portrait.

1773. ISAIAH THOMAS, a printer of Boston,  
cut a press and types to Newbury-port, in the  
province of Massachusetts, North America, where  
a newspaper was printed for a short time under  
his direction.

1773. T. GREEN, a printer, from New London,  
established a printing-office in Norwich, of New  
London county, in the province of Connecticut,  
North America; which he soon removed to Ver-  
mont. A second press also was erected in this  
year by the firm of Robertsons and Trumball.

1773. *The Batchelor*, a title given to a series  
of essays published in Dublin, of which the  
best was reprinted in two volumes 12mo. by  
Becket of London. There is a large portion of  
wit and humour in this curious production.

1773. *The Templar*. The essays under this  
title were written by the celebrated bibliographer  
Mr. Samuel Paterson, and consisted only of  
fourteen numbers. It was chiefly designed as  
an attack upon the newspapers for advertising  
ecclesiastical offices, and places of trust under  
government.

1773, Jan. *Westminster Magazine*.

1773. *The Monthly Miscellany*.

1773. *The Sentimental Magazine*.

1773, Oct. *The Skeptic; or, Unbeliever*, No. 1.

1773. *The Lawyer's Magazine*.

1773. *The Edinburgh Magazine and Review*  
was commenced by Mr. William Smellie and  
Dr. Gilbert Stuart, which was conducted for  
three years with great spirit and talent, but was  
dropped in 1776, after the production of forty  
seven numbers, forming five 8vo. volumes. Its  
downfall was attributed to a continued series of  
harsh and wanton attacks from the pen of Dr.  
Stuart on the writings of lord Monboddo, which  
disgusted the public mind. For some curious  
particulars of Dr. Stuart and the *Edinburgh  
Magazine*, see *Calamities of Authors*, vols. i. ii.

1774, Feb. 6. Died, JAMES BETTENHAM, of  
St. John's-lane, London, a printer of no small  
eminence in his profession, which he pursued  
with unabated industry and reputation till 1766,  
when he retired from business, and died of a  
gradual decay, at the advanced age of ninety-  
one. To show the uncertainty of human affairs,  
this worthy man, after carrying on a respectable  
and extensive business for more than sixty years,  
left behind him not quite £400. His first wife  
was the daughter of the first William Bowyer,  
to whom he was married in December, 1712;  
she died December 8, 1716, aged thirty; he  
had a second wife, who died July 9, 1735, aged  
thirty-nine.

1774, Jan. *The Medical Magazine*, No. 1.

1774, Feb. 22. This day the great cause  
respecting literary property was finally deter-  
mined by the house of lords; upon which, on the  
28th, the booksellers of London presented a pe-  
tition to the house of commons against that  
decision.

1774, Feb. A bill was brought into parlia-  
ment by the booksellers of London, for a mono-  
poly for fourteen years in such books as they had  
at any time purchased prior to that date.

1774. ROBERT FOWLE, formerly a printer at  
Portsmouth, established a press at Exeter, in  
Rockingham county, in the state of New Hamp-  
shire, North America; but its operation came to  
a close within the short space of three years  
from its creation.

1774, March. *The St. James's Magazine*, No. 1.

1774, March, 11. The Irish newspapers first  
stamped; on which occasion the coffee-houses of  
Dublin raised their coffee and tea a halfpenny a  
cup, and their breakfasts three halfpence.

1774, March. JOHN MILLER, printer of the  
*London Evening Post*, was taken in execution  
and confined in Fleet prison on the suit of lord  
Sandwich, for the whole damages given him by  
a verdict.

1774, April 4. Died, OLIVER GOLDSMITH, who it has justly been said, was, both in verse and prose, one of the most delightful writers in the language. His verse flows like a limpid stream. His ease is unconscious. Every thing in him is spontaneous, unstudied, unaffected, yet elegant, harmonious, nearly faultless. Without the refinement of Pope, he has more natural tenderness, a greater suavity of manner, a more genial spirit. Goldsmith never rises into sublimity, and seldom sinks into insipidity, or stumbles upon coarseness. His *Traveller* contains masterly national sketches. The *Deserted Village* is sometimes spun out into mawkish sentimentality; but the character of the village schoolmaster and the village clergyman, redeem a hundred faults. His *Retaliation* is a poem of exquisite spirit, humour, and freedom of style. He was the son of a clergyman, and born at Pallas, in the county of Longford, in Ireland, Nov. 29, 1728, and was educated at Trinity college, Dublin, and studied physic at Edinburgh. He went to Holland, and travelled through Flanders and part of Germany on foot. At Louvain he took the degree of bachelor of physic, the highest degree he ever attained. In 1758 he returned to England. Being reduced to a low state, he became usher in a school at Peckham; where, however, he did not remain long but settled in London, and subsisted by writing for periodical publications. One of his first performances was an *Enquiry into the state of polite learning in Europe*; but he emerged from obscurity in 1765 by the publication of his poem entitled, the *Traveller*; or a *Prospect of Society*; of which Dr. Johnson said, "that there had not been so fine a poem since Pope's time." The year following appeared his beautiful novel of the *Vicar of Wakefield*.<sup>\*</sup> His circumstances were now respectable, and he took chambers in the Temple; but the liberality of his temper, and a propensity to gaming, involved him in frequent difficulties. He is said to have obtained in one year from the booksellers and by his plays the sum of £1800. In 1768 he brought out his comedy of the *Good-Natured Man*, at Covent-garden, but its reception was not equal to its merits. In 1770 he published the *Deserted Village*, a poem; which, in point of description and pathos, is above all praise. As a comic poet he appeared to great advantage in 1772, by the play of *She Stoops to Conquer*; or, the *Mistakes of a Night*; which is still a favourite with the public. Besides these performances, he produced a number of other works of merit. He died by taking an extra-

<sup>\*</sup> Mr. John Newberry was the fortunate publisher of the *Vicar of Wakefield*, for which he gave £60, partly from compassion, partly from deference to Johnson's judgment; but Mr. Newberry had so little confidence in the value of his purchase, that the *Vicar of Wakefield* remained in manuscript until the publication of the *Traveller* had established the fame of the author. Another instance of the generosity of Mr. Newberry was his pressing upon Dr. Goldsmith, for his poem of the *Deserted Village*, £100, which the author insisted upon returning, when upon computation he found that it came to nearly a crown a couplet, a sum which Goldsmith conceived no poem could be worth. The sale of the poem made him ample amends for this unusual instance of moderation.

gant dose of James's powders, and was buried in the Temple church-yard. A monument was erected to his memory in Westminster abbey, with a beautiful latin epitaph by Dr. Johnson.<sup>\*</sup>

1774, June. It is a singular fact that the first Bible Society that ever existed was established by some Roman Catholic prelates, in France, about this time.

1774, Nov. 21. Mr. J. WILLIAMS, bookseller, sentenced in the court of king's bench, to pay a fine of £100, to pay all costs, and one month's imprisonment, for publishing a paragraph in the *Morning Post* reflecting on the character of the hon. Charles Fox.

1774, Nov. 25. Died, HENRY BAKER, F.R.S. &c. an ingenious and eminent naturalist, and author of the *Microscope made Easy*, *Employment for the Microscope*, and other learned works. He was born in London, May 8, 1698, and on Feb. 17, 1713, was bound apprentice to Mr. John Parker, a bookseller in Pall Mall, to whom he served an apprenticeship. In April, 1720, he turned his attention to teaching two young ladies, who were born deaf and dumb, to understand and speak the English language, and was so highly successful that he was induced to persevere in the prosecution of his valuable and difficult undertaking, and all his pupils bore the best testimony to the ability and good effect of his instruction. On April 30, 1729 he married Sophia, youngest daughter of Daniel De Foe.

In 1728 Mr. Baker, under the assumed name of Henry Stonecastle, as Steele had before done under that of Isaac Bickerstaff, projected, and for nearly five years, solely conducted the *Universal Spectator*, a periodical work, published weekly; during that time by far the greater part of the essays were written by him. A selection from these essays has been since published in four volumes, and has passed through several editions. In 1737 he published in two volumes, 8vo. *Medulla Poetarum Romanorum*, an arranged selection of passages from the Roman poets, with translations in English verse.

Mr. Baker was a poetical writer in the early part of his life. His *Invocation to Health* got abroad without his knowledge, but was reprinted by himself in his "*Original Poems serious and humorous*," in two parts, published in 1725 and 1726. Among these poems are some tales as witty and as loose as Prior's. He was the author also of the *Universe*, a poem, intended to restrain the *Pride of Man*, which has been often reprinted. It has been said of Mr. Baker, that "he was a philosopher in little things."

1774. The *Parliamentary Register*. This valuable and important work, the first of its kind, was commenced by John Almon, bookseller, who resolved to compile, and publish himself, its monthly numbers, a regular and faithful series of the whole proceedings and debates of both houses of parliament, together with all exami-

<sup>\*</sup> The *Tears of Genius*, occasioned by the death of Dr. Goldsmith, 1774. This poetical tribute was the production of Mr. Samuel Jackson Pratt, under the name of *Courtesy Melmouh*.

ations at the bar, and all papers laid upon the table. Mr. Almon was much encouraged and assisted in the prosecution of this work by persons of the first talents in both houses.

1774, Oct. Died, Sir JAMES HODGES, knight, who was many years a considerable bookseller particularly in what were called *Chap Books* at the sign of the Looking-glass, on London Bridge. He was also a member of the common council for Bridge ward; and was one of the court of assistants of the stationers' company. April 15, 1757, he made his famous speech in the city senate, on moving the freedom of the city to Mr. Pitt, beginning with "History, the key of knowledge; and experience, the touchstone of truth, have convinced us that the country owes the preservation of its most excellent constitution to the frequent fears, jealousies, and apprehensions of the people." Being a popular man, and of considerable ability, he was elected in 1757 town clerk of the city of London; and was knighted in 1758, on presenting an address to king George II. In 1759, having been accused, by the friends of Mr. alderman Beckford, of partiality in the execution of his office, in respect to some matters relative to the election of the lord mayor, he vindicated himself by an affidavit, which he thought it necessary to publish. He died at Bath.

1775, Jan. 8. Died, JOHN BASKERVILLE, a printer and letter-founder, at Birmingham, the beauty of whose editions have commanded and received universal admiration. "The typography of Baskerville," remarks Dr. Dibdin, on the *Classics*, "is eminently beautiful; his letters are in general of a slender and delicate form, calculated for an 8vo. or even a 4to., but not sufficiently bold to fill the space of an imperial folio, as is evident from a view of his great bible. He united, in a singularly happy manner, the elegance of Plantin with the clearness of the Elzevirs; his 4to. and 12mo. *Virgil*, and small prayer book, or 12mo. *Horace*, of 1762, sufficiently confirm the truth of this remark. He seems to have been extremely curious in the choice of his paper and ink. In his italic letter, whether capital or small, he stands unrivalled; such elegance, freedom, and perfect symmetry being in vain to be looked for among the specimens of Aldus and Colineus." John Baskerville was born at Walverley, in Worcestershire, in 1706. In the year 1726 he kept a writing school at Birmingham; but in 1745 he engaged in the japanning business, and became possessed of considerable property. His inclination for letters induced him to turn his attention towards the press: he spent many years in the uncertain pursuit, sunk £600 before he could produce one letter to please, and some thousands before the shallow stream of profit began to flow. His speculations in printing appear to have yielded him more of honour than of profit. He obtained leave from the university of Cambridge to print a bible in royal folio, and two editions of the common prayer; but that learned body appears to have had a stronger inclination for making their privi-

lege conducive to worldly gain, than for earning fame by the encouragement of printing. The university exacted from Mr. Baskerville twenty pounds per thousand for the octavo, and twelve pounds ten shillings per thousand for the duodecimo editions of the prayer; and the stationers' company, with similar liberality, took thirty-two pounds for their permission to print one edition of the psalms in metre, which was necessary to make the prayer-book complete. Baskerville certainly brought the art to a degree of perfection till then unknown in this country. He trusted nothing to the manufacture of others. He was at once his own manufacturer of "ink, presses, chases, moulds for casting, and all the apparatus for printing;" and, according to Mr. Derrick, he made his paper also. He carried on, at the same time, the japanning business to a great extent, in the most elegantly-designed and highly-finished manner. "He could well design, but procured others to execute." "He was much of a humourist; idle in the extreme; but his invention was of the true Birmingham model—active." "Taste accompanied him through the different works of agriculture, architecture, and the fine arts." "His carriage, each pannel of which was a distinct picture, might be considered the pattern-card of his trade; and it was drawn by a beautiful pair of cream-coloured horses." It is evident, from a passage in the letter before-mentioned, that he was quite weary of printing. "The business of printing," says he, "which I am heartily tired of, and repent I ever attempted;" and he once made an offer, "on the condition of never attempting another type." Little or nothing was printed by him after the year 1765.

The means by which he gave effect to his work are excluded from the province of printing, in these days of improvement, by the triple incongruities of *fine* as possible—*quick* as possible—*cheap* as possible. He had a constant succession of hot plates of copper ready, between which, as soon as printed (aye, as they were discharged from the tympan) the sheets were inserted; the wet was thus expelled, the ink set, and the trim glossy surface put on all simultaneously. But in those times it was not necessary, in order to keep the bodies and souls of masters and men from uncoupling, to print, by one pair of men, three thousand five hundred sheets a-day, or have machines to do two thousand in an hour. John McCreery, in his poem of the *Press*, pays a handsome tribute to the memory of Mr. Baskerville in the following lines:

O Baskerville! the anxious wish was thine  
Utility with beauty to combine;  
To bid the overweening thirst of gain subside;  
Improvement all thy care and all thy pride:  
When Birmingham, for riots and for crimes  
Shall meet the keen reproach of future times,  
Then shall she find amongst our honoured race,  
One name to save her from entire disgrace.

He died without issue. His widow, in 1775, wholly declined the printing business, but continued the letter-founding till 1777. "Many efforts were used after his death to dispose of the

types; but no purchaser could be found in the whole commonwealth of letters.\* The universities rejected the offer, and the London booksellers preferred the types of Caslon and Jackson. The property lay a dead weight, till purchased by the celebrated M. de Beaumarchais, at Paris, in 1779, for £3,700.<sup>†</sup> Had the letter-founding of Baskerville equalled his printing, his success in typography would not have been doubtful.

Agreeable to the singularity of his opinions, and by an express direction contained in his will, he was buried in a tomb of masonry in the shape of a cone, under a windmill in his garden belonging to a handsome house which he had built at the upper end of the town of Birmingham. On the tomb was placed this inscription:

## STRANGER!

BE NEATH THIS CONE, IN UNCONSECRATED GROUND,  
A FRIEND TO THE LIBERTIES OF MANNING DIRECTED  
HIS BODY TO BE INHURNED.

MAY THE EXAMPLE CONTRIBUTE TO EMANCIPATE THY  
MIND FROM THE IDLE FEARS OF SUPERSTITION,  
AND THE WICKED ARTS OF PRIESTHOOD.

The house of Mr. Baskerville was destroyed in the riots of 1791, but his remains continued undisturbed till the year 1821, when the spot having been let for a wharf, it became necessary to remove the coffin: it was in consequence removed to a fresh place of interment.

1775, Jan. 19. *Died*, JOHN OLIVER, printer to the society for promoting Christian knowledge, and who carried on a considerable business in Bartholomew-close, where he died at the age of seventy-three years.

1775, Jan. 31. An order was issued by the house of lords to take into custody H. Randall, printer of the *Public Ledger*; but sir Francis Molyneux, usher of the black rod, would not give the printer a meeting at his house, lest the public virtue of the lord mayor should lodge the man in Newgate who ventured to execute the orders of the house of lords against any printer residing in the city of London.

1775. BENJAMIN EDES, a printer of Boston, made his escape by night from that place, with

a press and a few types, in the early part of the American war,\* and opened a printing-office in Watertown, a pleasant town of Middlesex county, in the province of Massachusetts; where he continued the *Boston Gazette*, and printed for the provincial congress of Massachusetts. Thomas acquaints us, that "the printing which Edes executed at Watertown did not do much credit to the art; but the work at this time, done at other presses, was not greatly superior. The war broke out suddenly, and few of any profession were prepared for the event. All kinds of printing materials had usually been imported from England; even ink for printers had not, in any great quantity, been made in America. This resource was, by the war, cut off; and a great scarcity of these articles soon ensued. There were but three small paper-mills at Massachusetts: New Hampshire none; and Rhode Island contained only one, which was out of repair. The paper, which these mills could make, fell far short of the necessary supply. Paper, of course, was extremely scarce, and what could be procured was badly manufactured, not having more than half the requisite labour bestowed upon it. It was often taken from the mill wet, and assized. People had not been in the habit of saving rags, and stock for the manufacture of paper was obtained with great difficulty. Every thing like rags was ground up together to make a substitute for paper. This, with wretched ink and worn-out types, produced miserable printing." vol. i. In 1776 Edes returned to Boston, and probably the Watertown typography then came to a close.

1775, March. *Died*, JOHN OSBORNE, junior, a bookseller and member of the stationers' company, London.

1775, May 3. *The Massachusetts Spy*. This was a periodical work commenced at Worcester, capital of Worcester county, in the province of Massachusetts, North America, printed by Isaiah Thomas, the historian of American typography, at the solicitations of several gentlemen of the county, who were at this period zealously engaged in the cause of their country. Thomas's business speedily prospered, and it was greatly extended; he united the two branches of printing and bookselling; erected a paper mill, and set up a bookbinding establishment. He was the first man who printed in America a *bible* of the folio and royal 4to. form. The *Massachusetts Spy* was continued until the year 1818.

1775, May 11. The Universities of Oxford and Cambridge vested by law with the copyright in books given them by the authors; but this exclusive right is to continue so long only as those universities shall print such works at their own presses.

1775, May. 29. THOMAS CARNAN, bookseller, in St. Paul's church-yard, London, whose name deserves honourable mention, detected or presumed the illegality of the exclusive right of the

\* In 1765, Baskerville applied to his friend, the eminent Dr. Franklin, then at Paris, to sound the literati respecting the purchase of his types, but received no answer.

† *Les Œuvres de Voltaire, avec des Avertissements et des Notes, par Condorcet, &c. Kehl, de l'Imprimerie de la Société littéraire et typographique, 1785-89, 79 vols. 8vo.*—This famous edition of Beaumarchais eclipsed every thing of its kind, on a similar scale of magnitude; but for intrinsic worth, if not for extrinsic splendour, it has been surpassed by the recent impression of Renouard. Beaumarchais began with buying the whole of Baskerville's types, punches, and matrices. He re-established ruined paper mills in the Vosges, about 15 miles from Kehl; was nice to excess in the paper to be manufactured, and employed the most knowing workmen engaged in the manufacture of Dutch paper. His printing-office and establishment at Kehl were immense. Many millions of livres were expended, and the ultimate loss of a million was the result of his vast projects, and incessant activity and solicitude. But the proof-sheets (especially of the two-decimo edition) were carefully revised, and Beaumarchais, in an evil hour, exalted Voltaire, at the expense of Racine. In short, the impression betrayed the absence of a correct editorial tact; and La Harpe tells us that those of Didot are very much superior in accuracy and utility. Marie Francis Arout de Voltaire was born at Chatenay, Nov. 30, 1694, and died at Paris, May 30, 1778.

\* The American war between Great Britain and her colonies commenced at Lexington, in the neighbourhood of Boston, April 19, 1775, and on Jan. 20, 1783, Great Britain acknowledged their independence.

universities and the company of stationers, regarding almanacks, and invested it accordingly; he cause was tried in the court of common pleas, and decided against the company. An injunction which had been granted by the court of chancery, Nov. 29, 1773, was dissolved June 2, in this year.

1775, July 10. *The Gentleman*. A third short ived attempt by Mr. Colman to render our common newspapers the vehicle of rational amusement. *The Gentleman* was originally published in the *London Packet*, and consisted only of six numbers. There is reason to think, that had he *Genius* and the *Gentleman* been continued, hey would have even surpassed the *Connoisseur*.

1775, July 18. Came on before the court of ession, in Scotland, a cause between Mr. James Dodsley, bookseller of London, and Messrs. Elliot and Macfarquhar, of Edinburgh, booksellers. The action was brought for reprinting lord Chesterfield's *Letters to his Son*, which had cost Dodsley £1575. Their lordships decided in avour of Mr. Dodsley, by continuing the interdict he had obtained against Messrs. Elliot and Macfarquhar, by a majority of nine against five.

1775, Aug. 28. *Died*, GEORGE FAULKNER, a worthy printer of no mean celebrity, and the first man who carried his profession to a high degree of credit in Ireland. He was the confidential printer of dean Swift, and enjoyed the friendship and patronage of the earl of Chesterfield. He settled at Dublin as a printer and bookseller soon after 1726, (in which year we find him in London under the tuition of the celebrated William Bowyer,) where he raised a very comfortable fortune by his well-known *Journal*, and other laudable undertakings. In 1735, he was ordered into custody by the house of commons in Ireland, for having published *A proposal for the better regulation and improvement of quadrille*, an ingenious treatise by bishop Hort. Having had the misfortune to break his leg, he was satirically introduced by Foote, who spared nobody, in the character of *Peter Paragraph* in the *Orators*, 1762,\* when on a visit to Dublin. He had the honour of wearing an alderman's gown of the city of Dublin. A very fair specimen of his talents as an epistle writer may be seen in the *Anecdotes of Mr. Bowyer*; or in the second

volume of the *Supplement of Swift*; whence it appears that, if vanity was a prominent feature in his character, his gratitude was no less conspicuous. The residence of Mr. Faulkner was in Essex-street, opposite the bridge.

#### EPITAPH ON GEO. FAULKNER,

ALDERMAN AND PRINTER OF THE CITY OF DUBLIN.

Turn, gentle stranger, and this urn reverse,  
O'er which Hibernia saddens with a tear;  
Here sleeps George Faulkner, printer! once so dear  
To humorous Swift and Chesterfield's gay peer;  
So dear to his wronged country and her laws;  
So damnable when imprisoned in her cause;  
No alderman e'er graced a weightier board,  
No wit e'er joked more freely with a lord.  
None could with him in anecdotes confer  
A perfect annal book in Elzevir.  
Whate'er of glory life's first station presage,  
Whate'er the splendour of the title-page;  
Lost after loss, though learned lore ensues  
Close as thy types, and various as thy news;  
Yet, George, we see one lot await them all,  
Gigantic folios, or octavo small:  
One universal finish claims his rank,  
And every volume closes in a blank.

James Hovey, who was one time a partner of Faulkner, published *without date* a collection of Swift's pieces in prose and verse, entitled the *Draper's Miscellany*, containing seven pieces.

A pamphlet was published in 1752, containing letters from lord Chesterfield to alderman George Faulkner, Dr. Madder, Mr. Sexton, Mr. Derrick the earl of Arvan, &c. His lordship's letters to Faulkner in particular, afford a striking example of that ironical facetiousness and pleasantry for which he was remarkable—at the same time also, they exhibit as striking an instance of the wonderful utility of a good butt to a professed wit. To this pamphlet is prefixed an elegant little engraving of the head of Mr. Faulkner.

1775, Sept. 19. The printing-office of Mr. John Gore, situated in Princess-street, Liverpool, destroyed by fire.

1775, Nov. *Died*, CHARLES GREEN SAY, well known as printer of the *Gazetteer*, *General Evening Post*, and other newspapers. Mr. EDWARD SAY, father to the above, was many years a respectable printer, and master of the stationers' company in 1763, died May, 1769.

1775. CHARLES BERGER and FLEURY MESPLET established the first press at Montreal, the capital of an island of the same name in the river St. Laurence, in Canada.

1775. The first attempt at stereotype printing in North America, was made by Benjamin Mecom, (nephew to Dr. Franklin) a printer at Philadelphia. He cast plates for a number of pages of the *new testament*, but never completed them.

1775, Jan. *The London Review*, No. 1. This publication was set on foot by Dr. William Kenrick,\* who had been a writer in the *Monthly Review*; but differing with the proprietors, he commenced the above periodical in opposition.

\* Enraged at the ridicule thus brought upon him, Faulkner one evening treated to the seat of the gods all the *fools* of the printing-office, for the express purpose of their hissing and hooting Foote off the stage. Faulkner placed himself in the pit, to enjoy the actor's degradation; but when the objectionable scene came on, the unfortunate printer was excessively chagrined to find, that so far from a groan or a hiss being heard, his gallery friends partook of the comical laugh. The next morning he arraigned his only confidant, inveighed against them for having neglected his injunctions, and on demanding some reason for their treachery, was lacerated ten times deeper by the simplicity of their answer: "Arrah, master," said the spokesman, "do not be after tipping us your blarney; do you think we did not know you? Sure 'twas your own sweet self that was on the stage, and shewer light upon us, if we go to the play-house to hiss our worthy master." Failing in this experiment, Faulkner commenced an action against Foote, and got a verdict of damages to the amount of £200. This drove Foote back to England, where he resumed his mimicry, and humorously took off the lawyers on his trial, and judges who condemned him.

\* He was born at Watford, in Hertfordshire, and bred a rule-maker, which profession he abandoned for literature. To improve himself he went to Leyden, and afterwards settled in London. He was some time editor of the *Morning Chronicle*; but a quarrel with the proprietors induced him to start a newspaper against it, without success. He died June 9, 1779.

1776, *March 2*. The printing-office of Messrs. Cox and Bigg, in the Savoy, London, destroyed by fire; also the dwelling-houses of the two partners; two warehouses filled with books, belonging to Mr. Cadell and Mr. Elmsley of the Strand, and several contiguous buildings were consumed.

1776, *April 15*. From this day the *Dublin Gazette* was ordered to print no article of news without the authority of the government.

1776, *April 29*. In the court of king's bench, Mr. Axtell, for printing a pamphlet called the *Crisis*, was sentenced to three months' imprisonment. On the same day, George Allen for printing, and Robert Holloway for publishing, a pamphlet called the *Rat Trap*, were sentenced to three months' imprisonment.

1776, *May 28*. The stamp duty upon newspapers advanced, by lord North, from one penny to three halfpence or £6 2s. 6d. per thousand, being a discount of two per cent. Price to the public 3d.; to the trade, 5s. per quire of twenty-five papers; paper from 13s. 6d. to 16s. per ream.

1776, *July 3*. In the court of king's bench, lord Bolingbroke obtained £20 damages from the printer of the *Morning Chronicle* for a libel. The damages were laid at £5000.

1776. CARDINAL BRASCHI, on attaining the tiara, (1774) adopted the title of Pius VI. when he gave his sanction to the translation and publication of the whole *Bible* into the Italian language by Martini,\* archbishop of Florence. The *New Testament* was published at Turin, in 1769; and the *Old Testament* in 1776, dedicated to his holiness. He was born at Cesena, December 27, 1717; was made treasurer of the apostolical chamber by Benedict XIV.† and raised to the rank of cardinal by his predecessor Clement XIV.‡ His public acts and private virtues, during a long and anxious exercise of the papal dignity, entitle his memory to the gratitude and honour of his communion, whilst the barbarity and indignity with which he was treated by the revolutionists of France, must excite the indignation and abhorrence of every friend to justice and humanity. John Angelo Braschi, pope Pius VI. died at Valence, after a short illness, August 29, 1799, aged eighty-two years.

1776. It is well known that Conrad Sweynheym, was the inventor of printing maps with

moveable types on the occasion of printing the twenty-seven maps for the cosmography of Ptolemy. He died before the work was quite finished, and it was therefore executed by another German, Arnold Buckinek (Buckinge,) at Rome, at this time. The practice of printing maps with moveable types, was practised for some time in the sixteenth century, when two Germans, almost at the same time, and without knowing any thing of each other, renewed the attempt. The first who published a specimen was Augustus Götlieb, a Prussian deacon at Carlsruhe, and who corresponded with the celebrated printer, William Haas, of Basil, that he might cut types for him on a certain plan, to be used in map-printing. His first attempt was made in this year. It anticipated Breitkopf in the publication and execution of his ideas, and was called typometry. In the same year, however, appeared the environs of Leipzig, by Breitkopf, as a specimen; and his second attempt, in 1777, in which, and also in succeeding essays which were not made public, he constantly endeavoured to improve his invention. In 1829, the celebrated Firmin Didot was employed in engraving the dies for moveable types for printing maps, which invention was exclusively his own.

1776, *July 10*. In the court of common pleas, the earl of Chatham brought an action against Henry Sampson Woodfall, printer of the *Public Advertiser*, for a libel. On the discovery of a variation of one letter between the printing and the record, his lordship was nonsuited.

1776, *August 2*. DIED, DR. MATTHEW MATTY, a foreign physician who had settled in London, and published the *Journal Britannique*, in 18 volumes; this journal exhibits the view of the state of English literature from 1750 to 1755. Gibbon bestows a high character on the journalist, who sometimes "aspires to the character of a poet and a philosopher; one of the last disciples of the school of Fontenelle."

About 1755, when Dr. Johnson was preparing to open a *Bibliothèque*, or *Gazette*, his friend Dr. Adams recommended Matty as an assistant. "He," said Johnson, "the little black dog! I'd throw him into the Thames." Dr. Matty left a son, Paul Henry, who died January 16, 1787. He produced a *Review* known to the curious; his style and decisions often discover haste and heat, with some striking observations; alluding to his father, Matty, in his motto applies Virgil's description of the young Ascanius. "*Sequitur patram non passibus acquies*." He says he only holds a *monthly conversation* with the public. His obstinate resolution of carrying on this *Review* without an associate, has shown its folly and its danger, says D'Israeli, for a fatal illness produced a cessation, at once, of his periodical labours and his life.

1776. SOLOMON SOUTHWICK, a printer at Newport, Rhode Island, North America, on his being compelled to quit that town, erected a temporary press at Attleborough, or Artleburgh, a township of the county of Bristol, on the frontiers of Massachusetts, in New England.

\* Antonio Martini was born at Prato, in 1730, and died December 31, 1809. His translation has been repeatedly printed: the edition of Livorno, 1818, and that of Italia, 1817, with the stereotype *New Testament*, executed by T. Rott, Shackellwell, London, 1813, were put in the prohibitory index, by a decree of January 17, 1830.—*Townley*.

† Pope Benedict XIV. was born at Bologna, March 31, 1675, and died May 8, 1758.

‡ Cardinal Ganganelli was advanced to the papal dignity, Feb. 1769, and took the title of Clement XIV. Under his pontificate, the order of Jesuits was entirely suppressed by a bull, dated 1773. He died September 22, 1774.—Pope Ganganelli presented to George III. the most splendid collection of the works of Piranesi that has hitherto been seen in this country. They are comprised in twenty-four folio volumes, uniformly bound in calf, gilt leaves, and richly tooled. They became the property of the duke of Gloucester; but what became of them at the duke's death?

1776. **EZEKIEL RUSSEL**, a printer from Salem, opened a printing-office at Danvers, a town of Essex county, in the state of Massachusetts, in North America. His printing-office was "in a house known by the name of the Bell tavern; but soon afterwards removed to Boston."

1776. **SAMUEL LOUDEN**, a printer of New York, removed with his press to Fishkill, a town of Dutchess county, in the province of New York, North America, a short time before the British may took possession of the city; and here continued to publish the *New York Packet* until the establishment of peace.

1776. **Died, ROBERT FOULIS**, a celebrated printer and letter-founder of Glasgow, in Scotland, who, in conjunction with his brother Andrew, who died in 1774, produced some works in the art of typography that will cause their names to be recorded in the temple of fame. They were both natives of Glasgow, and were born, the elder brother, April 20, 1707, and the younger, Andrew, Nov. 23, 1712. Robert was originally a barber, and practised that art on his own account for some time. While thus humbly employed, he came under the notice of the celebrated Dr. Francis Hutcheson,\* then professor of moral philosophy in Glasgow university. His acute observer discovered his talents, in-aimed his desire for knowledge, and suggested

him the idea of becoming a bookseller and printer. Foulis did not, however, receive a complete university education, although he attended his patron's lectures for several years, and his name is so enrolled in the matriculation book. Andrew, who seems to have been designed for the church, entered the university in 1727, and probably went through a regular course of study. Some years after they had determined to follow a literary life, the brothers were engaged in teaching the languages during the winter, and in making short tours into England and to the continent in summer. These excursions were of great advantage to them; they brought them into contact with eminent men, enabled them to form connexions in their business, and extended their knowledge of books. On some of these occasions they made considerable collections, which they sold at home to good account. Thus prepared, the elder brother began business

Glasgow as a bookseller about the end of 1739, and in the following year published several works. Three years afterwards his connexion with the university commenced. In March, 1743, he was appointed their printer, under condition "that he shall not use the designation of university printer without allowance from the university meeting in any books excepting those of ancient authors." The date at which Andrew joined him in business is somewhat uncertain. The first productions of his press, which were issued in 1742, were almost

exclusively of a religious nature, many of them relating to the well known George Whitefield.\* In 1742, he published *Demetrius Phalereus de Elocutione*, apparently the first Greek work printed in Glasgow, although it is certain that there existed a fount of Greek letters there nearly a century before. It would be tedious to notice each work as it appeared. The immaculate edition of *Horace*, an edition of *Cicero's* works in twenty volumes, *Cæsar's Commentaries* in folio, *Callimachus* in the same size, with engravings executed at their academy, form but a small part of the splendid catalogue of their classics. The success which had attended their exertions as printers, induced the elder Foulis to attempt the establishment of an academy for the cultivation of the fine arts, a scheme for which Scotland was but ill prepared by the dissensions which had followed the union, and which had been succeeded by the rebellions of 1713 and 1745. In 1751, he went abroad, partly with the view of extending his commercial connexions, but principally with the intention of arranging for the establishment of this institution. After remaining on the continent for about two years, and sending home several artists whom he had engaged in his service, he returned to Scotland in 1753. It is melancholy to reflect that the taste of these two brothers for the fine arts at last produced their ruin; for engaging to establish an academy for the instruction of youth in painting and sculpture in Scotland, and the enormous expense necessary to send pupils to Italy, to study and copy the ancients, gradually brought on their decline in the printing business; and they found the city of Glasgow no fit soil into which to transplant the imitative arts, although the literary genius of Greece and Rome had already produced the Messrs. Foulis ample fortunes. Notwithstanding the beginning of this scheme was very weak, yet in some of the departments it rose above mediocrity, particularly in drawing and engraving; but in moulding, modelling, and painting, they proved that all temporary and private attempts must be abortive for want of continual support. Human life is too short for bringing to perfection those arts which require permanent establishments to prevent their decline. This is particularly the case with painters, to whose studies no limits can be set, but whose encouragement is, of all others, the most precarious. However, it should be remembered, to the credit of Robert Foulis, that he was the first projector of a school of the liberal arts in the island of Great Britain. Whatever may hereafter be construed of the motives which urged this patriotic institution, selfishness must be entirely banished out of the question; unless the pleasure that arises from endeavouring to do good to one's country may be so considered.

\* Dr. Francis Hutcheson was born in the north of Ireland, August 5, 1694, and died at Glasgow in 1766. He was very fine writer on moral philosophy, and an excellent author. His *Moral Philosophy* was published at Glasgow in 10 vols. 4to.

\* George Whitefield, one of the founders of the sect of Methodists, was born at the Bell Inn, Gloucester, December 16, 1714, and died at Newbury-port, in New England, North America, October 1, 1770. He was eminent as a divine and also as a theologian and controversial writer.

We shall close the history of these remarkable but unfortunate men in a few words. After the death of the younger brother, it was determined to expose the works belonging to the academy to public sale. For this purpose Robert, accompanied by a confidential workman, went to London about the month of April, 1776. Contrary to the advice of Mr. Christie,\* and at a period when the market was glutted by yearly importations of pictures from Paris, his collection was sold off,—and as the reader may have anticipated, greatly under their supposed value. The catalogue forms three volumes, and the result of the sale was, that after all expenses were defrayed, the balance in his favour amounted to the very enormous sum of *fifteen shillings!!!* Irritated at the failure of this his last hope, and with a constitution exhausted by calamities, he left London and reached Edinburgh on his way homeward. On the morning on which he intended setting out for Glasgow, he expired, almost instantaneously, in his 69th year.

1776, Dec. 17. JOHN MILLER, JOHN WILKIE, HENRY RANDALL, and HENRY BALDWIN, four printers of newspapers, found guilty of printing a letter from the constitutional society, signed by Mr. Horne (Tooke), respecting the payment of the sum of £100 to Dr. Franklin. On the 1st of Feb. 1777, three of them received judgment, when they were fined £100 each, and ordered to be discharged.

1776. *The Holy Bible*, 24mo. printed by J. W. Pasham, in Blackfriars.† This is a very beautiful pocket edition, in imitation of Field's, with notes by the rev. Mr. Romaine,‡ which might be cut off! an artifice to evade the patent enjoyed by the king's printer. It was printed in a house taken for the purpose, on Finchley common. John William Pasham was originally of Bury St. Edmund's, where he published a newspaper under the title of the *Bury Flying Weekly Journal*. He died December 16, 1783.

1776, May. *The Biographical Magazine*.

1776, May. *The Bath and Bristol Magazine*.

1776. *The Farmers' Magazine*.

1777, April 7. Died, SIR STEPHEN THEODORE JANSSEN, bart. a merchant of eminence in the city of London, universally respected for his many public and private virtues. He became a liveryman of the stationers' company in the year 1723.

\* James Christie was many years well known and justly celebrated as an auctioneer, and the successful disposer of property of every kind, whether by public sale or private contract. With an easy and gentleman-like flow of eloquence, he possessed, in a great degree, the power of persuasion, and even tempered his public address by a gentle refinement of manners. He died in Pall Mall, after a long and lingering illness, Nov. 6, 1803, aged 73, and was buried on the 14th, in St. James's burial ground.

† A list of various editions of the bible and parts thereof, in English, from the year 1526 to 1776. A manuscript list of English bibles, copied from one compiled by the late Joseph Ames, presented to the Lambeth Library by Dr. Gifford, has furnished part of this publication; late discoveries of several learned gentlemen has supplied the rest. Compiled by Dr. Duncarel. London, 8vo. pp. 73.

‡ Rev. William Romaine was born at Hartlepool, in 1714, and died in London, July 25, 1793. He was an eminent and very learned divine, and published many able theological works.

In 1749 and 1750 he was master of the company, and in the latter year sheriff of London. In 1754, he had the honour of being elected lord mayor. In 1774, he gave £70 as a present to the poor of the stationers' company, and in 1775, £50 more. In 1776, he gave £100, half to the poor, and half to purchase a piece of plate with his arms on it, with which a handsome epergne was purchased. In 1777 he added a legacy of £50. For a biographical notice of this worthy individual and his family, see Nichols's *Literary Anecdotes*, vol. iii. p. 406-11.

1777, May 12. The court of king's bench determine that new music was on the same footing as literary property, with respect to copyright.

1777. Print sellers' property secured.

1777, June 4. Died, RICHARD BALDWIN, a bookseller in St. Paul's church-yard, London, aged eighty-six years. Mr. Baldwin had long retired from business, and died at Birmingham. His son, Richard Baldwin, junior, died before him, in January, 1770. See page 636, ante, for Duntun's\* character of Richard Baldwin.

1777. *Essays, Moral and Literary*. These essays, the well-known production of the rev.

\* Duntun characterises the following booksellers:—CHRISTOPHER HENRY.—He is a downright honest man, and has always a large stock of books that are very scarce. He is a man of moderation, and my good friend. His residence was in Little Britain.

MR. HARRICK.—He is a tall handsome man, deals much with the lawyers, and has the good luck to be opposite neighbour to Mr. Bare. He neither neglects the business of life, nor pursues it too close; and has every body's good word. He is well skilled in the doctrine of the Christian faith, and can discourse handsomely upon the most difficult article in religion. His attendance at church is devout and constant, yet his zeal has nothing of phrenzy and passion (which is too common in this age); he manages with prudence and decency in the midst of religious worship, and always keeps within the bounds of religion and reason.

MR. HALSEY.—He is one of a good judgment, and knows how to bid for a saleable copy, or had never printed the *Ateneus Spy*. He is now in the bloom and beauty of his youth, and has great ingenuity and knowledge of the friendship of others. He is a constant shopkeeper, and his close application to business does render him the growing hopes of his father's family.

MR. HARRISON, in Chancery-lane.—He is a man free from faction, noise, and anger, not so weak as to give such an advantage as any must have who contends with one that is stark blind—as how much better is he that's passionate. He is a diligent man in his shop, a kind neighbour, and a religious master—teaching his servant better by his own example than all the tutors in both universities.—This is also the character of G. CORRY, in Little Britain.

MR. HOAN.—He printed for Dr. Scott, and had a right to several excellent copies. When I traded with him, I ever found him a very ingenious, honest, reserved person; and that is all I shall say of him.

MR. HORNBALD, in Duck-lane.—He has been unfortunate, and so I think is every body one time or other. If we see his carriage to his rich uncle, we shall find how his courage and wisdom carried him with an unwearied course through hemispheres of prosperity and adversity, compassing, as may say, the whole globe of both fortunes—or that if we look upon Frank Hornbald, we may all learn that no cross is too heavy for a Christian resolution, nor any difficulty too hard for honesty to conquer.

MR. ERIKAL JAY, in Chesapeake.—He was my journeyman for near a year; and I shall give him a true character. He is my good friend, and has shewn me a particular respect ever since he lived in my family. His gravity, justice, sweetness, and moderation, soften the greatest enemies of his name and person; and there is nothing in nature that hates him besides the devil and a Jacobite. He is also happy in his relations. His aged father is commensurate in all sorts of piety. His brother (the apothecary) is

Vicesimus Knox, D.D., first appeared anonymously in this year, in a small volume octavo, and, meeting with a favourable reception, were soon republished with the addition of a second volume, and with the affixture of the author's name. Few productions have been more popu-

lar, or more deservedly so, than these instructive essays. The subjects on which Dr. Knox has expatiated in these essays, are numerous and well chosen; and they uniformly possess a direct tendency either to improve the head or amend the heart. The style is elegant and perspicuous,

zealous promoter of the reformation of manners; and of my good friend Eliphaz, his whole life is but a *practice of piety*; or rather a passage to a better. We also find a *regularity in his name*; for there are only two booksellers of it in the whole world; namely, Eliphaz Jay, in London, and Eliphaz Dobson, in Dublin.

Mr. KATLAW, St. Paul's Church-yard.—His sign is "The Bishop's Head," and indeed he is pretty warmly imposed that way. He has been an eminent episcopal bookseller these many years. He prints for Dr. Sharp, bishop of York, Dr. Scot, and other eminent clergymen.

Mr. LINDEAY.—Many and conspicuous were the prognostics of a true piety that shined forth in the early dawn of his life. He understands religion, and loves it—and whilst he was but an apprentice, was a great example of a constant unaffected devotion. He was born to a good state, and having traded a few years, grew wary of printing, and is gone to a country seat to prepare for heaven.

Mr. JOHN LAURENCE.—An upright, honest bookseller. We were neighbours some years, and partners in printing his late *Lord Delamere's Works*, Mackenzie's *Narrative of his Siege of Londonderry*, and *Mr. Baister's Life*, in folio. He has something in him that will not suffer him to break in word, which is altogether as good security and dependence as his bond. When Parkhurst dies, he will be the first presbyterian bookseller in England. He is so exact in trade as to mark down every book he sells. He is very much conversant in the sacred writings; and somewhat to the late Mr. Roswell, so deservedly famous for the defence he made at his trial in Westminster-hall, on which occasion the honourable sir Henry Ashurst, art., was his great and good friend.

Mr. WILLIAM MILLER.—His person was tall and slender; he had a graceful aspect (neither stern nor effeminate); his eyes were smiling and lively; his complexion was of a rosy colour, and he breathed as if he had run a race. The figure and symmetry of his face exactly proportionable. He had a soft voice, and a very obliging tongue. He was of the sect of the Peripatetics, for he walked every week to Hampstead. He was very moderate in his eating, drinking, and sleeping; and was blessed with a great memory, which he employed for the good of the publick, for he had the largest collection of stitched books of any man in the world, and could furnish the clergy (at a dead lift) with a rited sermon on any text or occasion. His death was a noble loss, and will never be repaired, unless by his ingenious son-in-law, Mr. William Laycock, who, I hear, is making a general collection of stitched books; and, as Dr. Miller's stock was all put into his hands, perhaps he is the fittest man in London to perfect such a useful undertaking.

Mr. SAMUEL MANSFIELD is Mr. Norris's bookseller; and as long as he can turn metaphysics into money, he is to be continued.

Mr. MARSHAL, in Newgate-street.—He will be well sed for his ready money, but where he loves is a friend to soul and body.

Mr. MALTHEUS.—He midwived several books into the world, ay! and that of his own conceiving, as sure as very young Perking was his who owned him! He made shew of a great trade, by continually sending out large arrears. But all I can say of his industry is, he took a real deal of pains to ruin himself. But though Mr. Maltheus was very unfortunate, yet I hope his widow (our new publisher) will have all the encouragement the trade can give her; for she is not only a bookseller's widow, but a bookseller's daughter, and herself free from all that pride and arrogance that is found in the carriage of some publishers.

Mr. MONTGOMERY.—He is a bookseller in Cornhill, and should have been placed among his brethren, but being of my stature, I happened to overlook him, but for this misfortune he shall now have the honour to bring up the rear of the *Reviewers*, so that the bookseller I am now to characterize is Hugh Montgomery. He was born a Scotsman, and served his time with *Auditor Bell*. He neither undertakes nor takes much, but had his master refused an *Athenian Oracle*, he stood fair for the next offer, and I believe would have had the good luck to have bought it; he bid like a man for the *Athenian Spy*, and from the little

dealings I have had with him, I find his discourse neither light nor unseasonable, and such as neither calls his virtue nor his judgment in question. He commends no man to his face, and censures no man behind his back (which is a quality he learned from his master Bell). He never speaks scornfully of his inferiors, nor vain-gloriously of himself. He does nothing merely for gain, and thinks not any thing in this life worthy of the loss of the next. While some of his neighbours compass sea and land to get an estate, he thinks contentment the greatest wealth, and contentment the greatest poverty; and if he has not so much as others (though he thrives apace), yet he thinks how many are happy with less. He never thinks ill of an estate because another's is better, or that he has not enough because another has more; for he measures his plenty by his condition and rank, and not by another's abundance, and is a little man that (like aged Littlebury, grave Scot, honest Strahan, and witty Chantry,) is always for doing the fair thing. I shall only add, he so highly obliged me, by his great fidelity in concealing a secret I committed to him, that to requite his kindness, I have prefixed his name to this *Idea of a New Life*, and have entrusted him with the sale of the whole impression.

Mr. NOWEL is a first-rate bookseller in Duck-lane: has a well furnished shop, and knows books extraordinary well, which he will sell off as reasonably as any man. I have always reckoned him among our ingenious booksellers.

Mr. NEWTON is full of kindness and good nature. He is affable and courteous in trade, and is one of those men of forty whose religion is yet to choose; for his mind (like his looks) is serious and grave; and his neighbours tell me "his understanding does not improve too fast for his practice, for he is not religious by start and sail, but is well fixed in the faith and practice of a church of England-man—and has a handsome wife into the bargain."

Mr. PHILLIPS.—He is a grave, modest bachelor, and it is said is married to a single life, which I wonder at, for, doubtless, nature meant him a conqueror over all hearts when she gave him such sense and such piety. His living so long a bachelor shows his refined nature, and so much he loves mortification in himself and others. And whoever considers the many others he had of marriage, will be ready to think he has so much chastity as scarce to sin in desire.

Mr. POOL, near the Royal Exchange. He is a little fellow, but is a man of great spirit, by which we see a brave soul may be lodged in a small tenement. His religion is all of a piece, he is just as well as devout; and is so stiff in his way of worship (which is that of the church of England) that he will scarce consent that the least pin of the episcopal building should be taken out, for fear the whole fabric should be dissolved.

Mr. PASC.—My attempting his character will be to his prejudice, for Mr. P.— would not chuse an ordinary man for his bookseller. For sense, wit, and good humour there are but few can equal, and none that exceed him: and all these qualities are accompanied with great humility.

Mr. PIERCE.—He was an honest man every inch and thought of him; and had his *Atlas* succeeded, or *M*— as been a stranger to him, had died worth twenty thousand pounds; and it could not have fell into better hands, for he took as much delight in doing of good, as if he had no other errand in the world. He had fathomed the vast body of learning, and in every several parts of it was master; nor did his conversation alone relish of his learning and piety; for, during the unfortunate part of his life he wrote *The Cry of the Oppressed*; an *Ingenious Discourse of Patience*; and almost completed a *Catalogue of English Writers*; after the method of Gruen's catalogue. His wit and virtues were writ legibly in his face, and he had a great deal of sweetness in his natural temper. Mr. Pitts had a great honour for Dr. Anselmy (though himself a churchman), and told me, that in his greatest distress the doctor had been kind to him, and that he believed there was not a more generous man in the whole world.

Mr. PLACC, near Fumival's-lan. His face is of a clear complexion, but himself is a very sober, pious man. He is very just in his dealings, and has studied the whole duty of every relation; so that his example spreads, and recommends the practice of Christianity.

occasionally assuming the high tone and structure of the Johnsonian period. To persons of every description, but especially to young persons, the essays of this author are invaluable; their first praise is, that they recommend, in a most fascinating manner, all that is good and great; and, secondly, they are in a high degree calculated to form the taste, and to excite a spirit of literary enthusiasm.—*Drake.*

1777, July 26. *The Magazine of Arts; or, Pismire Journal.* This work was the production of the rev. James Murray, of Newcastle-upon-Tyne, and printed by Mr. Angus. It consisted of five or six 8vo. sixpenny numbers; the fifth number of which is embellished with an engraving of a harp, which was the first thing that Mr. Thomas Bewick, the celebrated wood engraver, executed after he returned from his first visit to London.

1777, Nov. 8. The rev. John Horne (Tooke),\* received the following sentence in the court of king's bench: to be imprisoned twelve months in the king's bench prison, and to pay a fine of £200 and find security for his good behaviour for three years, himself in £400, and two sureties in £200 each, for publishing an advertisement, from the constitutional society, accusing the king's troops of barbarously murdering the Americans at Lexington. He pleaded his own cause. All the printers in whose papers this paragraph appeared, were served with writs.

1777. There were in this year in London, seven morning newspapers; eight three times a week; one twice a week; and one weekly.

1777, Nov. 18. *Died, WILLIAM BOWYER, junior, of Red Lion passage, Fleet-street, London,*† the most learned and distinguished printer of modern times. He was born in Dogwell-court, White Friars, London, December 19, 1699, and received his education at merchant tailors' school, from whence he removed to St. John's college, Cambridge, where he continued till June, 1722. Soon after leaving college he entered into the printing business with his father. The principal attention to the executive, or mechanical part of the business, devolving on the father, and the correcting of the proofs being almost exclusively the business of the son. One of the first works which came out under his correction was the edition of Selden's works, by Wilkins, in three volumes, folio. This was begun in 1722, and finished in 1726: and his great attention to it appeared in his drawing up an epitome of the piece, *De Synedris*, as he read the proof sheets. He married, Oct. 1728, his mother's niece, Miss Ann Prudom, daughter of Mr. Thomas Prudom, citizen and fishmonger, who had been left, a few years before, by her

father's will, under the guardianship of the elder Bowyer. By her he acquired some freehold farms in Yorkshire, and one at Navestock, in Essex. She died in 1731, when pregnant with a third son. Of the two former sons, one died an infant, and the other survived his father. Mr. Bowyer married a second wife, Mrs. Elizabeth Bell, in 1747. She was originally his house-keeper; but in that situation was well known to, and highly respected by, his literary friends. She was a very extraordinary woman, and after her marriage she applied herself so closely to the advancement of her husband's business, that she, by her intense application to learning, arrived at last to a degree of capacity equal to the task of reading the proofs of the most learned works done in the office; and it is but justice to observe here, that her mental acquirements were only surpassed by her modesty. She died before her husband. In 1729, through the friendship of the speaker, Onslow, Mr. Bowyer was appointed printer of the votes of the house of commons, an office which he held through three successive speakers, and for a space of nearly fifty years. In 1736 he was appointed printer to the society of antiquaries, and elected a member. In 1766, he engaged in partnership with Mr. Nichols, who had been trained by him to the profession. The year following, he was appointed printer of the journals of the house of lords and rolls of parliament. Mr. Bowyer wrote several curious tracts, and published improved editions of some valuable books. His publications are an incontrovertible evidence of his abilities and learning: to which may be added, that he was honoured with the friendship and patronage of the most distinguished personages of his age. For more than half a century, he stood unrivalled as a learned printer; and some of the most masterly productions of this kingdom appeared from his press. To his literary and professional abilities, he added an excellent moral character. His regard to religion was displayed in his publications, and in the course of his life and studies; and he was particularly distinguished by his inflexible probity, and an uncommon alacrity in assisting the necessitous. His liberality in relieving every species of distress, and his endeavours to conceal his benefactions, reflect great honour on his memory. Though he was naturally fond of retirement, and seldom entered into company excepting with men of letters, he was, perhaps, excelled by few in the talent of justly discriminating the real characters of mankind. He judged of the persons he saw by a sort of intuition; and his judgments were generally right. From a consciousness of his literary superiority, he did not always pay that attention to the booksellers which was expedient in the way of his business. Being too proud to solicit the favours in that way which he believed to be his due, he was often disappointed in his expectations. On the other hand, he frequently experienced friendships in cases where he had much less reason to have hoped for them: so that, agreeable to an expression of his own.

\* In the *St. James's Chronicle*, Dec. 9, 1777, appeared an excellent and humorous paper by the rev. Michael Lort, D.D., on Parson Horne's petition to be pilloried.—For an account of Dr. Lort, who died Nov. 5, 1796, see Nichols's *Literary Anecdotes*, vol. II. p. 594.

† In 1767, the office was removed from White Friars to Red Lion Passage, Fleet-street, where he styled himself "ARCHITECTUS VERBORUM." Over the door of the new office he placed a bust of Cicero.

in what he had received, and in what he had been denied, he thankfully acknowledged the will of heaven." The two great objects he had in view in the decline of life, were to repay the benefactions his father had received, and to be himself a benefactor to the meritorious of his own profession. These purposes are fully displayed in his last will. He was buried agreeably to his own direction, at Low Layton, in Essex, and a monument erected at the expense of Mr. John Nichols, to his father's memory and his own, with a Latin inscription written by Mr. Nichols, who was his apprentice, partner, and successor; and who has done ample justice to his eminent predecessor's memory, by an invaluable series of anecdotes of Mr. Bowyer\* and many celebrated literary characters of the last and present century, to which the reader is referred, as containing an invaluable fund of information.

At the east end of the court-room of the stationers' company, is the bust of Mr. Bowyer, under which is a brass plate, thus inscribed, in its own words, in conformity to a wish he had many years before communicated to his partner:

To the united Munificence of  
THE COMPANY OF STATIONERS,  
and other numerous Benefactors;  
who,  
when a calamitous Fire, Jan. 30, 1719-13,  
had in one night destroyed the Effects  
of WILLIAM BOWYER, Printer,  
repaired the loss with unparalleled Humanity:  
WILLIAM, his only surviving Son,  
being continued  
Printer of the Votes of the House of Commons,  
by his Father's Merits,  
and the indulgence of three Honourable Speakers;  
and appointed to print the Journals of the House of Lords,  
at near LXX years of age,  
by the Patronage of a noble Peer;  
struggling with a debt of gratitude which could not be repaid,  
left this Tablet to suggest  
what worn-out Nature could not express.

Ex Voto Patroni Optimali Amicissimil  
Poni Lubenter Curavit Cileas Divinitus  
J. Nichols, M.DCC.LXXVIII.

The following is a genuine extract from Mr. Bowyer's will:

\* \* \* \* \* And now I hope I may be allowed to leave somewhat for the benefit of printing. To this end, I give to the master and censors, or wardens and commonalty of the mys-

\* *Literary Anecdotes of the Eighteenth Century*; comprising *Biographical Memoirs of William Bowyer, printer, &c.* S. A., and many of his learned friends; an incidental view of the progress and advancement of literature in this kingdom during the last century; and biographical anecdotes of a considerable number of eminent writers and ingenious artists; with a copious index, by John Nichols, S. A. in nine volumes. Mr. Maty, in the first volume of his *New Review* thus mentions the *Anecdotes of Bowyer*: "Probenius scatters flowers over the grave of Aldus, and king the opportunity at the same time of paying literary honours to Erasmus, and the worthies who made his learning press sweat under them;—in plainer words, an account of a very distinguished and very worthy printer, who repaid gratitude what he had received from it, by that clause in a will which makes provision for the maintenance of a learned compositor of the press. Together with the accounts are given anecdotes, some longer, some shorter, of the writers who printed at Mr. Bowyer's press."

tery or art of a stationer of the city of London, such a sum of money as will purchase £2,000 three per cent. reduced bank annuities, upon trust to pay the dividends and yearly produce thereof, to be divided for ever equally amongst three printers, compositors or pressmen, to be elected from time to time by the master, wardens, and assistants of the said company. and who at the time of such election shall be sixty-three years old or upwards, for their respective lives, to be paid half-yearly; hoping that such as shall be most deserving will be preferred. AND WHEREAS I have herein before given to my son the sum of £3,000 four per cent. consolidated annuities, in case he marries with the consent of my executors: Now, I do hereby give and bequeath the dividends and interest of that sum, till such marriage takes place, to the said company of stationers, to be divided equally between six other printers, compositors or pressmen, as aforesaid; and if my said son shall die unmarried, or married without such consent as aforesaid, then I give and bequeath the said capital sum of £3,000 to the said company of stationers, the dividends and yearly produce thereof to be divided for ever equally amongst six other such old printers, compositors or pressmen, for their respective lives, to be qualified, chosen, and paid, in manner as aforesaid. It has long been to me matter of concern, that such numbers are put apprentices as compositors without any share of school-learning, who ought to have the greatest. In hopes of remedying this, I give and bequeath to the said company of stationers such a sum of money as will purchase one thousand pounds three per cent. reduced bank annuities, for the use of one journeyman compositor, such as shall hereafter be described; with this special trust, that the master, wardens, and assistants, shall pay the dividends and produce thereof half-yearly to such compositor. The said master, wardens, and assistants, of the said company, shall nominate for this purpose a compositor who is a man of good life and conversation, who shall usually frequent some place of public worship every Sunday, unless prevented by sickness, and shall not have worked on a newspaper or magazine for four years at least before such nomination, nor shall ever afterwards whilst he holds this annuity, which may be for life if he continues a journeyman. He shall be able to read and construe Latin, and at least to read Greek fluently with accents; of which he shall bring a testimonial from the rector of St. Martin's Ludgate, for the time being. I could wish that he shall have been brought up piously and virtuously, if it be possible, at Merchant Taylors', or some other public school, from seven years of age till he is full seventeen, and then to serve seven years faithfully as a compositor, and work seven years more as a journeyman, as I would not have this annuity bestowed on any one under thirty-one years of age. If after he is chosen he shall behave ill, let him be turned out, and another be chosen in his stead. AND WHEREAS it may be many years before a compositor may be found that shall exactly answer

the above description, and it may at sometimes happen that such a one cannot be found; I would have the dividends in the mean time applied to such person as the master, wardens, and assistants, shall think approaches nearest to what I have described. AND WHEREAS the above trusts will occasion some trouble; I give to the said company, in case they think proper to accept the trusts, £250. \* \* Mr. Bowyer further gave to the company of stationers £180 a-year for specific charitable purposes; also a small silver cup.\* See his will at large in Nichols's *Literary Anecdotes*, vol. iii. p. 270.

1777. The *Glasgow Herald* established. At first this paper was called the *Advertiser*, afterwards the *Advertiser and Herald*, and latterly by the *Glasgow Herald*; Mondays and Fridays.

1777. The *Kendal Diary*, a sheet almanack, began by Mr. Pennington, continued till 1836.

1778, March. The following sums were paid for compiling indexes to the *Journals of the House of Commons*: Mr. Edward Moore, £6400 as a final compensation for thirteen years' labour; Rev. Mr. Foster, £3000 for nine years' ditto; Rev. Dr. Roger Flaxman, £3000 for nine years' ditto; and Mr. Cunningham, £500 in part for ditto; making a total of £12,900.

1778. A *Grammar of the Bengal language*, 8vo. This work was the production of Nathaniel Brassey Halhed, esq. and printed at Hoogly, a city of Hindostan, in Bengal, from letters cut and types founded by Mr. Charles Wilkins, at that time in the East India company's civil service, whose extraordinary skill and industry had to encounter every difficulty which necessarily resulted from the total want of European artists. Mr. Halhed informs us, that Mr. Wilkins was obliged to charge himself with all the various occupations of the metallurgist, the engraver, the founder, and the printer.

Mr. Wilkins persevered in his noble undertaking of rendering the oriental languages available to the English scholar, through the medium of the art of typography; with this view he compiled from the most celebrated native grammars and commentaries, a work entirely new to England, on the structure of the Sanskrita tongue: he cut steel letters, made punches, matrices, and moulds, and cast from them a fount of the Dava-nagari character, his only assistance being the mechanics of a country village. Early in 1795, he had commenced the printing of this laborious undertaking in his own dwelling-house; but, on the second of May in that year, the whole of his premises were destroyed by fire; his books, manuscripts, and the greater part of the Sanskrita punches and matrices were preserved; but the types which had been prepared with so much labour, were all either lost or rendered useless. This is a circumstance not less interesting as a typographical anecdote, than it is as an instance of

honourable erudite industry; it is like Mercator engraving and colouring his own maps, or Aldus and Stephens working at their own presses and letter cases. About ten years afterwards, the court of directors of the East India company encouraged Dr. Wilkins to resume his labours, and to cast other types; as the study of the Sanskrita had become an important object in their new college at Hertford.

1778. Peignot mentions that a *Life of M. d'Aguesseau*, written by his son the chancellor d'Aguesseau, was composed and printed by M. and Madame Saron, at Chateau de Fresnes, by means of a private press which they had obtained from London in 1778. The volume bears the date of 1720, but it was really struck off in this year. Sixty copies of it were printed; and no other production of this press is known.

1778, April 24. Died, SAMUEL BAKER, who was for many years distinguished as an eminent bookseller; and published several good catalogues of books, at market prices, between the years 1757 and 1777. He was also very famous as an auctioneer of books; a quality in which he was at least equalled, if not excelled, by Mr. George Leigh, who was many years his partner in York-street; and by his great nephew Mr. Samuel Sotheby, partner with Mr. Leigh in the Strand. Mr. Baker retired from business a few years before his death to a delightful villa which he built at Woodford Bridge, near Chigwell in Essex. He left his property to his nephew, Mr. John Sotheby. The following dates, from three flat stones in the church-yard of St. Paul, Covent Garden, record the deaths of Mr. Baker's mother, his own, &c. &c.

Mrs. Ann Baker, May 27, 1766, aged 67.  
Mrs. Rebecca Baker, of York-street, Feb. 18, 1768, aged 62.  
Mr. Samuel Baker, April 24, 1778, aged 66.  
Mr. John Sotheby, Nov. 1, 1807, aged 67.  
Harriet Sotheby, wife of Samuel Sotheby, Bookseller; born 23 Jan. 1775, died 9 July 1808; the best of women, of wives the perfectest.

1778, May 18. Died, THOMAS GENT, printer, in the city of York. The name of Gent is well known to the collectors of English topography, and of typographical curiosities, as that of a printer who sometimes employed his press upon productions of his own; and who, in his character of author, produced numerous volumes, which are far from being destitute of merit. He was a native of Dublin, and served his apprenticeship to Mr. Powell, a printer in that city, but, unfortunately, no farther can be known of his early history\*. On his arriving in London he was employed by Mr. Daniel Midwinter and Mr. Mears, in Blackfriars. In 1714, April 20, he left London on foot, and walked to York in six days, where he was engaged by Mr. White, with whom he remained a year, and then visited Dublin, and found employment with Mr. Thos. Hume in Copper-alley; but returned to London

\* This cup was given to the elder Mr. Bowyer by Mrs. James, after his loss by fire.

\* The *Life of Mr. Thomas Gent, printer of York*, written by himself. London: printed for Thomas Thorpe, 1823. This little work contains an excellent portrait, and a great deal of curious information upon printers and printing.

bout the latter part of 1716, and worked with fr. Wilkins in Little Britain, in company with amuel Negus. He then worked for Mr. Watts. a 1718, he again visited Ireland, but soon returned to London, and commenced master. In 724, Mr. Gent removed his printing-office from ondon to York, and married a relation of Mr. hite's, with whom he had become acquainted uring his former residence in that city. His idence was in Petergate, the same that had slonged to Mr. White. The imprint to one of is books states that his printing-office was in office-yard, "where that useful art, to which e sons of learning are infinitely obliged, is permed after a neat manner." He pursued his isiness with diligence until he had attained the lvanced age of eighty-seven years, being at that me the oldest master printer in England, and freeman of the cities of London, York, and ublin. He was interred in the church of St. ichael le Belfrey, in York. Mr. Gent was the thor of a great number of small tracts in verse d prose, and published a useful compendium, ntaining some things not in larger histories, ituled, *The antient and modern History of the ous City of York*; and in a particular maner of its magnificent cathedral, commonly lled York-minster, &c. &c.

1778, June 1. *Died*, JOSEPH BENTHAM, an derman of Cambridge, and many years printer he university. He was born at Ely, in Noember, 1708: his father was a very worthy clerman of the diocese of Ely, and descended om an ancient family in Yorkshire. Mr. Benam was not eager after money in the way of s business, but rather ambitious of printing rks that would do him credit. He printed s brother's valuable *History of Ely*, at a conderable expense to himself. He had a great ste for gardening, and a turn for humour. He us a very amiable man, and the only one of six others that was not in orders. He married ne, sister and heiress of George Reste, esq. e was buried, as was his wife, in Trumpington urch.

1778, July 25. *Died*, ANDREW JACKSON, bookler, well known as a dealer in old books, and ck letter, for more than forty years, in Clare urt, Drury Lane. Here, like another Magbechi, midst dust and cobwebs, he indulged ppetite for reading; legends and romances, tory and poetry, were indiscriminately his ourite pursuits. Unlike a contemporary ther of the trade,\* he did not make the oosity of his customers the foundation of a lection for his own use, and refuse to part h an article, where he found an eagerness in a chaser to obtain it. Where he met with a ity, he would retain the same till he had ished his own desires in the perusal of it, and n part with it agreeable to his promise. ough placed in an humble rank in life, he

was easy, cheerful, and facetious. If he did not abound, his wants were few, and he secured enough to carry him to his journey's end. He was retainer to the Muses, but rather traversed the plains than ascended any steps up the hill of Parnassus. In 1740 he published the first book of *Paradise Lost* in rhyme: and ten years afterwards, with somewhat better success, *Matrimonial Scenes*; consisting of the *Seaman's Tale*, the *Manciple's Tale*, the *Character of the Wife at Bath*, the *Tale of the Wife at Bath*, and her *Five Husbands*; all modernized from Chaucer; by A. Jackson.

The first refiner of our native lays  
Chanted these tales in second Richard's days;  
Time grudg'd his wit, and on his language fed!  
We rescue but the living from the dead;  
And what was sterling verse so long ago  
Is here new coined to make it current now.

The contents of his catalogues of the years 1756, 1757, 1759, and one without date, as specified in their titles, were in rhyme. In 1751, in conjunction with Charles Marsh, he republished, as Shakspeare's, a *Briefve conceits touching the Commonweale of this Realm of England*; originally printed in 1581. He quitted his business about a year before his death, having completed his eighty-third year the fourteenth of May preceding.

1778, Aug. 12. *Died*, ROBERT GOADBY, printer and proprietor of the *Sherborne Mercury*, who carried on a large and extensive business as a bookseller. Few men have been more generally known in the west of England than Mr. Goadby, and few had more friends or more enemies. To the freedom of his sentiments on religious and political subjects, and to the openness with which he declared them, he was indebted for both. Truth was the object of his researches. Mr. Goadby was also the conductor of several miscellaneous and periodical publications; which being sold extremely cheap, and very widely circulated, had a considerable good effect, and proved the means of disseminating a great deal of useful knowledge among persons whose opportunities of giving information were few and scanty; and to his praise it should be observed, that he carefully excluded from his publications every thing of an immoral and irreligious tendency. He compiled an *Illustration of the Scriptures*, three vols. folio; a work, entitled, the *Universe Displayed*; and he was also the author of the *Life of Bamfylde Moore Carew, King of the Beggars*. His weekly paper, the *Sherborne Mercury*, was uniformly conducted in a manner friendly to the liberties of Englishmen. In particular, he had a just idea of the importance of the liberty of the press: and the celebrated axiom of Mr. Hume, "*the liberties of the press and the liberties of the people must stand or fall together*," was a favourite one with Mr. Goadby. To the poor he was a constant and generous friend. His acts of beneficence were very numerous while he lived; and by his will he left a sum in the stocks, the interest of which was annually distributed among the poor of Sherborne. He left 40s. a-

\* John King, of Moorfields, whose curious library, consisting of ten days' sale, was sold by auction by Barker 760.

year to the vicars of Sherborne for ever, on condition of their preaching an annual sermon upon the first Sunday in May, when the beauties of nature are in the highest perfection, on the wonders of the creation. The inscription on his tomb stone, placed there in consequence of his own directions, is another proof that the infinite varieties of vegetation engrossed a considerable share of his attention. It stands in the church yard of Osborne, a small village about a mile from Sherborne, and is as follows:

In memory of ROBERT GOADBY,  
late of Sherborne, printer, who departed this life  
August 12, 1778, aged 57.  
Death is a path that must be trod,  
If man would ever come to God.  
The fir tree aspires to the sky,  
and is clothed with everlasting verdure;  
Emblem of the good, and of that everlasting life,  
which God will bestow on them.  
Since death is the gate to life,  
the grave should be crowned with flowers.

Many of Mr. Goadby's friends apprehended that he injured his health by too great an application to business and study. He was, indeed, of a disposition uncommonly active and assiduous, and could not bear long to be idle. He was not without his faults; but they were few, and not of a singular kind; they were, without doubt, greatly overbalanced by his good qualities, which certainly entitle him to the character of a most active, useful, and worthy member of society.

1778. *Johnson's Sunday Monitor*. This was the first newspaper published on the sabbath, in Great Britain. It appeared in London.

1778, Aug. 17. *Died*, WILLIAM CASLON, the second type-founder, who, as an artist had great merit, though not equal to his father; yet the reputation of the foundry suffered no diminution in his hands. He married Miss Elizabeth Cartlitch, only child of Dr. Cartlitch, a lady of beauty and understanding, by whom he had two sons, William and Henry. Mr. Caslon dying without a will, his property became divided in equal proportions between his widow and two sons, but the superintendence devolved on the elder William. Of Mrs. Caslon it would be improper to pass unnoticed. Her merit and ability in conducting a capital business during the life of her husband, and afterwards till her son was capable of managing it, was deserving of all praise. In quickness of understanding, and activity of execution, she left few equals among her sex. On the death of her husband, and their eldest son establishing himself in Moorfields, she conducted the business herself, and continued to do so till disabled by an attack of the palsy, which she survived but a few months, dying Oct. 23, 1795, aged about 70 years.

1778. *Died* C. HEYDINGER, a German bookseller, in the Strand, London. He was unsuccessful in business, and died in distressed circumstances some time in this year.

1779, Jan. 23. The *Mirror*, a weekly paper resembling the *Spectator*, commenced at Edinburgh on this day, in the shape of a small folio sheet, price three half-pence, and terminated

May 27, 1780, having latterly been issued twice a-week. Of the one hundred and ten papers to which the *Mirror* extended, forty-two were contributed by Henry Mackenzie,\* author of the *Man of Feeling*, &c. &c. The sale, during the progress of the publication, never exceeded four hundred copies. When republished in 12mo. volumes, a considerable sum was realized from the copyright, out of which the proprietors presented £100 to the orphan hospital, and treated themselves to a hoghead of claret, to be drunk at their ensuing meetings.

The *Mirror*, though inferior to the *Spectator* in variety and humour; to the *Rambler* in dignity and ethic precept; and to the *Admirer* in the field of splendid fiction; yet supports a character which has justly rendered it a favourite with the public. There is, owing in a great measure to the genius of Mr. Mackenzie, a pathetic charm, a tender strain of morality, thrown over its pages, which greatly interests; nor is it, by any means, sterile or defective in the delineation of character. These qualifications are to me, by many degrees, more pleasing and permanently impressive, than the eternal wit and irony which pervade the *World* and *Connoisseur*. When we affirm, therefore, that *sweetness, delicacy, and pathos*, are the distinguishing features of the *Mirror*, we doubt not, from the imperishable nature of these ingredients, that it is formed to delight a distant posterity.

1779, May 10. LORD NORTH, prime minister, and chancellor of the university of Oxford, introduced a bill into parliament to renew and legalize the privilege of the universities, and the stationers' company, to the exclusive right in printing almanacks; but after an able argument by Mr. Erskine in favour of the public, upon the petition of Mr. Carman, the bookseller, the house of commons rejected the ministerial project by a majority of forty-five votes.

1779. In this year there were twenty printing offices in the city of Edinburgh, and ten paper mills in the neighbourhood.

1779, May 11. *Died*, EDWARD DILLY, a bookseller of great eminence in the Poultry, London, particularly in the line of American exportation, and in the writings of the good old school of Presbyterians, Doddridge, Watts, Lardner, &c. Mr. Edward Dilly was an enthusiastic admirer of the politics (if not of the personal charms) of Catharine Macaulay,† whose publications he regularly ushered into the world; and may truly be said to have been a general and generous patron. He was a man of great pleasantry of

\* Henry Mackenzie was a native of Scotland, died Jan. 14, 1831, in the eighty-sixth year of his age; as a writer he is distinguished by refined sensibility and exquisite taste; with more delicacy, Mackenzie possesses much of Sterne's peculiar pathos. His principal works are the *Man of Feeling*, the *Man of the World*, and *Julia de Roubique*.

† Catharine Macaulay Graham, an historian of some celebrity, was the daughter of John Sawbridge, esq. of Otantigh in Kent, and born in 1730. In 1760 she married Dr. George Macaulay, a physician, who left her a widow in 1783, she married Mr. Graham, a clergyman. In 1780 she went to America for the purpose of visiting General Washington. She died at Binsfield June 23, 1791.

nanners, and so fond of conversation, that he almost literally *talked himself to death*. He was buried in the church-yard of Southhill, in Bedfordshire, with the following epitaph inscribed in his grave stone:

Near this place lies interred  
The body of EDWARD DILLY,  
late citizen and bookseller, of London.  
He was born in this parish,  
July 25, 1738;  
and died May 11, 1779.

The business was carried on by his younger brother Charles Dilly, who had been some time its partner, and thus became the sole proprietor of a very valuable trading concern, which he continued to cultivate with that industry and application, which in the great commercial metropolis of England almost invariably leads to pululence, till 1807, under which year see a notice.

1779, July 20. *Died*, DOUGAL GRAHAM, the hyming chronicler of the rebellion of 1745, and who for some time carried on the business of a printer at Glasgow; and it has been affirmed, that, like Buchan, the chronicler of Peterhead, he used to compose and set up his works without ever committing them to writing. Unfortunately, no account of the parentage or early life of this eccentric individual has been preserved. It has been said that he was engaged in the rebellion of 1745 and 1746, but without sufficient authority. He had, to use his own words, "been an eye-witness to most of the movements of the armies, from the rebels first crossing the ford of 'reew, to their final defeat at Culloden;" but it would seem from this expression, as well as from his recollections of some of his acquaintances, that it was only in the capacity of a follower, who supplied the troops with small wares. But Dougal's aspiring mind aimed at a higher and nobler employment,—the cultivation of the muse; and no sooner was the rebellion terminated by the battle of Culloden, than he determined to write a history of it "in vulgar rhyme." Accordingly, the *Glasgow Courant* of September 9, 1746, contains the following advertisement: "That there is to be sold by James Duncan, printer in Glasgow, in the Salt-Mercat, the second shop below Gibson's Wynd, a book entitled, *A full, particular, and true account of the late rebellion in the years 1745 and 1746, beginning with the Pretender's embarking for Scotland, and then an account of every battle, siege, and skirmish that has happened in either Scotland or England: to which is added, several addresses and epistles to the pope, pagans, poets, and pretender, all in metre, price fourpence.* But any booksellers or packmen may have them as cheap as the said James Duncan, or the author, D. Graham. The like," the advertisement concludes, "has not been done in Scotland since the days of sir David Lindsay!" As the book became known, Dougal issued editions greatly enlarged and improved.\* That of 1771, while it contains many additions, is said to want much of the curious matter in the earlier editions. In 1752, Graham styles himself 'mer-

chant in Glasgow,' but it would appear that his wealth had not increased with his fame; about this time he became a printer. The exact date at which he became bellman is not known, but it must have been after 1770. At this time the situation was one of some dignity and importance: the posting of handbills and the publishing of advertisements were not quite so common; and whether a child had "wandered,"—"salmon, herring, cod, or ling" had arrived at the Broomielaw,—or the grocers had received a new supply of "cheap butter, barley, cheese, and veal," the matter could only be proclaimed by the mouth of the public crier. After several years of, it may be supposed, extensive usefulness in this capacity, Dougal was gathered to his fathers. Besides the before-named history, Graham wrote many other poems and songs, some of which, though little known, are highly graphic. They would form a pretty large volume, but it is hardly probable that in this fastidious age any attempt will be made to collect them.—Chambers's *Eminent Scotsmen*.

1779, Nov. 12. *Died*, JOHN BEECROFT, a considerable wholesale bookseller in Paternoster-row, many years agent to the university of Cambridge, and master of the company of stationers in 1773. He died at Walthamstow.

1779, Nov. 24. HENRY SAMPSON WOODFALL, printer of the *General Advertiser*, sentenced in the court of king's bench to pay a fine of six shillings and eight pence, and to be confined in Newgate twelve months, for publishing a handbill expressive of joy at the acquittal of admiral Keppel.\*

1779. DR. JOHNSON published his long-expected work, the *Lives of the English Poets*, and fixed the price at two hundred guineas, at which Malone observes, "The booksellers, in the course of twenty-five years have probably cleared five thousand. Johnson has dignified the booksellers as the 'patrons of literature.'" In the case of the above work, which drew forth that encomium, he had bargained for two hundred guineas; and the booksellers spontaneously added a third hundred. On this occasion the great moralist observed to a friend, "Sir, I have always said the booksellers were a generous set of men. Nor in the present instance have I reason to complain. The fact is, not that they have paid me too little, but that I have written too much." The *Lives* were soon published in a separate edition; when for a few corrections, the doctor was presented with another hundred guineas. This work was first suggested by a literary club of booksellers,

\* Augustus, viscount Keppel, was the second son of the earl of Albemarle. He accompanied commodore Anson in his voyage round the world, and in 1778 commanded the channel fleet, which, July 13, in that year, fell in with the French under count d'Orville off Ushant. A partial action ensued, which the English admiral thought to have renewed in the morning, but the enemy had retired. This affair gave great dissatisfaction to the nation, which was aggravated by sir Hugh Palliser, second in command, preferring a charge against admiral Keppel, who was honourably acquitted by a court-martial at Portsmouth. Sir Hugh was then tried and censured. In 1782, admiral Keppel was raised to the peerage; he was also at two separate periods first lord of the admiralty. He died Oct. 2, 1768.

of which alderman Cadell, with Messrs. James Dodsley, Lockyer Davis, Thomas Longman, Peter Elmsby, honest Tom Payne of the Mews-gate, Thomas Evans, and James Robson, were the members, and from which originated the germ of many valuable publications. Under their auspices, Mr. Thomas Davies (who was himself a pleasant member of the club) produced his *Dramatic Miscellany*, and his *Life of Garrick*.\*

1779, Jan. *The British Miscellany*, No. 1.

1779, Jan. 18. *The Literary Fly*, No. 1. Edited by the rev. Herbert Croft.

1779, March. *The Englishman*, No. 1.

1779, May. *The Whig Magazine; or Patriot Miscellany*, No. 1.

1779, July. *The Foreign Medical Review*.

1780, Jan. 8. *Died*, FRANCIS NEWBERRY, a bookseller, at the west end of Saint Paul's, who was for several years publisher of the *Gentleman's Magazine*; he was the nephew of Mr. John Newbery, esq. the respectable vender of Dr. James's powders, at the east end of St. Paul's church yard.

1780, Feb. 20. *Died*, in Greyfriar's gate, Nottingham, aged seventy-two years, THOMAS PEST, land surveyor, a skillful astronomer, mathematician, and schoolmaster. He was the oldest almanack writer in England, having wrote the *Gentleman's Diary* and *Poor Robin* upwards of forty years; during which time he was never behind hand with his competitors at prognosticating future events.

1780. ISAIAH THOMAS, printer at Worcester, in Massachusetts, North America, printed an almanack for this year; one of the boys asked him what he should put opposite the 13th of July. Mr. Thomas being engaged, replied, "any thing, any thing!" the boy returned to the office and set "rain, hail, and snow." The country was all amazement—the day arrived, when it actually rained, hailed, and snowed. From that time Thomas's almanacks were in great repute.

1780, March 11. *Died*, RICHARD NUTT, a

printer in the Savoy, in 1724, and afterwards many years printer of the *London Evening Post*; had long retired from business, and died in Bartlett's buildings, aged eighty-six.

1780, April 24. *Died*, JOHN NOURSE, many years bookseller to his majesty. He was a man of science, particularly in the mathematical line; in which department a great number of valuable publications were by him introduced into the world. He also published a considerable number of French books. After the death of Mr. John Nourse, the extensive business of the house was carried on, with indefatigable diligence, by Mr. Francis Wingrave, for the benefit of Mr. (afterwards Sir Charles) Nourse, an eminent surgeon at Oxford, equally distinguished for the long period, and the eminence of his practice. He received the honour of knighthood, Aug. 15, 1786, on his majesty's visit to the university. He was a coteremporary student and pupil with the celebrated Mr. Pott; of similar vivacity, temper, and manners, and of equal celebrity for professional abilities and knowledge. He had long laboured under a severe dropsical complaint; which terminated fatally April 19, 1789. Mr. Wingrave was his successor in the long-established shop in the Strand.

1780, June 6. *Died*, MR. EMERSON, printer, of St. John's square, London, and proprietor of *Lloyd's Evening Post*: after carrying on business with reputation for more than twenty years, he retired with an easy competency.

1780. *Died*, GEORGE HAWKINS, many years a bookseller in Fleet-street, near the Temple gate. He was treasurer of the company of stationers from the year 1766 till his death.

1780, July 28. *Died*, EDWARD ALLEN, a very excellent printer in Bolt-court, Fleet-street, London, the "dear friend" of Dr. Johnson, and a member of the Essex head club. He was far advanced in years; his printing office united to the dwelling of Dr. Johnson, which was next door to it, and afterwards occupied by Mr. Thomas Bensley, who demonstrated with foreigners that the English press could rival and even excel the finest works that graced the continental annals of typography.

1780. *Weekly Review*. This publication was commenced by James Tytler, during his residence in the sanctuary at Holyrood, Edinburgh; but was soon discontinued, when a printer named Menmons, renewed the publication, and Tytler was employed in the capacity of chief contributor.

1780. *The Volunteer Evening Post*. From the time of *Saunders's News Letter*, in 1763, was published in Dublin to this year, a great host of publications, most of which soon perished; amongst the ephemeral prints was the above-named paper; the circumstances attending the origin and expiration of which exhibit a lively portrait of the spirit of the times. The opposition to the government was then so strong that no printer could be found in Ireland to publish a paragraph in opposition to the popular cause. Government was therefore compelled to send a

\* David Garrick, one of the most celebrated actors which England has produced, was born at Hereford, Feb. 1716. His father was a captain in the army, descended from a French family, who being protestants, fled to England on the revocation of the edict of Nantes. He received his education partly at the grammar school of Lichfield, and partly under Dr. Johnson, with whom he visited London in 1733. His first appearance on the stage was at Ipswich, in 1741, under the assumed name of Lyddial; and the applause he met with induced him to make his appearance at the theatre in Goodman's fields, in the character of Richard the Third. The other theatres were quickly deserted, and Goodman's-fields became the resort of the people of fashion till that theatre was shut up. In the summer of 1743, he played in Dublin to such full houses, that the heat of the weather and the crowds occasioned a fever, which was called the Garrick fever. In 1747 he became joint-patentee of Drury-lane theatre; and in 1749 he married Mademoiselle Violette, an Italian stage dancer. In 1769 he celebrated a fete in honour of Shakespeare, called the Jubilee, at Stratford-upon-Avon. It was afterwards made an entertainment at Drury-lane, under the same title, and had a prodigious run. In 1776 he gave up his concern in the theatre for £35,000. He died 1779, and was buried in Westminster abbey. Mr. Garrick was hospitable and generous, but vain, and fond of satuary. He wrote several dramatic pieces, prologues, epilogues, songs, and epigrams, in the last he excelled. Mrs. Garrick (Eva Maria Violette) was born at Vienna, Feb. 29, 1724, and died at London, Oct. 16, 1822.

press and printers from England for their purpose, but it required no little management to establish it. It first assumed a popular name, and professed to take a warm side in that cause. To increase the deception, the portrait of a volunteer, in full uniform, was exhibited every night, and every other device put in practice with the same view. But the secret soon displayed itself, and the mob proceeded to take summary vengeance. The editor escaped, but the printer was dragged to the Tenter-fields, and there tarred and feathered! Unable to withstand popular hatred, the paper was dropped; but so strong was the public indignation, that no one could be got to purchase the materials, and editors, printers, types, press, &c. were, after three years' effort, re-transported to England.

1780. *The Poetical Magazine*.

1780, Aug. 4. *The Protestant Packet*; or, *British Monitor*, designed for the use and entertainment of every denomination of Protestants in Great Britain. By the rev. James Murray.\*

Spartacus (genus est audax, avidumque ferax) nodo casus propiore linæ.—Seneca.

Newcastle-upon-Tyne, printed by T. Angus, St. Nicholas' church yard, for the editors.

1780. *The Detector*. This political paper was promised "to be continued occasionally during the session of parliament." It was printed in octavo, at the price of sixpence each number; but, meeting with little encouragement, was soon relinquished.

1780, Nov. *The Traiteur*, No. 1.

1780. *The Whig*. This series of papers was written by the late Hugh Boyd, and appeared in *Almon's London Courant*; and, together with the *Freeholder*, very ably assisted in maintaining the cause of constitutional liberty.

1780, Dec. 2. *Periodical Essays*, by the rev. Robert Nares, afterwards archdeacon of Stafford, No. 10, Feb. 3, 1781.

1781, Feb. *Died*, JACOB WRAGG, a compositor of Bury St. Edmunds, in Suffolk. Mr. Wragg was the first person chosen by the company of stationers to enjoy the annuity left by Mr. Bowyer; and, says Mr. Nichols, was "in every respect deserving of it." He was a man of real learning, and had been patronized by Dr. Jortin, on whose first volume of the *Life of Erasmus* he had been employed at Mr. Edward

Say's. It has been remarked, however, as : somewhat strange circumstance, that in an occupation so nearly allied to literature as that of printing, a single candidate only should have offered himself as qualified to enjoy so comfortable a stipend.

1781. MR. TILLOCH, editor of the *Philosophical Magazine*, presumed to have invented a method of stereotyping, without having, at the time, any knowledge of Ged's invention.\* In perfecting the invention, Mr. Tilloch had the assistance and joint labour of Mr. Foulis, printer to the university of Glasgow. After great labour, and many experiments, these gentlemen "overcame every difficulty, and were able to produce plates, the impressions from which could not be distinguished from those taken from the types from which they were cast. Though we had reason to fear, from what we found Ged had met with, that our efforts would experience a similar opposition from prejudice and ignorance,† we persevered in our object for a considerable time, and at last resolved to take out patents for England and Scotland, to secure to ourselves, for the usual term, the benefits of our invention." Owing to some circumstances of a private nature, not connected with the stereotype art, the business was laid aside for a time, and Mr. Tilloch having removed from Glasgow to London, the concern was dropped altogether; but not till several volumes had been stereotyped and printed, under the direction of Messrs. Tilloch and Foulis.

1781, Feb. 6. *News from the Pope to the Devil*, with their lamentations for the acquittal of lord George Gordon; to which is added the Hypocrite, by Judas Guzzle Fire, A. M. (the rev. James Murray.‡) Newcastle: printed for the author. MDCCLXXXI. Small 12mo. 19 pages.

1781, March 1. *Died*, MR. CHASE, printer of Norwich.

1781. April. LORD NORTH introduced a bill into parliament, with respect to laying an additional duty on almanacks. In the course of his speech his lordship observed, "According to the laws now in being, sheet almanacks are subject to a duty of twopence each; and book almanacks to one of fourpence each. But, of late, complaints had been made to him by the printers of the latter, that the printers of the former had contrived to print upon a very large sheet of paper, which, admitting of a variety of matter, and folding up, almost in the manner of a book,

\* *The Freeman's Magazine*; or the *Constitutional Repository*, containing a free debate concerning the cause of liberty; consisting of all the papers published in the London newspapers from Northumberland and Newcastle, or the county of Durham, from the sending of instructions to the Newcastle members of parliament, till this present time. By the rev. James Murray and others.

Quisnam igitur liber? Sapientis qui imperiosus  
Quem neque pauperies, neque mors, neque vincula terrent.  
Responsare cupidinis, continere honores  
Fortis, & in scilpe totus teres, atque rotundas:

—Eripe turpi  
Colla Jaga: Liber liber sum dic age.—Horace.

Newcastle upon Tyne, printed for the editors, and sold by T. Slack, W. Charley, and J. Atkinson, booksellers. R. Fisher, the circulating library; and G. Young, High Bridge, Newcastle, and all other booksellers in town and country. MDCCLXXIV.

\* Mr. Tilloch says so in the *Philosophical Magazine*; and, therefore, we must suppose he had not, at that time, seen the narrative, just read, of Mr. Rowe Moore's books, dated 1788, in which a tolerable outline is given of the practice of stereotyping, although not under so learned a name; but quite sufficient, if any body else had happened to have seen it at the time, to have raised a competitor to Messrs. Tilloch and Foulis.—Hansard.

† Of course, if they came southward.

‡ The Rev. James Murray, author of *A History of the Church in England and Scotland*, *Travels of the Imagination*, *Sermons to Ases*, and many other works, was born in Scotland, at Fauns, in Roxburghshire. He became minister of the High Bridge Meeting-house, Newcastle upon Tyne, in the year 1764, where he continued to reside and publish his works till his death, which happened January 28, 1782.

answered all the purposes of a book almanack; so that the sale of the latter had considerably fallen, to the loss both of the trader in book almanacks and the revenue. This appeared by a comparison of the duties paid on sheet and book almanacks in two given years. In one year 316,515 sheet almanacks, and 261,000 book almanacks had paid duty; but, in the next year, the contrivance of printing on a sheet that folded like a book had so far succeeded, that the sale of the book almanacks fell short 32,000 of what it had been the year before. To remedy this, he proposed to equalize the duties on both, which would be by laying twopence additional on sheet almanacks: this was but a trifle to an individual, considering that it was an expense that came but once a year; and the produce of this additional duty would be about £2,600 a year. Out of this money, he proposed to give £500 per annum to each of the two universities, as a compensation for what they had lost by judgment in the common pleas, which had destroyed the monopoly of printing almanacks, that the two universities had enjoyed for near two centuries." The house agreed to the report of the committee of ways and means, agreeing to the two resolutions for laying an additional tax on all sheet almanacks, and granting an annuity of £500 out of the produce to each of the two universities.\*

1781, May 8. The exclusive right of the king's printer to print *Forms of Prayer*, fully established in the court of exchequer.

1781. *The New Annual Register*, containing the history of the preceding year. It was projected and originally edited by Dr. Kippis;† after whose death, in 1795, it was conducted by the rev. Thomas Morgan, LL.D., the coadjutor of Dr. Aikin in the preparation of his *Biographical Dictionary*. Watt, in his *Bibliotheca Britannica*, states that this publication was at one time edited by the late Mr. John Mason Good; but we do not observe that this is mentioned in Dr. Olinthus Gregory's life of that gentleman. *The New Annual Register* was continued till 1825, but it never attained the reputation of its predecessor and rival.

1781. *Died*, JOHN HENRY MILLER, formerly a printer at Zurich, in Switzerland, and afterwards at Philadelphia, where he published a

newspaper in the year 1744. He then removed to Marienberg, in Upper Saxony, and after various peregrinations he finally fixed himself in Pennsylvania, where he ended his days.

1781, July. In the court of king's bench the printer of the *London Courant* was sentenced to be fined £100, imprisoned for a year, and at the expiration of his confinement to be set in the pillory for one hour. The printer of the *Noon Gazette*, for having copied the paragraph, was sentenced to pay a fine of £100, and a year's imprisonment; and as he had published a paragraph the following day, justifying what he had done, he was for the second offence ordered an additional six months' imprisonment, and to stand in the pillory. The publisher of the *Morning Herald* was ordered to pay a fine of £100, and to be imprisoned one year. The printer of the *Gazetteer* (being a female) was sentenced to pay a fine of £50, and to be imprisoned six months, for a libel on the Russian ambassador.

1781, June 23. *The Manchester Chronicle*, No. 1, printed and published by Charles Wheeler, in Hunter's lane. The *Mercury* was the only paper in Manchester when Mr. Wheeler commenced the *Chronicle*.

1781. The first newspaper in the Hungarian language, appeared at Presburg.

1782, Aug. 12. WILLIAM COWPER, the celebrated poet, was prevented by rains and floods from visiting lady Austen, who suggested the *Task*. Cowper beguiled the time by writing to her the following lines, and afterwards printing them with his own hand. He sent a copy of these verses, so printed, to his sister, accompanied by the subjoined note, written upon his typographical labours.

To watch the storms, and hear the sky,  
Give all the almanacks the lie:  
To shake with cold, and see the plains  
In autumn drown'd with wintry rains:  
'Tis thus I spend my moments here,  
And wish myself a Dutch mynheer;  
I then should have no end of wit,  
For lumpish Hollander unfit:  
Nor should I then repine at mud,  
Or meadows delug'd with a flood;  
But in a bog live well content,  
And find it just my element;  
Should be a clod and not a man,  
Nor wish in vain for sister Anne,  
With charitable aid to drag  
My mind out of its proper quag;  
Should have the genius of a boor,  
And no ambition to have more.

My dear Sister,—You see my beginning; I do not know but in time I may proceed to the printing of halfpenny ballads. Excuse the coarseness of my paper; I wasted so much before I could accomplish any thing legible, that I could not afford finer. I intend to employ an ingenious mechanic of this town to make me a longer case, for you may observe that my lines turn up their tails like Dutch mastiffs; so difficult do I find it to make the two halves exactly coincide with each other.

We wait with impatience for the departure of this unseasonable flood. We think of you, and talk of you; but we can do no more till the

\* When the duty was taken off almanacks, in the year 1834, it will not be an improper question to ask if the grant to the universities ceased?

† Andrew Kippis was born at Nottingham, March 28, 1726, died at London, October 6, 1795, and was buried in Bunhill fields. He was a writer in the *Monthly Review* some time; and in 1761 had a share in the *Library*, which failed. He was chosen philological tutor in the academy for the education of dissenting ministers. In 1773 he published a *Vindication of the Protestant Dissenting Ministers*, with regard to their late Application to Parliament, which brought him into a controversy with dean Tucker. In 1777 he became the editor of the new edition of the *Biographica Britannica*; five volumes of this were published in his life-time, and the greatest part of the sixth was prepared before his death. In 1788 he published the *Life of Captain Cook*, in one volume, &c. and in the same year a *Life of Dr. Lardner*, prefixed to his works. Dr. Kippis was also the writer of the *History of Knowledge*, &c. in the *New Annual Register*, and a variety of other pieces, particularly sermons and tracts.

waters subside. I do not think our correspondence should drop because we are within a mile of each other; it is but an imaginary approximation, the flood having in reality as effectually parted us, as if the British channel rolled between us.

Yours, my dear sister, with Mrs. U.'s best love,  
WILLIAM COWPER.

Monday, Aug. 12, 1782.

1782. *Died*, WILLIAM FRANCIS DE BURE, an eminent bookseller of Paris. His treatise of *Scarce and Curious Books*, 7 vols. 8vo. 1766, and his *Museum Typographicum*, 1776, shew his industry and knowledge to great perfection.

1782, Feb. *Maty's New Review*, No. 1. This work was the production of Paul Henry Maty, son of Dr. Matthew Maty, who died August 2, 1780. He was born in 1745, and intended for the church, but his advancement was hindered by some scruples he entertained respecting the doctrines of the Trinity. He was appointed one of the librarians of the British museum, and in 1778, a secretary of the royal society. In 1782 he commenced the above work, which he continued till 1786. In 1784, when there were great divisions in the royal society, occasioned by the dismissal of Dr. Hutton from the post of foreign secretary, Mr. Maty resigned his place. He died Jan. 16, 1787.

1782. *The Jesuit*. This periodical paper was commenced during the short-lived administration of lord Shelburne, as characteristic of that nobleman. In this work Mr. Sheridan had a principal concern, and it was so severe upon the minister that the attorney-general was directed by government to institute a prosecution against the publisher. It ought to be mentioned as a curious instance of the honesty of party, that when the conductors of this paper came soon after into power, they suffered the prosecution to go on, and the bookseller to be imprisoned twelve months without interposing on his behalf, or even paying the heavy expenses which he had incurred!

1782, Nov. 28. *Died*, MR. RIDLEY, bookseller in St. James's-street.

1782. *The European Magazine*.

1783, Jan. *The Gentleman's Magazine*, considerably enlarged, and from this time each year was divided into two volumes.

1783, March 29. *Died*, THOMAS CASLON, an eminent bookseller in stationers'-court, and whose name appears conspicuously on the title-pages of the day. He was master of the stationers' company in 1782.

1783. JOSEPH FRANCIS IGNATIUS HOFFMANN, a native of Alsace, (who settled the following year at Paris) availed himself of the discovery of *Ged*, which had been made in the art of stereotyping, and endeavoured to extend it. He printed, on solid plates, several sheets of his *Journal Polytype*, and advertised father *Chemmer's Recherches sur les Maures*, 3 vols. 8vo. as a polytype book. Hoffmann was deprived of his printing office in 1787, by a decree of the council; and in 1792 he addressed a memoir to the minister of the interior, to enable him to open a

new channel for his industry. He formed two sorts of types or puncheons; one for detached letters, and the other for letters collected into the syllables most frequently occurring in the French language. Hoffmann termed the art of casting types the art of *polytypes*, and that of re-uniting several characters into a single type, the art of *logotype*. In 1785, Joseph Carez, a printer at Toul, in France, chanced to obtain some numbers of Hoffmann's *Journal Polytype*; he was struck with the advantages which the new process seemed to offer, and commenced his first essays in editions, which he called *omotyped*, in order to express the reunion of many types in one. He executed several liturgical and devotional works, and among others, an edition of the *Vulgate Bible* in nonpareil, which possesses great neatness.

1783. *An Introduction to Logography*: or, the art of arranging and composing for printing with words intire, their radices and terminations, instead of single letters. By his Majesty's royal letters patent. By Henry Johnson. London, printed logographically. 8vo. Walter. This new method of composition was denominated *Logographic*, which consisted in the art of arranging and composing for printing with words intire, their radices and terminations, instead of single letters; for which invention Mr. Walter, the proprietor of the *Times* newspaper, and part contriver of this new method, obtained his majesty's letters patent; Mr. Johnson was a compositor with Mr. Walter, and appears to have been at great trouble and not a little expense to prepare his types, and published the above pamphlet to recommend them to the public. In the pamphlet Mr. Johnson says, by this method, "the errors are far less than in common; there can be none orthographical; nor can there be any misplacing, inverting, or omission of letters, nor substitution of one letter for another." It may be fairly asked, how came the word *majesty*, in the very title-page, to be misprinted *najesty*. Is this the extraordinary correctness that is to silence all objections? But, as well from this unlucky circumstance, as from the awkward one of a single *e* which had dropped below the line, p. 47, in the familiar word *extensive*; common types appear to have been had recourse to, in aid of this logographical scheme. Nor could it be otherwise, were his stock of letters ever so large; for when the inconceivable variety of whole words, and requisite combinations of letters are cast, there must still remain a great deficiency of technical and uncommon terms, with proper names, to be made up when wanted, from single letters; but neither the words *majesty*, nor *extensive*, rank in these classes: and even if it were possible for a printer to complete such a stock, is he to print all things in the same sized type; or is his whole stock of combinations to be multiplied in all the usual sizes, and then to be doubled for Roman and Italics in each? In this latter case, what sum of money would a printer require to set up with? what must be his stock of letters, sufficient to

answer the usual calls of business? and how are those, who live in confined situations, to enlarge their printing houses, for the methodical and convenient disposition of the numerous cases of words and other combinations? At present, a printer orders in a certain quantity of each fount of types, as his occasions require; an order well understood, and readily executed. According to this improvement, an order for a hundred weight of English *nouns*, half a hundred weight of *adjectives*, and a quarter of a hundred weight of *verbs*, would be too vague to answer any purpose: for an assortment suitable for a volume of sermons, would not print a volume of *Philosophical Transactions*, the *Roman History*, or a *System of Geography*! He must either be furnished with five or ten hundred weight of the whole English language, if possible; or, a hundred weight, made up in pounds, of—*butter, cheese, beef, pork, tripe, mustard, air, water, earth, fire, heat, cold, light, darkness, snow, rain*, &c. all specified. Another hundred weight must be made up in half pounds, of—*angels, devils, heaven, hell, sulphur, grin, growl, howl, stink, bricks, tiles, rubbish, mope, brooms, soap, sand*, &c. to the end of a most laborious and comical list; beside which, a smaller assortment of all these will be wanted with capital initials, for the beginning of sentences. Indeed, if a common printer's stock of single letters, is to be added as an *appendage* to this copious magazine, \* will be a very useful drudge on all occasions, to make plurals with; but so formidable an apparatus can serve no other purpose than embarrass the art, and encumber the artist with assistance. Hitherto we have only considered printers as engaged on English composition; but beside occasional quotations, how are they to print Latin, French, Italian, and Spanish works? These Mr. Johnson proposed to compose from syllables of two or three letters; but whatever shift may be made with the Latin in this way, we conceive that no stock of syllables, within the power of any founder to cast, or printer to amass, would suit the combinations in other languages, accommodated with their peculiar accents, apostrophes, and circumflexes. This method was however soon discontinued.

1783. J. STOCKDALE introduced the art of printing into the town of St. George, the capital of the island of St. George, the largest of the Bermudas or Sommers islands.

1783, Nov. 18. *Died*, GEORGE AYSCOUGH, bookseller of Nottingham. He unfortunately launched into speculations which impaired his fortune; and was reduced to live with his son, Samuel, assistant librarian of the British museum, and a very useful contributor to the literary history of his country.

1783. In this year there were only five master printers in the town of Liverpool; Robert Williamson, John Gore, John Sibbald, John Johns, and George Woods: with this latter gentleman Mr. McCreery served his apprenticeship.

1783. *Transactions of the Society of Arts, &c.*

1784, Feb. 15. *Died*, JOHN MILLAN, who was a bookseller at Charing cross more than fifty years. He is thus celebrated in Mr. Dell's\* poem of the *Booksellers*:

"Millan, deserving of the warmest praise,  
As full of worth and virtue as of days;  
Brave, open, gen'rous, 'tis in him we find  
A solid judgment and a taste refin'd;  
Nature's most choice productions are his care,  
And them 't obtain, no expense or pains does spare:  
A character so amiable and bright,  
Inspires the muse with rapture and delight;  
The gentleman and tradesman both in him unite.

1784, March 1. *Died*, GILBERT MARTIN, of the Apollo press, Edinburgh. Mr. Martin possessed a most singular disposition, and very extraordinary qualities. His peculiarities pressed chiefly on his nearest relations and friends; conscientious, but obstinate; very liable to err, though he seldom thought he acted wrong; *litera scripta* was his guide, and a rule of conduct, which, once determined on, neither interest, friendship, reason, nor justice, could divert him from his purpose. With such a disposition, it was dangerous to deal with him; and many sacrifices were to be made by those who persevered in his friendship. By dint of application, he had improved an excellent understanding, and acquired a taste and science in his profession which few predecessors had displayed; disdaining to be fettered by the common rules of art, he ranged into a wide field of luxuriant fancy, and combined in types such symmetry and elegance as might vie with the powers of a painter's pencil.

1784, April 12. A bill was passed in the Irish house of commons, for securing the liberty of the press in that country, whereby it was enacted, "that the name of the real printer and proprietor of every newspaper should be entered upon oath at the stamp office."

1784, April 30. *Died*, THOMAS EVANS, a well-known and eminent bookseller in the Strand; much beloved, respected, and esteemed by his numerous acquaintance, friends, and relations; by the latter for his affectionate regard; by his friends for his readiness and activity in their service; and by his acquaintance for the pleasantness of his conversation, and his entertaining manner of displaying his wit and humour, of both of which he possessed a more than ordinary portion to the close of his existence; even that "last solemn act of a man's life," his will, containing an example of it. After directing that his funeral should be in a very plain manner, he could not refrain from adding, that "it would be ridiculous to make a coxcomb of a grave man." Few persons in the middling rank of life had their company more courted by those

\* Henry Dell was a bookseller, first in Tower-street, and afterwards in Holborn, where he died very poor. He once attempted to perform the part of Mrs. Termagant, at Covent Garden theatre, but without success. He wrote and altered four dramatic pieces. He was also the author of the *Booksellers*, a poem, which was pronounced by some able judges, to be "a wretched, rhyming list of booksellers in London and Westminster, with silly commendations of some, and stupid abuse of others."

who had the pleasure of knowing him, because few have been more successful in their "flashes of merriment," or have more frequently "set the table in a roar;" and there are not many to whom the public have been more obliged for a right use of their professional powers. Mr. Evans (who served his apprenticeship with Mr. Charles Marsh, a bookseller of reputation in Ronnd-court and at Charing cross) had naturally a taste and a love for literature; and, as far as prudence would permit, endeavoured to render his private propensity the source of public advantage and public ornament. Hence he favoured the world with elegant editions of complete collections of the works of some very eminent poets, and engaged in a great number of publications that tended to rescue merit from oblivion, and to do honour to the literary character of his country. Among them we may enumerate editions of Shakspeare's poems, Buckingham's poems, Buckingham's works, *Nicholson's Historical Library*, four volumes of *Old Ballads*, with notes, (of this his son afterwards published an improved edition) cardinal de Retz's *Memoirs*, Savage's works, Goldsmith's works, Prior's works, Rabelais's works, *History of Wales*, and Peck's *Desiderata Curiosa*. To all these works Mr. Evans prefixed dedications written with neatness and elegance, addressed to his literary patrons, Garrick, Sir Joshua Reynolds, Mr. Sheridan, and others. Mr. Evans had his imperfections in common with the rest of mankind: but those who knew him best felt a triumph when they heard any of his failings singled out as the subject of discussion, because it served to bring to their recollection how much his foibles were overbalanced by his many substantial good qualities. The following characteristic lines were written, by way of epitaph, by a friend who intimately knew and consequently esteemed him:

"Cropt by th' untimely hand of Death, here lies,  
If 'Life's a jest,' one who was truly wise;  
If cares were jests, his jests were all his care,  
Till life and jest dispers'd in empty air.  
Then take this sigh, thou poor departed shade!  
For all the pleasures thy life display'd:  
Alas! 'tis all that's now in friendship's power;  
The sad exchange for many a cheerful hour."

1784, July 14. EDMUND BURKE, esq. brought an action against Mr. Woodfall, printer of the *Public Advertiser*, for a libel. Mr. Burke laid the damages at £5000, but the jury gave him only £100.

1784. Valentin Haüy, (brother to the celebrated French mineralogist,) was the first person who turned his attention towards instructing the blind. The plan which he adopted was first suggested to him by his acquaintance with a German lady, the baroness Von Paradis, of Vienna, who visited Paris in the year 1780, and performed on the organ with general applause. Haüy repeatedly visited this ingenious lady, and was much surprised to find in her apartments several contrivances for the instruction of the blind; for instance, embroidered maps and a

pocket printing apparatus, by means of which she corresponded with Von Kempelen, in Vienna, the ingenious inventor of the chess-player and speaking automaton, and with a learned blind gentleman, named Weissenburg, at Mannheim. The philanthropic Haüy compared the high cultivation of these two Germans with the degraded state of the blind in France, where at the annual fair of St. Ovide, an innkeeper had collected ten poor blind persons, attired in a ridiculous manner, and decorated with asses' ears, peacocks' tails, and spectacles without glasses, to perform a burlesque concert. In 1784, Haüy opened an asylum, in Paris, under the patronage of the *société philanthropique*, and since called the "institution royale des jeunes aveugles," or the royal institution for the juvenile blind, in which he set on foot that excellent course of instruction which has since been copied in all quarters of the world. The young inmates were instructed not only in appropriate mechanical employments, as spinning, knitting, making ropes or fringes, and working in pasteboard, but also in music, reading, writing, arithmetic, geography, and the sciences. For this purpose he invented particular means of instruction, resembling those with which he had become acquainted by his intercourse with the two blind Germans. For instruction in reading, he procured raised letters in metal, from which, also, impressions might be taken on paper, the impressions being so deeply sunk in the paper as to leave their marks in strong relief, and which marks were felt by the fingers of the pupils. For writing, he used particular writing-cases, in which a frame, with wires to separate the lines, could be fastened upon the paper. For ciphering, there were moveable figures of metal and ciphering boards, in which the figures could be fixed. For teaching geography, maps were prepared, upon which, mountains, rivers, cities, and the borders of counties, were embroidered in various ways. In the beginning, the philanthropic society paid the expenses of the institution, which was afterwards taken under the protection of the state. The benevolent example thus set by France was followed by the governments of Russia, Prussia, and Austria, by the establishment of similar institutions in their respective capitals. In England the same feeling shewed itself by the school at Liverpool being opened in 1791. The asylum at Edinburgh and the school at Bristol followed in 1793. That of London in 1799, and Norwich in 1805. After this the blind seem to have been nearly forgotten, as it was not till 1828 that the asylum at Glasgow commenced its operation. In 1827 the important art of printing for the blind was first practised in the Edinburgh asylum, where Mr. Gall, the inventor, printed, as the first specimen, the *Gospel of St. John*. In 1833, a school was opened at Belfast, Ireland. In 1835, the Wilberforce memorial school for the blind was opened at York; and at this period there were no less than four others projected,—at London, Manchester, Aberdeen, and Dundee.

1784, Nov. 7. *Died*, THOMAS LOWNDES, who was for twenty-eight years a bookseller in Fleet-street, where he had an extensive circulating library, and was a considerable dealer in dramatical works; and, by persevering industry, acquired a considerable fortune. He was a strong-minded uneducated man; rough in his manners, but of sterling integrity; and is supposed to have been delineated by Miss Burney, in her celebrated novel, *Cecilia*, under the name of *Briggs*.

On a flat stone in the chancel of St. Bride's, is this inscription.

H. S. E.

Thomas Lowndes, Bibliopola,  
hujus parochie ipso anno supra viginti octo,  
Natus pridie cal. Decembris, anno Salutis 1719;  
denatus 7 Novembris, 1784.  
Quis desiderio sit pudor aut modus  
Tam chari capitis!

He was a native of Cheshire, as were three eminent printers of the same name in the sixteenth century.

1784, Dec. 13. *Died*, SAMUEL JOHNSON, one of the brightest luminaries that ever graced the literary hemisphere, a learned critic, lexicographer, and miscellaneous writer, in the seventy-fifth year of his age, to the loss of his intimate associates, and the world, whose unremitting friend he had ever been. He was born at Lichfield, Sept. 7, 1709, where his father was a bookseller. He was educated partly at the free school of Lichfield, and in 1728 was admitted of Pembroke college, Oxford, which he left in 1731, without a degree. On the death of his father he became usher of the school at Bosworth, where he did not continue long. We next find him residing with a printer at Birmingham, where he translated Lobo's *Account of Abyssinia*. In 1735 he married a widow lady of that town, and the same year opened a school at Edial, near Lichfield, but he obtained only three scholars, one of whom was David Garrick. About this time he wrote his tragedy of *Irene*. In 1737 he set out for the metropolis, accompanied by Garrick, where he formed a connexion with Cave, the publisher of the *Gentleman's Magazine*, for which work he continued to write several years. In 1769, he produced his fine eastern tale of *Rasselas*, which is designed to prove that no worldly pleasures are capable of yielding true gratification, and that men must look for this to a future state of existence. In 1762 the king granted him a pension of £300 per annum, without any stipulation with respect to his literary exertions. Johnson had the honour of a conversation with the king in the royal library in 1765, when his majesty asked if he intended to publish any more works? To this he answered, that he thought he had written enough; on which the king said, "so should I too, if you had not written so well." About this time he instituted the literary club, consisting of some of the most celebrated men of the age. In 1773 he went on a tour with Mr. Boswell to the western islands of Scotland, of which journey he shortly after

published an account, which occasioned a difference between him and Macpherson relative to the poems of Ossian. In 1776 the university of Oxford sent him the degree of LL.D. by diploma, which before had been conferred on him by the university of Dublin. After a long illness, during part of which he had fearful apprehensions of death, but at last his mind became calm, composed, and resigned, he died full of that faith which he had so vigorously defended and inculcated by his writings.

When Mr. Thrale built the new library at Streatham, and hung up over his books the portraits of his favourite friends, that of Johnson was last painted and closed the number, upon which Mrs. Thrale\* wrote the following lines:

Gigantic in knowledge, in virtue, in strength,  
Our company closes with Johnson at length;  
So the Greeks from the cavern of Polypheme past,  
When wisest, and greatest, Ulysses came last.  
To his comrades contemptuous, we see him look down,  
On their wit and their worth with a general frown.  
Since from science' proud tree the rich fruit he receives,  
Who could shake the whole trunk while they turn'd a few  
His piety pure, his morality nice— [leaves.  
Protector of virtue, and terror of vice;  
In these features religion's firm champion display'd,  
Shall make infidels fear for a modern crusade.  
While th' inflammable temper, the positive tongue,  
Too conscious of right for endurance of wrong:  
We suffer from Johnson, contented to find,  
That some notice we gain from so noble a mind;  
And pardon our hurts, since so often we've found  
The balm of instruction pour'd into the wound.  
Tis thus for its virtues the chemists extol  
Pure rectified spirit, sublime alcohol;  
From noxious putrescence, preservative pure,  
A cordial in health, in sickness a cure;  
But expos'd to the sun, taking fire at his rays,  
Burns bright to the bottom, and ends in a blaze.

The great peculiarity which most conspicuously characterizes the writings of Johnson is: under the weight of a pompous and over-artificial diction, and struggling with numberless prejudices and foibles, we see, in all of his compositions, the workings of a strong and reflecting mind. It is to be lamented that this great writer and virtuous man laboured under constitutional infirmities of body and mind, which rendered him occasionally gloomy, capricious, and overbearing; though he seems to have been by no means deficient in either abstract or practical benevolence. It is remarkable that, while the works of Johnson are becoming less and less familiar to modern readers, his life, as related by his friend JAMES BOSWELL,† is constantly increasing in popularity. This appears to result from the forced and turgid style of his writing, which is inconsistent with the taste of the pre-

\* Heather Lynch Pizzi, (originally Miss Sallabury, afterwards Mrs. Thrale,) died at Clifton, near Bristol, May 2, 1831. She was the author of the *Three Warnings*, and other poems.

† James Boswell was the son of Alexander Boswell, of Auchinleck, one of the justices of session, and born at Edinburgh, Oct. 29, 1740. He received his education at the school and university of his native city; and early distinguished himself by his love of poetry and the belles lettres. He was an advocate first at the Scottish bar, and upon the death of his father removed to the English bar; but his disposition was rather indolent, and he was fond of pleasure, which were powerful impediments to his progress in the legal profession. By the favour of lord Londale he was chosen recorder of Carlisle. He died May 19, 1796.

sent age, while his colloquial language, as reported by his biographer, has perfect ease and simplicity, with equal, if not superior energy. *The Life of Johnson* is in itself one of the most valuable literary productions of the eighteenth century. It is the most minute and complete account of a human being ever written. Mr. Boswell, who is a native of Scotland, and a man of lively, though not powerful intellect, employed himself for many years in gathering the particulars of his friend's life, in noting down the remarks of the moralist upon men and things, and in arranging and compiling his work, which was published in 1791 in two volumes quarto. Its author has thus, by an employment to which few men would have condescended, and a laborious exertion of powers, in themselves almost trifling, been the means of presenting to the world one of the most instructive and entertaining books in existence.\*—*Chambers*.

1784, Jan. 1. *The Reasoner*, No. 1.

1784, Feb. 3. *The New Spectator*, with the sage opinions of John Bull, No. 1. Probably edited by Mr. Horatio Robson.

1784. *Weekly Amusement*, No. 1.

1784. Minion type first used in newspapers.

1784, April 23. *The Miniature*, No. 1.

1785, Feb. 6. *The Lounger*, a work of exactly the same character as the *Mirror*, by the same writers, and under the same editorship, was commenced at Edinburgh, and continued once a week till the 6th of January, 1787; out of one hundred and one papers to which it extended, fifty seven were the production of H. Mackenzie.

1785, April 6. The idea of laying down fixed charges for different kinds of printing was not suggested for nearly two centuries after the discovery of the art, nor indeed until this year was there any published list of prices; and the merit of forming the basis of the scale for regulating the price of the compositor's labour, certainly belongs to the journeymen, who on April 6, 1785, submitted to the masters eight propositions for this purpose, five of which were agreed to, and three rejected by them, after they had been laid before them upwards of seven months. Previous to this year, the price paid for composition appears to have been regulated by the size of the type employed; upon the principle that the compositor was less liable to interruption when engaged in picking up his thousands of small type, than he was when employed upon large type, where the interruptions for making-up, imposing, correcting, &c. were more frequent. Antecedently to this time, whenever the compositor was paid by the thousand, he appears to have received for english type four-pence; for long primer, three-pence halfpenny; and for brevier, three-pence farthing. In Scotland, at the same period, brevier type was paid two-pence halfpenny, and english type four-pence per thousand.

Regarding Scotland, it appears, that about the year 1763, a dispute arose in the office of Messrs. Murray and Cochrane, printers in Edinburgh, about the price of composition, when William Smellie, then engaged as a reader, devised a scale of prices for composition.

The first regular and acknowledged compositors' scale for the payment of piece-work is by one writer stated to have been agreed to at a general meeting of masters, who assembled in the month of November 1785, to consider eight propositions submitted to them in a circular from the whole body of compositors, with a view to advance the price of labour. That part of the trade, however, who were most materially interested in the adjustment of the price of labour, namely, the compositors, do not appear to have been present when these propositions were discussed, or to have been permitted to offer any arguments in their favour; but the masters assumed the right to set a price upon the labour of others, although a short time afterwards they repelled with indignation an attempt of the booksellers to interfere with their decisions and profits. We are informed by another writer that the scale was not formed at a general meeting of masters, but by a committee, who, "after much labour and considerable discussion," agreed to a scale of prices, which, although it has at different times been amplified and altered to suit the various circumstances of the times, and the different kinds of work as they occurred, has served as the basis of every other scale up to the present time. It is not essential, at this period, to know whether the scale was agreed to by a general meeting of masters or by a committee.

1785. The agency for newspapers commenced in this year by Mr. William Taylor, in London. Mr. Newton, of Warwick-square, was at first a partner with Mr. Taylor.

1785. The patent of king's printer for Scotland renewed for forty-one years from the expiration of the preceding grant in the year 1798. This grant will consequently cease in 1839.

1785, April 14. *Died*, WILLIAM WHITEHEAD, poet laureat, a man of amiable manners and intelligent conversation. He was the son of a baker, and born in the parish of St. Botolph in Cambridge, where, after being at Winchester, he entered at Clare hall, and in 1743 took the degree of M. A. intending to enter into orders, but was prevented by adverse circumstances, and became tutor in the family of the earl of Jersey. In 1754 he published a volume of poems, which was well received, and on the death of Cibber, was appointed laureat. From the days of Rowe, if not from an earlier period, the regular duty of the poet laureat had been to produce an ode for the new year and one for the king's birth-day, both of which, being set to music by the master of the king's band, were sung before the court, and likewise published in the newspapers. Throughout the whole term of the eighteenth century, when there was little genuine poetry of any kind, the productions of the laureat were generally a mere tissue of tame and senseless verses; but

\* Miss Lucy Porter once told Dr. Johnson that she should like sometimes to purchase new publications, and asked him if she might trust to the reviewers. "Infinitely, my dear Lucy," he replied, "provided you buy what they abuse, and never any thing they praise."

some allowance ought in fairness to be made for the difficulty which a man even of superior genius must have experienced, in, year after year, forcing from his brain ideas approaching a poetical character, respecting subjects which in reality have nothing poetical about them. Indeed it must be acknowledged, that the absurdity does not lie so much in the odes, as in the custom of exacting them. In this point of view, Whitehead himself seems to have regarded the office, for in a *Pathetic Apology for all Laureats, past, present, and to come*, which appeared in the edition of his works published after his death, he almost redeems the serious nonsense of eight-and-twenty years, by the humour with which he ridicules the envious poetasters who were in the habit of publishing rival odes.

*His muse, obliged by sack and pension,  
Without a subject or invention,  
Must certain words in order set,  
As innocent as a gazette;  
Must some half-meaning half-disguise,  
And utter neither truth nor lies.  
But why will you, ye volunteers,  
In nonsense tease us with your jeers,  
Who might with dulness and her crew  
Securely slumber? Why will you  
Sport your dim orbs amidst her fogs?  
You're not obliged—ye silly dogs!*

Mr. Whitehead was the author of the *Roman Father*, *Fatal Constancy*, and *Cruela*, tragedies; the *School for Lovers*, a comedy; and a *Trip to Scotland*, a farce. He was succeeded by the rev. Thomas Warton, author of the *History of English Poetry*, whose lyrical genius might have been expected, if such had been at all possible, to lend a grace to even this dreary task.

1785, *Died*, JOACHIM IBARRA, printer to the king of Spain, who carried the typographic art to a degree of perfection which had been unknown in that country. His presses produced fine editions of the bible, the *Mazarabic Misal*, Marian's *History of Spain*, *Don Quixote*, and *Grabriel's* Spanish translation of *Sallust*. He invented a superior kind of printing ink. He was a native of Saragossa.

1785, *May 5. Died*, THOMAS DAVIES, a bookseller, in Russel-street, Covent-garden, London. Mr. Davies was a man of uncommon strength of mind, who prided himself on being through life a companion for his superiors. He was born in or about the year 1712, and educated at the university of Edinburgh, and became, as Dr. Johnson used to say of him, learned enough for a clergyman. He imbibed very early a taste for theatrical pursuits; and in 1736, his name appears in the bills of the Haymarket theatre. He next appeared at York, where he married Miss Yarrow, an actress, whose beauty was not more remarkable than her private character was ever unsullied and irreproachable. He also performed at Edinburgh, where he appears to have been the manager of the theatre. He then went to Dublin, and, with his wife, performed several characters. In 1753, he was with his wife at Drury-lane, where they remained several years in good estimation with the town. In 1762, a few years before he finally quitted the theatre,

he resumed his former occupation of a bookseller, in Russel-street, and became the author, compiler, and publisher, of many useful works; but not meeting with that success which his attention and abilities merited, Mr. Davies, in 1778, was under the disagreeable necessity of submitting to become a bankrupt; when such was the regard entertained for him by his friends, that they readily consented to his re-establishment; and none, as he said himself, were more active to serve him, than those who had suffered most by his misfortunes. But all their efforts might possibly have been fruitless, if his great and good friend Dr. Johnson had not exerted all his interest in his behalf. In 1780, by a well-timed publication, the *Life of Garrick*, two volumes, which passed through four editions, he not only acquired considerable fame, but realized money. Mr. Davies was the writer of essays without number, in prose and verse, in the *St. James's Chronicle*, and some other of the public newspapers. At his death he was aged about seventy-three years, and was buried by his own desire, in the vault of St. Paul, Covent Garden; and the following lines were written on the occasion:

*Here lies the author, actor, Thomas Davies;  
Living he shone a very rare man;  
The scenes he played life's audience must commend,  
He honour'd Garrick—Johnson was his friend.*

Mrs. Davies, his widow, died Feb. 9, 1801.

1785. *The Political Herald and Review; or a survey of Domestic and Foreign Politics, and a critical account of Political and Historical Publications*. This work was edited by Dr. Gilbert Stuart, late joint proprietor and editor of the *Edinburgh Magazine*, which extended we believe only to two volumes, which are now rather scarce.

1785. *The Holy Bible*, with the various readings and parallel texts, by Bishop Wilson, 3 vols.—Bath. This Bible is most beautifully printed on vellum paper; the verses are marked on the sides, not to interrupt the narrative; and it is in every respect the completest English edition for study, or the library.

1785, *June 28. Died*, JOHN RIVINGTON, printer, in St. John's-square, London.

1785, *July 2. Died*, JOHN WILKIE, bookseller, in St. Paul's church-yard, and treasurer of the company of stationers. He was much respected for his pleasant and engaging manners. Mr. Wilkie left two sons, both in the trade. The eldest, Mr. George Wilkie, was in partnership with Mr. John Robinson, and carried on a very extensive wholesale trade in Paternoster-row. Mr. Thos. Wilkie, the younger son, was settled at Salisbury, of which city he had the honour of being chief magistrate.

1785, *July 9. Died*, WILLIAM STRAHAN, an eminent printer, and many years printer to his majesty. The life of William Strahan affords another instance of the difficulties which may be overcome by perseverance and integrity—and without any usurpation of the rights of others, what can be achieved by a man's own efforts.

This worthy typographer was born at Edinburgh, in April, 1715. His father, who had a small appointment in the customs, gave his son the education which every lad of decent rank then received in a country where the avenues to learning were easy, and open to men of the most moderate circumstances. After having passed through the tuition of a grammar-school, he was put apprentice to a printer; and, when a very young man, removed to a wider sphere, and went to follow his trade in London, where he appears to have worked for some time as a journeyman. He married, early in life, a sister of Mr. James Elphinstone,\* a schoolmaster of some reputation, and translator of *Martial*. Sober, diligent, and attentive, while his emoluments were very scanty, he contrived to live rather within than beyond his income; and though he married early, and without such a provision as prudence might have looked for in the establishment of a family, he continued to thrive, and to better his circumstances. This he would often mention as an encouragement to early matrimony, and used to say, that he never had a child born that providence did not send some increase of income to provide for the increase of his household. With sufficient vigour of mind, he had that happy flow of animal spirits that is not easily discouraged by unpromising appearances. By him who can look with firmness upon difficulties, their conquest is already half achieved; but the man on whose hearts and spirits they lie heavy, will scarcely be able to bear up against their pressure. The forecast of timid, or the disgust of too delicate minds, are very unfortunate attendants for men of business, who, to be successful, must often push improbabilities, and bear with mortifications. His abilities in his profession, accompanied with perfect integrity and unabating diligence, enabled him, after the first difficulties were overcome, to get on with rapid success. And he was one of the most flourishing men in the trade, when, in the year 1770, he purchased a share of the patent for king's printer of Mr. Eyre, with whom he maintained the most cordial intimacy during all the rest of his life. Besides the emoluments arising from this appointment, as well as from a very extensive private business, he now drew largely from a field which required some degree of speculative sagacity to cultivate; it was that great literary property which he acquired by purchasing the copyrights of some of the most celebrated authors of the time. In this his liberality kept equal pace with his prudence, and in some cases went perhaps rather beyond it. Never had such rewards been given to the labours of literary men, as now were received from him and his associates in those purchases of copyrights from authors.

Having now attained the first great object of business—wealth, Mr. Strahan looked with a very allowable ambition on the stations of political rank and eminence. Politics had long occupied his active mind, which he had for many years pursued as his favourite amusement, by corresponding on that subject with some of the first characters of the age. Mr. Strahan's queries to Dr. Franklin, in the year 1769, respecting the discontents of the Americans, published in the *London Chronicle* of 28th July, 1778, show the just conception he entertained of the important consequences of that dispute, and his anxiety, as a good subject, to investigate, at that early period, the proper means by which their grievances might be removed, and a permanent harmony restored between the two countries. In the year 1775, he was elected a member of parliament for the borough of Malmsbury, in Wiltshire, with a very illustrious colleague, the hon. C. J. Fox; and in the succeeding parliament, for Wotton Bassett, in the same county. He was a steady supporter of that party who were turned out of administration in spring, 1784, and lost his seat in the house of commons by the dissolution of parliament, with which that change was followed; a situation which he did not show any desire to resume on the return of the new parliament. Of riches acquired by industry, the disposal is often ruled by caprice, as if the owners wished to show their uncontrolled power over that wealth which their own exertions had attained, by a whimsical allotment of it after their death. In this, as in other particulars, Mr. Strahan's discretion and good sense were apparent: he bequeathed his fortune in the most rational manner; and of that portion which was not left to his wife and children, the distribution was equally prudent and benevolent. His principal study seems to have been to mitigate the affliction of those who were more immediately dependent on his bounty; and to not a few who were under this description, who would otherwise have severely felt the drying up of so rich a fountain of benevolence, he gave liberal annuities for their lives; and, after the example of his old friend and neighbour Mr. Bowyer, bequeathed £1000 to the company of stationers for charitable purposes.\* He had been master of the company in 1774. Endued with much natural sagacity, and an attentive observation of life, he owed his rise to that station of opulence and respect which he attained, rather to his own talents and exertion, than to any accidental occurrence of favourable or fortunate circumstances. His mind, though not deeply tinctured with learning, was not uninformed by letters.

\* James Elphinstone was born at Edinburgh, Nov. 25, 1731, and died at Hammer-smith, Oct. 8, 1809; Mr. Strahan had left him £100 a-year, £100 in ready money, and twenty guineas for mourning. Mrs. Strahan survived her husband about a month, and by her will left her brother £100 a-year more. It is said of Mr. Elphinstone, that a more social and affectionate heart was never bestowed upon man.

\* He gave to the company of stationers £1000 upon trust, half the interest of which to be divided yearly in the week after Christmas day, to five poor journeyman printers, natives of England and Wales, being freemen of the stationers' company; the other half to five poor journeyman printers, natives of Scotland, without regard to their being freemen or non-freemen of the company of stationers; among many other generous legacies Mr. Strahan gave also £100 to the poor of the parish of St. Bride's, in which he had many years resided.

Letter-writing was one of his favourite amusements, and among his correspondents were men of such eminence and talents as well repaid his endeavours to entertain them. One of these was Dr. Franklin, who had been his fellow-workman in a printing-house in London, whose friend-ship and correspondence he continued to enjoy, notwithstanding the difference of their sentiments in political matters, which often afforded pleasantries, but never mixed any thing acrimonious in their letters. One of the latest he received from his illustrious and venerable friend, contained a humorous allegory of the state of politics in Britain, drawn from the profession of printing, of which, though the doctor had quitted the exercise, he had not forgotten the terms.\* There are stations of acquired greatness which make men proud to recal the lowliness of that from which they rose. The native eminence of Franklin's mind was above concealing the humbleness of his origin. Those only who possess no intrinsic elevation are afraid to sully the honours to which accident has raised them, by the recollection of that obscurity whence they sprung. Of this recollection Mr. Strahan was rather proud than ashamed; and many of those who were disposed to censure him, blame it as a kind of ostentation in which he was weak enough to indulge. But we think 'tis to consider too curiously, to consider it so." There is a kind of reputation which we may laudably desire, and justly enjoy; and he who is sincere enough to forego the pride of ancestry and of birth, may, without much imputation of vanity, assume the merit of his own elevation. In that elevation he neither triumphed over the inferiority of those he had left below him, nor forgot the equality in which they had formerly stood. No one was more mindful of, or more solicitous to

oblige the acquaintance or companions of his early days. The advice which his experience, or the assistance which his purse could afford, he was ready to communicate; and at his table in London every Scotsman found an easy introduction, and every old acquaintance a cordial welcome. This was not merely a virtue of hospitality, or a duty of benevolence with him; he felt it warmly as a sentiment: and that paper in the *Mirror* (the Letter from London, in the 94th number) was a genuine picture of his feelings, on the recollection of those scenes in which his youth had been spent, and of those companions with which it had been associated. If among the middling and busy ranks of mankind this brief sketch can afford an encouragement to the industry of those who are beginning to climb into life, or furnish a lesson of moderation to those who have attained its height; if to the first it may recommend honest industry and sober diligence; if to the latter it may suggest the ties of ancient fellowship and early connexion, which the pride of wealth or of station loses as much dignity as it foregoes satisfaction by refusing to acknowledge; if it shall cheer one hour of despondency or discontent to the young; if it shall save one frown of disdain or of refusal to the unfortunate; the higher and more refined class will forgive the familiarity of the example, and consider, that it is not from the biography of heroes or of statesmen that instances can be drawn to prompt the conduct of the bulk of mankind, or to excite the useful though less splendid virtues of private and domestic life.

The following lines came from the heart of one who both loved and revered him :

If industry and knowledge of mankind,  
Could prove that fortune is not always blind;  
If wealth acquired could prompt a generous heart,  
To feel new joys its blessings to impart;  
Lament with me such worth should be withdrawn,  
And all who knew his worth must weep for STRAHAN !  
In business, which became his pleasure keen,  
Tho' not enough the tradesman to be seen;  
Social and frank, a zealous friendly guide,  
With safe advice, and ready purse beside,  
And far above the littleness of pride:  
Pride that, exacting homage, meets, in place  
Of true respect, contempt beneath grimace.  
A breast thus warm could not with coldness bear  
Those base returns the good must sometimes share;  
Sincere himself, his feelings stout excus'd,  
Never by one man to be twice abused:  
For nature alters not; the leopard's skin  
Is stained without, as hearts are stained within;  
Numbers whose private sorrows be relieved,  
Have felt a loss, alas ! but ill conceived;  
He's gone ! and those who miss him, never will  
Find equal excellence his place to fill.  
Thy darts, oh Death, that fly so thick around,  
In such a victim many others wound.

Bernard's Inn.

J. NOORTHODGE.

\* " But let us leave these serious reflections, and converse with our usual pleasantries. I remember your observing once to me in the house of commons, that as two journey-men printers within your knowledge, had met with such success in the world as ourselves. You were then at the head of your profession, and soon afterwards became a member of parliament. I was an agent for a few provinces, and now act for them all. But we have risen by different modes, I, as a republican printer, always liked a form well *plained down*; being adverse to those *overbearing* letters that held their heads so high as to hinder their neighbours from appearing. You, as a monarchist, chose to work upon crown paper, and found it profitable; whilst I worked upon *pro patria* (often indeed called *foolscap*) with no less advantage. Both our *heaps* held out very well, and we seem likely to make a pretty good day's work of it. With regard to public affairs (to continue in the same style) it seems to me that the compositors in your chapel do *not* cast off their copy well, nor perfectly understand imposing; their forms are continually pestered by the *outs* and *doubles* that are not easy to be corrected. And I think they were wrong in laying aside some *faces*, and particularly certain *head-pieces* that would have been both useful and ornamental. But, courage! The business may still flourish with good management; and the master become as rich as any of the company."

Passy, near Paris, Aug. 19, 1784. B. FRANKLIN.  
During nine years and a half, from the 7th January, 1777, Passy was the residence of Dr. Franklin; who, possessing a printing-press in his own house, used to divert himself from time to time by composing and printing for the amusement of his intimate friends several light essays and *jeux d'esprit*, such as the *Supplement to the Boston Independent Chronicle*, and the *Letter from the pirate Paul Jones*, described in the "Memoirs of B. Franklin, &c." &c. 1818. Franklin quitted Passy in July, 1785.

Mr. Strahan had five children; three sons and two daughters: William, the eldest, carried on the profession of a printer for some years on Snow hill; but died in his father's life-time, April 19, 1781, and his business was taken by Mr. Spilbury.—George, of university college, Oxford, M. A. 1771, and B. and D. D. 1807, was prebendary of Rochester, and upwards of fifty years vicar of St. Mary's, Islington.—Andrew, who, in due time succeeded his father. The daughters

were respectably married. In the court-room of the stationers' company there is a portrait (by sir William Beachy) of "William Strahan, esq. master of the company, 1774."

1785, Aug. 6. THE REV. DR. SHIPLEY, dean of St. Asaph, was tried at Shrewsbury, for a libel, in publishing sir William Jones's *Dialogue on Government*; when the jury returned the following verdict, *guilty of publishing, but whether a libel or not, the jury do not find*. Mr. afterwards lord Erskine, was counsel for Dr. Shipley, and exerted himself with such eloquence that it had a most powerful effect on the verdict of the jury.

1785. Died, THOMAS COTTERELL, a letter-founder, of whom Rowe Mores\* says, "Mr. Thomas Cotterell is in order a *primo proximus*. He was in the late Mr. Caslon's house, an apprentice to dressing, but not to cutting. This part he learned, as Mr. Moxon terms it, 'of his own genuine inclination.' He began in the year 1757, with a fount of English roman;" [and afterwards cut a fount of Norman, intended (but not used) for Domesday-book]. "He lives in Nevil's-court, in Fetter-lane; obliging, good-natured, and friendly; rejecting nothing because it is out of the common way, and is expeditious in his performances." "Mr. Cotterell died, I am sorry to add," says Mr. Nicholls, "not in affluent circumstances, though to his profession of a letter-founder were superadded that of a doctor for the tooth-ache, which he cured by burning the ear; and had also the honour of serving in the troop of his majesty's life-guards." From the time that Cotterell was left to himself by Jackson, he continued to increase his founts as low as *brevier*. But he also cut some founts of dimensions which till then were unknown; and which Rowe Mores calls "proscription, or posting letter, of great bulk and dimensions, as high as to the measure of 12 lines of pica!"

1785, Sept. 29. Died, WILLIAM BAKER, a learned printer of Ingram-court, Fenchurch-street, London. He was the son of William Baker, (a man of amiable character and manners, of great classical and mathematical learning, and more than forty years master of an academy at Reading,) and was born in 1742. Being from his infancy of a studious turn, he passed so much of his time in his father's library as to injure

his health. His father, however, intended to have sent him to the university; but a disappointment in a patron who had promised to support him, induced him to place him as an apprentice with Mr. Kippax, a printer, in Culm-street, London, where, while he diligently attended to business, he employed his leisure hours in study, and applied what money he could earn to the purchase of the best editions of the classics, which collection, at his death, was purchased by Dr. Lettsom. This constant application, however, to business and study, again endangered his health, but by the aid of country air and medicine, he recovered; and on the death of Mr. Kippax he succeeded to his business, and removed afterwards to Ingram-court, where he had for his partner Mr. John William Galabin, afterwards principal bridge-master of the city of London. Among his acquaintance were some of great eminence in letters; Dr. Goldsmith, Dr. Edmund Barker, the rev. James Merrick, Hugh Farmer, Cæsar De Missy, and others. An elegant correspondence between him and Mr. Robinson, author of the *Indices Tres*, printed at Oxford, 1772, and some letters of inquiry into difficulties in the Greek language, which still exist, are proofs of his great erudition, and the opinion entertained of him by some of the first scholars. Such was his modesty, that many amongst his oldest and most familiar acquaintance were ignorant of his learning; and where learning was discussed, his opinion could never be known without an absolute appeal to his judgment. He left behind him some manuscript remarks on the abuse of grammatical propriety in the English language in common conversation. He wrote also a few minor poems, which appeared in the magazines, and is said to have assisted some of his clerical friends with sermons of his composition. In the Greek, Latin, French, and Italian languages, he was critically skilled, and had some knowledge of the Hebrew. He was interred in the vault of St. Diones Backchurch, Fenchurch-street, and the following elegant Latin epitaph to his memory was placed on the tomb of his family in the church-yard of St. Mary, Reading, by his brother John:

M. S.

Parentum, fratrumque duorum,  
quorum senior fuit Gulielmus Baker,  
Vir, litterarum studiis adæd eruditus,  
Græcorum præcipue Latinarumque,  
ut arti, quam sedulus excoluit Londini,  
(Ubi in templo Dionysio dicato  
Ossa ejus sepulta sunt)  
Typographicæ ornamēto;  
ac familiaribus,  
ob benevolentiam animi, morum comitatem, et modestiam,  
delicis et desiderio fuerit.  
Omentum ejus auctum usque ad duodecim pondo et ultra,  
Litterarum, auxilio eruditissimæ eximie;  
Sororemque, et fratres, et patrem senem,  
dulcibus illius alloquiis;  
ipseque, mortem oculo immotum intrinsecum, vitâ  
privavit, die Septembris 29, 1785, æt. 44.  
E filius, Johannes, hoc marmor P. C.

1785, Oct. 17. Died, WALTER SHROPSHIRE; formerly an eminent bookseller in Bond-street, London. He died at Hendon.

\* Edward Rowe Mores was born at Tunstall, in Kent, Jan. 13, 1736, where his father was rector near thirty years, and was educated at Merchant Taylors' school, and Queen's college, Oxford. He published an ancient fragment, entitled *Nomina et insignia Gentilitia Nobilium Equitumque sub Eoardo primo Rege Militantium*, 4to. In 1755 he was chosen a fellow of the society of antiquaries, and he projected the equitable society for insurance on lives and survivorship by annuities. He was the author of the *History and Antiquities of Tunstall, in Kent*, and a *Dissertation on Foundries and Founderies*, of which no more than eighty copies were printed: it will always be a typographical curiosity. Mr. John Nichols bought the whole impression, at the sale of Mr. Mores' curiosities, and after subjoining a small appendix, gave it to the public. Mr. Mores was a most indefatigable collector, and possessed great application in the early part of his life, but in the latter part gave himself up to habits of negligence and dissipation; which brought him to his end by mortification, in the forty-ninth year of his age, at his house at Low Layton, Nov. 28, 1775.—See Nichols's *Literary Anecdotes*, vol. v. pp. 389-404.

1785, Nov. 8. *The North Country Journal; or the Impartial Intelligencer*. Printed and published in Newcastle-upon-Tyne, by Leonard Umfreville. Small folio.

1785, Dec. 5. On this day an important cause was tried before the court of session in Scotland, respecting literary property. The proprietors of the *Encyclopædia Britannica* had printed a great part of Gilbert Stuart's history in their work; the court determined, they were subject to the penalty of the acts.

1785. *The Observer*, by Mr. Richard Cumberland. These essays may be classed under the appellations of literary, critical, and narrative; humorous, moral, and religious. They were printed at Tunbridge Wells, and published in London by Charles Dilly. The *Observer* had extended to six volumes in 1798, and in 1803, it was incorporated with the *British Essayist*; and in 1808, it was reprinted in 3 vols. 12mo.

1786, Feb. 20. JOHN ALMON, proprietor and printer of the *General Advertiser*,\* was tried in Westminster hall, before Lord Mansfield, for a libel against the right hon. William Pitt, chancellor of the exchequer, charging the ministry with stock jobbing, &c. In his new situation as printer of the *General Advertiser*, he was again the object of the enmity of the court. It was singular Mr. Pitt should be tempted to seize so trifling an occasion to commence a prosecution against the friend of his father,† for printing a paragraph, which, it is more than probable, any other minister would have despised and forgot. The damages were laid at £10,000, and the jury gave £150. This prosecution was commenced in the star chamber mode, by information *ex officio*. There is a circumstance which shows that the ministers took more care and caution in the institution of this prosecution than they usually observe in the commencement of more important measures. This was, before the defendant was served with any notice, they retained

the flower of the bar against him. No less than six of the most eminent council were retained to support this prosecution. This was being exceedingly illiberal, and leaves us scarcely any room to doubt of the motives in which this prosecution originated. Mr. Almon was exceedingly deceived in the steps of this prosecution by his attorney, who repeatedly assured him, that the trial would not come on. Whether it was sheer ignorance, or neglect, or any other cause, is not now worth ascertaining. It is certain, that when the trial came on, it was discovered that even the ordinary attention had not been paid. However, as a spirited defence was deprecated, very little was said; and the naked fact of selling the paper at the printer's house, was all the evidence upon which the jury formed their verdict, which was for the crown. The *confidential junto* had now full scope for their vengeance; and that they were determined to gratify all their former resentment, Mr. Almon had information in streams from all quarters; for they were so elated by the success of their manœuvre in having ensnared him, that they made the expected punishment the subject of their conversations at table, at the opera, at Ranelagh, and other places. Some days after the trial, Mr. Almon happened to meet in the street (between Clare market and Lincoln's Inn) one of the principal law officers of the crown, who, in the course of the conversation that passed between them, assured Mr. Almon, that he should press for the severest punishment, and in particular, for the pillory. The French poet, Corneille, says,

C'est le crime qui fait la honte, et non pas l'échafaud.

His political sins were too many to be forgiven; and the junto too much embittered not to embrace the first opportunity for revenge. In this situation he was obliged to dispose of his paper, and printing materials, with all possible expedition. Unfortunately for him, the person who contracted for them, and who got possession, proved insolvent, and he did not receive for his property, which had cost him several thousand pounds, an eighth part of the value. Under the advice of many of his friends, and even of some of the learned gentlemen, who had been returned against him, he went to France; and there, as Mr. Wilkes says, "met with that protection which an innocent man had a right to expect, but could not find in his own country." The selection of a paltry paragraph, written, as it seems, for the purpose of prosecution,\* and prosecuting him only for it; amounts to almost

\* John Almon, bookseller, in Piccadilly, whom we have before noticed, retired from London in June, 1781, and in the following August he had the misfortune to lose his wife. In the month of September, 1784, he married the widow of W. Parker, printer of the *General Advertiser*, and returned once more to London and to business, taking up his residence in Fleet-street. He left ease and affluence to encounter fatigue and rescue indigence.

† William Pitt, earl of Chatham, was the son of Richard Pitt, esq. of Boconock, in Cornwall, was born Nov. 15, 1706, and died May 11, 1778. After receiving a liberal education, he obtained a cornetcy of horse, and soon after that a seat in the house of commons, where he greatly distinguished himself by his eloquence in opposition to what he considered as the arbitrary and indefensible measures of sir Robert Walpole. To this opposition he was indebted, in 1745, for a legacy of £10,000, by the duchess dowager of Marlborough, "on account," as the will expresses it, "of his merit in the noble defence he made for the support of the laws of England, and to prevent the ruin of his country." His patriotic and formidable opposition to the introduction of general warrants will be remembered to the latest posterity, as will his eloquent, though unsuccessful, deprecation of the measures adopted in 1765, which finally ended in the loss of our American colonies, and that of relieving Protestant dissenting ministers from the hardship of being required to subscribe to the doctrinal articles of the church of England. His remains were interred with great funeral pomp in the north cross of Westminster-abbey; and on the spot is a stately monument.

\* A few years ago a rascally attorney sent to the different newspapers an advertisement of a watch being lost; and offered a reward for the recovery, in certain words which had been proscribed by an old act of parliament. He then brought actions against the printers for the penalty; and thereby levied a considerable booty; as they were all glad to compound the matter rather than go into a court of law, where their conduct seldom meets with a favourable construction. The printer of a newspaper cannot everlastingly stand at the side of his press. His health and constitution would in a few years be destroyed by it. He therefore must at intervals trust to servants.—Designing men watch these opportunities.

a demonstration by circumstances, that it was the man and not the crime, that was the object. These prosecutions for libels most commonly, if not always, originate in the resentments of party. They are not commenced for the satisfaction of justice, but for the gratification of revenge. When the delinquents, who are generally the printers, come to be tried, the juries are told they are judges of only the fact of printing or publishing; that whether the matter complained of be a libel or not, is a question of law; and all the epithets, which in other cases constitute the crime, such as intentionally, maliciously, wickedly, &c. are in this case inferences of law, with which they are to have no concern, and upon all which they are incompetent to decide. Any man of the most ordinary understanding, must perceive, that this question of law is already decided, by bringing the man to trial. It would be absurd, and reflect infinite disgrace upon our boasted laws, to say that he was brought to trial for innocently committing an innocent act. The criminality has been determined: and the jury are called only to decide the identity. This is called law. And a man is sentenced to endure a long imprisonment, and to pay a heavy fine, and perhaps to the ignominy of the pillory, for having printed some silly paragraph, which no man would have remembered next day. And the printer is also sometimes put under an interdiction of the exercise of his trade, by being further sentenced to find sureties for his good behaviour, in a sum perhaps exceeding the value of his property. And if he complains, he is told there is no hardship in the case; for he is to take care to print only what is lawful, and then his sureties will not be forfeited. But how is he to distinguish what is lawful, from what is unlawful? A special jury of gentlemen are told, that they are not competent to decide upon any paper, whether it is a libel or not, that being a question of law; yet the culprit, who is commonly a man of inferior rank, as well as education, must, at his peril, be competent to understand what a special jury cannot.\* And this is called law. The law of libel changes like the seasons of the year. The *North Briton* was a horrid libel during one administration, and a very constitutional paper during the time of another. The writer of the *Letter to the People of England*,† was punished by one administration, and rewarded with a pension by another. Junius's letter was a libel in Westminster hall—it was no libel in the city of London.

1786, Feb. 21. *Died*, JOHN HAWES, printer

in Johnson's-court, Fleet-street, London, who, for his amiable disposition, and inflexible integrity, will long be remembered by his friends.

1786, March 16. JOHN WALTER, printer of the *Universal Register*, convicted of a libel upon lord Loughborough, and sentenced to pay a fine of £50, at Guildhall, London.

1786, April 4. *Died*, WELLS EGGLEHAM, a worthy journeyman printer, a character not unknown in the regions of politics, porter, and tobacco, in London. He was bred to the profession, and worked as a compositor, till disabled by repeated attacks of a formidable gout. For some years he was employed in the service of the elder Mr. Woodfall, and his name appeared for some time as the ostensible publisher of the *Public Advertiser*. Having from nature a remarkable squint, to obviate the reflections of others, he assumed the name of *Winkey*, and published a little volume of humorous poetry, in 1789, under the title of *Winkey's Whims*. He was one of the founders of the honourable society of *Johns*. In 1779 he was the author of a *Short Sketch of English Grammar*, 8vo. A great variety of his fugitive pieces appeared in the public prints. The latter part of his life was principally supported by the profits of a very small snuff and tobacco shop, by collecting of paragraphs for the *Public Advertiser*, and by officiating occasionally as an amanuensis to Mr. John Nichols. He died overwhelmed with age, infirmities, and poverty, leaving an aged widow, who obtained a small pension from the company of stationers, and survived till 1811.

1786, May 3. *Died*, ROBERT COLLINS, bookseller, Paternoster row; of the firm of Hawes, Clarke, and Collins.

1786. *Died*, JOHN GASPARD, a bookseller at Zurich in Switzerland. He published some esteemed works on entomology. His father was the celebrated artist John Gaspard Fuessli who died in 1782; and who wrote a *History of the Artists of Switzerland*, which is a good work.

1786, July 21. *Died*, CHARLES BATHURST, successor to Benjamin Motte, and many years an eminent bookseller in Fleet-street, opposite St. Dunstan's church.

1786. *Died*, JOHN FARMER, a worthy and industrious compositor. He is particularly mentioned in the will of the elder Mr. Bowyer, with whom he had "long wrought," as that worthy old gentleman expresses it. He continued to work in the office of his old master till his death; before which he had the comfort of having his name enrolled on the list of Mr. Bowyer's annuitants, in 1783.

1786, Sept. 12. GRIFFITH JONES, printer and editor; he was born in 1722, and served his apprenticeship with Mr. Bowyer. Of this ingenious man, slighter notice has been taken by the biographers of the time than his virtues and talents certainly merited. He was many years editor of the *London Chronicle*, the *Daily Advertiser*, and the *Public Ledger*; in the *Literary Magazine* with Johnson, and in the *British Magazine* with Smollett and Goldsmith, his

\* *An Essay on the Liberty of the Press, chiefly as it respects Personal Slender*. By Dr. Hayter, some time lord bishop of Norwich, and afterwards lord bishop of London. This very excellent essay on the most important rights of mankind, is printed in the *Life of John Aiken*, 1790, and we are sorry that its length only hinders us from inserting it in this work. Dr. Hayter justly observes, that "without the free use of the press, any characters or designs, unfavourable to liberty, cannot be publicly known, till it is too late to oppose them. Hence the greatest enemies to the press are those characters which are notorious for entertaining those designs."

† Dr. Shebbeare, see page 702 *ante*. He died 1798.

anonymous labours were also associated. The native goodness of his heart endeared him to a numerous and respectable literary acquaintance, among whom he reckoned John Newbery, bookseller, Woty, Goldsmith, and Johnson; to the latter of whom he was for several years a near neighbour in Bolt-court. His modesty shrunk from public attention, but his labours were very frequently directed to the improvement of the younger and more untutored classes of mankind;

"To rear the tender thought,  
And teach the young idea how to shoot."

His translations from the French were very numerous; but as he rarely, if ever, put his name to the productions of his pen, they cannot now be traced. One little publication, entitled *Great Events from Little Causes*, was his composition, and met with a rapid and extensive sale. It is not, perhaps, generally known, that to Griffith Jones, and a brother of his, Giles Jones, in conjunction with John Newbery, the public are indebted for the origin of those numerous and popular little books for the amusement and instruction of children, which have been ever since received with universal approbation. The Lilliputian histories of *Goody Two-Shoes*, *Giles Gingerbread*, *Tommy Trip*, &c. &c. are remarkable proofs of the benevolent minds of the projectors of this plan of instruction, and respectable instances of the accommodation of superior talents to the feeble intellects of infantine felicity. To Stephen Jones, son of the above Griffith Jones, the public are indebted for the new and improved edition of the *Biographia Dramatica*, 1812, and for many other valuable publications.

1786, Sept. 29. *Died*, THOMAS FISHER, the first printer who established a regular printing-office in the city of Rochester, who for many years exhibited a pattern of extreme assiduity in business, and became an alderman of that corporation. At the time of his death he was preparing a new edition of the *History of Rochester*, of which Mr. Shrubsole, of Sheerness, was the original compiler. But though Mr. Fisher was not the actual editor of that work, it is certain that much of its success was due to the zeal with which he solicited and procured communications for it. He was the father of Mr. Thos. Fisher, of the India house, the very excellent antiquarian draftsman, whose deciphering of the Stratford records is sufficient to immortalize his name.

1786, Nov. 6. *The Microcosm*. These papers were principally written by four young gentlemen of Eton college; namely John Smith, George Canning, Robert Smith, and John Frere, assuming the feigned name and character of Gregory Griffin; and the work was continued weekly, to July 30, 1787, with the 40th number.

1786, Nov. 7. *The Pharos*.<sup>\*</sup> These essays were the production of a lady, the author of *Constance*, a novel, and were published twice

a-week, every Tuesday and Saturday, for about half a-year, and concluded with the 50th number, April 28, 1787, forming two volumes 12mo.

1786. *Died*, MATTHEW JENOUR, the well known printer of the *Daily Advertiser*, and master of the stationers' company in 1769. His younger brother and partner, Joshua Jenour, master of the company in 1772, died 1774. Matthew Jenour, the father of the above gentleman, was, in 1724, printer of the *Flying Post*, and afterwards the first establisher of the *Daily Advertiser*, a paper which for many years stood at the head of all the diurnal publications, and the property in which was considered to be as permanent as a freehold estate (shares having been frequently sold by public auction as regularly as those of the new river company.) It received its death-blow Feb. 8, 1794, by the publication of the publican's *Morning Advertiser*. The last number of the *Daily Advertiser*, however, was published Sept. 8, 1798; so that it lingered about four years, and then expired. Mr. Jenour was a man of very respectable character; and the *Daily Advertiser* enriched his family.

1787, March 3. *Died*, JOSEPH POTE, a very intelligent printer and bookseller of Eton, where he printed and published many learned works, and was himself the editor of several; among which may be mentioned, *The History and Antiquities of Windsor Castle, and the Royal College, and Chapel of St. George*, &c. &c. 4to. illustrated with cuts; treating of many particulars not in Ashmole, Anstis, or any other writers. He died at Eton, aged eighty-four years. Mr. Pote left two sons and a daughter, the eldest son, Joseph, entered the church and obtained some valuable preferments; he died July 29, 1797, in his sixtieth year. The younger, Thomas, was a printer, and succeeded to his father's business; was master of the stationers' company in 1791, and was very generally esteemed, as a cheerful lively companion, and a open-hearted friend; he died Dec. 28, 1794, leaving a widow and four children. The daughter was married to Mr. John Williams, bookseller, of Fleet-street, London, well remembered in the days of *Wilkes and liberty*, see page 713 ante. His son, Mr. John Williams, carried on his grandfather's business at Eton, with considerable reputation, in partnership with Mrs. Maria Pote, widow of his uncle Thomas.

1787. MA. WEDGEWOOD, who established a famed pottery for the manufacture of articles in imitation of the ancient Etruscan vases, at Etruria, in Staffordshire, had a printing press at this place, at which he printed a *Catalogue of Cameos*, &c. &c. made and sold by Josiah Wedgewood, 8vo. Etruria, 1787. Mr. Wedgewood died Jan. 3, 1798.

1787, March 17. *Olla Podrida*. The public is indebted to Mr. Thomas Monro, A.B., of St. Mary Magdalene college, Oxford, for the origin and conduct of this paper, assisted by Dr. Horne, late bishop of Norwich, and others. It consists of forty-four essays, published weekly.

<sup>\*</sup> A light house.

1787, May 24. *Died*, HARRIS HART, printer, of Crane-court, Fleet-street, London. He was a very worthy and industrious man; commenced business in Poppin's-court, Fleet-street, and removed a few years before his death to Crane-court, to the house which had been occupied by Dryden Leach.

1787. The first English work in which a series of fac-similies of autographs\* appeared, was sir John Fenn's *Original Letters from the Archives of the Paston Family*; followed by British autography, a collection of fac-similies of the handwriting of royal and illustrious personages, with their authentic portraits, by John Thane, 3 vols. 4to. 1789. But the most extensive and correct work on autographs, is that of John Gough Nichols, folio. London, 1829.

1787, May 22. A forged gazette extraordinary circulated, with a view to stock-jobbing; the author never discovered.

1787, Sept. A patent was granted to Mr. Hooper, of London, for a new method of manufacturing printing paper, particularly for copper-plate printing.

1787, Jan. 2. *The Busy Body*, No. 1.

1787, Jan. *The County Magazine*, No. 1. 4to.

1787, Jan. *The Humourist's Magazine*, No. 1.

1787, May 27. *Hull Packet*, No. 1.

1787, June. *The Sheffield Register*, No. 1.

This newspaper was established by Joseph Gales (son of Thomas Gales,† bookseller, of Sheffield), who in 1794 went to America, and settled at Raleigh, in North Carolina, and afterwards at Washington, where, in 1814, his printing office was destroyed by the victorious British army. The *Register* became the property of James Montgomery, who changed the name into the *Sheffield Iris*, under whose management it became one of the most popular papers of the day.

1788, Jan. 1. *Died*, MR. HEATH, some years a bookseller at Nottingham. He had been at the Methodist meeting the last night of the year, where he staid till past twelve. On his return home he found Mrs. Heath in bed, and, after informing her that the clock had struck twelve, and wishing her many happy new years, he fell back upon the floor and died without a groan.

1788, Jan. 10. The printing office of Mr. Rickaby, in Bow-street, London, with several premises, destroyed by fire.

1788, Jan. 14. *Died*, THOMAS SMITH, printer and bookseller, at Canterbury; many years an alderman of that city.

1788, March 2. *Died*, SOLOMON GESNER, the celebrated author of the *Death of Abel*, and of many other productions written in a similar style, that rank high in the literature of his native

country, carried on the business of a bookseller, at Zurich, in Switzerland, and was a member of the legislative council of his native city. His father was also a bookseller in the same place. He attained an elegant taste and skill in painting and engraving, and his works were not only in general published by himself, but often embellished with engravings by his own hand, from his own designs. Among the testimonies of affection and respect which he received from his foreign admirers, he was presented with a gold medal by the empress Catherine of Russia. He died of an attack of apoplexy, in the 58th year of his age. Gesner declared that whatever were his talents, the person who had most contributed to develope them was his wife. She is unknown to the public; but the history of the mind of such a woman can only be truly discovered in the *Letters of Gesner and his Family*.\*

1788, May. *Died*, WILLIAM RICHARDSON, printer, who succeeded his uncle Samuel. His widow obtained the situation of housekeeper, at stationers' hall. In a fragment of Mr. Richard Gough's memoirs, is the following letter:

"June 1, 1786. When a man has laid in a fund of knowledge, in any branch, from books, or other means of attainment, it is not to be wondered that the itch for scribbling seizes him. My authorship was fixed to the line of antiquity. While at college, I had begun to make additions to the list of writers on the topography of Great Britain and Ireland, prefixed to Gibson's *Camden*. I inserted these in Rawlinson's *English Topographer*, till I fancied I might commence topographer myself. I formed a quarto volume; and it was printed, 1768, at Mr. Richardson's press—on credit: my allowance not permitting any advance of money before publication. Mr. Richardson refused interest on his labour. The sale was rapid beyond expectation; and I was, on the balance between me and *honest Tom Payne*, gainer of seven pounds."

1788, May 28. *Died*, THOMAS BOWLES, many years a considerable stationer, in Newgate-street. He was one of the gentlemen nominated in 1787, as a proper person to serve the office of sheriff of London; and paid the fine to be excused. His strong natural abilities, a lively imagination, sound judgment, and a most extensive memory, aided by a classical education, rendered him a most entertaining and pleasing companion; learned without pedantry, and instructive without affectation. His death was sincerely lamented by all who had the happiness of his acquaintance. He died at Blackheath, aged about fifty years.

1788, May 31. *The Trifler*. This periodical collection professes to have emanated from St. Peter's college, Westminster, and to have been written solely by the scholars. Considered in this light, as the production of the Westminster

\* The earliest autograph in England now known, is the small figure of the cross, made by the hand of king William Rufus, in the centre of a charter by which the manor of Lambeth was granted to the church of Rochester, now in the British museum. We read of the signing of magna charta, which really means the sealing; a signature at that period was not the authentic attestation of an instrument, or even of a letter.—See introduction to this work.

† Mr. Thomas Gales was also the father of the Misses Gales, booksellers, Sheffield. He died at Eckington, near Sheffield, Sept. 21, 1809, in his seventy-third year.

\* John Gesner, born at Zurich, March 18, 1719, died May 6, 1790; canon of Zurich. Conrad Gesner, died at Zurich, December 13, 1768. John Matthias Gesner, died at Gottingen, August 3, 1783.

youth, it evidences strongly in favour of their good sense, and of their proficiency in elegant literature. Under the assumed character of Timothy Touchstone, it was published every Saturday, for forty-three weeks, until its close, on March 21, 1789, and then formed an 8vo. volume. The names of the authors (who were all under the age of twenty,) were Mr. Oliphant, and Mr. Allan, of Trinity college, Cambridge; the hon. W. Aston, and Mr. Taunton, students of Christ church.—*Drake*.

1788. *Variety*. This work consists of thirty-two essays, and were intended to have been published weekly; but made their appearance in the form of a duodecimo, a great part of which was acknowledged by Mr. Repton.

1788. *Winter Evenings*; a production of Dr. Vicesimus Knox, which, if not so popular as his *Essays*, yet possesses very considerable merit.

1788. Mr. GRAVES, of Warrington, Lancashire, made paper from the bark and leaves of willow twigs.

1788, July 14. *Died*, JOSEPH BERRY, bookseller of Norwich, who was succeeded by his brother Charles, and — Rochester, who published a catalogue of books.

1788, July 16. Mr. WILKINS, who had been confined in Newgate on account of being concerned with the proceeding of lord George Gordon,\* received a free pardon from the secretary of state.

1788, July 29. *Died*, THOMAS CARNAN, a very honourable and worthy bookseller, in St. Paul's church yard, London. He died in Hornsey-lane, near Highgate.

1788, July. *Curtis's Botanical Magazine*.

1788, July. *The Literary Magazine, and British Review*, No. 1. It concluded in June, 1794; twelve volumes.

1788, Aug. 14. *Died*, CHARLES SPENDELLOWE, who in the humble capacity of a journeyman printer, passed creditably through life. He was the nephew of Mrs. Nunneley, a printer, in White Fryars, and publisher of the *St. James's Evening Post*, who bequeathed a considerable property to Spendelowe and his sister, of which they were deprived by the chicanery of Mr. Rayner, their guardian. The young woman unfortunately died an early victim to sorrow and intoxication. Mr. Spendelowe had been fourteen years in the employ of John Nichols, and died at the age of 49.

1788, Oct. 18. *The Newcastle Advertiser*, No. 1, published in Newcastle, by Matthew Brown. On the 3d October, 1811, it was sold to Edward

Humble, who tried different days of publication under the new title of the *Freeman's Weekly Post*, and for some time with a second title of the *General Hue and Cry*. At last this paper was discontinued in Newcastle, and the *Durham County Advertiser* arose from it.

1788, Nov. *Died*, J. HUDDLESTONE WYNNE, a character pretty generally known in the literary world. He was born in the year 1743, and flourished between the years 1760 and 1788. Very early in life he evinced his poetical talent, and at the age of thirteen, he was apprenticed to a printer, as a compositor. During his apprenticeship he sent many of his effusions to different periodical publications, where they obtained a ready insertion, and were generally approved by those who read them. Shortly after completing his apprenticeship, not choosing to follow the business of a printer, he obtained a lieutenancy in the service of the East India company; whither he went; but on account of some unhappy controversy with a superior officer, and other causes, he was in less than two years from his departure sent back to England; and being received coldly by his relations, who were not pleased at his quick return, he resolved on the expedient of trying his success as an author. He got accordingly introduced to several booksellers of that day, among whom were Kearsley, Riley, Bell, Evans, and Wilkie, who gladly availed themselves of his literary talents. Mr. Wheble engaged him to conduct the *Lady's Magazine*, for which he received a regular monthly stipend; nor had he any reason to complain of their liberality for his labours, as it is certain several of these gentlemen were great friends to him in future life. Many of Mr. Wynne's poetical productions are to be found in a publication intitled the *British Magazine and Review*. Some of these appeared in his own name, others under the fictitious signature of 'George Osborne, esq.' Mr. Wynne also wrote the *History of England in verse*, which has not yet appeared in print.—Though Mr. Wynne excelled as a poet, his prose productions are likewise numerous. It was by the advice of Dr. Goldsmith, who was his contemporary, that he first began the *History of Ireland*, which he afterwards dedicated to the duke of Northumberland. The doctor jocosely observed, "that it would be better to relinquish the draggle-tail muses; as, for his part, he found productions in prose were more sought after and better paid for." Mr. Wynne's reputation as an author soon became established; and had his economy kept pace with his success, it is certain he might have passed through life, if not in affluence, at least above indigence. But want of economy was his prevailing fault. Possessing a sanguine imagination, and having the highest sense of honour and rectitude himself, he was easily imposed upon; and while he had money, he considered but little the value of it; yet, wanting it, perhaps none suffered more from the poignancy of poverty than he did. The following story is told of Wynne, when he was for some time a compositor on the *General Evening Post*,

\* George Gordon, commonly called lord George Gordon, was the son of Cosmo George, duke of Gordon, and born in Scotland, Oct. 19, 1750. He entered first into the navy, but quitted that service, and entered into parliament. But what chiefly brought him into notice was the opposition to a bill for granting further toleration to the catholics. His intemperance on this occasion proved the cause of the riots in 1793; when upon June 24, two catholic chapels, and the prison of Newgate, were destroyed, for which he was tried and acquitted. In 1796 he was found guilty of publishing a libel on the queen of France, and fined £5000, on which he fled to Holland; but returning to England he was taken and placed in Newgate, where he died, Nov. 1, 1793.

in which situation he gave frequent proofs of the versatility of his genius, and the promptness of his poetic fancy. His employer, who well knew his abilities, contracted with him to supply a short article of poetry for every day's publication, at a very small sum. One day, having forgot this part of his engagement till reminded of it by a fellow-workman, and the day being then too far advanced to have it deliberately written out, he obtained the assistance of another compositor, and thus, on the spur of the moment, while he himself composed the first six lines impromptu, he dictated the last six to his coadjutor; by which rapidity of composition he saved his credit, and secured his usual weekly remuneration. In the beginning of the year 1770 he married the daughter of an eminent mason of Lambeth, who had at his death bequeathed £1000 to each of his daughters; but the brother, being principal executor to the will of his father, applied his sister's fortune to his own use in trade; and, through his ill success, not a guinea of Mrs. Wynne's portion was ever paid. Mr. Wynne was for a considerable time editor of the *Gazetteer*, and was a well-known speaker at the Robin Hood and Coach-makers'-hall debating societies; but, being unhappily a staunch supporter of an administration whose measures were extremely unpopular, he got little good by his political speculations. In those days such topics were freely discussed, and often agitated with much warmth. Mr. Wynne in this respect acted the part of a champion, and undertook to defend the ministry in their war with America, and other ruinous measures.

1788, Dec. 8. *Died*, HENRY DENCH, who filled with reputation each department of the narrow circle of life which was his lot, was a good husband, and a tender father. In his profession, that of a compositor, he was remarkably attentive and industrious. He died of a violent asthma, in the 50th year of his age. To say more of him would be impertinent. Not to have said so much, would have ill accorded with the feelings of one who in the early part of life regarded him as a friend, and to whom for a long series of years he was an affectionate servant. He left one infant son, who was afterwards bred to the profession of a printer: and to whose talents and integrity I gladly pay this tribute.—*Nichols*.

1788. The first daily evening paper commenced.

1788. The motto of the stationers' company first used: *Verbum Domini manet in æternum*.

1789, Jan. 23. *Died*, JOHN CLELAND, author of a well known immoral romance, entitled the *History of Fanny Hill; or Memoirs of a Woman of Pleasure*. This notorious book was sold to Griffiths, the bookseller, for twenty guineas, though its sale has produced as many thousands. It was one of Griffiths's first adventures in trade, and he had the assurance, as editor of the *Monthly Review*, to recommend it to the public as a rival of *Tom Jones*, in one of the early numbers of that work. He was, however, apprehended under a general warrant as the publisher;

but having contrived to remove the copies out of his house by the back door, in Paternoster-row, while the officer was gone to get the warrant backed by the lord mayor, he escaped the punishment which otherwise would have befallen him. Cleland was called before the privy council, and having pleaded poverty as the cause, the earl of Grenville procured him a pension of £100. a-year, on condition that he should abstain from such kind of writing for the future. He was a native of Scotland, and a man of some literary ability. He lived upon his pension in a private manner, in London, where he died at the age of eighty-two years. Bishop South truly observes, "he who has vented a pernicious doctrine, or published an ill book; must know that his guilt and his life end together. No! Such an one being dead, yet speaketh. He sins in his very grave; corrupts others while he is rotting himself; and has a growing account in the other world, after he has paid nature's last debt in this; and, in a word, quits this life like a man carried off by the plague, who, though he dies himself, does execution upon others by a surviving infection."

1789. *Eaton Chronicle; or the Salt Box*, royal 8vo. pp. 165.

At tu EATONIS lepidos sale tinge libellos,  
Agnoscat moros quisque legatque suos:  
Angustæ castare licet ridearis avenæ,  
Dum tua multorum vincax avena tubas.

This volume is edited by the late William Gifford, esq., and is inscribed to the noble originator, earl Grosvenor, the father of the present marquis of Westminster. The following is a copy of the address to the reader, dated Eaton Hall: "In the summer of 1788, lord Grosvenor invited a numerous party of his relations, friends, and acquaintance, to Eaton Hall, to celebrate the birth day of lord Belgrave, who came of age in the spring of that year. As they met before the arrival of the period peculiarly set apart for the festival, his lordship proposed in a sportive moment that a little journal should be kept of their proceedings, and produced every morning at breakfast. As this could not occupy a large space, he further proposed to admit any little piece of prose or verse, whose subject might not be entirely foreign from the company; and it was hoped by these means that a sheet might be served up every morning with tea. The paper took its name from a SALT BOX, which was appointed to receive the contributions. This was examined every evening; and the contents were arranged and transcribed by the writer of this introduction, who had the honour of being appointed editor." Archbishop Wrantham possesses two copies of this volume.—*Martin's Catalogue of Books Privately Printed*, p. 72.

1789, Jan. *Died*, SAMUEL CLARK, (one of the society of friends,) a printer, and some time a partner with William Richardson, nephew to the celebrated writer. Mr. Clark had retired from business about 1768. He was a most amiable man; in temper he was cheerful and serene; in manners mild and unassuming; his benevolence was boundless.

1789, Jan. 31. *The Loiterer*. The conductor of, and the chief contributor to this publication, was Mr. James Austen, M. A. of St. John's college, Oxford; and it is but justice to say, that, notwithstanding its locality of plan, the *Loiterer* is written with a great share of ability, vivacity, and humour; it terminated with the sixteenth number, March 20, 1790.

1789, March 22. *Died*, JOHN GREGORY, many years printer of the *Leicester Journal*, and alderman of that corporation. He was descended of an ancient family, settled at Raveness, in the parish of Ashover, in the county of Derby. His behaviour through life, as a tradesman, husband, father, and as a magistrate, he discharged with such openness of heart, and upright conduct, that his loss was long felt and regretted by a large circle of friends and acquaintance. He served the office of mayor in 1781. John Gregory, one of his sons, who succeeded him as printer of the *Leicester Journal*, died in 1806; and another, Joseph Gregory, M. A. vicar of St. Martin's and All Saints', Leicester, died in 1802. Mr. John Price, who married Fanny, the alderman's only daughter, succeeded to the business.

1789. *The Diary*. This newspaper was commenced by William Woodfall, on his own account. It is to this gentleman that the political world stands indebted for the foundation of reporting the debates of parliament in a proper manner. Aided by an uncommonly retentive memory, and incited by this advantage, he explored a path hitherto unknown, and commenced a career of great but unprofitable labour, the fatiguing and difficult task of giving a report of the debates of parliament on the night of the proceeding. In this line he attained the highest degree of celebrity, as well for the fidelity of the report, as the quantity and rapidity of his execution. Before his time a very short sketch of the debate was all that the newspapers attempted to give on the same night, and the more detailed reports were deferred to some subsequent day. Without taking a note to assist his memory, without the use of an amanuensis to ease his labour, he has been known to write sixteen columns after having sat in a crowded gallery for as many hours, without an interval of rest. He took pride in this exertion, which brought him more praise than profit. It wore down his constitution, which was naturally good; and when other papers, by the division of labour, produced the same length of details with an earlier publication, he yielded the contest, and suffered his *Diary* to expire. After that time he employed his talents in various publications. In 1784 he was invited to Dublin, to report the debates upon the commercial propositions; at which time, so great was his fame, crowds followed him through the streets, eager to catch a glimpse of a man whom they considered as endowed with supernatural powers.

1789, July 1. *Died*, JOHN DENTON, a native of the northern part of Yorkshire; and though bred a tinman, from a taste for letters kept a bookseller's shop for some time in the city of York; about 1780 he went to London, where,

seeing a speaking figure, made by some foreigner, he completed another in a very short time, and by that means accumulated much money, by exhibiting it in various parts of England. The speaking figure he afterwards sold to a printer, in the city of London, and made a writing figure. His abilities in the chemical line were very conspicuous; and he afterwards translated Pinetti's *Book of Deceptions*, with notes; from his knowledge in chemistry he obtained the art of plating coach harness, &c. which he carried on jointly with the business of a bookseller, in Holborn, for some time. In this business he unhappily formed a connexion with a person notorious for making plain shillings; those powers that assisted him to make several mathematical instruments, as pentagraphs, &c. enabled him to imitate the current coin in a manner that deceived the best judges, and held the court seven hours upon his trial, at last he was acquitted of coining, but convicted of having the implements for coining in his possession, for which he was executed on this day, at Tyburn, together with John Ward, George Green, and John Jones.

1789, July 14. Dr. WITHERS found guilty of publishing a libel on Mrs. Fitzherbert. He was sentenced to pay a fine of £50, to be imprisoned one year in Newgate, and find security for his good behaviour for two years; himself in £500, and two in £100 each. He died in Newgate, July, 1790.

1789, Aug. 12. The duty on newspapers was raised from three half-pence to two-pence, or £8 per thousand, being a discount of four per cent. Price to the public, four-pence; to the trade, 7s. per quire of twenty-six papers. In 1794, paper rose from 16s. to 18s. 6d. per ream, and afterwards to 20s. per ream. In July, 1794, the price to the public was raised to four-pence half-penny, and to the trade to 8s. per quire of twenty-six papers.

1789. A small volume, containing the *Lord's Prayer*, in one hundred and fifty languages, edited by Gustavus Bergmann, bears the imprint of Ruem, in Livland, (i. e. in Livonia, a province in Russia).

1789, Oct. *The Attic Miscellany*, No. 1, concluded in two volumes.

1789, Nov. 23. A logographic printer sentenced in the court of king's bench to pay a fine of £50, a year's imprisonment in Newgate, to stand one hour in the pillory, to enter into security for seven years, himself in £500, and two sureties in £100 each, for a libel on the duke of York.

1789, Dec. 8. Mr. PERRYMAN, printer of the *Morning Herald*, convicted of publishing a libel on the house of commons, regarding the trial of Warren Hastings, esq.

1789, Dec. 9. JOHN STOCKDALE, bookseller, in Piccadilly, London, was tried before lord Kenyon, and a special jury for a libel upon the house of commons, reflecting upon their conduct in the impeachment of Warren Hastings. Mr. Thomas Erskine was counsel for the defendant;

and is certainly not the last in importance of that distinguished pleader's speeches. This trial may be termed the case of libels, and the doctrine maintained and expounded by Mr. Erskine is the foundation of that liberty which the press enjoys in this country. When the house of commons ordered the impeachment of Warren Hastings,\* the articles were drawn up by Mr. Burke, who infused into them all that fervour of thought and expression which ever characterized his compositions. The articles, so prepared, instead of being confined to the records of the house until they were carried up to the lords for trial, were printed and allowed to be sold in every bookseller's shop in the kingdom, before the accused was placed upon his trial; and undoubtedly, from the style and manner of their composition, made a deep and general impression upon the public mind against Mr. Hastings. To repel or neutralize the effect of the publication of the charges, Mr. Logan, one of the ministers of Leith, wrote a pamphlet, which Stockdale published, containing several severe and unguarded reflections upon the conduct of the managers of the impeachments, which the house of commons deemed highly contemptuous and libellous. The publisher was accordingly tried, on an information filed by the attorney-general, and the jury after two hours' deliberation, found Mr. Stockdale *NOT GUILTY*. In the speech delivered by Mr. Erskine upon this occasion, he has recorded his name as the most consummate advocate of the age. It was "amidst the blaze of passion and prejudice" that he extorted that verdict, which rescued his client from the punishment which a whole people seemed interested in awarding against the reviler of its collective majesty.

1790, Feb. 3. The printer of the *Times* newspaper, fined £100 for a libel on the prince of

Wales and the duke of York, and the like sum for one on the duke of Clarence.

1790, Feb. 21. *Died*, JAMES BUCKLAND, for more than fifty years a bookseller of eminence at the corner of St. Paul's-court, in Paternoster-row, London, particularly amongst the dissenters, and was a remarkable gentlemanly looking personage, in the dress of George II.'s days. He was respected for simplicity of manners, and irreproachable integrity. He kept up the custom which at one time was common with all the best booksellers, of having a long board hung at the side of his door way, inscribed with the names of distinguished authors, whose works were to be found in his shop: he died at the age of seventy-nine years. The name of James Buckland is found associated with those of Longman, Robinson, Baldwin, Rivington, and other great booksellers in the title pages of most of the theological works of his time. Mr. Dawson, who was bookseller to the university of Oxford, was opposite to Mr. Buckland.

1790. WILLIAM NICHOLSON took out a patent for certain improvements in printing, the specification of which clearly shows, that to him belongs the first suggestion of printing from cylinders. This patent was never acted upon.

1790, March 27. *The Speculator*, by Nathan Drake, M. D. and Edward Ash, M. D. published weekly, consisting of twenty-six numbers.

1790. At Chester, in the beginning of this year, a reputable farmer, on the evening of a market-day, called at the shop of Mr. Poole, bookseller, and, desiring to speak with him at the door, put a shilling into his hand, telling him, "he had owed it to him for a many years." The latter asked, for what? To which the farmer replied, that "When a boy, in buying a book-almanack at his shop, he had stolen another—the reflection of which had frequently given him much uneasiness." If any one who sees this ever wronged his neighbour, let him be encouraged by the courage of the farmer of Chester, to make reparation in like manner, and so make clean his conscience; thus proving the old adage: *It's never too late to mend*.

1790. *The Holy Bible*, with various renderings of all the other translations into English, parallel texts, and notes by bishop Wilson; six vols. folio. Bath. Of the above grand edition of the English *Bible*, only twelve copies were printed on this paper, all intended as presents to royal libraries; and it is the most complete library *Bible*, that has yet appeared in any language. The type is beautiful; and, to avoid interruption in the narrative, the verses are not made different paragraphs, though they are marked in the margin. Under the text are all the parallels; and below, are the variations of each English version; the date is at the head of every page, and the objects are marked in the margin.

1790. *The Holy Bible*, printed on writing paper, with upwards of four hundred designs, by various masters; engraved by Martin. Two vols. folio, Cambridge. This is a fine work, superbly executed.

\* Warren Hastings had been governor-general of Bengal, in the East Indies, and upon his return to England was impeached by the house of commons. The trial commenced in Westminster hall, Feb. 13, 1788, and terminated with the acquittal of Mr. Hastings, April 23, 1795. He died August 22, 1818.

The prosecution and trial of Warren Hastings originated with Edmund Burke; and he was the author of the *Report of the Committee on the Trial of Hastings*, 1794. Edmund Burke was born in Dublin, Jan. 1, 1730, educated at Trinity College in that university, and in 1756, was entered as a law student at the Temple, London; but his thoughts were entirely turned to literature and politics, and he began to write in the newspapers and other periodical works. In 1765, on the accession to power of the marquis of Rockingham, he was appointed by that minister his private secretary, and brought into parliament for the borough of Wendover. His opposition to the intemperate measures which led to and prolonged the contest with America—his advocacy of the freedom of the press—of an improved libel law—of Catholic emancipation—of economical reform—of the abolition of the slave-trade—his impeachment of Mr. Hastings—and his denouncement of the French revolution—are some of the most memorable passages of his political course. Burke, as an eloquent and philosophic writer, stands alone. His mental digestion was so enormous, that he could draw nutriment from a mass of materials which few other men could have swallowed. His intellect was at once exact, minute, and comprehensive, and his imagination rich and vigorous. No matter what topic started, whether architecture, antiquities, ecclesiastical history, the reveries, persecutions, or the lives of the early ornaments of the church—he touched upon them all with the readiness and accuracy of a master. Mr. Burke died on the 8th of July, 1797, in the sixty-eighth year of his age.

1790, April 17. Died, BENJAMIN FRANKLIN, the most celebrated individual that stands recorded in the annals of typography, and well may every professor of the art boast of the name of this extraordinary man. From the humble rank of a journeyman printer, he rose to be the most eminent philosopher of the age in which he lived. We find the fame of the patriot vying with that of the philosopher, in casting a splendour over it, and standing alone the most exalted statesman of his time. M'Creery, in his poem of the *Press*, pays him the following elegant tribute :

O yield, ye living, to the great who rest,  
Sharing celestial joys among the blest !  
Columbia, rising into wealth and power,  
Unites her fame with Franklin's natal hour.  
Franklin, who struck with awe his country's foes,  
And great before a venal senate rose.—  
Artists who in your humbler stations stand,  
Earning your bread by labour's active hand,  
He left the lesson to your useful class,—  
Unheeded shall the great example pass !  
Like yours his sinewy arm the lever sway'd,  
And independence her blest tribute paid.

Panegyric, which has so often been disgracefully employed in strewing flowers on the tombs of the worthless, redeems her credit when she comes forth, with truth by her side, to immortalize the memory of the great and the good. To these epithets, if greatness and goodness be measured by the capacity and the inclination to serve mankind, no man had ever a fairer title than Benjamin Franklin.\* “At the name of Franklin, every thing interesting to virtue, freedom, and humanity, rises to our recollection! By what eulogy shall we do justice to his pre-eminent abilities and worth? This would require a pre-eminence of abilities and worth like his own. His vast and comprehensive mind was cast in a mould, which nature seems rarely to have used before, and, therefore, can be measured only by a mind cast in a similar mould. His original and universal genius was capable of the greatest things, but disdained not the smallest, provided they were useful. With equal ease and abilities, he could conduct the affairs of a printing-press, and of a great nation; and discharge the duties of a public minister of state, or the private executor of a will. Those talents, which have separately entered into the compo-

sition of other eminent characters in the various departments of life, were in him united to form one great and splendid character; and whoever, in future, shall be said to have deserved well of his country, need not think himself undervalued, when he shall be compared to a Franklin, in any of the great talents he possessed; but the happy man who shall be said to equal him in his whole talents, and who shall devote them to the like benevolent and beneficent purposes, for the service of his country and the happiness of mankind, can receive no further addition to his praise.”† The limits to which we are confined prevent us from giving any thing like a memoir of this great man; but as his works have been so universally read, and his life in every one's hands, little else is left us to do than to give a bare outline of facts that may serve for reference. He was born at Boston, in North America, on the 17th of January, 1706; the youngest, with the exception of two daughters, of a family of seventeen children. His father, who had emigrated from England† about twenty-four years before, followed the occupation of a soap-boiler and tallow-chandler, by which he seems with difficulty to have been able to support his numerous family. At first it was proposed to make Benjamin a clergyman; but his father was not able to afford him a college education, and it was found besides that the church in America was a poor profession after all. At ten years of age, he was taken by his father to assist him in his own business. He showed so much dislike to the business, that his father was induced to let him choose for himself. It was finally resolved to place him with his brother James, who had been bred a printer, and just returned from England, and set up on his own account at Boston.‡ To him, therefore, Benjamin was bound apprentice, when he was yet only in his twelfth year, on an agreement that he should remain with him in that capacity till he reached the age of twenty-one; but a difference happening between them, he removed to New York, from whence he went to Philadelphia, where after working as a journeyman for some time, he attracted the notice of sir William Keith, the governor, who persuaded him to set up for himself. Accordingly he came to England to purchase materials, but on his arrival found that the governor had deceived him by false promises, on which he obtained a situation in London, first as a pressman, and afterwards as a compositor, in the office of Mr. Palmer, in Bartholomew-close, and Mr. Watt's, near Lincoln's Inn-fields. He remained in London about two years, and in 1726 returned to Philadelphia, where he became clerk to a merchant. He entered into partnership as a printer with a person named Meredith,

\* As a proof that Franklin was anciently the common name of an order or rank in England, see Judge Fortescue, *De laudibus legum Anglie*, written about the year 1412, in which is the following passage, as translated, to show that good jurists might easily be formed in any part of England :

“Moreover, the same country is filled and replenished with landed menne, that therein so small a thorp cannot be found wherein dwelleth not a knight, an esquire, or such a householder as is there commonly called a *franklin*, enriched with great possessions; and also other freeholders and many yeomen, able for their livelihood to make a jury in form aforementioned.”

Chaucer, too, calls his country-gentleman a *franklin*; and, after describing his good house-keeping, thus characterizes him :

This worthy frankelin bore a purse of silk  
Fix'd to his girdle; white as morning milk,  
Knight of the shire, first justice at the assize,  
To help the poor, the doubtful to advise.  
In all employments generous, just he prov'd,  
Renoun'd for courtesy, by all beloved.

\* *Eulogium on Dr. Franklin, LL. D. President of the American Philosophical Society, &c. &c.* Delivered March 1, 1791, in Philadelphia, before both houses of congress, and the American philosophical society, &c. By William Smith, D. D. one of the vice-presidents of the said society, and provost of the college and academy of Philadelphia. 8vo.

† From Eaton, in Northamptonshire.

‡ See page 526, ante.

which he soon after conducted alone. In 1730, he was united to a widow lady, whom he had courted before her first marriage. About this period he contributed to the forming of the public library at Philadelphia, and in 1732, he was appointed clerk to the general assembly, and the year following post master of Philadelphia. About the year 1744, he commenced his electrical experiments, of which he published an account. He had the honour of making several discoveries in this branch of philosophy, the principal of which was the identity of the elastic fire and lightning. In 1747, he was chosen a representative of the general assembly, in which situation he distinguished himself by several acts of public utility. By his means a militia bill was passed, and he was appointed colonel of the Philadelphia regiment. In 1757, he was sent to England as agent for Pennsylvania. While in England he was chosen a fellow of the royal society, and honoured with the degree of doctor of laws by the universities of St. Andrew's, Edinburgh, and Oxford. In 1762, he returned to America, but two years afterwards he again visited England in the capacity of agent, and it was at this period that he was examined at the bar of the house of commons concerning the stamp act. After the disposal of this weighty affair, in the early part of the year 1766, Franklin made his first visit to the continent of Europe. He proceeded through Holland and Germany, and was every where received with the greatest marks of attention from men of science. In the following year he travelled into France, where he met with a no less favourable reception than he had experienced in Germany. He was introduced to a number of literary characters, and to the king, Louis XV. During Franklin's residence in England at this period, he visited different parts of the country, to which he was invited. Among other individuals who sought his society was Dr. Shipley, the bishop of St. Asaph, at whose residence, at Twyford, in North Wales, in the year 1771, he wrote the account of the early part of his life, which he addressed to his son. He was perfectly destitute of pride, and considered all honest men to be upon terms of equality. During his visit at this time, he went to Mr. Watts's\* printing-office, in Wildcourt, Lincoln's Inn-fields; and entering the press-room, proceeded to a particular press, where two men were at work:—"Come, my friends," said he, "we will drink together; it is now forty years since I worked like you, at this press, as a journeyman printer." A gallon of porter was sent for, and the three drank "Success to printing."† This press, we understand, is still in existence, and shown to strangers as a curiosity. Another interesting relic, and no less deserving of preservation, is the identical com-

positor's case occupied by Franklin. In 1775 he returned home, and was elected a delegate to the congress. He was very active in the contest between England and the colonies, and was sent to France, where, in 1778, he signed a treaty of alliance, offensive and defensive, which produced a war between that country and England. His person, as seen at this period, was square-built and fat. He wore his own hair, which was thin and gray. His head was remarkably large in proportion to his figure, and his countenance was mild, firm, and expressive. He looked healthy and vigorous, which may be ascribed both to a good constitution and temperate mode of living. In 1783, he signed the definitive treaty of peace, and in 1785 returned to America, where he was chosen president of the supreme council, and lent all his still perfect energies to consolidating the infant government. Age and infirmities, however, claimed their usual ascendancy; and in 1788 he retired wholly from public life. Franklin's last public act, and it was one in beautiful accordance with the whole tenor of his life, was putting his signature, as president of the anti-slavery society, to a memorial presented to the house of representatives, praying them to exert the full powers entrusted to them to discourage the revolting traffic in the human species. This was on the 12th of February, 1789.

In the spring of the year 1790, he felt that the termination of his career on earth was approaching; but he was no ways dismayed with the prospect of dissolution. His piety and philosophy alike sustained him. About sixteen days before his death, he was seized with a feverish indisposition, without any particular symptoms attending it, till the third or fourth day, when he complained of a pain in the left breast, which increased till it became extremely acute, attended with a cough and laborious breathing. During this state, when the severity of his pains sometimes drew forth a groan of complaint, he would observe, that he was afraid he did not bear them as he ought—acknowledged his grateful sense of the many blessings he had received from that supreme Being, who had raised him from small and low beginnings to such high rank and consideration among men; and made no doubt but his present afflictions were kindly intended to wean him from a world in which he was no longer put to act the part assigned him. In this frame of body and mind, he continued till five days before his death, when his pain and difficulty of breathing entirely left him, and his family were flattering themselves with the hopes of his recovery, when an imposthumation, which had formed itself in his lungs, suddenly burst,

\* Now conducted by John Cox and Sons, printers to the East India company.

† The following *technical toast* is offered to the profession:—Benjamin Franklin, the \* of his profession—the type of honesty—the / of all—and although the & of death has put a . to his existence, every † of his life is without a !.

and discharged a great quantity of matter, which he continued to throw up while he had sufficient strength to do it; but as he failed, the organs of respiration became gradually oppressed—a calm lethargic state succeeded—and on the 17th of April, 1794, about eleven o'clock at night, he quietly expired, closing a long and useful life of eighty-four years and three months. A few days after, his body was buried in the cemetery of Christ church, in Philadelphia, attended by the greatest concourse of spectators that had ever assembled on a similar occasion in America. His request had been, that he should, if convenient, be buried beside his wife; \* and that a plain marble slab should be placed over their joint grave, with an inscription simply of their names and dates of their interments.† When a young man, he wrote the following epitaph, which was found among his papers after his decease :

THE BODY  
OF  
BENJAMIN FRANKLIN,  
PRINTER,

(like the cover of an old book, its contents torn out,  
and strip of its lettering and gilding)  
lies here food for worms;  
yet the work itself shall not be lost,  
for it will (as he believed) appear once more  
in a new and more beautiful edition,  
corrected and amended by  
THE AUTHOR.

A lapse of nearly half a century has not effaced the memory of Franklin. His character and conduct were so intimately associated with all that is truly excellent and appreciable in human nature, that Time is powerless in shedding over

\* In none of the memoirs of the life of Franklin is any thing said of his family. We learn only, from casual notices in other publications, that he had but one surviving legitimate child, a daughter, of whom he speaks, on one occasion, in a letter to a friend, in the most affectionate terms. According to the author of the *Annals of Philadelphia*, he had an illegitimate son; but this does not appear to have caused any difference in his intercourse with him. Mrs. Baché, the daughter, attended him on his death-bed. She was a woman of strong mind and amiable disposition. In which respects she bore a resemblance to her father. The present professor Baché, president of Gerard College, Philadelphia, is a grandson of this gifted lady. William Franklin, the illegitimate son, who had at one time been governor of New Jersey, died in 1813.

† We made a pilgrimage, says Capt. Basil Hall, to the tomb of Franklin, dear old Franklin! It consists of a large marble slab, laid flat on the ground, with nothing carved upon it but these words:—

BENJAMIN } FRANKLIN,  
AND } 1796.  
DEBORAH }

Franklin, it will be recollected, wrote in early life an epitaph for himself, but his good sense and good taste showed him how unsuitable to his living character it would have been to jest in such a place. After all, his literary works, scientific fame, and his undoubted patriotism, form his best epitaph; still it may be thought, he might have been distinguished in his own land by a more honourable resting place than the obscure corner of an obscure burying ground, where his bones lie indiscriminately along with those of ordinary mortals; and his tomb, already well nigh hid in the rubbish, may soon be altogether lost. One little circumstance, however, about this spot is very striking. No regular footpath has been made to the grave, which is considerably out of the road, but the frequent tread of visitors having pressed down the rank grass which grows in such places, the way to the tombstone is readily found out without any guide.—*Travels in North America.*

him that obscurity which she gives to many other things. His personal existence has ceased, but his name and his works live for ever. His reputation also is not confined to a spot, or to the country in which he flourished, but is spread over the whole civilized globe. Out of the mass of thousands of individuals who flattered and enjoyed their little day of distinction, and who were reputed infinitely greater men than he, but who are now forgotten, Franklin rises prominent, bold, and distinct—an imperishable monument of moral and intellectual greatness. As furnishing an example to the young, as an instance of how much good may be done by one enterprising and well-directed mind, his life is invaluable. "The whole tenor of his existence," justly observes one of his friends, "was a perpetual lecture against the idle, the extravagant, and the proud. It was his principal aim to inspire mankind with a love of industry, temperance, and frugality; and to inculcate such duties as promote the important interests of humanity. He never wasted a moment of his time, or lavished a farthing of money, in folly or dissipation. By a judicious division of time, he acquired the art of doing everything to advantage; and his amusements were of such a nature as could never militate with the main objects of his pursuit. In whatever station he was placed by chance or design, he extracted something useful for himself or others. Every circumstance of his life turned to some valuable account. The maxims which his discerning mind has formed, apply to innumerable cases and characters; and those who move in the lowest, equally with those who move in the most elevated rank in society, may be guided by his instructions." The following excellent observations are by lord Mountmorres. "Few men have ever gained universal celebrity from such an origin. The principal conductor of the American revolution had been a journeyman printer in Philadelphia. Such are the destinations of that providence, which has ordained the production of an oak from an acorn. Dr. Franklin came to London in 1726. The love of science can be traced from this early period, though he appeared here in the line of his business. He had procured letters to, and was well received by Mr. Folkes, afterwards president of the royal society, and through him knew Dr. Clerk; he was not, however, gratified with a sight of his friend, which he often lamented, and which he laboured to obtain: great age and increasing infirmities

\* In the familiar letters of Franklin, the following passage occurs, which is remarkably characteristic of the man:—"For my own part, at present, I pass my time agreeably enough. I enjoy, through mercy, a tolerable share of health. I read a great deal, ride a little, do a little business for myself, now and then for others, retire when I can, and go into company when I please; so the years roll round, and the last will come, when I would rather have it said, *he lived usefully*, than *he died rich*."

"When I reflect, as I frequently do, upon the felicity I have enjoyed, I sometimes say to myself, that, were the offer made true, I would engage to run again, from beginning to end, the same career of life. All I would ask, should be the privilege of an author, to correct in a second edition, certain errors of the first."

prevented an introduction to sir Isaac Newton. Of his origin he made no secret. In a conversation at Paris, in company with the comte D'Aranda, and the duke de la Rochefoucault, he replied to an Irish gentleman, who had asked some questions about America, and particularly about the state of the paper manufacture there, "few men can give you more information on that subject than myself, for I was originally in the printing trade."\* The principles and qualities of electricity were scarcely known in the last age; the electric fluid was barely mentioned at the end of Newton's optics; it was reserved for Franklin to investigate its properties; and of that branch of science he may be considered as the father. Theory was advanced to practice and utility, by the invention of the conductor. Nor were his observations confined to this science; there were few subjects of common utility, upon which he did not comment; none which he did not improve and illustrate; of which, his *Advice to Servants*; to *Tradesmen*; to *Settlers in America*; on the cure of *Smoky Chimneys*; *Rules for Clubs and for conversation*; *Maxims to convert a Great into a Small Empire*, written with the caustic spirit of Swift, abundantly prove. To be generally useful, that he might be universally celebrated, seemed to be his ruling principle. The memories of the aged are not supposed to be retentive; the truth, however, seems to be, that the tablet of the memory becomes callous at a certain period; nor is it susceptible of new impressions, and particularly of verbal knowledge; Franklin was an exception to this rule; he acquired French after seventy; he spoke fluently, and even scientifically in that language. Science is seldom noticed by the votaries of fashion; but Dr. Franklin, in his French embassy, became the ton, the fashionable topic of modish conversation; the ladies wore hats à-la-Franklin, and great crowds of belles and beaux fluttered after him in the garden of the Tuilleries.† In society he was sententious, but not fluent, a listener rather than a talker; an informing, rather than a pleasing companion; impatient of interruption, he often mentioned the custom of the Indians, who always remain some time silent before they give an answer. The testimonies of Franklin's merit were conceived in the highest strain of panegyric. In the

year 1777, lord Chatham adverted, in a remarkable speech, to his dissuasive arguments against the war, and to the sagacious advice of the American Newton. Upon his reception in the French academy, D'Alembert, the friend and correspondent of Frederick the Great, welcomed him with that well known line which revived the boldness and the sublimity of Lucan:

*Eripuit coelo fulmen, accepitque tyrannus.*

The congress of America enjoined a general mourning, and public gratitude has celebrated his obsequies; science shall hereafter record the name of Franklin in the truest registers of Fame; that fame, which is ever just to the dead; however unjust it may be to the living, from caprice, from the malevolence of party, or from the fulsome adulations of baseness and of servility.

1790, April 18. Died, René La Butte, who for more than forty years was a teacher of the French language, in the university of Cambridge, where he was introduced by Dr. Conyers Middleton; he was a native of Angers, in Anjou, in France, and was bred a printer, in which he excelled. On leaving France he came to England, and worked in several respectable printing offices in London, particularly with Mr. Bowyer, and solely composed that valuable work Gardiner's *Tables of Logarithms*. In 1750 he went to Cambridge with Robert Walker and Thomas James to establish a newspaper, see page 879, ante. In 1746 he published a *French Grammar*, to which he prefixed an analysis relative to that subject, which is a work of considerable merit. Mons. La Butte married Miss Mary Groves, of Cambridge; and was possessed of a considerable estate near Ely, and of money in the funds, all obtained by his great care and industry. He died at his house, in All Saints' church-yard, at the age of seventy-eight years. He left the greater part of his fortune to his wife; and at the time of his death he had a nephew and niece residing in France.

1790, May 21. Died, THOMAS WARTON, author of the *History of English Poetry*,\* three volumes 4to. and Camden's professor of modern history, in the university of Oxford; he was born in 1728, and was the younger brother of the celebrated Joseph Warton,† author of an ingenious *Essay on the Genius and Writings of Pope*. In 1785, on the death of Whitehead, Thomas Warton was appointed laureat. His odes, however, were found in no respect superior to those of at least his immediate predecessor, and an attempt seems to have been made in his

\* Thomas Bradford, who succeeded to the printing business of Franklin, at Philadelphia, lived to the very advanced age, of ninety-five years, and died in that city, May 7, 1838, being the oldest master printer in America.

† When the news of the death of Dr. Franklin arrived in Paris, a society of printers met in an apartment of the Cordeliers convent, to celebrate a funeral festival in honour of the American philosopher. His bust was elevated upon a column in the middle of the room. Upon the head was placed a civic crown. Below the bust were composers' cases, a press, and other emblems of the art, which the sage had cultivated. While one printer was pronouncing an eulogium upon Franklin, workmen were printing it, and the speech composed and pulled off as fast as uttered, was copiously distributed among the spectators brought together by this entertainment.—*Madame Campan*.

See *Life of Franklin, FRANKLIN'S WORKS*, published by William and Robert Chambers, Edinburgh, 8vo. 1836, which contains a very copious life, &c. of this great statesman and philosopher.

\* The number printed was 1500, of which 1500 were sold almost as soon as published.

† Joseph Warton was the eldest son of the rev. Thomas Warton, D. D. and vicar of Basingstoke, where he died in 1746: born at Dunstond, in Surrey, in 1723, and educated at Winchester and Oxford. In 1766, he was appointed head master of Winchester school; and proceeded to the degree of B. and D. D. In 1784, he obtained a prebend at Winchester; and the rectory of Easton, which in the same year he was permitted to exchange for that of Upham. He resigned the mastership of Winchester school in July, 1795, and retired to his rectory at Wickham, where he terminated his useful and honourable life, Feb. 23, 1800.

reign to remit a portion of the duty. In a volume of the history of the *Decline and Fall of the Roman Empire*, published about this period, Gibbon made the remark that "from Augustus to Louis the muse has been too often venal; yet I doubt much whether any age or court can produce a similar establishment of a stipendiary poet, who, in every reign and at all events, is bound to furnish, twice a-year, a measure of praise and verse, such as may be sung in the chapel, and, I believe, in the presence of the sovereign. I speak the more freely," added the historian, "as the best time for abolishing this ridiculous custom is while the prince is a man of virtue, and the poet a man of genius." Apparently in consequence of these observations, the *New Year's Ode* was discontinued in 1790. The non-performance of the accustomed folly occasioned much talk, and was adverted to by Peter Pindar in what he called an *Ode on No Ode* :—

What! not a sprig of annual metre,  
Neither from Thomas nor from Peter!  
Who has shut up the laureat's shop?  
Alas, poor Tom's a-cold, I fear;  
For sack poor Tom must drink small beer,  
And, lo! of that a scanty drop!

Lord roar of Helicon the floods,  
Parnassus shakes through all his woods,  
To think immortal verse should thus be slighted.  
I see, I see the god of lyric fire  
Drop suddenly his jaw and lyre—  
I hear, I hear the muses scream affrighted.

Perchance (his powers for future actions hoarding)  
George thinks the year boasts nothing worth recording.  
Yet what of that! Though naught has been effected,  
Tom might have told us what might be expected;  
Have said that civil list should sigh no more,  
And Charlotte give—a sixpence to the poor!

Warton was succeeded (Cowper being alive) by James Henry Pye, who, as the jest-books have it, was much cut up for his presumption in aspiring to such an honour, and of whom the least that can be said is, that he has no place in English literature.

1790, June 22. *Died*, CHARLES RIVINGTON, printer, who had carried on an extensive business for thirty-two years, in Steyning-lane, in a noble house, which had formerly been the residence of a lord mayor; he was also a member of the common council, and had held the office of printer to the city of London, which he resigned in 1772. His only daughter married the rev. James Stovin, rector of Rossington, in the county of York, October 16, 1790.

1790, July 2. A stationer near Bond-street, London, was convicted at the public office, Bond-street, in the full penalty of £5, for lending out a newspaper contrary to the statute. He was the first person convicted under the act.

1790, July 5. On the trial of an indictment for a libel, stated to be *false*,\* scandalous, &c. against the printer of a morning paper at Dub-

lin, on the prosecution of the rev. George de la Pore Beresford; the jury, being satisfied by the evidence of the prosecutor, that several of the facts stated were *true*, brought in their verdict, not guilty, after being locked up all night.

1790, July 12. Printing presses licensed.

1790, July 16. *Died*, THOMAS FLETCHER, who had formerly been an eminent printer and bookseller at Cambridge, and was the second person who was chosen by the company of stationers to enjoy Mr. Bowyer's annuity to deserving journeymen printers. He died at his lodgings, in Shoe-lane, London. It was both singular and unfortunate, that about the time of Mr. Fletcher's illness, his brother (whom he supposed to be living in great affluence in America,) arrived in London in the most indigent circumstances, and being disappointed in receiving assistance from the only friend he could apply to, was necessitated to go into St. Thomas's hospital, where he died.

1790, July 29. The following singular cause for a libel was tried at the assizes at Bury St. Edmunds, in Suffolk, in which Thomas Hamilton, of Colchester, proprietor of a stage-coach, travelling between London and Halesworth, was plaintiff, and Mr. John Shave, printer of the *Ipswich Journal*, defendant. The action was grounded on two counts; the first, for publishing an advertisement in the said paper, setting forth, that the plaintiff's goods, coach horses, &c. being seized under a writ of execution from the sheriff, were to be sold by public auction: and the second count, for publishing another advertisement, signed Thomas Shave (brother to the defendant), who is also proprietor of a coach travelling the same road, wherein (in consequence of the first advertisement) he solicited the favours of the public toward his coach, "as Mr. Hamilton was under the necessity of declining the coach business."—Mr. Adair, counsel for the plaintiff, opened the case, and endeavoured to prove the false and malignant nature of the advertisements in question; in support of which the coachman was called, who said that the coach never discontinued its usual travelling on the road; another witness proved the purchase of the newspaper at the shop of the defendant; and two gentlemen were also called who intended to have gone to London by the plaintiff's coach, but were restrained from so doing by the appearance of the said advertisements. On the part of the defendant, Mr. Partridge stated the perilous situation in which a printer stood, if he was liable to be called to account for advertisements received in the ordinary course of business; and entertained no doubt, in the present case, they should be able to prove the supposed libel neither false nor malignant; for this purpose, Mr. serjeant Le Blanc called the agent of the under sheriff of the county of Essex, who proved, that he received a writ of execution against Mr. Hamilton's effects, on which he sent a warrant to one of the sheriff's officers at Colchester, to levy the same. One of the auctioneers employed by the said officer, and

\* On the trial of John Almon, 1779, the word *false* was left out; upon which lord Mansfield in summing up the evidence, stated "that the word had been left out many years ago; and the meaning of leaving this out is, that it is totally immaterial in point of proof, true or false: If it is true, there is, by the constitution, a legal method of prosecution, from the highest to the lowest—every man for his offences."

whose name appeared to the advertisement, proved that he took an inventory of the effects, agreeable to his instructions, had catalogues printed, and caused an advertisement to be published, first in the Chelmsford, and afterwards in the Ipswich paper; but that, in consequence of the writ of execution being superseded, the sale of the goods did not take place. He believed that Mr. Hamilton had more horses on the road than those advertised for sale, and that the coach did not discontinue running.—The counsel on the part of the plaintiff opposed the admission of the evidence, on the old ground, that in cases of libel, justification of the offence is not allowable; but the judge very properly over-ruled their objection in this instance. In summing up the evidence, he said there was no ground for the first count, the printer having given an indisputable authority for its publication; but that a verdict must be given against him in the latter case, and it was their province to ascertain the quantity of damages.—After some hesitation, the jury brought in a verdict for the plaintiff, with £80 damages.

1790, Aug. 1. *Died*, JOHN KNOX, a bookseller of eminence, in the Strand, London; and who devoted the fortune he acquired by his business, to the improvement of his country, in the planning of a herring fishery, and the settlement of new towns on the north-east coast of Scotland. He visited and explored that kingdom sixteen times in twenty-three years, beginning 1764; and in two volumes, gave a systematic view of Scotland in general. A society was formed at Edinburgh, and the Highland society in London extended their plan to his views, the progress of which, and his tour through the Highlands, and Hebrides, may be seen in the *Gentleman's Magazine*, vol. LVII, page 704. But, Mr. Knox's patriotism did not stop here, he formed a splendid design of representing his native country in its *Pictureque Scenery*, by the hands of such artists as Sandby, Dodd, Catton, and Farrington. His address to the public on this occasion is preserved in the *Gentleman's Magazine*, vol. LIX. page 326; he died at Dalkeith.

1790, Jan. 1. *The York Herald*, No. 1.

1790. *The Leicester Herald*, commenced by Richard Phillips; who, being of a democratic spirit, was prosecuted the following year for selling *Paine's Rights of Man*, and sentenced to eighteen months' imprisonment in Leicester jail. In 1795, his house and printing-office were destroyed by fire, soon after which he went to London, and was enabled by his political friends to set up the *Monthly Magazine*, which was designed to be the organ of that faction. During his residence at Leicester, sir Richard says, that on one of the evenings prior to publication, two or three columns of matter were upset; and on purpose to send off the papers to Derby, Nottingham, &c. by the mail, a column of *pie* was put into the form; some lines were printed over it, and it was headed "*Dutch Mail*." He relates that he received many communications, requesting a translation.

1790, Dec. 22. *The Bee*; a paper consisting of essays, philosophical, philological, and miscellaneous, conducted by J. Anderson, LL.D.\* published weekly, at Edinburgh, and regularly continued until eighteen volumes, small, 8vo. were completed, when it was relinquished; the first number commences with cursory hints and anecdotes of the late doctor William Cullen,† of Edinburgh.

1790. The literary fund established for the eleemosynary relief of destitute authors, through the exertions of David Williams,‡ for which he was rewarded by a provision out of the funds of the institution, and a residence in the house.

1790. *The Holy Bible*. 24mo. printed by Scatcherd and Whitaker, London.

1790. *The Naturalist's Pocket Magazine*. 12mo. nine vols.

1790. *The Analytical Review*.

1791, April 23. *Died*, LOCKYER DAVIS, a bookseller of very considerable reputation, in Holborn, opposite Gray's Inn. He succeeded to a business which had long been carried on by his uncle, Mr. Charles Davis. He was bookseller to the royal society, and nominally their printer. He was also one of the nominal printers of the votes of the house of commons; an honour at that time coveted by the profession;

\* James Anderson was the author of numerous works on agriculture and political economy; and his treatises, though they cannot boast of elegance of style, or correctness of language, bear evidence, however, to the benevolence, the information, and the judgment of the writer. He was born in Scotland, and died at Westham, near London, December, 1808.

† William Cullen, an eminent physician, was born at Hamilton, in Lanarkshire, Dec. 11, 1718, and died at Kirknewton, Feb. 5, 1790. He served his apprenticeship to a surgeon at Glasgow. In 1740 he took his degree of M.D., and in 1746, he was chosen lecturer in chemistry at Glasgow. In 1756, he was elected professor of chemistry at Edinburgh, where, in 1766, he was chosen to the medical chair, in which he raised the reputation of that university to an unequalled height in physical science.

‡ David Williams was born in Glamorganshire, and educated at a seminary in Carmarthen, with the intention of entering the ministry among the dissenters. His first appearance in that character was at Frome, in Somersetshire, from whence he removed to Exeter. The levity of the preacher and some deviations from the line of conduct which ought to mark the Christian pastor, occasioned his dismissal and he was obliged to quit the West of England abruptly. He then settled in London, and, for a little time, acted as minister at Highgate; but as his principles were rather free, he soon broke off his connexion with the dissenters, and commenced a new plan of education, which promised wonders and ended in nothing. This scheme, however, he carried on for some time at Chelsea, and had Dr. Franklin for a lodger, with whom he concerted the plan of establishing a deistical congregation. For some time the novelty attracted great notice, and many persons of distinction attended the lectures, but infidelity itself has few charms for the public, so that it is no wonder the chapel was soon deserted, and this minister of the religion of nature left to exert his wits in some other calling. His next appearance was in Paris, where he had been invited to assist the botchers who were busily employed in the manufacture of constitutions; but David Williams, however, had more good sense and liberality than to join in their ferocious designs; and he even had the courage to oppose them, for which he was denounced as a royalist. On this he returned to England, and devoted his time to literary pursuits. In 1804 appeared the *Claims of Literature, or the Origin, Notices, &c. of the Society for the establishment of a Literary Fund*, 8vo. by Mr. Williams and William Boscawen, esq. a commissioner of the victualling office, and well known by his translation of *Homer*. Mr. Boscawen died May 6, 1811, and Mr. Williams, June 29, 1816.

as the sale of the "votes" was then very considerable. It was enjoyed at the same period by Mr. Charles Bathurst, Mr. John Whiston, and his partner, Mr. Benjamin White; and also by Mr. Charles Rymers, as partner with Mr. Davis. At the first institution of the literary fund for the relief of distressed authors, Mr. Davis kindly gave them his gratuitous services as one of their registrars. After a long and exemplary life of 73 years, Mr. Davis went out of existence, in a manner singularly calm, and devoid of sickness. He had been indisposed for some time with the gout; but was thought to be quite recovered; and, a few moments previous to his death, had been diverting himself with playing at drafts with one of his daughters; but suddenly dropping his head, and remaining for a second or two in that posture, Miss Davis, imagining he had a sudden twinge of the gout, said, "Are you in pain, sir?" No answer being made, she flew to his assistance, but found all assistance vain. He was no more.—Mr. Davis was much valued as an honest and intelligent individual. He had read much, and to the purpose. Some little matters he had written; but they were principally *jeux d'esprit*, arising from temporary circumstances, and dispersed in the public papers, particularly the *St. James's Chronicle*. The only volume of his which is known, he having acknowledged himself the editor, was a valuable collection of the *Maxims of Rochefoucault*, 1774, 8vo. Few men, however, knew more of books, or more of the world; and fewer still were equally willing to advantage others by a free communication of that advice which, being the result of experience was the more valuable. He always wished to know his man before he opened his mind to him; but, once knowing him sufficiently to think him worthy of his confidence, he would communicate freely, and urge the party to exert himself sufficiently to be able to make the best use of his friendship. In every society he mixed with, he may be said to have been the life and soul, as he had the happy talent of rendering himself beloved equally by the young and by the aged, and that without the least departure from the strictest decorum of manners. Temperate in the extreme himself both in eating and drinking, few men enjoyed more heartily the conviviality of a select party; and scarcely any one excelled him in those minute but useful attentions to a mixed company, which lead so usefully to support conversation, and to render every man better pleased with his associates. His intimates were those of the first rank in life and literature; and his politeness in facilitating the researches of literary men has been the theme of many a writer. He was of amiable manners in private life; and his long management of an extensive business had made known to many of the first characters in the kingdom, and to almost all literary men, his integrity as a tradesman, his extensive information as a scholar, and his real value as a man. His family suffered a severe loss by his death; and none, who knew him, will read this notice without acknowledging that

they have lost a worthy friend. The following epitaph is placed on a small tablet under the organ-loft of St. Bartholomew the Great:

To the memory of Mr. LOCKYER DAVIS,  
of the parish of St. Andrew Holborn;  
who departed this life April 28, 1791;  
in the 73d year of his age.

His tenderness and attention as a husband and father  
have rarely been equalled, but never exceeded.  
His integrity was inflexible; the solidity of his judgment  
and elegance of his manners (which were preserved by  
temperance to the latest period of his life) rendered him  
at once the instructor and delight of a numerous acquaintance; his advice being ever solicited, and seldom taken  
but with advantage.

Indeed, the charm he has left in society  
will not be readily supplied,  
for we may truly say with the Poet,

'Take him for all in all we shall not look upon his like again.'

Also Mrs. MARY DAVIS,  
who departed this life Nov. 9, 1769, in the 48th year of  
her age. She was an affectionate wife, a tender mother,  
and a sincere friend.

1791. ALEXANDER ADAM, L.L.D. rector of the high school in the city of Edinburgh, published his *Roman Antiquities*, and for the copyright of which he received the sum of £600. It was translated into the German, French, and Italian languages.

1791. In the course of this year were sold 150,000 copies of Paine's *Rights of Man*; and 30,000 of Burke's reply.

1791. *The Grumbler*. The essays thus entitled, were the production of Francis Grose, esq. and were originally published in the *English Chronicle* newspaper, during this year.

1791, May 12. Died, FRANCIS GROSE, an eminent antiquary, in the fifty-second year of his age. He was F.S.A. of London and Perth; and captain in the Surrey militia. After having illustrated the *Antiquities of England and Wales*, in a series of 352 views of monastic and other ruins, in four volumes, and those of Scotland in the course of two years, in 190 views, and two volumes, with a map, he was on the point of completing his design by those of Ireland, where he had been employed about a month before his death. He published the first number of the *Antiquities of England and Wales* in 1773, and completed the whole in 1776, with the addition of a collection of forty plans. The historical account of each place, annexed to each plate, and several of the drawings themselves, were communicated by his learned friends, whose assistance he gratefully acknowledged in the preface to vols. iii. and iv. In 1777, he resumed his pencil, and added two more volumes to his English views, in which he included the islands of Guernsey and Jersey, in 237 views; and to these were added a general and county maps, completed in 1787. The whole number of views, in England, Wales, and the Islands, amounts to 589, besides forty plans, the head-pieces, and other plates illustrative of his prefatory dissertations on monastic institutions, castles, and military matters, gothic architecture, druidical and sepulchral monuments. Among his engravers are to be reckoned Bonner, Canot, Cook, Dent, Drawaza, Ellis, Godfrey, Grignon, Hall, Heath, Innes, Lespiniere, Mason, Mazell, Morris, New-

ton, Peake, Pigot, Pouncey, Record, Roberts, Pye, Smith, Sparrow, Thomas, Vivares, Watts, Williams. The views, were re-published, on pages distinct from the letter-press, in large 8vo. size. This first work completed, and having exceeded the most sanguine expectations of himself, and his friend and publisher, Master Samuel Hooper, Mr. Grose applied himself to one more professional, *Military Antiquities respecting a History of the English Army, from the Conquest to the Present Time*, in two vols. 4to. 1786—1788, illustrated with a great variety of plates, and published, like the preceding work, in numbers. But previous to this, having, in the course of his researches for it, in vain sought for some treatise exhibiting a series of authentic delineations and descriptions of the different kinds of armour and weapons used by our ancestors, he published *A Treatise on ancient Armour and Weapons*, illustrated by plates taken from the original armour in the tower of London, and other arsenals, museums, and cabinets, 1785, 4to. to which he gave a supplement, in 1789, in 4to. the plates of both, in a free painter-like manner, etched by Mr. John Hamilton, the vice-president of the society of artists of Great Britain. In 1785, he published a *Classical Dictionary of the Vulgar Tongue*; which it would have been for his credit to have suppressed; and a *Guide to Health, Beauty, Honour, and Riches*; being a collection of humorous advertisements, pointing out the means to obtain those blessings, with a suitable introductory preface. In 1786, the *History of Dover Castle*, by the rev. William Darrell, chaplain to queen Elizabeth. The Latin manuscript from which this work is printed, was transcribed from the original, in the library of the college of arms, under the inspection of the late William Oldys, esq. elegantly printed in 4to. and 8vo. the same size as the large and small editions of the *Antiquities of England and Wales*, with ten beautiful views, finely engraved from drawings taken on the spot, by Francis Grose, esq. The *English Antiquary*, is among Mr. Kay of Edinburgh's caricature portraits. The following epitaph, proposed for him, was inserted in the *St. James's Chronicle*, May 28.

Here lies Francis Grose.  
On Thursday, May 15, 1791,  
Death put an end to  
His Views and Prospects.

1791. *The Holy Bible*, large-8vo. and small, 12mo. with ornamental engravings, by Titler, London. This is called the *Cabinet and Unique Bible*; it has no side notes, and is beautifully printed. A few copies were worked off in 4to.

1791. *The Book of Common Prayer*, with an introduction to the services, finely printed by Didot, of Paris, 24mo; with a set of cuts executed under the direction of Lavater, the physiognomist.

1791. Printing introduced into the island of Guernsey.

1791. The second daily evening newspaper commenced.

1791. *The Patriot*; a small collection of political essays, published in one of the daily newspapers in Dublin, and reprinted by Debrett, a bookseller in London, in 1792.

1791. *The Derby Herald*, printed and published by Charles Sambroke Ordoyno, who, in 1792, removed to Nottingham.

1791. *The Glasgow Courier*, published on Tuesdays, Thursdays, and Saturdays.

1791. *The Lawyer's and Magistrate's Magazine*, published by E. Bentley; discontinued 1794.

1791, Sept. *Monthly Extracts*, No. 1. Forms four volumes.

1791, Oct. 21. Died, WILLIAM WARD, who was for more than thirty years master of the free grammar school, at Hinckley, in Leicestershire, and the first person who introduced the art of printing into that town. He was the author of the *Scripture Spelling Book*, 1762. His eldest son, John Ward,\* was for some time an assistant to his father, but left the printing office to join his relative Mr. Thomas Short, in the wool and hosiery business. Sarah, his daughter, succeeded him in the printing business, and was for many years the principal printer and bookseller in that town; after her death, Mr. Short succeeded to her business, and carries on a respectable trade.

1791, Nov. 4. Died, THOMAS HARRISON, many years printer of the *London Gazette*; sometime deputy of the ward of Castle Baynard; and was master of the company of stationers in 1784. Mr. Harrison had been a *bon vivant*, and was very generally respected by a large circle of acquaintance.

1792, Jan. 2. Died, WILLIAM DAVENPORT, a young man of considerable ability, the son of a clergyman at Leicester, who had been apprenticed to William Strahan, on the recommendation of Dr. Johnson, succeeded Mr. Fletcher, (formerly the printer of a newspaper at Cambridge, who died in 1790) as one of Mr. Bowyer's annuitants.

1792, Jan. 14. Died, JOSEPH JACKSON, a celebrated type-founder in Dorset-street, London. He was born in Old-street, September 4, 1733, and received his education in that neighbourhood; whence he was apprenticed to Mr. Caslon. He was exceedingly tractable in the common branches of the business; and had a great desire to learn the method of cutting the punches, which is, in general, kept profoundly secret. His master, and his master's father, constantly locked themselves in the place where they performed this part of the art; and in order to accomplish his object, Jackson bored a hole through the wainscot, and was thus, at different times, able to watch them through the process and to form some idea how the whole was performed: and he afterwards applied himself at every opportunity to the finishing of a punch. When he had completed one to his own mind he

\* To this gentleman Mr. John Nichols, the historian of Leicestershire, and eminent printer, dedicated the second edition of his *History of Hinckley*, folio, 1813. Mr. Ward died in August, 1836, aged seventy-one years.

presented it to his master, expecting to be rewarded for his ingenuity; but the premium he received was a severe blow, with a threat that he should be sent to Bridewell if he again made a similar attempt. This circumstance being taken in dudgeon, his mother bought him what tools were necessary, and he improved himself at her house whenever he had an opportunity. He continued to work for Mr. Caslon after he had served his term of apprenticeship, until a quarrel arose in the foundry about the price of work, which terminated in favour of the workmen, who had caused a memorial to be sent to the elder Caslon, then a commissioner of the peace, and residing at Bethnal-green. However, young Jackson and Mr. Cotterell, being supposed to have acted as ringleaders in this affair, were discharged. Compelled thus to seek employment, they united their slender stock in a partnership, and went on prosperously till Jackson's mother dying, he entered, in 1759, on board the *Minerva* frigate as armourer; and, in May 1761, he was removed in the same situation into the *Aurora*, where he was somewhat more successful, having about £40 of prize money to receive at the peace of 1763. On his return to London, he worked for some time under Mr. Cotterell, who was a private in the regiment of life-guards; a situation which in those days was esteemed very respectable, and sought for by even substantial master tradesmen. At length, Jackson was encouraged in a determination to adventure in business for himself by two of his fellow-workmen, Robinson and Hickson, who were also privates in the life-guards, who engaged to allow him £62 8s. per annum for conducting the business under this partnership, and to supply money for carrying on the trade for two years. For the purpose of carrying this arrangement into effect, a small house in Cock-lane was taken, and Mr. Jackson soon satisfied his partners that the business would be productive before the time promised. When he had pursued his labours about six months, Mr. Bowyer accidentally calling to inspect some of his punches (for he had no specimen), approved of them so much that he promised to employ him; adding "My father was the means of old Mr. Caslon riding in his coach, how do you know but I may be the means of your doing the same?" A short time after this he put out a small specimen of one fount, which his former young master carried to Bethnal Green with an air of contempt. The good old justice treated it otherwise; and desired his son "to take it home and preserve it; and whenever he went to cutting again, to look well at it."—It is but justice to the third William Caslon to add, that he always acknowledged the abilities of Jackson; and though rivals in an art which requires the greatest exertions of ingenuity, they lived in habits of reciprocal friendship. Business rapidly increasing, Mr. Jackson removed to Dorset-street for a more capacious workshop. He was applied to by the late duke of Norfolk to make a mould to cast a *hollow square*. Telling the duke that "he thought it

practicable;" his grace observed, "that he had applied to all the skilful mechanics of London, Mr. Caslon not excepted, who declared it impossible." He soon convinced the duke of his abilities: for in the course of three months he produced what his grace had been years in search of; and was ever after held in great estimation by the duke, who considered him the first mechanic in the kingdom. In 1784 he married the widow of Mr. Pasham, a printer, which materially assisted him in the means of carrying on business. In 1790 his foundry was destroyed by fire, and his moulds and matrices much damaged. He felt this calamity so severely as never to recover his health, or his usual energies for business. The foundry was rebuilt; but the chief materials above-named were not wholly restored (though much had been done towards it) at the time of his death. To particularize the articles of his foundry which were most reputed for their excellence, when all were highly meritorious, would be a boundless task. Let it suffice to mention, as matters of difficulty and curiosity, the fac-simile types which he cut for the *Doomsday-book*; and an *Alexandrian Greek*, under the direction of Dr. Woide, upon which the *New Testament* was printed. The matrices were afterwards deposited in the British museum.

1792, Feb. 16. Died, JOHN RIVINGTON, a bookseller of considerable eminence, in St. Paul's church-yard, where he carried on business, universally esteemed, for more than half a century; and enjoyed the especial patronage of the clergy, particularly those of the higher order. He was many years bookseller to the society for promoting christian knowledge; a governor of most of the royal hospitals, a member of the court of lieutenancy, and of the common council; a director of the amicable society in serjeant's inn, and of the union fire office; and an ancient member of the company of stationers, of which he was master in 1775; and where at one period his two brothers, James and Charles, and four sons, were liverymen. He was in the seventy-third year of his age at the time of his decease.

1792. *The Crisis*; consisting of forty-one essays, by lord Mountmorres, which originally appeared in a London newspaper, during the years 1792 and 1793, was afterwards reprinted in 1794. As a patriot and philosopher, lord Mountmorres was highly esteemed, and the objects of his labours in the *Crisis* accord with the character which he maintained. Toleration, public credit, the emancipation of the Irish catholics, and the French revolution, are among the leading subjects of this paper.

1792. *The Patriot*; consisting of essays on moral, political, and philosophical subjects, written and selected by a society of gentlemen, in London, and published every other Tuesday.

1792. *The Holy Bible*, called the *Self Interpreting Bible*; London, two vols. 4to. Brown, the author of the notes, was minister of Had-dington, in Scotland, and author of several esteemed pieces of Calvinistical divinity, a *Dictionary of the Bible*, &c.

1792. *March 31. The Manchester Herald*, No. 1, price threepence halfpenny, printed and published by Messrs. Faulkner and Birch, in the Market-place. This newspaper advocated liberal principles, and became the object of persecution.\*

1792, April 6. At the assizes held at Gloucester, the printer of a newspaper was fined £50. for advertising for stolen goods, and that no questions should be asked, pursuant to the act of Geo. III. cap. 36.

1792. *The Historical Register; or Edinburgh Monthly Intelligence*, conducted by James Tytler. This extraordinary genius, but ill-fated individual, was compelled to leave his native

country. Having espoused the cause of parliamentary reform, and joined the society entitled "Friends of the People," he published at the close of this year, a political placard, which, in that excited time, was deemed by the authorities to be of a seditious tendency. Learning that the emissaries of the law had been sent in quest of him, he withdrew to Ireland, and thence to America. Having been cited before the high court of judicature, and failed to appear, he was outlawed by that tribunal, Jan. 7, 1793. In America, Tytler conducted a newspaper at Salem, where he died of a severe cold, in the latter part of the year 1803. His family never joined him.

1792. *March 10. The Looker On*, was published every Saturday and Tuesday until the twenty-sixth number. For this elegant and instructive work we are indebted to William Roberts, A. M. of Corpus Christi college, Oxford.

1792. *Farrago*; consisting of essays, moral, philosophical, political, and historical, which were published anonymously for the benefit of the society for the discharge and relief of persons imprisoned for small debts.

1792, June 5. *Died*, DAVID HENRY, printer, who for more than half a century took an active part in the *Gentleman's Magazine*. He was born at Fovron, sixteen miles from Aberdeen, Dec. 26, 1710; "of a family," to use his own expressive words, in a letter which death prevented his finishing, "more respected for their good sense and superior education than for their riches; as at every neighbouring meeting of the gentlemen they were among the foremost." His father was at great pains to instruct his children; young Henry was put to the college of Aberdeen, but left it, and went to London, much to his father's regret, being a favourite son, and it was the old man's wish he should be a clergyman. "I left both country and friends," he adds, "before the age of fourteen; and may be truly said never to have seen either since, if by friends are meant assistants." Mr. Henry was literally the artificer of his own fortune. His inclinations having fixed him in the profession of a printer, and a concurrence of circumstances placing him within the notice of Mr. Edward Cave, an universal encourager of merit, he favoured the young printer with his protection; and in 1736 Mr. Henry became related to his patron, by marrying his sister, Miss Mary Cave. About this period he lived in habits of intimacy with the celebrated Dr. Franklin and William Strahan, who, like himself, were both at that time journeyman printers. Soon after his marriage, Mr.

\* A political society had been formed in Manchester, called the "Constitutional Society," in October, 1790, professedly to effect a reform in the representation of the people in parliament, and other liberal measures. The populace then strongly attached to the policy of ministers, entered into these unhappy fends; and in the evening of December 16, 1792, they attacked the house of Mr. Thos. Walker, a respectable merchant, who had served the office of boroughreeve; from thence the mob went to the premises of Faulkner and Birch, printers of the *Herald*. For some time they contented themselves with collecting in a menacing manner, in front of the printing-office, in Birtle Boar-court, and the shop in the market-place, exclaiming "God save the King," "Church and King," &c. and at length they proceeded to acts of violence; the property of the unfortunate printers was destroyed, and they were obliged to seek refuge in a foreign country.—At this time the following curious handbill, surrounded by a mourning border, was distributed:

#### VIOLENT DISSOLUTION,

*Being the last Kit of Mons. Herald of Manchester, a near relation to Mons. Argus of London, who expired on Saturday last, to the great regret of the Jacobin Painters, &c. but particularly to the BLACK CAT.*

On Saturday the 23d ult. died at Manchester, the place of his nativity, Mons. Herald, a near relation to Mons. Argus, lately deceased.—It is imagined by some that his death was occasioned by an assault and enormous battery committed on his body about three months ago; but that was certainly not the case, as it is well known he was perfectly recovered, his organs of vision having been the principal sufferers in that attack.—The truth is, his death was occasioned by *six mortal wounds* he had received from some masked assassins, and which were discovered in his most vital parts, by Twelve Physicians who were convened by the *Governeur* to hold a consultation on his case, about the last General Quarter Sessions of the Peace.

Notwithstanding the boasted number of his friends, there were very few attended to pay their last tribute of respect to their deceased friend.—Amongst the few artificers who did attend the funeral obsequies, a Cooper, a Callier, and two famous Walkers, were selected to bear the Pall.

The thing most extraordinary, and which excited the admiration of the populace, was a *huge black Old Cat*, whose domestic fidelity was so great, that he could not be driven away from the corpse, but with his claws clung fast to the Pall until the moment previous to the interment.—His circular back, and spiral tail, were manifest signs, during the whole ceremony, that had he power, he would exercise complete vengeance on the enemies of his defunct master.

Mons. Herald was, agreeable to his dying desire, interred under the Pulpit of his own Kirk, that, as he expressed himself, his very carcase might rekindle in the *Gravel* the dying sparks of Liberty, Equality, and the Rights of Man.

Thomas Cooper was a barrister in Manchester, of very superior talents and learning. He wrote *Letters on the Slave Trade*. Manchester: printed by C. Wheeler, 1787, and a most eloquent and indignant *Reply to Burke's incohesive against Mr. Cooper and Mr. Watt, in the House of Commons*, 30th April, 1792. London: printed for J. Johnson; and M. Faulkner and Co. Manchester, 1792. 8vo. He afterwards emigrated to America, and we believe is still living. Mr. Joseph Collier was a surgeon.

The conduct and proceedings of the dominant Church and King party, in Manchester, appear at length in *The whole Proceedings on the Trial of Thomas Walker and others, for Conspiracy to overthrow the Government*. Lan-

caster, 2nd April, 1794. Taken in short-hand, by Joseph Guray. Printed for T. Boden, Manchester, 1794. 8vo. They were all declared "not guilty." The trial was edited by Mr. Walker, who shortly afterwards published an excellent *Review of some of the Political Events which have occurred at Manchester, being a Sequel to the Trial*, &c. London, 1794. 8vo.

James Cheatham, a letter-press printer, who had been tried with Mr. Walker, emigrated to America, and commenced a newspaper at New York. He became an apostate, and wrote a scurrilous libel, which he called a *Life of Thomas Paine*.

Henry commenced business at Reading, where he established a provincial newspaper, for the use of that town, and of Winchester, where he had likewise a printing-office. In 1754, we first find his name used in the *Gentleman's Magazine* as a partner at St. John's Gate, where he continued to reside for many years with great reputation; and he possessed the freehold property of the gate and its appurtenances at the time of his death, which happened at Lewisham, in his 82d year. His literary labours would reflect much credit on his memory if an accurate list of them could be obtained; but his modest merit ever disclaimed the just praise which talents and industry like his deserved. One of the principal amusements of his life was the study of agriculture, which he understood from practice as well as theory. During his residence at Reading, the management of his newspaper occasioned him many long journeys, in all which he treasured up great stores of useful information; and on his quitting St. John's Gate, he occupied a considerable farm at Beckenham, in Kent. The result of these observations he gave to the public, in 1772, under the title of *The complete English Farmer; or, a Practical System of Husbandry, in which is comprised a general View of the whole Art of Husbandry*; but from this he withheld his name, as he did also from *An Historical Account of all the Voyages round the World, performed by English Navigators*, 1774, in four volumes, 8vo. of which the first and second were compiled by Mr. Henry; the third and fourth by another hand; to which, in 1775, Mr. Henry added a fifth, containing captain Cook's voyage in the *Resolution*; and in 1786, a sixth, containing the last voyage of captain Cook; introduced by an admirable summary of all the voyages undertaken for discovery only, in both the southern and northern hemispheres, and in the Pacific and Atlantic oceans. His remains, attended by a small party of select friends, were placed in the vicar's vault under the church of Lewisham. Mr. Henry, after having been almost nine years a widower, and having also lost one only daughter, married secondly, in 1762, Mrs. Hephzibah Newell; who survived him till Feb. 2, 1808; when she closed a long life, passed in acts of beneficence, at the age of 82. She died at Charlton, in Kent, and was buried at Lewisham. Several of his relations, desirous to try their fortune, went to America, where they acquired considerable property. Patrick Henry,\* esq. son of John Henry (a first cousin of our printer) was the first governor of Virginia after the revolution, and next in fame there to general Washington.†

1792, June 7. *Died*, Mr. FRANCIS NOBLE, who many years kept an extensive circulating library in Holborn, but, in consequence of his daugh-

ter obtaining a share of the first £30,000 prize that ever was sold, he retired from business. He died at Kentish town, at an advanced age. He was brother to Mr. Noble, who kept also a circulating library in St. Martin's-court, and whose steady son lived many years with Messrs. Payne, at the Mews-gate.

1792, July 9. JOHN BELL, printer of the *Oracle*, found guilty of publishing a libel in that paper upon the foot guards.

1792, July 9. LADY ELIZABETH LAMBERT, obtained a verdict of £4000 against Mr. TATTERSALL, proprietor of the *Morning Post*, for a libel.

1792, Oct. 9. *The Country Spectator*. An attempt, by no means unsuccessful, to render the character and occurrences of a provincial town the basis of a periodical paper. It issued from the press of Messrs. Mozley and Co., of Gainsborough, [now of Derby] and in the concluding essay, May 21, 1793, is acknowledged to be the production of Mr. T. F. Middleton, dedicated to the inhabitants of the town of Gainsborough.

1792, Dec. 10. SAMSON PERRY, printer of the *Aryus* newspaper, found guilty in the court of king's bench of publishing a libel upon the house of commons, in stating "that the house of commons were not the real representatives of the people." A reward of £100 had been offered for the apprehension of Mr. Perry.

1792, Dec. 12. *Died*, THOMAS DAGNALL, bookseller of Aylesbury, who by the most active industry, and the fairest dealing, had acquired considerable property. Such was the opinion which the community entertained of his integrity, that although he did not openly profess the business, nor take the name, he was in fact banker to the trading part of that populous and respectable town, and to the neighbourhood in general. On Saturday, the 8th instant, being market-day, he had attended in his shop as usual, and appeared in good health and spirits; but, after tea in the evening, complained of a giddiness in his head, which soon terminated in a fit of apoplexy; and notwithstanding all the efforts of medical skill, he died on the fourth day, after having been in a state of insensibility from the moment he was attacked.

1792, Dec. 22. A meeting at Freemason's tavern of the "Society of the Friends of the Freedom of the Press," Gerard Noel Edwards, esq. M. P. in the chair.\*

1792. *Died*, ALEXANDER ANOUS, a bookseller at Aberdeen, who was, for the greater part of his life, the "Leigh and Southeby, and the King and Lochee," of that part of the world, and sold a great many libraries by auction. He was a man

\* Patrick Henry was born in Virginia, May 23, 1736, and died there June 6, 1799.

† George Washington, commander in chief of the American forces during the struggle with Great Britain, and president of the United American States, was born in the state of Virginia Feb. 11, 1732, and died at Mount Vernon, in the same state, December 14, 1799.

\* Letter to R. B. Sheridan, esq., M.P., on his late proceedings as a Member of the Society for the Freedom of the Press. 8vo. 1793.

Observations on the Proceedings of the Friends of the Liberty of the Press. By sir Thomas Bernard, bart., barrister at law, LL.D., and chancellor of the diocese of Durham. 8vo. 1793.

Apology for the Freedom of the Press, and for General Liberty, with remarks on Bishop Horsley's Sermon, preached, Jan. 13, 1793. 8vo. By the rev. Robert Hall, M.A.

of great pleasantry and ready wit ; and many of his *bon mots* are well recollected in Aberdeen.

1792. *The Edinburgh Herald*, conducted by James Sibbald, but did not continue long in existence. In 1783, Mr. Sibbald established a monthly literary miscellany, under the name of the *Edinburgh Magazine*. This was the first time that a rival to the ancient *Scots Magazine* met with decided success. Mr. Sibbald was himself the editor and chief contributor.

1792. Mr. CAMPBELL obtained a patent for bleaching of rags for the making of paper.

1792. *The Carlton House Magazine*, vol. 1. 1792, Dec. 13. *The Associator*.

1792. *Peter Porcupine*, published by William Cobbett, bookseller, Philadelphia.

1793, Jan. *The British Critic*, No. 1. This publication was commenced by Messrs. Rivington, booksellers, in partnership with the rev. William Beloe and the rev. Robert Nares, archdeacon of Stafford. The editorship was entrusted to the judgment, sagacity, learning, and acuteness of Mr. Nares, in all and each of which qualities that gentleman proved himself eminently excellent. Mr. Beloe, in conjunction with Mr. Nares, conducted this work to the end of the forty-second volume, and then resigned it to others.

1796. An act of parliament was passed authorizing compensations to the clerks of the secretaries of state for the loss sustained by them "in consequence of the methods in which newspapers were dispersed into the country," and the sending and receiving of newspapers by members of parliament was limited to the period of the sitting of parliament, and forty days before and after the session.

1793. R. ROULSTONE introduced the art of printing into Knoxville, the metropolis of the state of Tennessee, in North America, at which time he commenced the publication of a newspaper, entitled the *Knoxville Gazette*.

1793. ISAIAH THOMAS of Boston, and subsequently of Worcester, set up a press at Walpole, in Cheshire county, in the state of New Hampshire, North America, and published a newspaper entitled the *Farmer's Museum*. In the following year Mr. Thomas established a press at Brookfield, in Worcester county in Massachusetts.

1793. A printing establishment was founded at Scutari, in Nátolia, the Asiatic suburb of Constantinople, by the sultan Selim III. It was closed at the revolution of 1807-8, in which the unfortunate monarch lost his throne and his life. Only a few years previously to this catastrophe he had erected a paper-manufactory also at Scutari, which in all probability shared the same fate. Selim III. was assassinated July 28, 1808.

1793, Jan. 4. — CARTER, a bill poster, was sentenced at the sessions house, Clerkenwell-green, to six months' imprisonment, and to find sureties for his good behaviour for one year, himself in £100, and two others in £50 each for posting up an *Address from the London corresponding Society in Great Britain, united for the purpose of obtaining a Reformation in Parliament*.

1793. Mr. ALEXANDER STEEVENS published his edition of *Shakspeare*, 15 vols. 8vo.\* In preparing this edition, it is said, "he gave an instance of editorial activity and perseverance which is without example. To this work he devoted solely, and exclusively of all other attentions, a period of eighteen months, and during that time, he left his house every morning at one o'clock with the Hampstead patrol, and proceeding without any consideration of the weather, or the season, called up the compositor, and woke all his devils.

Him late from Hampstead journeying to his book  
Aurora oft for Cephæus mistook :  
What time he brushed the dews with hasty pace,  
To meet the printer's devil's face to face.

"At the chambers of Mr. Reed, where he was allowed to admit himself, with a sheet of the letter-press ready for correction, and a room prepared to receive him, there was every book he might wish to consult. This nocturnal toil greatly accelerated the printing of the work, as, while the printer slept the editor was awake, and thus, in less than twenty months, he completed his edition." "Though Mr. Steevens," says an eulogist, "is known rather as a commentator than as an original writer, yet when the works he illustrated, the learning, sagacity, taste, and general knowledge which he brought to the task, and the success which crowned his labours, are considered, it would be an act of injustice to refuse him a place among the first literary characters of the age." He died Jan. 22, 1800, aged 64.

1793, Feb. 16. WILLIAM HOLLAND, bookseller, sentenced to be imprisoned one year, to pay a fine of £100, and find sureties for his good behaviour, himself in £200, and two others in £100 each, for selling a copy of Paine's *Letter to the Addressers*.

1793, Feb. 20. *Died*, SAMUEL HOOPER, bookseller, and the well-known publisher of captain Grose's works. He kept a shop for some time in the Strand, afterwards in Ludgate-street, and finally in High Holborn.

1793, March 9. *Died*, ARCHIBALD HAMILTON, a printer of considerable eminence in the city of London. He was bred to the profession of a printer at Edinburgh, but quitted that city in the year 1736, after the riots occasioned there by the popular vengeance against captain Porteous ; in which he was in some degree implicated, by having been present at the illegal execution of that unfortunate culprit. On his arrival in London, he obtained the superintendence of Mr. Strahan's office. But this was not a field wide enough for his talents, or his ambition ; and he very soon commenced business on his own account, which he carried on with great success for many years. Amongst other fortunate connexions, his acquaintance with Dr. Smollett

\* Of Johnson and Steeven's fourth edit. 15 vols. 8vo. 1793, large paper, on which paper only twenty-five were printed, one sold at Reed's for £29; and a copy at Mr. Strettel's, in 1820, for £10 ss. Ritson, 1863, £14 10s. Bindley, £21.

† Captain Porteous was murdered Sept. 7, 1736.

was not the least, whose *History of England* alone, proved a little fortune to the printer, bookseller, author, and stationer. The system of publishing *Bibles, Travels, &c.* was carried on by Mr. Hamilton, and his friends in the Row, to an extent of profit till then unknown. In 1756, with the assistance of Dr. Smollett,\* and other literary friends, he commenced the *Critical Review*; which he carried on with considerable success to the time of his death. Mr. Hamilton was also a partner with Mr. Jackson, of Oxford, in the university press; but, at the same time, relieved himself from the more immediate labour of personal attendance in his printing-office, by purchasing a villa at Ash, in Hampshire, in the neighbourhood of Farnham. He had also a town residence in Bedford-row, where he died, in his 74th year.† Mr. Hamilton was a man whose social qualities, well-informed mind, and communicative disposition had endeared him to a numerous circle of friends, and rendered his death a subject of unfeigned regret. He was a valuable contributor to the literary interests of his time. He left one daughter,‡ and one son. ARCHIBALD HAMILTON, who was also a printer, and had an office near St. John's-gate, Clerkenwell, where among other works, he began the *Town and Country Magazine*, which had a prodigious sale. He had also a printing-office between Highgate and Finchley, and afterwards at Golder's-green, Hendon, where he died, Oct. 6, 1792, leaving two sons, ARCHIBALD and SAMUEL, both printers, a third son in the army, and several daughters.

1793, May 8. Mr. SYMONDS, bookseller, sentenced to pay a fine of £100 for having published the *Jockey Club*, and to be imprisoned one year in Newgate, from the expiration of his former sentence of two years for the publication of the *Rights of Man*; and for publishing Paine's *Address*, he was sentenced to be further imprisoned one year, and to pay another fine of £100. After which he was to find security for

five years for his good behaviour, himself in £500 and two others in £250 each.

1793, May 8. Mr. RIDGEWAY, bookseller, sentenced to two years' imprisonment in Newgate, at the expiration of that time to be imprisoned one year more, and to pay a fine of £100, and then another year's imprisonment, and a fine of £100, and to find sureties for his good behaviour for five years, himself in £500, and two others in £250 each, for publishing three libels, namely, the *Jockey Club*, Paine's *Address*, and the *Rights of Man*.\*

1793, May. WILLIAM FREND, M. A. who had passed through his academic education at Cambridge with considerable distinction, and become tutor and fellow of Jesus' college, was expelled the university upon this day for publishing a pamphlet, entitled *Peace and Union recommended to the associated bodies of Republicans, and Anti-republicans*, 8vo. Against this sentence Mr. Frend appealed to the court of delegates, by whom, however, it was confirmed.

\* The reason why so many printers and booksellers were prosecuted at this time, was through the medium of a royal proclamation against seditious writings, which had been laid before the house of commons for their approbation, on May 33, 1793. This motion was warmly opposed by Charles Grey, (now earl Grey,) and the proclamation itself condemned in severe terms, as an insidious and pernicious measure. Grey declared, "that he scarcely knew how to express himself upon it; because he hardly could distinguish whether the sentiments which gave birth to it were more impotent or malicious. He mentioned the association of the Friends of the People, and complained that the minister, apprehensive of its effects, had concerted this measure, with an insidious view of separating those who had been long connected.—No man was ever more delighted with those practices than the right honourable gentleman—he, whose whole political life was a constant tissue of inconsistency, of assertion and retraction—he, who never proposed a measure without intending to delude his hearers; who promised every thing and performed nothing; who never kept his word with the public; who studied all the parts of captivating popularity, without ever intending to deserve it; and who, from the first step of his political life, was a complete public apostate. He remarked, as one of the objects of this proclamation, "that the king's officers, his commissioners of the peace, and his magistrates, were to make diligent inquiry in order to discover the authors and publishers of wicked and seditious writings." In other words, a system of espionage was to take place by order of the crown. The very idea was surprising as well as odious, that a proclamation should issue from the sovereignty of a free people, commanding such a system to be supported by spies and informers." From the accession of George III. in the year 1760 to the year 1800, the number of informations against printers and booksellers is incredible. The like number of informations against the press, in the same period, is not to be found in the history of Great Britain.

The rights of juries had long been in an indefinite and indeterminate state, particularly in the case of libels; and disputes disgraceful in themselves, and injurious to the administration of justice, had frequently arisen between the court and the jury, between the judges and the counsel. Fox, ever active in the defence of popular rights, moved for a bill to ascertain the authority of juries in the matter of libel. With respect to the pretended distinction between law and fact, Fox observed, that when a man was accused of murder, a crime consisting of law and fact, the jury every day found a verdict of guilty; and this was also the case in felony and every other criminal indictment. Libels were the only exception, the single anomaly. He contended, that if the jury had no jurisdiction over libels, the counsel who addressed them on either side, as to the criminality of the publication, were guilty of a gross and insolent sarcasm. Fox put this matter in a strong point of view, by advertising to the law of treason. It was admitted on all hands, that a writing might be an overt act of treason. In this case, if the court of king's bench were to say to the jury, "consider

\* Tobias Smollett was born on the banks of the Leven, in Scotland, in 1736, and died at Leghorn, Oct. 21, 1771.

† Mr. Farquhar corrector of the press in Mr. Hamilton's printing-office, was the father of Mrs. Mary Anne Clarke, whose connexion with the duke of York, from 1803 to 1806, is notorious, from the parliamentary investigation, in 1809, which led to the temporary retirement of his royal highness from the chief command of the army. After this investigation Mrs. Clarke announced her intention of giving to the world a narrative of circumstances relating to that connexion, which was actually printed, but suppressed by the author, on consideration of her receiving £10,000 in ready money, and an annuity of £600. The whole edition of 10,000 copies was accordingly committed to the flames, with the exception of one copy, which was deposited in Drummond's banking house. She was the author of the *Royal Prince, or a faithful narrative of facts relative to the acquaintance of the author with Col. Warden, Major Dodd, &c.* 2 vols. royal 12mo. 1816. A *Letter to the Right Hon. Wm. Fitzgerald, Chancellor of the Irish Exchequer*, &c. 8vo. 1812.

‡ Mrs. Sarah Hamilton died, at her house at Fulham, March 36, 1813. She was a lady of a well-informed and cultivated mind; and had associated much with Johnson, Smollett, Goldsmith, Garrick, and many others of the literati of the last age, whom she was accustomed to meet at her father's hospitable table. Like him, too, she was well acquainted with, and to the last retained a correct remembrance of the literary history of an extensive period.

1793, June 1. *The Preston Review and County Advertiser*, printed by Thomas Walker, with this motto on the title-page. "A faithful historian is of no country, and the conductor of an impartial newspaper of no party."

1793, June 5. DANIEL ISAAC EATON, bookseller, was tried at the Old Bailey, for publishing Paine's *Rights of Man*. The jury found him "guilty of publishing, without a criminal intent." Verdict recorded, and admitted to bail.

1793, July 19. ALEXANDER WHITE, who had been imprisoned in Newgate for five months, on a charge of writing and uttering a libel, took his trial at the quarter sessions of Newcastle-upon-Tyne. It appeared that Mr. White had written a paper, which he had reluctantly lent to Mr. Ridley, a friend, to be returned in the morning. While Mr. Ridley was reading the paper, it was snatched from him by Pungeon, one of the town sergeants. The jury brought in a verdict, *Not guilty of publishing*. The recorder objected to this, and the jury immediately returned a

only whether the criminal published the paper—do not consider the nature of it—do not consider whether it correspond to the definition of treason or not"—would Englishmen endure that death should be inflicted without a jury having had an opportunity of delivering their sentiments whether the individual was or was not guilty of the crime with which he was charged? Having shown that the law of libels was contrary to the original principles of law, Fox said, that if the committee were clear as to this point, their wisest and most proper measure would be to enact a declaratory law respecting it; but if they were of opinion that high authorities on the other side made the law doubtful, they might settle the law for the future without any reference to what it had been in times past. Pitt agreed with the principles stated by Fox, but instead of a committee of Justice, recommended the bringing in a bill "to remove all doubts respecting the rights and functions of juries in criminal cases." The bill was accordingly introduced, and passed the commons, but on its transmission to the house of lords, it was opposed on the second reading by the lord chancellor, on pretence of its being too late in the session to discuss a measure of such importance. The principle of the bill was ably defended by the law lords, Camden and Loughborough, with whom lord Greenville concurred; but the bill was finally postponed for that session; and in the following one it was triumphantly carried through both houses of parliament, and passed into a law, notwithstanding the violent opposition of the law lords Thurlow, Keayon, and Bathurst, who joined in a protest against the bill, which will remain a perpetual monument of the triumph of equity and common sense over professional subtlety. In its present anomalous state, the law of libel is yet indefinite and indefinite, and remains a blot upon the freedom of the press, and against the liberty and property of the printer.

Sir John Scott was an attorney-general of exemplary industry, of most pious veneration for the law of libel, and during his official career, he sat like an incubus on the rising liberties of his country. Persecutions were the Elysium of Scott; he revelled in them with extacy, and prided himself on the number he had instituted; and the most despotic autocrat could not have desired a state servant of a more commendable subservience to the "Divine Right," or more ready to evince it. During a debate in 1798, he said "The house should remember that there had been more prosecutions for libel within the last two years than there had been for twenty years before." Had it not been for the admirable firmness of juries, and the gigantic exertions of Erskine—had the remorseless tyranny of the minister, the leanings of a partial judge, and the indefatigable labours of a most willing attorney-general been suffered to prevail—all those who would not crouch in the dust beneath the feet of the minister, would have been convinced of their errors by the logic of the executioner.—The crime of constructive treason would have been the signal of a scaffold massacre of all thinking men in Great Britain. Had Horne Tooke and Hardy been sacrificed to the tender mercies of Pitt, the head of Godwin would have been rolled upon the scaffold.

verdict of *not guilty*. Mr. White conducted his own case with considerable ability.

1793. *The Cambridge Intelligencer*. This paper was established by Benjamin Flower, and was one of the earliest provincial newspapers that denounced the war against republican France, as "wicked and absurd." Mr. Flower was a man of deep religious feeling; and the very excess of his sincerity made him the more strenuous in his advocacy of the liberty of conscience. This formed a peculiar feature in his paper; and considering the period at which it appeared—with no friends in the field, but hosts of opponents on all sides—it was an undertaking that required the noblest courage to originate, and the spirit of a martyr to sustain. It met with extraordinary success, was read in all parts of the kingdom, and roused the dormant faculties of numbers to the dawning beams of public liberty, and increasing knowledge. The freedom of his remarks, however, subjected him to prosecution and imprisonment. In 1797, a paragraph in his paper, on the subject of political subseriency, gave such offence to the house of lords, that he was imprisoned.

"The argument, upon his case, in the court of king's bench, as well as in parliament, forms part of the constitutional history of England;" and, "the lords seemed to feel that they had stretched their privileges against the people to the utmost;" so before the end of the session he was liberated. The tide was too strong against him—his paper declined and was discontinued. He subsequently removed to Harlow, in Essex, where he carried on the printing business, and established a monthly magazine, upon the same principles, called the *Political Register*, but it had only a limited success. The powerful writing of Mr. Flower, in his advocacy of the liberty of conscience, in reference to the publication of some works of Paine, and others of free theological discussion, produced a remarkable effect on the mind of Mr. (afterwards lord) Erskine who had just obtained a verdict of guilty against a printer named Williams. Having applied to the prosecutors—the managers of the society for the suppression of vice—to stay their proceedings, and they having refused, Erskine indignantly threw up his brief, and left them to employ some less scrupulous agent, to call for judgment on the offender against a religion which was not more foully misrepresented in his publication than in their proceedings.

1793. *The Holy Bible*, with cuts, beautifully printed. It goes by the name of Heptinsall, the publisher. It is a very full size royal 4to.

\* *The Proceedings of the House of Lords in the Case of Benjamin Flower, printer of the Cambridge Intelligencer, for a supposed Libel on the Bishop of Llandaff, with prefatory Remarks by Mr. Flower; to which are added the Arguments in the Court of King's Bench, on a Motion for an Habeas Corpus, and a Postscript, containing Remarks on the Judgment of that Court, by Henry Clifford.* Published by Crooby and Letterman.

\* Amongst the many persons who were convicted of pretended treason, in merely seeking a reform in the representation of the people, and which has since come to pass, were Thomas Muir, a barrister, in Edinburgh, and Fynes Palmer, a Unitarian minister, at Dundee, were sentenced to transportation, in August, 1793.

1793, Aug. 5. RICHARD PEART and WILLIAM BELCHER,\* booksellers, at Birmingham, were tried and convicted at the Warwick assizes, of selling the *Address to the Addressers*. Mr. Belcher was also indicted for selling the second part of the *Rights of Man* and the *Jockey Club*. They were sentenced each to three months' imprisonment; to find sureties for their good behaviour for two years, themselves in £100 each, and two sureties in £50 each.

1793, Aug. 10. DANIEL HOLT, printer of the *Newark Herald*, was tried at the assizes held at Nottingham, and found guilty of selling Paine's *Address to the Addressers*; and of publishing an *Address to the tradesmen, mechanics, and other inhabitants of the town of Newark, on the subject of parliamentary reform*. For the first offence he was sentenced to pay a fine of £50, and to be imprisoned in Newgate for the space of two years: for the second offence, to pay a further sum of £50, and a further imprisonment of two years in the same jail, and afterwards to find security for his good behaviour, himself in £200, and two others in £150. Mr. Holt published, *A Vindication of the conduct and principles of the printer*

of the *Newark Herald*: an appeal to the justice of the people of England, on the result of two recent and extraordinary prosecutions for libel. By Daniel Holt, printer of the *Newark Herald*. 8vo. 3s. 6d. Symonds, London. Mr. Holt's address to his fellow-townsmen of Newark, breathes the genuine spirit of political martyrdom.—“Pursued as I have been,” says Mr. Holt, in his prefatory address, “by the furious, unceasing, and vindictive malice of a numerous herd of associated political assassins, and doomed to an almost unexampled imprisonment, by the unrelenting hand of legal severity, I throw myself on the humanity, benevolence, and candour of the British nation, as the last and only tribunal to which I can appeal, and from which I fully expect impartiality, justice, and protection.” He thus concludes, page 92. “The persecutions I have already had the honour to experience, are, and ever will be, my pride and exultation, as they have been occasioned by an attachment to that best of all causes, the cause of all mankind—THE CAUSE OF FREEDOM.” Mr. Erskine was counsel for the defendant, and addressed the jury with great zeal and ingenuity. Lord Kenyon also spoke with becoming liberality on the subject of anti-ministerial parties, which he by no means wished to extinguish; because, said he, “they keep ministers on their guard, in their conduct:” adding, “A great political character, who held a high situation in this country, but is now dead, used to say, that ministers were the better for being now and then a little pepper'd and salted.” In Mr. Holt's appendix, there are copies of the duke of Richmond's famous *Letter to Colonel Sharman*, and of his memorable bill for a *parliamentary reform*; also an abstract from the *New Annual Register* for 1782, of Mr. Pitt's speech on the same side of that most important question; with some other pertinent extracts; all contributing to render Mr. Holt's book an entertaining miscellany. Mr. Holt died Jan. 29, 1797, of consumption, brought on by his long confinement in Newgate, at the early age of thirty-three years, and was buried in the old church yard of Newark. He was a man of superior talents, and of the strictest integrity and benevolence.

1793, Sept. 9. *The Indian Observer*. A periodical paper projected and conducted by Hugh Boyd,\* esq., and published weekly at Madras, in a newspaper, entitled the *Hircarrah*. It terminated with the fifty-third number, on Sept. 9, 1794. The *Indian Observer* was reprinted in London, by subscription, in 1798.

1793, Nov. 6. *Died*, JOHN MURRAY, an active, well-informed, and successful bookseller of London. He was a native of Edinburgh; and for some time was an officer in the honourable corps of marines, under the patronage of sir George Yonge, bart. His first commencement as a bookseller is thus given by himself, in a letter to his friend William Falconer, the ingenious author of the *Shipwreck*, who was then at Dover, and by whom some lines addressed to Mr. Mur-

\* Mr. Belcher was the author of *An Authentic Account of the Riots in Birmingham, on the 14th, 15th, 16th, and 17th days of July, 1791*.

The nation was disgraced by a wanton and unprovoked series of tumults and outrages, which, for the space of four days, spread terror and alarm through the populous town of Birmingham and the adjacent counties. In most of the larger towns of Great Britain, associations were formed for the celebration of the French revolution on the 14th July; but the opposite party were not indifferent spectators of these proceedings: the most scandalous and inflammatory insinuations were conveyed in newspapers and pamphlets, stigmatizing the friends of freedom as determined republicans, and representing the act of joining in a convivial meeting on the odious 14th July, as an attempt to overturn the British constitution in church and state. A few days previous to the meeting in commemoration of the French revolution at Birmingham, six copies of the most inflammatory and seditious hand bill, proposing the French revolution as a model to the English, and exciting them to rebellion, were left in a public house by some person unknown. As the contents of this hand bill found a quick and general circulation, they occasioned a ferment in the town. The magistrates offered a reward of one hundred guineas for discovering the author, printer, or publisher of the obnoxious paper; and the friends of the meeting intended for the fourteenth, published at the same time an advertisement explicitly denying the sentiments and doctrines of the seditious hand bill, and disavowing all connection with its author or publisher. The views and intentions of the meeting having, however, been grossly misrepresented, and the gentlemen concerned suspecting the seditious hand bill to be an artifice projected by their adversaries, thought it most advisable to relinquish the scheme, and accordingly notice was given to that effect: but, at the pressing instance of several persons disaffected with this determination, the intention was revived, and the company met at the appointed time to the number of between eighty and ninety. The house was surrounded by a tumultuous crowd, who testified their disapprobation by hisses and groans, and by the shout of *Church and King*, which became the watch-word on this occasion. The mob immediately after set on fire and destroyed two meeting-houses of the dissenters, and from thence proceeded to the house of Dr. Priestley, a dissenting minister, which, with his library and valuable philosophical apparatus, manuscripts and papers, the mob entirely destroyed; and in like manner they continued for three ensuing days to burn the houses and valuable effects of Messrs. Ryland, Russell, Hutton, and others who resided near Birmingham. Of these infuriated rioters seventeen were tried and five were found guilty; one of whom was reprieved, and four executed: thus terminated a scene that dishonoured the national history. The amount of damages awarded by the jury at the Worcester assizes, was, for the Birmingham seditious, £3,364, and at Warwick £15,855.

\* Mr. Boyd is one, among many, to whom the letters of Junius have been ascribed.

ray were intended to have been prefixed to the third edition of that beautiful poem; but were omitted amidst the hurry of the author on leaving England for India.

"Brompton, Kent, 16th Oct. 1768.

"DEAR WILL,

"Since I saw you, I have had the intention of embarking in a scheme that I think will prove successful, and in the progress of which I had an eye towards your participating. Mr. Sandby, bookseller, opposite St. Dunstan's church, has entered into company with Snow and Denne, bankers. I was introduced to this gentleman about a week ago, upon an advantageous offer of succeeding him in his old business; which, by the advice of my friends, I propose to accept. Now, although I have little reason to fear success by myself in this undertaking; yet I think so many additional advantages would accrue to us both, were your forces and mine joined, that I cannot help mentioning it to you, and making you the offer of entering into company. He resigns to me the lease of the house; the good-will —; and I only take his bound stock, and fixtures, at a fair appraisement; which will not amount to much beyond £400; and which, if ever I mean to part with, cannot fail to bring in nearly the same sum. The shop has been long established in the trade; it retains a good many old customers; and I am to be ushered immediately into public notice by the sale of a new edition of lord Lyttleton's *Dialogues*; and afterwards by a like edition of his *History*. These works I shall sell by commission, upon a certain profit, without risque; and Mr. Sandby has promised to continue to me, always, his good offices and recommendation.—These are the general outlines; and if you entertain a notion that the conjunction will suit you, advise me, and you shall be assumed upon equal terms; for I write to you before the affair is finally settled; not that I shall refuse it if you don't concur (for I am determined on a trial by myself); but that I think it would still turn out better were we joined; and this consideration alone prompts me to write to you. Many blockheads in the trade are making fortunes; and did we not succeed as well as they, I think it must be imputed only to ourselves. Consider what I have proposed; and send me your answer soon. Be assured in the mean time, that I remain, dear Sir,

"Your affectionate and humble servant,

"JOHN MC. MURRAY.

"P.S. My advisers and directors in this affair have been, Thomas Cumming, esq. Mr. Archibald Paxton, Mr. Samuel Paterson, of Essex-house, and Messrs. J. and W. Richardson, printers. These, after deliberate reflection, have unanimously thought I should accept of Mr. Sandby's offer." "No reason," Mr. Alexander Chalmers observes, "can be assigned with probability for Mr. Falconer's refusing this liberal offer, than his appointment, immediately after, to the purser'ship of the *Aurora* frigate, which was ordered to carry out to India Messrs. Vansittart, Scrafton,

and Forde, as supervisors of the affairs of the company. He was also promised the office of private secretary to those gentlemen, a situation from which his friends conceived the hope that he might eventually obtain lasting advantages.—*Dis aliter visum.*"

Mr. Murray, in the mean time, engaged in an old and well-established trade; which from his connections in India and at Edinburgh, he considerably extended. For a short period, as might be expected, he was a novice in the art and mystery of bookselling; but soon became a regular proficient; and under his auspices many useful and elegant works were offered to the learned world. He began, in 1780, a volume of annual intelligence; under the title of the *London Mercury*; and in January 1783, commenced the *English Review*, with the assistance of a phalanx of able writers; amongst whom were Dr. Whitaker the historian of Manchester, Gilbert Stuart, &c. He wrote more than the public were generally aware of, and was an author in various shapes. He was succeeded by his son, Mr. John Murray, the present eminent and enterprising bookseller, in Albemarle-street.

1793, Nov. 26. GEORGE ROBINSON, the elder, GEORGE ROBINSON, the younger, JOHN ROBINSON, and JAMES ROBINSON, wholesale booksellers of Paternoster-row, London, who had been convicted at the Bridgewater assizes, of selling three copies of Paine's *Rights of Man* to Mr. Pyle, bookseller, at Norton Fitzwarren, near Taunton, in Somersetshire, were sentenced in the court of king's bench. John Robinson, who had seen the parcel before it was sent off, to pay a fine of £100, and the three other defendants £50 each.

1793, Dec. 1. DIED, WILLIAM OWEN, an eminent bookseller, in Fleet-street, publisher of the *Gazetteer*, and proprietor of the mineral water warehouse, in Fleet-street. He was master of the stationers' company in 1781.

1793, Dec. 9. JOHN LAMBERT, printer, and others, proprietors of the *Morning Chronicle*, were tried in the court of king's bench for publishing in that paper, *An Address of the Society for Political Information*, held at the Talbot inn, in Derby, July 11, 1792. The jury returned the following verdict: *Guilty of publishing, but with no malicious intent.* Lord Kenyon refused to record the verdict, and at five o'clock in the morning the jury found a verdict of *not guilty*.

1793. *The Female Mentor*; concluded 1798.

\* Gilbert Stuart was born at Edinburgh in 1745, and received his education at that university, where his father was professor. About the age of twenty he wrote a dissertation concerning the antiquity of the British constitution, for which he was complimented with the degree of doctor of laws. Being disappointed of the professorship of law at Edinburgh, he removed to London, and became a writer in the *Monthly Review*. In 1774 he returned to Edinburgh, and began a *Magazine and Review*, which failed, and he again went to London, where he engaged in the *Political Herald* and the *English Review*. He died at Edinburgh, August 13, 1786. He wrote the *History of Scotland from the Reformation to the death of queen Mary*. *Observations concerning the Public Law and Constitution of Scotland*. And, the *History of the Reformation in Scotland*.

1793, Dec. 25. *Died*, WILLIAM RUSSELL, a historical and miscellaneous writer, and author of the *History of Modern Europe*, five vols. 8vo. which has ever since its appearance been reckoned the best and most convenient work on the subject which it treats. William Russell was born at Windydoors, in the county of Selkirk, in Scotland, in the year 1741. He received the early part of his education at Innerleithen, where he acquired a slender knowledge of Latin and Greek, and having removed in 1756, to Edinburgh, he there studied writing and arithmetic for about ten months. He now commenced an apprenticeship of five years, under Messrs. Martin and Wotherspoon, booksellers and printers, during which period he added considerably to his stock of knowledge by private study. In 1763, while working as a journeyman printer, he became a member of a literary association styled the Miscellaneous Society, of which Mr. Andrew Dalzell, afterwards professor of Greek in the Edinburgh university, and Mr. Rt. Liston, afterwards sir Robert, and ambassador at Constantinople, were also members. Not long after he seems to have formed an intimacy with Patrick lord Elibank, who invited him to spend some time at his seat in East Lothian, and encouraged him in the prosecution of a literary career. He therefore relinquished his labours as a printer, and after spending considerable time in study at his father's house in the country, set out, in May 1767, for London. There he was disappointed in his best hopes, and found it necessary to seek subsistence as corrector of the press in the office of William Strahan, which in 1769 he exchanged for the office of overseer in the office of Brown and Aldred. While prosecuting these employments, he published several essays in prose and verse, but without fixing the attention of the world in any eminent degree. His success was nevertheless such as to enable him to relinquish the printing business. In 1780, he went to Jamaica for the purpose of recovering some money left there by a deceased brother. In 1787, he married Miss Scott, and retired to a farm called Knottyholm, near Langholm, where he spent the remainder of his days in an elegant cottage on the banks of the Esk. In 1792, he received the degree of doctor of laws from St. Andrew's, and in the ensuing year published the two first volumes of a *History of Ancient Europe*; but did not live to complete this undertaking, being cut off by a sudden stroke of palsy. He was buried in the church-yard of Westerkirk, and left a widow and one daughter. Dr. Russell was a man of indefatigable industry. Before he had perfected one scheme another always presented itself to his mind. "Without exhibiting the graces of polished life," says Mr. Chalmers, "he was an agreeable companion, and possessed a considerable fund of general knowledge, and a zeal for literature and genius which approached to enthusiasm. In all his undertakings he was strictly honourable, and deserved the confidence reposed in him by his employers." Among the works of Dr. Russell may be noticed his *Senti-*

*mental Tales*, in 1770. In 1772, a collection of *Fables, Moral and Sentimental*, and an *Essay on the Character, Manners, and Genius of Women*, from the French of M. Thomas. *Julia*, a poetical romance, appeared in 1774; and the *History of America*, published in numbers, was completed in 1779. In 1783, the *Tragic Muse*, a poem addressed to Mrs. Siddons.

1794, Jan. 23. GEORGE WILKINSON, a journeyman printer working at Bath, was tried at the quarter sessions in that city, and sentenced to four months' imprisonment, to pay a fine of 20s., and to find security for one year, himself in £50, and two others in £25 each, for uttering the following *seditious* expression; "Success to the French, and down with the allies."

1794, Jan. 28. *Died*, JOHN GOTTLIEB IMMANUEL BREITKOPF, an ingenious printer, letter-founder, and bookseller of Leipzig. He was born in that city, November 23, 1719. An accidental perusal of a work by Albert Durer, in which the shape of the letters is deduced from mathematical principles, appears to have suggested to him some valuable improvements in the art of casting types, which gave his printing office and foundry great reputation. He was also the first who cast musical types, now so common, although they possess so little of the beauty or accuracy of copper-plates as to be seldom used. He also continued to print maps with moveable types, and even to copy portraits by the same means, but neither of these were found of much utility. In 1793, he succeeded in printing the Chinese characters with moveable types, and his specimens were much admired. He is said also to have discovered some improvements in the composition of type metal, and the process of melting and casting; but what these were he concealed. He was the author of several publications concerning typography. His last work was a treatise on bibliography. His father was also a printer and bookseller at Leipzig.

1794, Feb. 28. Mr. SWINTON brought an action against Messrs. Robinson, booksellers, of Paternoster-row, and publishers of the *Critical Review*, for a critique published in that work, upon Mr. Swinton's *Travels in Norway, Denmark, and Russia*. A verdict was given for the defendants on the principle that fair criticism is allowable.

1794, March 9. *Died*, BENJAMIN WHITE, bookseller, who carried on for several years an extensive business, particularly in the line of natural history, and other expensive books. He was originally a partner with Mr. John Whiston, the well-known and worthy son of the celebrated William Whiston, who afterwards opened a separate shop. He retired from business with a plentiful fortune, and died at his house in South Lambeth. Benjamin, his eldest son, retired also in a few years after him, leaving the business to a younger brother, John, who also retired with an easy competency, to the enjoyment of a country life.

1794, May 28. JOHN RAEB, printer of the *Belfast Northern Star*, and twelve proprietors,

were tried in the court of king's bench, in Dublin, for publishing a libel in that paper, at Belfast. Mr. Curran, counsel for the defendants, submitted, that the proprietors came not within the scope of the information; being responsible only in civil, and not in criminal cases. The jury accordingly acquitted the twelve proprietors, and found the printer guilty. In November, in the same court, Mr. McCreery, and other printers and publishers of the *Northern Star*, were tried for a libel published Dec. 10, 1792. The jury returned a verdict of *guilty of publishing, but not with a malicious intent*. The court refusing to record the verdict, the jury again retired, and found the prisoners *not guilty*. This libel was the same with that for which Hamilton Rowan was sentenced in Dublin, to two years imprisonment, and a fine of £500, Jan. 10, 1794.

1794. *Portraits, memoirs, and characters of remarkable persons from the reign of Edward III. to the revolution*, two vols. 4to. and 8vo. by James Caulfield, a bookseller, of London, distinguished for his knowledge of prints.

1794. Nov. A patent was granted to Mr. Cunningham, of Edinburgh, for an improved method of making paper.

1794. The fifty-third volume of the *Acta Sanctorum*, compiled by Bollandus and his successors, was printed in this year in the abbey of Tongerlo, situated in the neighbourhood of Antwerp, in the Netherlands. During the period of confusion caused by the extravagances of the French revolutionists, when the monks were compelled to quit their ancient dwellings, and seek for refuge and protection wherever they might be found; Godefridus Hermannus, he abbot of Tongerlo, kindly received the editors of this laborious work, and not only lodged them in his abbey, but also supplied them with printing-press, and with such books as were necessary for their purpose. Thus assisted, they succeeded to print this fifty-third volume, but were unable to carry through the press more than two hundred and ninety-six pages of it at Tongerlo, the rest is supposed to have been executed at Rome. Copies of it are very rare, and in all probability a great portion of the impression was destroyed in the troubles and confusion of the time. It may be seen, however, in the Bodleian library, and in that of Trinity College, Dublin. It consists of 632 pages, exclusive of index and prefatory matter, and comprises the history of the saints of the 12th, 13th, and 14th days of October, being the sixth volume of the *Acta* for that month.

1794. Mr. SOUTHEY, the present distinguished writer and poet laureat, gives the following origin of the publication of his poem of *Joan of Arc*. "Towards the close of the year 1794," says Mr. Southey, "the poem was announced to be published by subscription, in a quarto volume, £1 1s. Soon afterwards, I became acquainted with my fellow-townsmen, Joseph Cottle, who had just commenced business as a printer and bookseller in the city of Bristol. One evening, read to him part of the poem, without any

thought of making a proposal concerning it, or expectation of receiving one. He offered me fifty guineas for the copyright, and fifty copies for my subscribers, which was more than the list amounted to; and the offer was accepted as promptly as it was made. It can rarely happen that a young author should meet with a bookseller as inexperienced and as ardent as himself; and it would be still more extraordinary, if such mutual indiscretion did not bring with it cause for regret to both. But this transaction was the commencement of an intimacy which has continued, without the slightest shade of displeasure at any time on either side, to the present day. At that time, few books were printed in the country; and it was seldom indeed that a quarto volume issued from a provincial press. A fount of new types was ordered for what was intended to be the handsomest book that Bristol had ever yet sent forth; and when the paper arrived, and the printer was ready to commence his operations, nothing had been done toward preparing the poem for the press, except that a few verbal alterations had been made. I was not, however, without misgivings; and when the first proof sheet was brought me, the more glaring faults of the composition stared me in the face. But the sight of a well-printed page, which was to be set off with all the advantages that fine wove paper and hot-pressing could impart, put me in spirits; and I went to work with good will. About half the first book was left in its original state; the rest of the poem was re-cast and re-composed while the printing went on. This occupied six months. I corrected the concluding sheet of the poem, left the preface in the publisher's hands, and departed for Lisbon by way of Corunna and Madrid." Mr. Cottle carried on business in Bristol with reputation, for many years, and was himself the author of several poems of considerable merit.

1794, Jan. 1. *The Ranger*, by the hon. Martin Hawke, and sir Robert Vincent, bart. printed at Brentford, weekly, though with occasional interruptions, till March 21, 1795, in forty numbers. They were written at a very early period of life; and, this circumstance being duly considered, they reflect the highest credit on their views and attainments.—*Drake*.

1794, July 5. *The Hull Advertiser*, No. 1.

1794, July. *The Repertory of Arts and Manufactures*.

1794. *The Kentish Monthly Register*, printed at the office and by the printers of the *Kentish Gazette*.

1794, Oct. *The Cabinet*, written and published every fortnight, by a society of gentlemen at Norwich. "Of this periodical paper we may, indeed," says Dr. Drake, "justly record, that its literary merit is great; and that, in its political capacity, where enthusiasm has not overstepped the limits of moderation, its argument is cogent, and its tendency good." Before the close of 1795 it was extended to three volumes 12mo. including one hundred and thirty-two different topics.

1796, *Jan. Died*, RICHARD JOHNSON, son of Mr. Richard Johnson, editor of the *Barometage*, and who was a very useful corrector of the press, and occasional editor to the booksellers. The son was for some years principal clerk to Thomas Curtis, esq. (a worthy member of the court of assistants,) in which station he saved a considerable sum of money. He became a liveryman in 1785, and was buried with his father in Hendon church yard. In his last will, dated January 3, 1795, he says: "I give and bequeath all the remainder of my property whatever, to the worshipful company of stationers, upon the following conditions: That they will allow my sister, Mary Johnson, fifty pounds per annum, to be paid half-yearly to her only; and ten pounds per annum to my uncle Lockington Johnson, or to his wife Elizabeth Johnson, during their natural lives; so that after the deaths of my sister Mary Johnson, my uncle Lockington Johnson, or his wife Elizabeth Johnson, all my whole property to be divided half-yearly, viz. the interest as the dividends shall become due (after deducting one guinea for an annual sermon at Hendon, and three guineas for a dinner for the master and wardens when they hear the sermon and visit his grave) among 'five very poor widows who have seen better days, above the age of sixty, whose husbands were liverymen, and in a good way of business, were either stationers, printers, booksellers, or binders; the choice of these objects to be left to the master, wardens, and court of assistants of the company of stationers.—N.B. To avoid any dispute, in case my uncle and aunt outlive my sister, the fifty not to go to them, but to be divided amongst the five widows." [Besides the sum of £1000 four per cent. bank annuities, found in the testator's name, the executors, with his other property, purchased £800 like annuities; the whole of which has been transferred to, and stands in the name of the corporation, with a balance in cash of £42 10s. 10d. paid over by the executors to the master and wardens. Since which, the sum of £50 like annuities has from a surplus of cash been purchased, and stands in the name of the corporation. There is also a sum of £50 five per cent. bank annuities, in the name of the testator's father, which cannot be transferred until the event of the testator's sister either marrying or arriving at the age of forty; but the dividends of it are received by the company.—The half-yearly dividend on the whole £1900 being £38 5s.]

1795. Da. JOHN WOLCOT, better known by the name of *Peter Pindar*, from the prodigious sale of his early pieces, became a desirable object of bookselling speculation; and in this year, Robinson and Walker, booksellers, entered into a treaty to grant him an annuity for his published works, and, on certain conditions, for his unpublished ones. While this treaty was pending, Wolcot had an attack of asthma, which he did not conceal or palliate, but, at meetings of the parties, his asthma always interrupted the business. A fatal result was of course anticipated,

and instead of a sum of money, an annuity of £250 a-year was preferred. Soon after the bond was signed, the doctor went into Cornwall, where he recovered his health and returned to London without any cough, which was far from being a pleasing sight to the persons who had to pay his annuity. One day he called upon Mr. Walker, the manager for the parties, who, surveying him with a scrutinizing eye, asked him how he did. "Much better, thank you," said Wolcot; "I have taken measure of my asthma; the fellow is troublesome, but I know his strength, and am his master."—"Oh!" said Mr. Walker, gravely, and turning into an adjoining room, where Mrs. Walker, a prudent woman, had been listening to the conversation. Wolcot, aware of the feeling, paid a keen attention to the husband and wife, and heard the latter exclaim: "There now, didn't I tell you he wouldn't die? fool that you've been! I knew he wouldn't die." A plea was then set up that the agreement extended to all future pieces as well as to the past; and on this ground an action was commenced which in a short time was compromised. Wolcot enjoyed the joke, and outlived both the parties.

1795, *Jan. 17. Died*, JOHN EGERTON, (of the firm of Thomas and John Egerton) a bookseller of great eminence in Whitehall, (successor to John Millan.\*) To the literati he was a useful man; he knew books well; and his memory, uncommonly retentive, was seldom at a loss through the varieties of dates, prices, and sizes. In the sale-room he was conspicuously clever, and put the excellencies of an article very forcibly to the bidders. In private life his character and conduct were very exemplary; and his zeal and activity in business few have exceeded. He married one of the daughters of Lockyer Davis, noticed at page 772, *ante*.

1795, *Jan. 25. Died*, CHARLES RATHBAND, who for some years followed the occupation of a printer, having been bred in the old school of typography, under Watts, Bowyer, and other eminent artists, and was himself no mean proficient in that noble art. He was a native of Ireland, and possessed of strong mental abilities, improved by an excellent education; and was a

\* Of John Millan, noticed at page 750 *ante*, there is a portrait, (an etching by Harris, from a painting by Roberts,) "1786, aged 80;" and consequently he was 54 years of age at his death. The following picture of his shop was delineated March 8, 1772:—"In my return from Westminster last night, I penetrated the utmost recesses of Millan's shop; which if I may borrow an idea from modern history, is incrustated with literature and curiosities like so many stalactical exudations. Through a narrow alley, between piles of books, I reached a cell, or *adytum*, whose sides were so completely cased with the same suppellex, that the fire-place was literally *encaissée dans la muraille*. In this cell sat the deity of the place, at the head of a whist party, which was interrupted by my inquiries after *Diluvius* in sheets. The answer was, "he had none in sheets or blankets;" but only in the state of this I send, which I think is in a rich coverlid or counterpane; and, as it has an index of species referring to the plates, you will not have the trouble of interleaving or writing in it. I emerged from this shop, which I consider as a future *Herculeanum*, where we shall hereafter root out many scarce things now rotting on the floor, considerably sunken below the level of the new pavement."

"R. Gouss."

very useful assistant in the establishment of several provincial newspapers—at Canterbury, Chester, Hereford—and at each of these places his company was eagerly sought by those whose praise was fame—but, as has been well observed by Dr. Johnson, the great are not always the best rewarders of the companions of their pleasures! He left each of the situations unenriched, though with the satisfaction, in every sense of the word, of bringing with him a good name; but his principal occupation was the superintendence of a newspaper, the *General Evening Post*. His conduct in that situation was strictly consonant to the integrity of his principles, and the soundness of his judgment; and no employment could better have suited the inclination of a man who never wrote a licentious or an ill-tempered line. His death was occasioned by a fall during a severe frost, which, rendering the imputation of a leg unavoidable, terminated in a mortification.

1795, Jan. 31. *Died*, WILLIAM BROWN, bookseller, at Ashbourn, in Derbyshire, in the seventy-eighth year of his age.

1795, Jan. *Died*, WILLIAM ALLEN, an eminent bookseller at Newark, in Nottinghamshire, aged sixty-two years.

1795, Feb. 7. *Died*, EDWARD EASTON, many years an eminent and respectable bookseller in the city of Salisbury, and an alderman of that corporation. In 1780, he was elected to the office of chief magistrate of the city, which he filled with great credit, and presented a very loyal address to his majesty on the subject of the memorable riots of London in that year. Having attained the age of seventy-five years, and retired only three months from the fatigues of business to Bradford, Wilts, he died suddenly.\*

1795, March 1. *Died*, NATHANIEL THOMAS, editor of the *St. James's Chronicle* from its institution (1761); and, in a short time (by the pecuniary assistance of Henry Baldwin, the original printer of the paper) became one of the proprietors of it; and in that situation so conducted himself as to acquire a very general esteem. He was the son of Mr. Thomas, a gentleman of respectable family in Cardiff; and, in 1741 was entered of Jesus college, Oxford; but not choosing to subscribe to the articles, he retired, in 1752, and went to London in search of employment amongst the booksellers. He was the first who translated Marmontel's *Tales* into English, and also Condamine's *Tour*. He died in Salisbury-square, in his sixty-fifth year.

1795, March 18. WILLIAM HERBERT, an eminent typographical antiquary, who published in 1785 the first volume of Ames's *Typographical Antiquities*, 4to. The second volume appeared

in 1786; and the third and last in 1790. He was born Nov. 29, 1718, and was educated at Hitchin, in Hertfordshire. His first career in life commenced in the service of the East India company, as purser's clerk to three of their ships; and retired with £300, with which he set up as a printseller and engraver of charts on London bridge, and continued in it till the houses on the bridge were taken down. The first night he spent in his house on the bridge, he was witness to a dreadful fire in some part of London, on the banks of the Thames, which, with several other succeeding ones, suggested to him the thought of a floating fire-engine. He proposed it to captain Hill, of the royal exchange assurance, who told him, "there must be a fire every now and then for the benefit of insurance." He published his proposal in the *Gazetteer*, and it was soon adopted. Mr. Herbert retired with an easy fortune, and died at Cheshunt. He was three times married, but left no children. After the death of Mr. Ames, and the dispersion of the materials which had been collected for the *History of Printing in Great Britain and Ireland*, he stepped forward to resume the subject. If there was not a limit assigned by a wise and kind providence to human life and human proficiency, we should say that Mr. Herbert wore himself out by too close an application to his favourite pursuit. But who can say this of a man who attained almost the verge of his seventy-seventh year? Who, that knew his integrity, simplicity, and modesty, and how punctually he fulfilled the relative, social, and public duties required at his hands, can presume to imagine he will lose the reward of a long and happy life.

1795. In London there were published fourteen daily newspapers, ten three times a-week, two twice a-week, and twelve weekly; seventy-two in the country; thirteen in Scotland; and thirty-five in Ireland—total, 158. The number of newspapers conveyed by post before the improved plan of Mr. Palmer, (which took place in 1794) was two million per annum; and in this year they amounted to eight million.

1795, March. *Died*, JOHN JONES, one of the proprietors of the *Kentish Gazette*, published at Canterbury. Mr. Jones was a young man of the fairest prospects and expectations.

1795, April 22. *Died*, WILLIAM JACKSON, a printer of eminence at Oxford; and proprietor and publisher of the *Oxford Journal* from its establishment. He was also lessee of the Oxford Bible-press, and a principal in the banking-house there. In his public character he was much respected; in private life, warm in his attachments, and sincere in his friendship. He died at Oxford, aged upwards of seventy years. A friend, who knew him long and intimately, says that "that extraordinary phenomenon, Jackson, the printer of the *Oxford Journal*, was a man of no extraordinary abilities, but one who dared, and soon found the beneficial effects of printing, and had his own price, while it established his paper, the only sterling, political, electioneering controversy that ever existed; where, not parties

\*His brother James, in the commission of the peace, and an alderman of that city, died Dec. 31, 1799, aged 77, at Salisbury. He had attended a meeting of the magistrates at the council chamber, and died on his return home. He had just before published an essay on *Human Longevity*, recording the name, age, and place of residence, and year of the decease of 1715 persons, who attained a century and upwards, from A. D. 66 to 1799, comprising a period of upwards of 1733 years, with anecdotes of the most remarkable.

only, but private persons from the throne to the mechanic—one who could give a portrait of an English house of commons when swayed, in some degree pensioned by Harry Pellam.

1795. *Died*, SAMUEL LEACROFT, bookseller at Charing Cross, where he succeeded to the shop and business of that singular genius, Charles Marsh.\* Mr. Leacroft was an *élève* of Lockyer Davis, noticed at page 772, *ante*.

1795, *April 25. Died*, JAMES HUTTON, who in the early part of his life had been a bookseller, and for many years secretary to the society of Moravians. He was a well known character, and very generally esteemed. He died at Ox-tend cottage, in Surry, in the eightieth year of his age, and was buried in the Moravian cemetery at Chelsea. Though Mr. Hutton was a Moravian preacher, his charities were confined to no sect; and the latter end of his life was spent literally in going about doing good. He often recommended misfortune when beyond his own ability to relieve; nor was he refused admittance to the highest ranks, though his ardent benevolence inclined him greatly to neglect his own dress, that he might better feed the hungry, and cover the naked.

1795, *May 20.* JOSEPH TOWERS, a political and miscellaneous writer, was born at Southwark, March 31, 1737, where his father was a dealer in second-hand books, the easy access to

\* He was the author of the poem, intitled, *The Library, an Epistle from a Bookseller to a Gentleman, his Customer; desiring him to discharge his bill*. Printed for [the Author] Charles Marsh, near Northumberland-house, Charing-cross, 1766, 4to. With abundance of absurdities, some shrewd thoughts are introduced upon "long-winded credit," and the disadvantage of it to a tradesman who deals for ready money only. His plea for his title is the purchase of a library, for the accomplishment of which £50 was necessary, and he concludes ingeniously enough:

"The sum of all then is, I beg,  
And you shall have both hat and leg,  
Your Worship would discharge your bill,  
That I my contract may fulfil."

The following manuscript note (probably written by Richard Owen, esq., of Cambridge,) is copied from the back of the title-page of the above poem, 1737. "The author (Charles Marsh) was originally a chnrch-clerk in Westminster, or, perhaps, I should have said a chapel-clerk; and it should have been said a good one; I will answer for it as good a chapel-clerk as a poet. He lived several years in Old Round-court, in the Strand, but did no great matter in his business, being of a very unhappy temper, and withall very proud and insolent, with a very plentiful share of conceit, as appears from this extraordinary piece. To show the man, I must here mention that I once bought a black letter tract of him for the price marked in his catalogue, 1s. A person not long after came into his shop, and asked for it; and upon being told it was sold, said he would have given three or four shillings for it: upon which his apprentice, Evans, told me, Marsh said, 'Ah, it is given away!' and seemed angry with me for having got it. He removed (upon account of the court's being less frequented, on the new paving of the street) to Charing Cross, not far from the corner of Northumberland-house; turning down to Westminster; where he had not so much business as to his old situation. Here he sold Ward's medicines, and became one of the assistants in the court of Westminster. After his removal, he left off trade, and commenced a justice of the peace, like many other decayed and broken down tradesmen at that time. In this novel way he became the tool to sir John Fielding. He had a son, who was a man of letters, educated at Westminster school, and from thence went to Cambridge, where he was many years a fellow. He was afterward a clerk in the war office," and died Jan. 21, 1812, in his 75th year.

which gave his son a taste for reading, and enabled him at an early period of life to accumulate a fund of useful knowledge. He appears to have had no regular education, for when scarcely twelve years of age, he was placed, as an errand boy, with Mr. Samuel Goadby, stationer, Royal Exchange. With him he remained some years, until in 1754, he was bound apprentice to Mr. Robert Goadby, printer, of Sherborne, in Dorsetshire. Here, in his leisure hours, he applied himself to the study of Greek and Latin, and perused the best books in every branch of learning, and very successfully supplied the want of a regular education. In 1763, he commenced author, by publishing a *Review of the genuine Doctrines of Christianity*, &c. in which he stated his reasons for renouncing the doctrines of Calvin, in which he had been educated. In 1764, he left Sherborne and went to London, and having taken out his freedom, supported himself by working as a journeyman printer; he published a pamphlet on libels, which Wilkes and his party had then rendered an interesting subject. In 1765 he was employed in editing a periodical called the *British Biography*, 8vo. which was continued by him as far as the seventh volume. About this time he acquired some property by marriage, and began the bookselling business in Fore-street, where he continued for about nine years, but with no great success. During this time he published various pamphlets on the political pamphlets of the day, and always in opposition to the measures and supporters of the administration. In 1774 he resigned his business, and was ordained a preacher among the dissenters, and soon after chosen pastor of a congregation at Highgate. In 1778 he exchanged this situation for the office of forenoon preacher at Newington Green, where Dr. Price preached in the afternoon. When Dr. Andrew Kippis was employed by the London booksellers on a new edition of the *Biographia Britannica*, Mr. Joseph Towers was his assistant. In 1778, he received the degree of LL. D. from the university of Edinburgh, and continued occasionally to communicate his sentiments on public affairs in various pamphlets. Dr. Towers was a man whose life points the numerous advantages which may be derived from industry and application; and shows how much may be done, by a steady attention, accompanied with moral habits and prudent economy. His acquisitions were certainly very considerable; and his knowledge of literary history, and of ecclesiastical controversy very extensive. His manners also were pleasing, and recommended him to the best society, where he was received a welcome guest.

1795. S. FREEMAN and SON introduced the art of printing in Cincinnati, the capital of the Miami country, in the Ohio, North America; and by the year 1810 there were eight or ten presses established in different parts of the state. In 1826 Cincinnati itself contained no fewer than nine printing establishments, and also a type foundry, and manufactories for every thing connected with printing.

1795, May 23. Died, STANLEY CROWDER, for many years a considerable wholesale bookseller on the north side of Paternoster-row. He was an élève of sir James Hodges. In the latter part of his life, finding business decline, he was fortunate enough to obtain the place of clerk to the commissioners of the commutation house and window tax for London, which afforded him a comfortable asylum in his old age.

1795, June 12. Died, JAMES FLETCHER, a bookseller at Oxford, aged eighty-seven years and seven months. He was a native of Salisbury, in Wiltshire.

1795, June 24. Died, WILLIAM SMELLIE, an eminent naturalist, miscellaneous writer, and printer, in the city of Edinburgh, where he was born about the year 1740. He received the rudiments of his education at the parish school at Duddingston, and was for some time at the high school of Edinburgh. His father, who was a builder, and constructor of the martyrs' tomb, in the Greyfriars church-yard, at first wished to apprentice him to a stay-maker, but the business of a printer was ultimately preferred, and he was indentured to Messrs. Hamilton, Balfour, and Neill, then eminent professors of that art in the Scottish capital. While yet very young, he had the misfortune to lose his father; but the exemplary conduct of the young printer soon placed him above the necessity of depending upon others for his subsistence. Every leisure moment was devoted to study, or literary pursuits; and only a few years of his apprenticeship had elapsed, when he was appointed by his employers to the responsible office of corrector of the press, with a weekly allowance of ten shillings, in place of his stipulated wages of three shillings. Instead of wasting his earnings on frivolity or dissipation, young Smellie took the opportunity of attending a regular course of the university classes. The result of this was soon evidenced, by his producing an edition of *Terence*, in 12mo. 1758, wholly set up and corrected by himself; which Harwood, the philologist, declares to be "an immaculate edition;" and which gained to his masters an honorary prize, offered by the Edinburgh Philosophical society, for the best edition of a Latin classic. Upon the expiry of his indentures, Mr. Smellie, then only nineteen years of age, accepted employment from Messrs. Murray and Cochrane, printers in Edinburgh, as corrector of their press, and conductor of the *Scots Magazine*. Notwithstanding, however, his severe professional labours, he still prosecuted his classical studies with greater ardour; and nothing, perhaps, can better illustrate the self-tasking nature of Mr. Smellie's mind, than the fact, that he instructed himself in the Hebrew language, solely that he might be thereby fitted for superintending a grammar of that tongue, then about to be published by professor Robertson. He continued in the employment of the above gentlemen for six years; that is to say, until the year 1765, during which time we find him steadily advancing himself in life, extending his acquaintance

amongst the *litterati* of the day, and improving himself by every means within his reach. He had a decided preference to the study of natural history, especially of botany, and about the year 1760, collected an extensive *Hortus Siccus* from the fields around Edinburgh, which he presented to Dr. Hope, professor of botany in the university. He likewise in the same year gained the honorary gold medal given by the professor for the best botanical dissertation; and soon afterwards wrote various other discourses on vegetation, generation, &c., all of which were subsequently published in a large work solely written by himself, entitled the *Philosophy of Natural History*. He was besides no mean chemist, at a time when chemistry had scarcely been reduced to science, and was generally held as alike visionary and vain. Upon the publication of the *Essays* of the celebrated David Hume,\* printed by Mr. Smellie, an extended correspondence took place between them, in which the latter contested with great logical force and acumen many of the heterodox doctrines advanced by the former; particularly that respecting the credibility of miracles. He lived in terms of great intimacy with Dr. William Buchan, author of the well-known *Domestic Medicine*. That work passed through the press in Messrs. Murray and Cochrane's printing office, and entirely under Mr. Smellie's superintendence, Dr. Buchan himself then residing in England. It is well ascertained that Mr. Smellie contributed materially, both by his medical and philological knowledge, to the value and celebrity of the publication; and from the fact, indeed, of his having rewritten the whole of it for the printers, he was very generally considered at the time, in Edinburgh, to be the sole author of it. In 1763, being then only twenty-three years of age, Mr. Smellie married a Miss Robertson, who was very respectably connected. By this marriage he had thirteen children, many of whom he had lost by disease. In 1765, upon the conclusion of his engagement with Messrs. Murray and Cochrane, he commenced business as a master-printer, in conjunction with Mr. Auld, Mr. Smellie's pecuniary proportion of the copartnery being advanced for him by Dr. Hope and Dr. Fergusson, professors in the university. In 1767, a new copartnery was formed by the introduction of Mr. Balfour, bookseller, who brought along with him the property of a newspaper called the *Weekly Journal*, which had for a considerable time previously been established. The manage-

\* David Hume, celebrated as a metaphysical and historical writer, was born in the city of Edinburgh, April 26, 1711, where he died, August 25, 1776. His *History of England* was the first example of the highest kind of historical composition which appeared in English literature. The first volume, embracing the period from the accession of James I. to the revolution, was published in 1754; and the second, appeared in 1756; and, notwithstanding the superior erudition, accuracy, and even elegance, of subsequent writers, it has since been the standard work upon the subject. Besides the profits it brought him he obtained a pension from lord Bute. In 1769 he accompanied the earl of Hertford in his embassy to Paris, where in 1765 he remained chargé d'affaires. After his death appeared a work by him, called *Dialogues concerning Natural Religion*.

ment of this latter was solely intrusted to Mr. Smellie; but as it happened to be a losing concern, he shortly afterwards insisted on its discontinuance. This led to disputes, which finally terminated in a dissolution of the copartnery in 1771; when a new contract was entered into between Mr. Balfour and Mr. Smellie only. About the same time, he appears to have been on terms with the eminent William Strahan, to undertake the management of the vast printing concern carried on by him in London; but from some cause not clearly explained, the treaty was broken off. It is worthy of mention, as showing the respect in which Mr. Smellie was at this time held, that upon his entering on this new copartnery, lord Kames became security for a bank credit in favour of the younger printer, to the amount of £300. In 1780, on the suggestion of the late earl of Buchan, a society for collecting and investigating the antiquities of Scotland, was instituted at Edinburgh. Of this society, Mr. Smellie was personally invited by his lordship to become a member; which he did, and was appointed printer of their journals and transactions. Next year he was elected keeper of their museum of natural history; and in 1793, he was elected secretary, which office he held till his death. It is not, we believe, generally known, that with Mr. Smellie originated the admirable scheme of a statistical account of all the parishes of Scotland, which was afterwards brought to maturity by sir John Sinclair. At the desire of the antiquarian society, Mr. Smellie, in 1781, drew up a regular plan of the undertaking, which was printed and circulated; but the individuals to whom they were addressed, do not seem to have understood the important nature of the application, and only a very few complied with the directions given in it. In 1780, Mr. Smellie commenced the publication of his *Translation of Buffon's Natural History*; a work which has ever stood deservedly high in the opinion of naturalists, being illustrated with numerous notes and illustrations of the French author, besides a considerable number of new observations. In the year 1780, the partnership between Mr. Smellie and Mr. Balfour was dissolved, when the former entered into partnership with Mr. William Creech, bookseller. This connexion continued to the end of 1789, when Mr. Smellie commenced, and ever afterwards carried first volume of his *Philosophy of Natural History* on business on his own account. In 1790, the work was published; the copyright of which was purchased by Mr. Elliot, bookseller, Edinburgh, for one thousand guineas. The second and concluding volume was not published till 1799. His acquaintance with Robert Burns\* commenced

in the year 1787, upon the occasion of the poet's coming to Edinburgh to publish his poems, which were printed by Mr. Smellie. From their similarly social dispositions, and mutual relish of each others wit, an immediate and permanent intimacy took place betwixt them. After Burns's departure from Edinburgh, they corresponded frequently; but the greater part of the communications were afterwards destroyed by Mr. Smellie, equally, perhaps, on the bard's account and his own. Of the high opinion which the latter entertained, however, of his friend—and it is well known how fastidious was his taste on the score of talent, honesty, and real friendship amongst his fellow-creatures—we have sufficient evidence in the poetical sketch, by Burns:

To Crochallan came  
The old cock'd hat, the grey sortout, the same;  
His bristling beard just rising in its might,  
'Twas four long nights and days to shaving night;  
His uncurl'd grizzly locks, wild staring, thatch'd;  
A head, for thought profound and clear, unmatch'd;  
Yet though his caustic wit was biting, rude,  
His heart was warm, benevolent, and good.

Mr. Smellie expired, at Edinburgh, in his fifty-fifth year; and we regret to add his name to the long list of men of genius, who have terminated a career of labour, anxiety, and usefulness, amid the pressure of pecuniary difficulties.\* Some years after his death, a volume was published, under the care of his son, containing memoirs of three distinguished men, with whom he had been acquainted; lord Kames,† Dr. John Gregory,‡ and Mr. David Hume: it formed part of a more extended design, which Mr. Smellie had sketched out, but found not time to execute.

and characters. Models, as far as he required any, he found in the poetry of Ramsay and Ferguson, and in that great body of national song, comic and sentimental, which the Scottish people have composed for themselves in the course of ages. In 1783, he published a volume of poems at Kilmarnock, which had a wonderful success, and was soon afterwards invited to Edinburgh, where a new edition of his poems were printed, and from which he realized £600. He then took a farm in partnership with his brother Gilbert, and at last settled at Dumfries, as an exciseman. During the latter years of his life, he employed his poetical talent chiefly in the composition of a series of songs, which, though they have the general fault of treating love with too little regard for its higher and more delicate emotions, are allowed to rank among the best compositions in that department of poetry. His latter years, as must be generally known, were clouded with poverty and its attendant distresses, aggravated by passions, which, equally with his genius, formed a part of the extraordinary character assigned to him by nature. After his death, which happened at Dumfries, July 21, 1796, leaving a widow and four children, his works, including poems, songs, and letters, were published in an elegant collection by Dr. James Currie, of Liverpool, who added a biographical memoir, remarkable for judgment and good taste, and which produced above £1000 for the benefit of his family. Mrs. Burns died March 26, 1834.

\* *Memoirs of the Life, Writings, and Correspondence of William Smellie, F.R.S. and F.A.S.*, late printer, in Edinburgh, Secretary and Superintendent of *Natural History to the Society of Scottish Antiquaries*, &c. By Robert Kerr, F.R.S. and F.A.S. two vols. 8vo. Edinburgh: printed by Alexander Smellie, for John Anderson, 1811, with a portrait and fac-simile of his writing. A work, says Mr. Robert Chambers, perhaps disproportioned to the subject, but containing many curious anecdotes.

† Henry Home, lord Kames, author of the *Elements of Criticism*, and other works, died Dec. 26, 1792.

‡ An eminent physician, and author of *A Father's Legacy to his Daughters*. He was born at Aberdeen, June 3, 1734, and died at Edinburgh, Feb. 9, 1793.

\* Robert Burns, the brightest star in the poetical annals of Scotland, was born "on the Doon side," near the town of Ayr, Jan 25, 1739, and reared to the laborious profession of a farmer. With the advantage of a plain education, and access to a few books, the mind of this highly-gifted individual received a degree of cultivation, much superior to what is attainable in the same grade of society in other countries; and at an early age, he began to write in his vernacular language, verses respecting rural events

1795, Aug. 5. *Died*, WILLIAM GOLDSMITH, several years a bookseller in Paternoster-row, and afterwards in Warwick-court, Newgate-street. Possessing landed property at Strety, in Bedfordshire, he was appointed high sheriff for that county in 1784. He died much lamented.

1795, Sept. 10. *Died*, JOHN ARCHDEACON, a very excellent printer, whom the university of Cambridge appointed to succeed Mr. Benthams, as their printer, and in which office he continued for many years. He died at Hemingford Abbots, aged seventy.

1795, Oct. 21. *Died*, JOHN BEWICK, a very distinguished artist in wood engraving. He was a native of Orington, on the banks of the Tyne, a few miles from Newcastle, and was seven years the junior brother of the celebrated Thomas Bewick, to whom, however, in conjunction with Mr. Beilby, he had served a seven years' apprenticeship, and soon evinced talents and skill equal, if not superior, to those of his elder brother, in the xylographic art. Unfortunately for the arts and for society, of which he was an ornament, this promising individual was cut off in the thirty-fifth year of his age.

1795, JOSEPH RIDLEY was awarded by the society for encouragement of arts, a premium of forty guineas, for his improvement of the printing press.

AITKEN, bookseller, of London, convicted, in the court of king's bench, of publishing a certain immoral book called *Harri's List of Covent Garden Ladies*, for which he was sentenced to pay a fine of £200 to the king, to be imprisoned until the fine be paid, and afterwards to find security for his good behaviour for three years; himself in £250, and two sureties in £100 each. Mr. Roach, a bookseller, was sentenced to twelve months' imprisonment, and to find security for his good behaviour for three years, for the same offence.

1795, Nov. In O'Harra's *History of New South Wales* it is stated that the art of printing was introduced into New South Wales, but no mention is made of any books printed, or name of the spot on which the press was erected.

1795, Dec. 1. *Died*, THOMAS SPILSBURY, the successor of the younger William Strahan, in the printing office on Snow-hill; where he died, in the sixty-second year of his age. To distinguished ability in his profession he joined the strictest integrity, amiable manners, and a style of conversation, which, whether the subject was gay or serious, never failed to delight. As his press was resorted to by eminent literary characters, who often availed themselves of his critical remarks; so have they, in return, uniformly borne testimony to his uncommon precision in every thing appertaining to a pure genuine English diction. He was the first person in this country who made it an express study to print French works with accuracy; in which, having at that time only a slight acquaintance with that language, he by closeness of application soon arrived at such a mastery as to be pronounced, by many of the most accomplished scholars of

that kingdom, resident in London, superior in point of correctness, even to the printers of Paris.

1795, March. *The Manchester Gazette*, No. 1. printed and published by Thomas Bowden and William Cowdroy, in Hunter's-lane.

1795. *The Sporting Magazine*, No. 1.

1795, Sept. 22. *The Sylph*.

JAMES MONTGOMERY, printer of the *Sheffield Iris*, was convicted of publishing a libel in that paper upon colonel Athorpe, relative to his conduct at the time of the riots in Sheffield on the 4th of August, 1795, and he was adjudged to six months' imprisonment in York castle, to pay a fine of £30 to the king, and find security for his good behaviour for two years, himself in £100, and two sureties in £50 each.

Bless'd with freedom unconfin'd,  
Dungeons cannot hold the soul;  
Who can chain the immortal mind?  
None but he who spans the pole.

From *Prison Amusements*, written during the author's confinement.

1796, Jan. 2. *Died*, EDWARD BALLARD, aged eighty-eight years, printer and bookseller, in Little Britain. He was the last of the trade who inhabited that once grand emporium of books, where he died in the house in which he was born. He had outlived his mental faculties, and was for some time used to be moved about in a chair. The family of the Ballards were famed for more than a century as the supporters of literature; and amongst the first booksellers who sold books by a marked catalogue. The father of them was celebrated by John Dunton.\* See pages 590 and 708 ante.

\* John Dunton characterizes the following booksellers: JONATHAN GREENWOOD, bookseller and auctioneer, served his apprenticeship with Mr. Cockril, and had the character of being a very diligent servant. When he married it was neither for beauty nor riches; so that he is a rare example of conjugal love and chastity. By the wise management of his domestic affairs, he not only gained the affections of his man (*Chandler*), but of all who knew him. He was a great instance of self-denial in his words and looks; and never was any conversation better tempered, for he knew how to be familiar, without making himself cheap. He was a member of Dr. Annesley's church, yet had a larger soul than to confine his charity to one party. His father was a divine of the church of England, but loved and valued the image of God wherever he found it; and for his son Jonathan, he was so well loved by the moderate conformists, that he had a considerable trade amongst them; yet Mr. Greenwood was far from a temporizer, and ever chose rather to be good than great. But I see it is neither piety nor diligence gives a man any constant title to the goods of fortune; for though he had contracted a large acquaintance (and had Dr. Annesley's friendship, who helped him to Mr. Allen's *Heart-work* and other saleable copies) yet he concluded trading at last with as small a pittance of the world as he had to begin it; so that the chief thing he has left to boast of is, a virtuous wife, and several small children. But he still deserves the love and esteem of all good men, for the worst that can be said of him is, "There goes a poor honest man," which is much better than, "There goes a rich knave."

MR. PAWLART, in Chancery-lane. He is related to him that printed that excellent book called the *Whole Duty of Man*. But, alas! the uncle is dead. For the Pawlart that is yet living, he is a man of a generous temper, and lives in the world like one that is much above it.

MR. PRAON, in Redcross-street, of whom I never bought but sold—the more is the pity—many hundred reams of *Tigresse Liburgy*, *Edict of Nantes*, and other books that my friends had forgot to ask for. I might call Mr. Praon the waste paper stationer of London, for I believe he buys

1796, Feb. 7. A forged French newspaper, called *L'Eclair*, circulated in London. On the 3d of July, a verdict of £100 was given against D. Stuart, proprietor of the *Morning Post*, for sending the above paper to the proprietors of

the *Telegraph*; and on the following day a verdict of £1500 was given against Mr. Dickinson, for falsely accusing Mr. Goldsmid, the money broker, of forging the above.

1796. *The Holy Bible*, two vols. 4to. printed

more of that necessary drug than all the city besides. He is generally seen in the same coat, though he has a change of raiments—as if he thought men's hearts were rather to be changed than their garments. He is a man exactly made, even to a nail's breadth, and is a great pattern of humility and justice. He is firm in his word and bargain, and by his beard and dress one would take him to be one of the ancient philosophers. He is very quick of forgiving injuries—but for his wit and contentment (which has put him in the row of Christians) it is rather to be admired than commended.

Mr. RAVEN.—He is my brother both by sign (Dunton's sign was the black raven) and trade; and I do him no wrong if I call him the pattern and standard of wit and loyalty. He has the true art of governing himself and family; and, in a word, my brother raven is whatever a sober man and a good bookseller ought to be. He is also a nice disputer, and can dress his thoughts in very neat language.

I saw him on his counter, where he ate,  
Busy in controversies sprung of late;  
A gown and pen became him wondrous well,  
His grave aspect had more of heaven than hell,  
Only there was a handsome picture by,  
To which he lent a corner of his eye.

Mr. STARRAY.—I formerly knew him in Fleet-street, and we renewed our acquaintance in Amsterdam. He would talk well on any subject, and had good-nature in his very looks. He printed a book relating to government, that forced him to leave his country. He was a brave asserter of English liberties to his last breath.

Mr. SMALT.—He is a man so well known in the stationers' company, that it is character enough to name him. In days of yore he has been something, but the case is so altered, it were well now if I could call him nothing.

Mr. SAMUEL SMITH, bookseller to the Royal Society, deals very much in books of a foreign growth, and speaks French and Latin with a great deal of fluency and ease. His shop is very beautiful and well furnished. He was one of those I invited to the funeral of my apprenticeship. His partner, BENJAMIN WALFORD, is a very ingenious man, and knows books extraordinary well.

Mr. SMITH, near the Royal Exchange. His fair soul is tenent to a lovely and well-proportioned body, his eyes are clear and shining, his brow proclaims fidelity, and his whole frame of face and favour is a most perfect mixture of modesty and sweetness; he has all the advantage of mind and body, and an honest birth (being son to that eminent bookseller, Mr. Ralph Smith) conspiring to render him a happy person.

Mr. SMITH in the Strand. He was born with auspicious stars, has made several auctions with good success, and increases daily both in fame and riches.

THOMAS SIMMONS, formerly of Ludgate-street. He as well as his father printed for the famous Baxter, and was a most accomplished bookseller. His conjugal virtues have deserved to be set as an example to the primitive age; they approach so near to singularity in ours, that I can scarce speak of his love to his wife, without a satire upon others. If any difference is, it is who of the two shall be most obliging; so that if all be true that I have heard of them, I am ready to conclude they are a pair of angels sent below to make marriage amiable in their persons. And, lastly, if I consider Mr. Simmons as a father, how tender he is of his children. He takes care to form the minds of his daughters by the principles of virtue, and to set out his sons in the fair way to heaven; and none are too great to follow this pious example, for it is the duty of parents, from the highest to the lowest, to see their children brought up in the fear of God.

Mr. SEXTON, in Exchange-alley. He has the honour to print for Sir William Dawes, Dr. Smith, and other eminent churchmen. He is a very modest quiet man, and never insinuates his merit by any other means than the plous things he speaks or prints.

Mr. SCAWENAY.—The morning of his life was clear and calm, and ever since his whole life has been a continued series of honesty, then no wonder he printed for Judge Hale. He merits the name of "Universal Bookseller," and is familiarly acquainted with all the books that are extant in any language. He keeps his stock in excel-

lent order, and will find any book as ready as I can find a word in the dictionary. He is a great ornament to the stationers' company, and may justly be called venerable for his heavenly aspect, wherein gravity and sweetness are well compounded. I shall only add, he is a constant frequenter of Sturbridge fair (where Mr. Biagrove, and he once made me free), and perhaps is the only bookseller that understands fair keeping to any advantage.

Mr. SHERRARDINE is a man of very quick parts. I have heard him say he would forgive any man that could catch him. His shop is usually well furnished with valuable books: out of which I once made a very choice collection. He noderstands his trade to a nicety, and talks much to the purpose, if one could but trace him. He will give as much for a library as any of us, and even I think he learned this generous quality from his Master Hussey, who once gave seventy-five pounds for a parcel of books that I thought I had purchased too dear at sixty.

Mr. SOUTHWAY.—He had the happiness to find a wife of a good fortune; but, meeting with disappointments in trade, he retired to a coffee-house in Foster-lane; but no misfortunes have made honest Southway forget the duties of a husband, the ties of friendship, or the doing justice to those he dealt with. He printed for Mr. Smithies and other eminent churchmen; but it was not his luck to get so estate by authors; and I wish he may get it by coffee, as I believe he would, did the booksellers of London give him that generous encouragement as his fair dealing amongst them deserved.

Mr. SWELL.—He was once a rising sun in trade; but his sun is set in a cloud, and he is now reckoned amongst the unfortunates. He was owner of a great deal of wit and learning, and, perhaps, had he not known it, had still been as thriving as ever. He was much admired for all his projects (especially that of Dupin), and even the first blossoms of his youth paid us all that could be expected from a ripening manhood; while he was but an apprentice in Cornhill, he could outwit most other booksellers; and when he traded for himself, he could find none to surpass him but himself alone.

But here John Dunton, is thy skill confin'd,  
Thou canst not pilot his nobler soul and mind;  
No pen the praise he merits can indite;  
Himself, to represent himself, must write.

Mr. SAUNDERS.—He lived in the New Exchange, and had the honour to be personally known to very many of the nobility and gentry of the first rank in England: and there was scarce a bookseller in London but had a kindness for him. If any hated him it was the fair sex, for his living so long a bachelor; but they might excuse him, for he was too busy to think of love, and too honest to marry for money. I discovered that — robbed his warehouse, for which he became my friend to the day of his death.

RALPH SYMPSON.—He is one whose piety and virtue has measured the chains of Providence, and accordingly makes a due estimate of all occurrences. He is a person of great integrity, and much respected by all that know him. He printed some essays of Sir William Temple; and being very industrious, is like to be rich in a few years.

Mr. TRACY on London Bridge. His religion is not confined to the church any more than the shop; his behaviour in his family is grave and exemplary; his devotion constant; his care over his household is tender and impartial; and to his servants he seems a father rather than a master.

RICHARD WALLINGTON.—He is industrious and indefatigable in his calling; has the intimate acquaintance of several excellent pens, and therefore can never want copies; and trust him for managing and improving them. He has a pretty knack at keeping his word; and I expect to see him master of the company at least, if not a gold chain about his neck, before he dies.

Mr. WALWYN.—He is a person of great modesty and wit, and if I may judge by his poems, perhaps the most ingenious bard, of a bookseller, in London. Dryden, without descending, might call him brother. His mind is none of those narrow ones who know one thing and are ignorant of a thousand; but, on the contrary, it is so very large, that although it cannot be said Walwyn knows every thing equally well, yet it is most certain he can give an excellent account of all things; and for forming of titles, commend me to Herbert Walwyn; for I could

by Millar Ritchie, Albion-buildings, Bartholomew-close, London. Mr. Ritchie, may justly be considered the father of English fine printing, and the specimen which he gave in this bible renders him worthy of the title. A curious circumstance attended the printing of it; when it was far advanced towards conclusion, the two universities, and the king's printer, obtained an injunction to prevent its progress; just at this period some person was printing a bible at Dublin, under the title of *Jackson's Family Bible*, without notes. Mr. W. Jackson, the university printer, at Oxford, brought an action against the Irish printer. It was solemnly argued, and the Irish court determined that a restriction upon printing authentic copies of the scriptures was not good, and the bible was proceeded with. Upon this; Mr. Ritchie also took the liberty to proceed with his bible, and no more was heard of the injunction. Two unique copies, upon India paper, printed on one side only, were taken. It was printed for John Parsons, Paternoster-row.

1796, March 1. Died, GEORGE SWINDELLS, printer, in Hanging-bridge, Manchester, at the early age of thirty-six. He was a native of Disley, in Cheshire. Mr. Swindells was one of the earliest publishers of works in numbers in that town; and he also established an extensive business in ballads, Christmas carols, &c. which is still carried on by his eldest son, John.

1796, March 22. In an edict published at Erfurt, in Germany, for the instructions of the censors, or licensers of the press, provision is made, that those who publish poems shall pay double price per sheet for the writings they submit to official examination.

give an instance in which he exceeded a clob of wits in that nice affair.

Mr. W—er, cutter in wood, made all the cuts for *The Men in the Moon*, &c., and all such as I wanted for *Athena*, &c. Mr. W—at did the curious flowers for *Salmon's Herald*, and exceeds all the town for cutting in wood. He has got a habit of melting his penny, and once a month is as great as a king; but abating that reeling vice, W—at is an honest man, and has about him all that unaffected neglect of pomp in clothes, lodging, furniture, which agrees with his sedentary course of life.

Mr. ———, I forget his name, but I think I can describe his person and qualities, so as any bookseller may know him. His person is tall and slender, his eyes quick and sparkling, and his features flourish in an oval form. So much for his body. As to his qualities, he is very pious, just, humble, modest, sincere, and the care he takes of his aged father will bring a blessing on all he has. But I need not enlarge; for he that will read the character (Psalm xv) of "an inhabitant of that holy hill" will there read his true and most pure character.

MATTHEW WORTON, a very courteous obliging man. His trade lies much among lawyers. He is so just to his word, that, if he was immortal, it would be altogether as good dependence as his bond. I hear he is a rising man; and I am heartily glad of it, for the goods of this life can scarce fall into the hands of one who is better disposed to use them well.

[THOMAS WORTON, son of the above, acquired great reputation both as an author and bookseller, lived many years at the Three Daggers and Queen's Head, against St. Dunstan's church, where he succeeded his father, and where he published, in 1737, the earliest history that we have of the *English Barons*, being a *Genealogical and Historical Account of their Families*, three vols. 12mo.—1741, enlarged to five vols. 8vo. Mr. Worton was the publisher of many works of very considerable merit. He was master of the company of stationers in 1737; and after having long retired from business, died at Point Pleasant, Surry, April 1, 1766.]—Nichols.

1796, April. Died, THEOPHILUS THORNTON, bookseller, Southampton-street, Covent-garden. He was possessed of considerable talents; particularly conversant in rare tracts and scarce portraits, but unfortunately had a very slender constitution; and was for some years very infirm. He was the son of the rev. Aburne Thornton, of East Bergholt, Suffolk, who died in December, 1772. Young Thornton was born about 1759; and in 1773 was placed in his service till 1784, when he commenced business on his own account. He lost his wife and only child in 1787, which so deeply affected his spirits that he never thoroughly recovered; and died at his lodgings, in Kentish Town, aged thirty-seven.

1796, May. Died, JOHN BILBY, son of the rev. Mr. Bilby, who had been bred a printer, of which he became so much enamoured, that he worked regularly a few hours a-day, gratis, for the period of fifty years. He died at Nottingham.

1796, May 6. Died, JOHN BINNS, bookseller, of Leeds, in Yorkshire, was the eldest son of Nathaniel Binns, bookseller, Halifax, who died at an advanced age, in January, 1801. He was taught the art of bookbinding, &c. under his father. About the age of twenty he went to London, and was employed by Mr. Crowder, bookseller, much to the satisfaction of his employer. From thence he removed to Leeds, where he commenced business on his own account, and where he prosecuted it with avidity and singular success. Mr. Binns published his first catalogue in 1767; and continued to publish one for some time, every two or three years; but for several years previous to his decease he published a catalogue annually. Mr. Binns was in business about thirty years. He died at Grantham, on a journey from London, at the age of fifty-two years. He was interred in St. Peter's church, Leeds, where a handsome marble monument is erected to his memory. He was twice married. He was most indefatigable in business; and his bibliographical knowledge was excelled by few. He was a partner in the Leeds Commercial Bank, under the firm of Scott, Binns, Nicholson, and Smith, from its commencement till his death. Mr. Binns was a very respectable amateur in the science of music; and about his eighteenth year he compiled a *Dictionary of Music*, which in a few years was published under the name of Hoyle. Mr. Binns was twice married, and left two sons and three daughters. He was immediately succeeded in the business by his eldest son John;\* but he, being of a delicate constitution, died in a few years. The second son, Thomas, then entered upon the business, who, as well as his brother, engaged John Heaton to superintend and take the executive part of the business, and who succeeded them in the

\* In 1794, the property of the *Leeds Mercury* was transferred by James Bowling, the proprietor and editor, to Messrs. John Binns and George Brown, in whose hands it continued till March 7, 1801, when the copyright was purchased by Edward Baines, by whom, in conjunction with his son, Edward, the *Mercury* is still conducted, and now ranks as one of the first provincial newspapers, in point of circulation, in the three kingdoms.

same premises, which he commenced in consequence of the second son's severe illness and subsequent death.

1796, May 8. KYD WAKE, a journeyman printer of London, was convicted of insulting his majesty in his passage to and from the parliament house, by hissing and using several indecent expressions, and was sentenced to be imprisoned and kept to hard labour in Gloucester jail for the term of five years, solitary confinement; to stand once in the pillory; and to find security in £1000 for his good behaviour for ten years. He had his head shaved, and wore the prison dress, consisting of a blue and yellow jacket and trousers, a woollen cap, and a pair of wooden shoes. Wake at last came to an untimely end, being crushed to death between the wheels of a waggon and a post in Paul's chain, St. Paul's church yard, March 15, 1807.

1796, June 6. *Died*, DANIEL PRINCE, many years a very eminent bookseller and printer at Oxford, of which he was a native. During the long period of his being manager of the university press, many valuable publications of course passed under his superintendence. Those in which he most prided himself will be seen by the following list, which not long before his death he transmitted to Mr. John Nichols, of London, as a curiosity:

Blackstone's *Magna Charta*, 1769, 4to.  
*Marmora Gronoviana*, 1768, folio.  
*Lateri Synopsi Conchyliorum*, 1770, folio.  
*Blackstone's Commentaries*, four vols. 4to. third edit.  
 1779, 8c.  
*Kennelcott's Hebrew Bible*, two vols. folio, 1776.  
*Cicero's Opera*, ten vols. 4to. 1784.  
*Bradley's Observations and Tables*, all printed in 1786, but not published for some years after.

Mr. Prince married a sister of Dr. Hayes; and died in New College lane, Oxford, in his eighty-fifth year, to the loss of many persons who were the objects of his bounty, and by all who had the happiness to enjoy his friendship.

1796, Aug. 8. *Died*, JOHN NICHOLSON, bookseller, at Cambridge, aged sixty-six years, who by unremitting attention to business for forty-five years, acquired considerable property, and was in the university better known by the name of *Maps or Pictures*, from his constant habit of offering those articles at the different chambers. He established a very capital circulating library, including most of the lecture books read in the university, and also many of the best and scarcest authors in various other branches of literature; by which means the students were enabled to furnish themselves with the works of the best writers at a small expense. He presented to the university a whole-length portrait of himself (painted by Reinagle) loaded with books, which hangs in the staircase of the public library, and under it a print engraven from it.

1796. THOMAS SCOTT, rector of Aston Sandford, in Buckinghamshire, published a family Bible, in numbers, which proved the ruin of Bellamy the publisher. The work was sold by the assignees, but Mr. Scott not having parted

with the copyright, printed another in opposition to it, and gained his object. Four volumes, 4to. 5th edition, 1810.

1796, Sept. 25. *Died*, STEPHEN FLETCHER, a bookseller at Oxford, in which city he was born, and where he died in the eighty-second year of his age.

1796, Oct. *Died*, JOHN CROUSE, printer of the *Norfolk Chronicle*, for thirty-five years, and during that period was always distinguished for his integrity and goodness of heart. He died at Norwich, aged fifty-eight years, and was succeeded in his business by Messrs. Stephenson and Matchett.

1796. *Died*, EDWARD JOHNSTON, bookseller. He was the son of William Johnston, a bookseller of long-established reputation, in Ludgate-street, who relinquished the business to his son about the year 1770; and was afterwards appointed stationer to the board of ordnance. He died, at a very advanced age, in 1804. Mr. Edward Johnston, who inherited a good fortune from his maternal grandfather, Edward Owen, printer of the *Gazette*; retired from business, and died in Dublin.

1796, Oct. *Died*, THOMAS BAILEY, warehouseman at the printing office of the university of Cambridge; a man of very singular character. The week before his death, being apparently in good health, he ordered his coffin to be made of red deal, in the rough, which he garnished with herbs, giving also orders to be buried without a shroud; and even proceeded to hire and pay his bearers, predicting his own death to take place on the Saturday following,—he lived, however, until the Wednesday.

1796, Oct. 26. *Died*, EDWARD JOHNSON, bookseller, many years partner with Mr. Dodd, in Ave-Maria-lane, and afterwards his successor. He died at Reigate, in his eighty-seventh year.

1796. *Died*, MR. POTTS, an eminent printer and bookseller in the city of Dublin, and proprietor of *Saunders's News Letter*.

1796, Nov. 20. JOSEPH BURKS was sentenced in the court of king's bench, to be imprisoned in Coldbath-fields, to hard labour for two years, and at the end of that period to enter into recognizances in the sum of £500, for his good behaviour seven years, for publishing a libel, *A Summary of the Duties of Citizenship*.

1796, Dec. 10. *Died*, SACKVILLE PARKER, a bookseller at Oxford, in which city he was born, and where he died in his eighty-ninth year.

1796, Jan. 7. *The Reaper*, by Mr. Maude, of Wensley Dale, and was originally published in the *York Chronicle*; these essays were continued till Thursday June 22, 1779.

1796, Jan. *The Monthly Mirror*.

1796. *The Trifler*, published at Edinburgh.

1796, March. *The Watchman*. This little miscellany was printed at Bristol, though published in London; and was the production of S. T. Coleridge, well known to the public for the sublimity and originality of his poetical effusions. It closed with the tenth number.

1796, March. *The Monthly Magazine*, No. 1.

1796. *The Peeper; essays moral, biographical, and literary*, by John Watkins, LL.D., and dedicated to Miss Hannah More. Dr. Watkins was the editor of the *Orthodox Churchman's Magazine* till its termination.

1796. *Feb. The Eugénien*, published in the *Monthly Magazine*.

1797. *The Brighton Guide*. This paper was the production of John Williams, a literary aspirant, who generally assumed the name of ANTHONY PASQUIN.\*

1796. *April 25. The Ghost*, ended Nov. 16.

1796. *The Trifler*, published at Edinburgh.

1796. *July. Monthly Magazine*.

1796. *The Lynce*.

1796. *The Enquirer; Reflections on Education, Manners, and Literature*, by William Godwin, well known in the literary and political world. For some time Mr. Godwin kept a bookseller's shop in Skinner-street, Snow-hill, London, where he ushered into the world many very useful works tending to facilitate the instruction of youth.

1796. *Nov. Quiz*, by a society of gentlemen.

1797. *Feb. 5. Died, THOMAS LONGMAN*, many years a considerable bookseller in Paternoster-row, and nephew to Thomas Longman, noticed at page 696 *ante*, to whose business he succeeded. He was a man of the most exemplary character, both in his profession and in private life, and as universally esteemed for his benevolence as for his integrity. He died at Hampstead, aged sixty-six, and was succeeded by his son Thomas, who with a considerable portion of the well-earned wealth, inherited the good qualities of his father, and carried on the business of a

bookseller, hitherto unknown in this country. Another son, George, (who was M.P. for Maidstone,) was of equal consequence as a wholesale stationer.

1797. *Feb. 6. JOHN SMITH* sentenced in the court of king's bench to be imprisoned and kept to hard labour in Clerkenwell house of correction, for two years, and at the end of that time to enter into recognizances in the sum of £1000 for his good behaviour for five years, for publishing a work called the *Duties of Citizenship*.

1797. *Feb. 13. Died, WILLIAM BROWN*, bookseller, in Essex-street, in the Strand, London. He served his apprenticeship with, and was afterwards many years journeyman to Mr. Sandby, on whose quitting business, about 1765, he opened the shop in which he died, after a week's illness, aged sixty-three years, and was buried at Enfield. He was succeeded in business by Mr. Robert Bickerstaffe. Mr. Brown married the only sister of Mr. Harrison, surgeon and apothecary of Enfield, and of the rev. Mr. Harrison, dissenting minister at Warrington, by her he had only one son, who died an infant; and she died in 1795. He divided his fortune between her brothers and their children, after making provision for his own poor relations, who were very few.

1797. *Feb. 19. Died, JAMES DODSLEY*, the brother, the partner, and successor in business of Robert Dodsley,\* noticed at page 711 *ante*. James Dodsley was very early in life invited by his brother Robert (who was twenty-two years older than himself,) to assist him in business, and became an active and useful partner, in conjunction with whom he published many works of the first celebrity; and after his brother's retirement, in 1759, continued the business with the same perseverance, and acquiring wealth with honour to himself and credit to the public. In 1782 he suggested to the Rockingham administration the plan of the tax on receipts; which, though troublesome to the trader, has been productive of considerable revenue to the state. A few years after (1788) he was nominated as a proper person to be sheriff of London and Middlesex; in excuse for which he cheerfully paid the customary fine. It is worth noticing, as a literary anecdote, that he sold no less than 18,000 copies of Mr. Burke's famous *Reflections on the French Revolution*; with considerable advantage both to himself and to the author, to whom he made a very handsome compliment for the profits.—His property (which was estimated to be about £70,000,) he gave principally to nephews and nieces, and their descendants. By a habit of secluding himself from the world, Mr. Dodsley, (who certainly possessed a liberal heart and a strong understanding) had acquired many peculiarities. He at one time announced an intention of quitting trade; but in less than a fortnight, repenting the resolution, again adver-

\* He was born in the metropolis, and had his education at Merchant Taylor's School, where he suffered chastisement for an epigram upon Mr. Knox, the third master. At the age of seventeen, he was placed with a painter, but quitted that profession to commence author and translator. When he was no more than eighteen, he wrote a defence of Garrick against Dr. Kenrick, which procured him the friendship of the British Roscius. About two years afterwards, he went to Ireland, and during his residence in Dublin, he edited several periodical publications; but having attacked the government during the administration of the duke of Rutland, a prosecution was commenced against him, and he was obliged to decamp, leaving the printers to endure the judgment. In 1784, he was associated with Mr. Bate Dudley, in conducting the *Morning Herald*, but a violent quarrel breaking out between them, Williams wrote an intemperate satire on his antagonist, for which he was prosecuted. The action, however, terminated by the interference of some friends. In 1787, Williams accompanied his friend Flon to France, and on his return commenced a paper called *The Brighton Guide*. He next settled at Bath, from which place he was also under the necessity of withdrawing precipitately; and in 1797, we find him in the court of king's bench, as plaintiff in an action against Pankier the bookseller, for a libel contained in Mr. Gifford's poem, entitled *The Bavian*, where, in one of the notes, the author speaking of the scribbler, observes, that "he was one so lost to every sense of decency and shame, that his acquaintance was infamy, and his touch poison." In this cause the plaintiff was consigned, solely from the proof that was exhibited of having himself grossly libelled every respectable character in the kingdom, from the sovereign down to the lowest of his subjects. He was afterwards engaged as a theatrical reporter on one of our newspapers; but happening to write a critique on a celebrated actor, who, in fact, did not perform at all on the night when he was described as having murdered his part, the calumniator was dismissed.

\* Of Robert Dodsley there is a portrait by sir Joshua Reynolds, engraved by S. F. Ravenet, prefixed to his work called *Trifles*, published in 1777.

tised that he should continue in business, and re-solicited the favour of his friends. For some years previous, however, he kept no public shop, but continued to be a large wholesale dealer in books, of his own copy-right. Of these, a part, to the amount of several thousand pounds, was burnt by an accidental fire in a warehouse which he had not prevailed on himself to insure; but the loss of which he was philosopher enough to bear without the least apparent emotion; and sold to a gentleman, the chance of the fragments of waste-paper that might be saved, for a single hundred pounds. This agreement was not fulfilled, but the whole remainder was afterwards sold for 80 guineas. He kept a carriage many years; but studiously wished that his friends should not know it; nor did he ever use it on the eastern side of Temple-bar. He purchased an estate, with a small house upon it, between Chislehurst and Bromley; on the house he expended an incredible sum, more than would have re-built one of twice the size, which afterwards he rarely visited, and at length let, with the estate, on a long lease, at a very low rent.— Though he often expressed his apprehension that the law (if he should die intestate) would not dispose of his property as he could wish, he never could persuade himself to make a will till he was turned of 70; after which time he made four; the last of them Jan. 4, 1797, not long before his decease. He was buried in St. James's church, Westminster; and in the chancel on an open book of marble is inscribed:

Sacred to the memory of JAMES DODSLEY,  
many years an eminent bookseller in Pall Mall.

He died Feb. 19, 1797, aged 74.

His body lies buried in this church.

He was a man of a retired and contemplative turn of mind, though engaged in a very extensive line of public business.

He was upright and liberal in all his dealings;  
a friend to the afflicted in general,  
and to the poor of this parish in particular.

Mr. Dodsley left nearly £400 to the company of stationers; £1000 each to Mr. George Nicol, and Mr. John Walter,\* booksellers, two of his executors; £4000 to Mr. John Freeborn, who had been several years his assistant in business; to Webster, his attorney, £1000; to his maid-servant £500; to his coachman £500, and also his carriage and horses; and to the poor of St. James's, Westminster, £200 three per cent.

1797, March 3. *Died*, THOMAS WRIGHT, printer, who was first employed in the office of Mr. Archibald Hamilton, who died in 1793. He commenced business about 1766, first in Chancery-lane, and afterwards in Peterborough-court, till his death. Mr. Wright was a well-educated, sensible man, printed several works of consequence, and was much respected by many literary men of the first eminence. He planned some works for others, and meditated some for himself, particularly one on the same plan as Nichols's *Literary Anecdotes*, which, says Mr. Nichols, his own professional knowledge would have enabled him to have performed with credit.

\* Served his apprenticeship with Robert Dodsley.

He printed the *Westminster Magazine*, in which he had marked the writer of every article, in a copy which probably still exists. He had, in like manner, when at Mr. Hamilton's, prefixed the names of the writers to the *Critical Review*. In a preface to the second volume of *Essays and Criticisms*, by Dr. Goldsmith, 1798, Mr. Seward says, "The late Mr. Thomas Wright, printer, a man of literary observation and experience, had, during his connexion with those periodical publications in which the early works of Dr. Goldsmith were originally contained, carefully marked the several compositions of the different writers as they were delivered to him to print. Being, therefore, it was supposed, the only person able to separate the genuine performances of Goldsmith from those of other writers in these miscellaneous collections, it became the wish of several admirers of the author of the *Traveller* and *Deserted Village*, that his authentic writings should no longer be blended with other doubtful or spurious pieces. Mr. Wright was therefore recommended, and prevailed upon, to print the present selection, which he had just completed at the time of his death."

1797, March 28. *Died*, JOHN MEANT, an eminent stationer in Bishopsgate-street within, and for twenty-seven years one of the common-council for that ward. He was possessed of an uncommon strength of understanding, and an inflexible integrity. He resided at Lewisham, and had been for two or three years past tormented with an unconquerable asthma. Seeing his approaching death, he in the preceding month resigned the key of the city seal, with which the corporation of London had long entrusted him.

1797, April 18. *Died*, ABRAHAM BADCOCK, bookseller, at the corner of St. Paul's church-yard. His judgment of books was good; and he possessed literary talents himself which might have been greatly useful to the world, had circumstances called them into exercise. A few of the best-designed books for children were written by him at moments of leisure: and it is believed that few of the numerous writers of either sex, whose labours have first met public attention from that long-famed receptacle, were without considerable obligations to his friendly and judicious suggestions. To the chasteness, delicacy, and decorum of style, so peculiarly necessary to be preserved in books intended for the amusement and instruction of youth, his attention was particularly directed; and to this object he has been frequently known to sacrifice what, by less considerate judges, might have been deemed well worthy of publication. To the character of this worthy man, the pen can scarcely do justice, without seeming to bestow panegyric. On general subjects few men, perhaps, thought more justly; in all transactions of business no one could conduct himself with more urbanity. With the diligence and accuracy of a tradesman, he most happily blended the manners and principles of a gentleman. Superior to the petty attentions to immediate profit, which actuate

many persons in trade, he was the liberal patron, the able and faithful adviser, the unostentatious but sincere friend. An innate sense of strict honour, by which all his dealings were directed and governed (though often thought impracticable in trade, and, in his particular, often disadvantageous in a pecuniary point of view), obtained for him that mental satisfaction with which no pecuniary emolument can enter into competition. It gained him the universal esteem and admiration of all who knew him; and what greater earthly happiness can a human being aspire at or enjoy?

1797, April. Died, ORION ADAMS, a journeyman printer, whose eventful life would occupy a volume of more than ordinary dimensions. He was a native of Manchester, and son of Mr. Roger Adams, original proprietor and printer of the *Manchester Weekly Journal*, 1719, and afterwards of the *Chester Courant*; to which property Orion would, by right, have succeeded, had not his instability and eccentricities prevented it. For the last fifty years his life had been a lamentable scene of chequered events. In Birmingham (with his partner Boden), and at Manchester, Chester, Plymouth, and Dublin, he may be remembered as a master printer; and there are very few London or provincial printing-offices in the kingdom where he has not occasionally worked as a journeyman.\* For several years he practised a kind of itinerant or pedestrian pilgrimage; and frequently, after he had attained his 70th year, walked from London to Chester and back, with a heart as light as his pocket; for, under all adversities, his temper was cheerful, obliging, and friendly. He was intimately acquainted with many of the first characters of the stage, particularly Barry, Mossop, Ryder (with whose father, as a printer, he was in partnership in Dublin), and many others; and at the memorable Stratford jubilee, Orion Adams was distinguished as a brilliant character from Birmingham, in his own carriage, though, a few months after, such was the versatility of his fortune, he sunk into the humble character of a distributor of play-bills to an itinerant company. He died in a very obscure lodging near Chester, at the age of eighty years, in great poverty.

1797, April 29. Died, WILLIAM WHITTINGHAM, an eminent printer and bookseller at Lynn, in Norfolk, and editor of the continuation of Blomefield's *History of Norfolk*, by Mr. Parkins; of Burton's *Leicestershire*; Philpot's *Kent*; a part of Thornton's *Nottinghamshire*; and of an abridgement of Blomefield's *Norfolk*, of which only a few numbers were published.

1797. The stamp duty upon newspapers was raised from twopence to threepence halfpenny; £12 5s. per thousand, being a discount of sixteen per cent. Price to the public, sixpence; to

the trade, 11s. per quire of twenty-seven sheets.\* In July, 1801, paper having increased to 30s. or more, per ream, application was made for a further discount, and it was increased to twenty per cent. or £11 11s. 11d. per thousand. In 1803, paper being greatly reduced, viz. to £1 2s. 6d. per ream, the discount was reduced to sixteen per cent, and 18s. additional. In 1809, the price of the newspaper was raised to sixpence halfpenny, paper having risen to £2 16s. and even £3 per ream, and the price to the trade was 12s. per quire of twenty-seven sheets.

1797. The following were the principal periodicals published, with the number sold:

TITLE.	SOLD.	PROPRIETORS.
<i>Monthly Review</i> .....	5000	Griffiths.
<i>Monthly Magazine</i> .....	5000	Phillips.
<i>Gentleman's Magazine</i> .....	4550	Nichols.
<i>British Critic</i> .....	3500	Rivington & Co.
<i>European Magazine</i> .....	3250	Sewell & Co.
<i>Critical Review</i> .....	3500	Hamilton & Co.
<i>Universal Magazine</i> .....	1750	Bent & Co.
<i>Analytical Review</i> .....	1500	Johnson.
<i>Repertory</i> .....	1000	Wyatt.
<i>Annals of Agriculture</i> .....	1000	Young.
<i>Nicholson's Journal</i> .....	750	Robinson.
<i>Medical Review</i> .....	750	Boosey & Co.

The *New Annual Register* had attained a sale of seven or eight thousand annually. The greatest number sold by any monthly publication was 14,000 of the *Town and Country Magazine*, printed by Archibald Hamilton; but at his death, in 1792, it was discontinued.

1707. Newspapers first published at Constantinople, the capital of Turkey.

1797, June 21. Seditious societies and reading-rooms suppressed by an act of parliament.

1797. M. Peignot mentions a work privately printed, at the chateau de Dampierre, near St. Jean d'Angely, in France, being the *Adventures of Robinson Crusoe*, in English and French, printed by a lady for her amusement.

1797. FRANCIS AMBROSE DIDOT, FIRMIN DIDOT, and L. H. HERHAN, printers, in Paris, obtained patents for their inventions of stereotype printing: for a short time they were in partnership; but afterwards, they stereotyped works on their own account. It has been stated by the French, that the merit of the invention properly belongs to Firmin Didot; but, by what we have laid before our readers, it is evident, that however much he contributed towards its present advanced state, to him belongs not the merit of the invention.

1797, Nov. 20. Died, ROGER PAYNE, the celebrated bookbinder in Duke's-court, St. Martin's-lane, London, to the no small regret of several founders of magnificent libraries; and whose personal history is one among the many, of the ability of a man being rendered nearly useless by the dissoluteness of his habits. He stands an example to the young, of mere talent, unattended with perseverance and industry, never leading to distinction,—of great ability, clouded

\* In the letters of Daniel Prince, at Oxford, to Mr. Gough and John Nichols, London, there is the following notice of Adams; "Oct. 8, 1795, I send this by Orion Adams, an old itinerant type, remembered by me about fifty years."

There was a Thomas Adams, a journeyman printer, who worked many years with Mr. John Miller, printer of the *London Evening Post*.

\* In 1794, the duty on newspapers, published in sheets, was twopence halfpenny, and on half sheets, twopence; provided that every such sheet shall not exceed twenty-eight inches in length, and twenty inches in breadth.

by intemperance and consequent indiscretion, causing the world only to regret how much may have been lost, that might have been developed had the individual's course been different, and his excellences directed so as to have produced the best results; but, unfortunately, like too many in the same class in society, having no command over themselves, when in possession of a few shillings, live jovially; and when that is exhausted, almost famishing, and always in a state of destitution. Roger Payne was born in Windsor Forest, and first became initiated in the rudiments of the art he afterwards became so distinguished a professor of, under the auspices of Mr. Pote, bookseller to Eton college. From this place he came to London, where he was first employed by Thomas Osborne, bookseller, of Holborn. Disagreeing on some matters, he subsequently obtained employment from Thomas Payne, of the King's Mews, who ever after proved a friend to him, although, of the same name, was not related. He established him in business near Leicester-square, about the year 1766-1770, and the encouragement he received from his patron, and many wealthy possessors of libraries, was such that the happiest results, and a long career of prosperity, might have been anticipated. His talents as an artist, particularly in the finishing department, were of the first order, and such as, up to his time, had not been developed by any other of his countrymen. He adopted a style peculiarly his own, uniting a classical taste in the formation of his designs, and much judgment in the selection of such ornament as was applicable to the nature of the work it was to embellish. Many of these he made himself of iron, and some are yet preserved as curiosities, and specimens of the skill of the man. To this occupation he may have been at times driven, from lack of money, to procure them from the tool-cutters; but it cannot be set down as being generally so, for in the formation of the designs in which he so much excelled, it is but reasonable to suppose, arguing upon the practice of some others, in later times, he found it readier and more expedient to manufacture certain lines, curves, &c. on the occasion. Be this as it may, he succeeded in executing binding in so superior a manner as to have no rival, and to command the admiration of the most fastidious book-lover of his time. He had full employment from the noble and wealthy, and the estimation his bindings are still held in, is a sufficient proof of the satisfaction he gave his employers. His *chef d'œuvre* is *Æschylus*, translated by the rev. Robert Potter,\* in the possession of earl Spencer, the ornaments and decorations of which are most splendid and classical. The binding of the book cost the noble earl fifteen guineas.†

That he was characteristic or eccentric may be judged by what has been related of him. He appears to have also been a poet on the subject of his unfortunate propensity, as the following extract from a copy of verses, sent with a bill to Mr. Evans, for binding *Barry on the Wines of the Ancients*, proves.

Homer, the bard, who sung in highest strains  
The festive gift, a goblet, for his pains;  
Pæonian gave Horace, Virgil fire,  
And Barclay wine my British muse inspire.  
Barley wine, first from Egypt's learned shore;  
And this the gift to me of Calvert's store.

He commenced business in partnership with his brother Thomas Payne, and subsequently was in like manner connected with Richard Wier,‡ but did not long agree with either, so that separation speedily took place. He afterwards worked under the roof of Mr. Mackinlay, but his later efforts showed that he had lost much of that ability he had been so largely endowed with. Pressed down with poverty and disease, he breathed his last in Duke's-court, St. Martin's-lane. His remains were interred in the burying-ground of St. Martin's in the Fields, at the expense of Mr. Thomas Payne, who, as before-stated, had been his early friend, and who, for the last eight years of his life, had rendered him a regular pecuniary assistance, both for the support of his body and the performance of his work. His regard did not end with his life; for the worthy possessor of the name of *Thomas Payne* had a small whole length of the man at his work, in his deplorable working room, engraved at his own expense, under which Mr. Bindley wrote the following lines:

ROGERUS PAYNE;  
natus Vindesor. MDCCLXXXIX; denatus Londin.  
MDCCLXXXVII.  
Ætatem hanc graphicam solertis Bibliopæci  
Μνημόσυνον meritis  
Bibliopola dedit. *Sumptibus Thomas Payne.*  
Etch'd and publish'd by S. Harding, No. 127, Pall Mall.  
March 1, 1806.

1797, Jan. *Monthly Epitome*, No. 1. Discontinued March, 1806, nine volumes.

1797. *The Friend*.

1797. *The Investigator*.

1797, April. *The Philanthrope*. A very valuable

\* Wier was not a whit less disolute than his partner. Previous to this, (in 1774,) he and his wife were employed at Toulouse, in binding and repairing the books in count MacCarthy's library. The connexion between Wier and Roger, which took place during the latter part of Payne's career, as might be expected from both of their habits, was of short duration. They were generally quarrelling, and Wier, being a man of strong muscular power, used sometimes to proceed to thrashing his less powerful coadjutor. Payne is said to have composed a sort of *Memoir of the Civil War* between them. After their separation, Wier went abroad, and being taken prisoner by a privateer, he is said to have threatened to demolish half the crew if they did not liberate him. Like his partner, he worked the latter part of his life with Mr. Mackinlay.

Mrs. Wier, was celebrated as the most complete book-restorer that ever lived. She was for a long time employed by Roger Payne; and her skill in mending defective leaves was such, that, unless held up to the light, the restoration was imperceptible. On her return from France, she went to Edinburgh to repair the books in the Record Office in that city.

\* Mr. Potter is advantageously known in the republic of letters, by his excellent translation of *Sophocles*, *Euripides*, and *Æschylus*. He died at Lowestoff, August 9, 1804.

† A curious specimen of Roger Payne's bills may be seen in the *Gentleman's Magazine*, vol. lxxiv. part ii. page 440; and in Arnett's *Books of the Ancients*, page 192.

able and elegant series of essays, and, in the title-page, said to be *after the manner of a periodical paper*. It was published in crown 8vo.

1797. *The Kelso Mail*, printed and edited by James Ballantyne, the well-known printer, who first introduced a taste for typographical elegance into Scotland.

1797. *The Four Ages*, by William Jackson, of Exeter, celebrated for his musical talents, and the author of a well-known and very ingenious work, under the title of *Thirty Letters*.

1797, April. *The Medley*.

1797, Oct. *The Reporter*, a political periodical, written with considerable powers both of diction and argument.

1797, Nov. 20. *The Anti-jacobin*. This paper arose from the determination of George Canning and other literary men, to establish a weekly newspaper, for the purpose of exposing to ridicule the political agitators of that time. Dr. Grant, well known as a writer in the reviews and other periodicals, was the first person chosen to be the editor, but upon his declining the office, William Gifford accepted the situation. It continued to be published until July 9, 1798. Mr. Wright, in Piccadilly, was the publisher.\*

1797. When the legislative union of Ireland came to be agitated this year in Dublin, the Irish press teemed with writing of a kind appropriate to the state of the national mind at that unhappy era. Some of the temporary prints openly counselled assassination as a legitimate aid to political warfare; and one, called the *Union Star*, in reference to a particular individual, took for its motto the well-known lines—

"Perhaps some arm more lucky than the rest,  
May reach his heart and free the world from bondage."

Although £700 was offered for the discovery of the author and publisher of this print (it was secretly posted up in the streets during the night) he was never betrayed, though known to hundreds.

1798, Jan. 5. *Died*, WILLIAM FLACKTON, who had been more than sixty years an eminent bookseller and stationer at Canterbury, beloved, esteemed, and regretted by all who knew him, at the age, nearly, of eighty-nine years. He was

\* It was about this period that the redoubtable fray took place between Mr. Gifford and Dr. Wolcott (Peter Pindar.) Mr. Gifford began the attack, by discharging against Peter one of the sharpest arrows from his satiric bow, in the form of *An Epistle to Peter Pindar*. Wolcott, though a lamponer of others, could not bear to be satirized himself; and stung to the soul by the assault, determined upon revenge. Instead, however, of applying in the first place to his most powerful weapon, "the grey goose quill," he assumed the *argumentum baculum*, and sallied forth in quest of his adversary. Waiting his opportunity, and seeing Mr. Gifford enter Mr. Wright's shop, he rushed in after him, and aimed a blow at Mr. Gifford's head, with a cudgel which he had provided for the occasion. Fortunately, a gentleman standing by, saw the movement in time to seize the arm of the enraged poet, who was then bundled into the street, and rolled in the mud, to the amusement of the gathered crowd. Nothing further took place at that time, but the disappointed satirist went home, and soon after published a piece under the title of *A Cut at a Cobbler*. Mr. Gifford was originally a shoemaker. For his services upon the *Anti-jacobin*, he was rewarded with the paymastership of the band of gentlemen pensioners, and at a subsequent period, he was made a double commissioner of the lottery.

the last of an ancient and reputable family, and of a decent, though not learned, education. But he had much cultivated his mind by reading, which, with music and gardening, formed, almost to the very last, the solace of his leisure hours. His conversation was instructive, pleasant, and intelligent; and the cheerfulness of his temper never left him till the lamp of life was extinguished. As a bookseller of the old school, he deserves to be spoken of with respect. His knowledge of scarce and valuable books was in general very good, though it suffered some ridicule in the *Gentleman's Magazine*, by his permitting a copy of *The lamentable tragedy of Queen Dido* to be sold for two shillings. He had a very curious collection of English and foreign heads, and other scarce and valuable prints, chiefly ancient. He was passionately attached to sacred music; and in the choir books of Canterbury cathedral, are to be found several of his anthems and services, bearing evident marks of judgment and feeling. The institution of Sunday-schools in that city owes much to his early support and encouragement. In pecuniary aid, also, he was not wanting to that as well as other charities, private and public; and we may conclude his character by affirming, that he lived and died a warm friend, an honest and upright man, and a sincere Christian.

1798, Jan. 16. *Died*, THOMAS GREENHILL, many years a wholesale stationer in Graecchurch-street, London. He was master of the company of stationers in 1787; but having retired from business, he died at Watford, Herts. George Greenhill, who was appointed treasurer to the stationers' company in 1797, was a younger son of the above gentleman.

1798. *The Works of Horatio Walpole, Earl of Oxford*, five vols. royal 4to., edited by Robert Berry, esq. a native of Scotland. This gentleman, during a residence in Italy with his two daughters, became acquainted with Horatio Walpole,\* who at his death bequeathed to the latter handsome legacies, and to the father the copyright of his works, which is said to have produced £3000. Mr. Berry accordingly undertook the task of editor, and the preface was written by one of his daughters.

\* Horace Walpole, a younger son of the celebrated prime minister, (died March 13, 1745,) was born at Wareham, in Dorsetshire, Oct. 5, 1717, and died at London, March 2, 1797. He was an eminent cultivator of miscellaneous literature. His principal works are; *A Catalogue of Royal and Noble Authors*, 1756; *Anecdotes of Painting in England*, 1791; *Catalogue of Engravers in England*, 1769; *History of the last ten years of George II.*; and a romance called *the Castle of Otranto*, which acquired great popularity, and was successfully imitated by Miss Clara Reeve, in her story of the *Old English Baron*, in 1777. Personally, and also in his manner of writing, Walpole was eccentric and heartless; but the ease, piquancy, and brilliancy of his style, will long keep his works before the public. He succeeded a nephew in the earldom, nearly at the close of his long life.

In October, 1797, appeared the following lines: *The Printer's Farewell to Strawberry Hill*; four stanzas, six lines each. This was written by Silvester Harding, miniature painter, who published an edition of *Grammont*; but is signed T. K. (Thomas Kirk,) and was the last article printed at the press. His lordship left Mr. Kirk only a gift of £100.

1797. JOSEPH JOHNSON, bookseller, in St. Paul's church yard, London, sentenced to nine months' imprisonment, and amerced in a fine of £50, for selling a pamphlet which had been written by the rev. Gilbert Wakefield,\* against the interference of Great Britain with the French revolution, for which he suffered two years' imprisonment. Mr. John Cuthell,† bookseller, in Middle-row, Holborn, was likewise sentenced to a fortnight's imprisonment, for selling a copy of the same.

1798, Feb. Died, JOB BRADLEY, printer and bookseller, at Chesterfield, Derbyshire, of which corporation he was an alderman.

1798, Feb. Died, EDWARD FISHER, bookseller, at Rochester; he was the eldest son of Thomas Fisher, bookseller, who died in 1786. A younger brother, Thomas Fisher, esq. F. S. A. died July 20, 1836, aged sixty-five.

1798. To enter a book at stationers' hall was considered optional, and the books given to corporate bodies were only those so entered and so acknowledged by 41 Geo. III., and in the case of Beckford and Hood in the king's bench, the foregoing doctrine was confirmed. The omission to enter at stationers' hall presented a prosecution for the penalties inflicted by the statutes, but left a satisfaction for the violation of copy-right at common law still the same.

1798, March 4. Died, ROBERT HORSFIELD, for several years a bookseller in Ludgate-street, and treasurer of the stationers' company from 1785 to 1797. He succeeded to the extensive business of Messrs. Knapton.

1798. SAMUEL FALK, a printer, and a native of Hungary, commenced the experiment of stereotyping at Vienna. Being refused a privilege for the practice of his art, he quitted Vienna, and settled in the printing office of the university of Buda, the capital of Lower Hungary, from whence he issued several specimens.

1798, March 26. Died, WILLIAM GILL, an eminent wholesale stationer, in partnership with Mr. Wright, in Abchurch-lane, who was several

years one of the common council of the ward of Candlewick, and elected alderman of Walbrook in 1781. He served the office of sheriff the same year; and that of lord mayor in 1788; and was elected treasurer of Christ's hospital in 1785. He gave to the stationers' company thirty shillings a-year, to be added to Cater's dinner.

1798, April 7. Died, THOMAS WRIGHT, who was for fifty years in partnership with Mr. Gill, as a wholesale stationer, in Abchurch-lane; and survived his partner only a fortnight. He died suddenly, after taking a walk in his grounds in Dulwich, Surry, and without any previous complaint. He was attacked with an epileptic fit, and expired before any medical assistance could be procured. Alderman Gill was stated to have amassed the sum of £300,000.; and the fortune of alderman Wright was supposed to have been equal, if not to a greater amount. They commenced business together, as stationers, on London-bridge, retained the most respectable characters, and were remarkable for great application and frugality. Mr. Wright was several years one of the common council for Candlewick ward, where he was elected alderman in 1777. He was sheriff in 1779; and lord mayor in 1785. In 1786 he presented to the company a large silver tea urn; and in his will, Nov. 24, 1794, says,

"I give to the masters and keepers or wardens and commonalty of the mystery or art of a stationer of the city of London, two thousand pounds, four per cent. bank annuities, upon trust, to pay, apply, and distribute the dividends and yearly produce thereof upon the first day of January in each year, or as soon after as conveniently may be, in manner following, that is to say, the sum of fifty pounds eight shillings, part of such dividends, unto and amongst twenty-four poor freemen of the said company, not receiving any other pension from the company, in equal shares and proportions at two pounds two shillings each. To the clerk of the said company for the time being, the sum of three pounds three shillings, other part of such dividends, for his trouble upon this occasion. And the sum of twenty-six pounds nine shillings, residue of such dividends, in and towards the providing and defraying the expense of a dinner for the master, wardens, and assistants of the said company upon the day of such distribution." [The said sum of £2000. was, soon after the death of Mr. alderman Wright, transferred by his executors to, and now stands in the name of the corporation; the yearly dividends being £80.]

1798, April 15. Died, JOHN MARCH, many years a printer of considerable eminence on Tower-hill, and master of the stationers' company in 1790. He was a man of the most amiable disposition. By industry, frugality, and a train of fortunate events, he left an ample fortune to his widow (who died April 15, 1800,) and to an only son, who succeeded to his business, but died in the prime of life, July 13, 1804.

1798, May 20. Died, JAMES FLETCHER, son of James Fletcher, noticed at page 787, ante. He had formerly been partner with Mr. James

\* Gilbert Wakefield was born at Nottingham, Feb. 23, 1756, and was educated at Jesus' college, Cambridge. In 1778, he entered into deacon's orders, and became curate at Stockport, in Cheshire, from whence he removed to Liverpool. In 1779, he married and retired from the established church for conscientious reasons, and undertook the office of classical tutor in the dissenting academy at Warrington. While in that situation, he published a number of works, the principal of which were, a *Translation of the First Epistle to the Thessalonians*; another of the *Gospel of St. Matthew*; an *Inquiry into the Opinions of the Christian Writers of the first three Centuries, concerning the Person of Jesus Christ*, 4 vols. 8vo. and the *Silva Critica*. In 1790, he removed to the dissenting college at Hackney, his connexion with which ended in about a year. He wrote some pamphlets against the government, of which no notice was taken, until his *Letter to the Bishop of Llandaff* appeared, when the attorney-general instituted a prosecution against him and the publisher. Mr. Wakefield was sentenced to be imprisoned two years in Dorchester goal, from whence he was liberated in May, 1801, but died of a fever on the 9th of September following. The principal of his works are, *A Translation of the New Testament*, 3 vols. 8vo.; *Tragedium Græcorum Selectus*, 3 vols. 12mo.; and an edition of *Lucretius*, 5 vols. 4to. Mr. Wakefield deserves the character of an amiable man, an industrious scholar, and an eminent biblical critic.

† Famous for his catalogues, particularly in the medical line, and every branch of general science.

Rivington, in St. Paul's church yard; and was succeeded in his business by Mr. Hanwell, whose associate, Mr. Parker, had been apprentice to Daniel Prince, and was a lineal descendant from Dr. Samuel Parker, bishop of Oxford, who died March 20, 1687.

1798, May 25. Died, BEDWELL LAW, a bookseller of extensive business in Ave Maria lane, London, who by his mild and unobtrusive manners secured the esteem of all who knew him. He was succeeded in business by his son, Charles. Another son, Henry, carried on a considerable printing business, in St. John's square, in the house formerly Mr. Emonson's, afterwards John Rivington's, and since Deodatus Bye's.

1798, May 29. Printing presses and public schools suppressed in Russia, by order of the emperor Paul I. Paul was born Oct. 1, 1754, and strangled at St. Petersburg, March 23, 1801.

1798, May 30. Died, JOHN SHAVE, many years one of the printers of the *Ipswich Journal*.

1798, Aug. 23. Died, Mr. DENNIS, bookseller, Middle-row, Holborn, London, where he issued catalogues, in which were generally several very curious articles, particularly in the occult sciences. He died a young man.

1798, Sept. 6. Mr. WILLIAMS, who kept a reading-room in Old Round-court, in the Strand, convicted of lending a newspaper to read, and taking one penny for the use of it, was fined £5.\*

1798. During the time that Egypt was occupied by the French republican armies, they appear to have established printing-offices at Alexandria, as well as at Cairo and Gizeh. An Arabic, Turkish, and Persian Alphabet, and Some Introductory Exercises in the Arabic Tongue, appear in the *Bibliotheca Marsdeniana*, bearing for imprint Alexandria, an. VI. (1798.) In 1800, a periodical work appeared at Cairo, entitled, *Courrier de l'Egypte, depuis le 12 Fructidor an VI, jusqu'au 20 prairial an IX.* in 4to. Of this one hundred and sixteen numbers were published. Some pieces relative to the assassination of general Jean Baptiste Kleber, (June 14) appeared in 1800.

1798. *Literary Hours*, by N. Drake, M. D.†

1798, April. *The Weekly Register*, No. 1.

1798, July. *The Ladies' Monthly Museum*.

1798. *The Philosophical Magazine*.

1798. *Public Characters*, vol. I.

1799, Feb. 2. Died, THOMAS PAYNE, senior, in the eighty-second year of his age, after having been for more than forty years a bookseller of the highest reputation at the Mews-gate, London. He was a native of Brackley, in Northampton-

shire; and began his career in Round-court, in the Strand, opposite York buildings; where, after being some years an assistant to his elder brother, Olive Payne\* (with whom the idea and practice of printing catalogues is said to have originated) he commenced bookseller on his own account, and issued a *Catalogue of curious Books, in Divinity, History, Classics, Medicine, Voyages, Natural History, &c. Greek, Latin, French, Italian, and Spanish, in excellent condition, and mostly gilt and lettered*, dated Feb. 29, 1740, being almost the first of the catalogists, except Daniel Browne,† at the Black Swan without Temple Bar, and the short-lived Meers and Noorthouck. From this situation he removed to the Mews-gate, in 1750, when he married Elizabeth Taylor, and succeeded her brother in the shop and house, which he built, whence he issued an almost annual succession of catalogues, beginning 1755. In 1790 he resigned his business to his eldest son, who had for more than twenty years been his partner, and who opened a new literary channel, by a correspondence with Paris, whence he brought, in 1793, the library of the celebrated chancellor, Lamoignon. This little shop, in the shape of an L, was the first that obtained the name of a literary coffee house in London, from the knot of literati that resorted to it; and, since the display of new books on the counter has been adopted from the Oxford and Cambridge booksellers, other London shops have their followers. If a reasonable price, and a reasonable credit for his goods, be the criterion of integrity, Mr. Payne supported the character of an honest man to the last; and, without the modern flash of wealth, which, ostentatiously exposed in a fine shop, has involved so many traders of all descriptions in difficulties and ruin, he acquired that fortune which enabled him to bring up two sons and two daughters with credit, and to assist some relations who wanted his aid. Warm in his friendships as in his politics, a convivial, cheerful companion, and unalterable in the cut and colour of his coat, he uniformly pursued one great object, *fair dealing*, and will survive in the list of booksellers the most eminent, for being adventurous and scientific, by the name of honest Tom Payne. The author of the *Pursuits of Literature*, who is an excellent appreciator of character, calls him "that *Tripho emeritus*, Mr. Thomas Payne, one of the honestest

\* A copy of the work, which was written by king Henry VIII. and which gained him from the pope the title of "Defender of the Faith," was stolen from the Vatican, and sold to the brother of Payne, the bookseller, of the Mews-gate. The bookseller received for it, from the marquiss of Douglas, an annuity for life.

† Daniel Browne was a well-known and eminent bookseller, in the Strand, and is characterized by Dutton, at page 625 *enfe*. His son, John Henry Browne, was a few years a wholesale stationer in Lothbury; but having an inclination for the church, was ordained by archbishop Cornwallis, and was presented by viscount Newark, heir to the duke of Kingston, to the rectory of Eakring, in Nottinghamshire, where he was highly respected for his piety and benevolence. In 1796, he printed, but not for sale, *A Serious Address to the superior inhabitants of the parish of Eakring*, 8vo. This gentleman and Mr. Nathaniel Conant, were the executors to the will of William Bowyer, jun., and to whom he gave £500 each.

\* By the 39th Geo. III. cap. ix. any hawkers or others, letting out a newspaper for hire, to forfeit £3, in addition to any other penalty in force. By the 39th of Geo. III. cap. xxi. for carrying a newspaper, stamped or unstamped, to the enemy, a penalty of £200.

† *Essays, biographical, critical, and historical, illustrative of the Rambler, Adventurer, and Idler, and of the various periodical papers which, in imitation of the writings of Steele and Addison, have been published between the close of the eighth volume of the Spectator, and the commencement of the year 1809.* By Nathan Drake, M.D., author of *Literary Hours*, and of the *Essays on the Teller, Spectator, and Guardian*. In two volumes, fols. cap 8vo. London: 1810.

men living, to whom as a bookseller, learning is under considerable obligations." Thomas Payne, of Pall Mall, was the eldest son, and inherited every good quality of his father. The following epitaph was written by William Hayley, esq.

Around this tomb, ye friends of learning, bend !  
It holds your faithful, though your humble friend :  
Here lies the literary merchant, PAYNE,  
The countless volumes that he sold contain  
No name by liberal commerce more carest  
For virtues that become her votary's breast ;  
Of cheerful probity, and kindly plain,  
He felt no wish for disingenuous gain ;  
In manners frank, in manly spirit high,  
Alert good-nature sparkled in his eye ;  
Not learn'd, he yet had learning's power to please,  
Her social sweetness, her domestic ease :  
A son, whom his example guides and cheers,  
Thus guards the hallow'd dust his heart revere ;  
Love bade him thus a due memorial raise,  
And friendly justice pen'd this genuine praise.

1799. *April*. An act of parliament was passed "for the more effectual suppression of societies established for seditious and treasonable purposes, and for better preventing treasonable and seditious practices;" which contains the following provisions and penalties respecting printers, letter-founders, and printing-press makers.

39 Geo. III. cap. 79. *Sect. 23* enacts, that from and after the expiration of forty days from the day of passing this act, every person having any printing press, or types for printing, shall cause a notice thereof, signed in the presence of and attested by one witness, to be delivered to the clerk of the peace acting for the county, stewardry, riding, division, city, borough, town, or place, where the same shall be intended to be used, or his deputy, according to the form prescribed in the schedule hereunto annexed; and such clerk of the peace, or deputy respectively, shall, and he is hereby authorized and required to grant a certificate in the form prescribed in the schedule hereunto annexed, for which such clerk of the peace, or his deputy, shall receive the fee of one shilling, and no more; and such clerk of the peace, or his deputy, shall file such notice, and transmit an attested copy thereof to one of his majesty's principal secretaries of state; and every person who, not having delivered such notice, and obtained such certificate as aforesaid, shall, from and after the expiration of forty days next after the passing of this act, keep or use any printing press or types for printing, or having delivered such notice and obtained such certificate as aforesaid, shall use any printing-press or types for printing, in any other place than the place expressed in such notice, shall forfeit and lose the sum of twenty pounds.

*Sect. 24* exempts his majesty's printers, and the public presses belonging to the two universities.

*Sect. 25* and *26* relate to type-founders and printing-press makers.

*Sect. 27* enacts, that from and after the expiration of forty days after the passing of this act, every person who shall print any paper or book whatsoever, which shall be meant or intended to be published or dispersed, whether the same shall be sold or given away, shall print upon the

front of every such paper, if the same shall be printed on one side only, and upon the first and last leaves of every paper or book which shall consist of more than one leaf, in legible characters, his or her name, and the name of the city, town, parish, or place, and also the name, (if any) of the square, street, lane, court, or place, in which his or her dwelling-house, or usual place of abode shall be; and every person who shall omit so to print his name and place of abode on every such paper or book printed by him, and also every person who shall publish or disperse, or assist in publishing or dispersing, either gratis or for money, any printed paper or book, which shall have been printed after the expiration of forty days from the passing of this act, and on which the name and place of abode of the person printing the same shall not be printed as aforesaid, shall, for every copy of such paper so published or dispersed by him, forfeit and pay the sum of twenty pounds.\*

*Sect. 28* exempts papers printed by authority of either house of parliament.

*Sect. 29* enacts, that every person who, from and after the expiration of forty days after the passing of this act, shall print any paper for hire, reward, gain, or profit, shall carefully preserve and keep one copy (at least) of every paper so printed by him or her, on which he or she shall write, or cause to be written or printed, in fair and legible characters, the name and place of abode of the person or persons by whom he or she shall be employed to print the same; and every person printing any paper for hire, reward, gain, or profit, who shall omit or neglect to write, or cause to be written or printed as aforesaid, the name and place of his or her employer on one of such printed papers, or to keep or preserve the same for the space of six calendar months next after the printing thereof, or to produce and show the same to any justice of the peace, who, within the said space of six calendar months, shall require to see the same, shall, for every such omission, neglect, or refusal, forfeit and lose the sum of twenty pounds.

O irksome task ! in sad desponding strains,  
To trace the direful ills our art sustains ;  
Power's sleepless hosts, impell'd by jealous rage,  
In guilty fear th' unnatural warfare wage.—  
Call off, O Pitt ! thy statue-raising bands,  
Already formed the threatening monster stands,  
Its ponderous base our subjugated Passes,  
Chains and war-trophies well thy deeds express ;  
Whilst on its head in glistening show appears,  
A diadem of crystallizing tears.  
No servile purpose slavery could obtain,  
E'er on our annals left so black a stain.—  
Thy paper-taxes of o'erwhelming weight,  
Have prest upon us like the arm of fate ;  
Now register'd, now ticketed, we move,  
Our slightest works the double label prove.  
Such rage as thine mad Omar once inspir'd,  
Whose hand the Alexandrian treasure fir'd. M'Creery.

This act was found pregnant with so much harassment to individuals whose conduct might be perfectly clear of intentional transgression, or

\* When the bill was going through the house of commons, a member moved as an additional clause, "that all anonymous works should have the name of the author printed on the title-page."

evasion of the law, and calculated to afford such a harvest to the common informer, (as an instance of which, one of them, from some inadvertence or misconception of the printer, talked, in the true spirit of venal espionage, exultingly of the five thousand penalties of £20 each, for omitting the name upon an annual pocket-book,) that an act was passed in 1811 to restrict to twenty-five penalties, for any one and the same book, and empowering magistrates to mitigate even to £5, and quarter sessions to grant still further relief. The spirit of the act was, however, followed up by the Castlereagh administration, in December, 1819.

1799. *Died*, CHARLES JOSEPH PANCKOUCKE, one of the most eminent booksellers and publishers of Paris. He was the son of Andrew Joseph Pauckoucke, noticed at page 686 *ante*, born at Lisle, in 1736, and brought up under his father as a bookseller. At the age of twenty-eight he settled at Paris, where he soon took the lead in his profession, and his knowledge of typography made him celebrated all over Europe. He has made his name particularly memorable by the establishment of the *Moniteur*,\* the idea of which is said to have suggested itself to him from what he saw during a visit to England of the influence of the newspaper press, even at that time. With him also originated the *Encyclopédie Méthodique*, and continued to be published for more than one hundred and fifty volumes. Panckoucke lived in habits of intimacy with the most distinguished French writers and men of genius of his time. He was also the author of a considerable number of works.

\* For the origin of newspapers in France, see page 473 *ante*. What progress the periodical press made in France, we have not been able to ascertain; but there was really no political press there until the year 1793, when the constituent assembly in the declaration of rights, decreed (24 October) that the free communication of thoughts and opinions is one of the most precious rights of man, and that every citizen may therefore speak, write, and print freely. This decree, which formally recognised the liberty of the press, at the same time called it into existence. But no distinction was made between the various modes of publication, and no greater securities were required for newspapers than for books and pamphlets. The periodical press was a stranger to the habits of the country, and the public were not prepared for it. Violent and witty pamphlets were indeed written, but no one had yet learned either to write or read a journal. In this respect the *Moniteur* began the education of the community in France. No journals were previously known, except the *Mercur*, the *Gazette de France*, and the *Courrier de Provence*. As men's passions became heated, a new brood was hatched, amongst which were Marat's *Ami du Peuple*, and Hebert's *Père Duchêne*. The rapidity and acerbity of the pamphlets of the time were suited to the taste of a people which lived upon excitement. Violent alternations of licence and despotism distinguished the most stormy period of the revolution; yet, in spite of the extravagance of the one, and the disproportionate severity of the other, the press continued to make way. Under the consulate and the empire it was subjected to systematic control. No journal could appear without the authority of the minister of the interior; the number of provincial papers was at this unsettled time, limited to one for each department, and these were placed under the authority of the prefects. On some occasions, however, Napoleon himself became a journalist, and replied in the *Moniteur* to the manifestoes of the British government. He also encouraged a revival of religious doctrines, the influence of which was felt in literature before it reached the sphere of politics. Of this school the *Journal des Débats* was the centre, and Chateaubriand and Bonald were the organs.

1799, May 30. JOHN PARRY, the proprietor, JOHN VINT, the printer, and GEORGE ROSS, the publisher of the *Courier* newspaper, were convicted in the court of king's bench for publishing a paragraph, stating the emperor of Russia to be a tyrant among his subjects, and ridiculous to the rest of Europe. Mr. Parry was sentenced to pay the sum of £100, to be imprisoned in the king's bench for six months, and find securities for his good behaviour for five years, himself in £500, and two sureties in £250 each. Vint and Ross to be imprisoned in the same jail for one calendar month each. Speaking of the opposition papers at this time, George Canning says:

*Couriers*, and *Stars*, sedition's evening host,  
Ye *Morning Chronicle* and *Morning Post*;  
Whether you make the *Rights of Man* your theme,  
Your country libel, and your God blaspheme.

1799, June 13. *Died*, GEORGE SÆL, bookseller in the Strand, London; who by unremitting integrity, punctuality, and despatch, had formed for himself a connexion in the wholesale line no less honourable than advantageous. In gathering up the varieties of antiquarian literature, his diligence was known to most modern collectors; while his various publications for the mental culture and moral guidance of youth, found their way into many respectable seminaries of education throughout the kingdom. These publications were chiefly edited by Mr. Thomas Park, who distinguished himself by a variety of elegant publications. Mr. Sæl died at the age of thirty-eight, of a pulmonary consumption, which is thought to have originated from excessive application to business.

1799. *Died*, SAMUEL BLADON, a bookseller, who resided in Paternoster-row, and from his integrity and skill as an accountant, was frequently an arbitrator in complicated accounts.

1799, Oct. 23. *Died*, WILLIAM BINGLEY, bookseller, who has already been noticed at page 723 *ante*, for his imprisonment during the days of "Wilkes and Liberty." After his bankruptcy, he sought refuge in Ireland, where for several years he carried on the business of a bookseller; but, returning to London, in 1783, he found an asylum in the office of Mr. John Nichols, the printer, (in which capacity he originally set out in life,) and where he in some degree found repose from the turmoils of political strife. He could not, however, refrain from authorship, and published several pamphlets. A periodical work, entitled the *New Plain Dealer*; or, *Will Freeman's Budget*, appeared between 1791 and 1794, consisting chiefly of politics and invectives against courtiers and their dependents; prefixed to it was a portrait of the author, under the character of an English citizen, who was two years imprisoned in English bastilles, without trial, conviction, or sentence, and a long account of his own sufferings, under the title of *A Sketch of English Liberty*; in which he states that £500 was actually voted to him at a meeting of the Constitutional society, on the suggestion of Mr. Horne Tooke; but that, at a subsequent meeting, Mr. Wilkes stood foremost

in opposition to the money being raised for him on that society. In the preface to No. IV. the writer modestly likens himself to a phoenix; he exists merely of himself—he has passed through the fire of persecution, and, in imitation of that bird, has risen again from his own ashes; so that his subjects of fires and illuminations, singular as they appear, are only natural. No. V. was announced as an intended *Sequel to the Memoirs of the late Jack Straw, Sinner, Saint, and Devil, who sold books by millions*. He was a man of strong natural understanding, though not much assisted by literature; and was of the strictest integrity; but unfortunately possessed an habitual irritability of temper, which proved a perpetual discomfort. With the most earnest inclination to do right, he frequently wandered into error; and a considerable portion of his time was employed in making apologies for mistakes which a slight consideration would have prevented. He was for thirty-six years happy in a connubial connexion with a very worthy woman, by whom he left three daughters; all of whom being respectably married, he again engaged in a matrimonial connexion, Jan. 21, 1798, with the widow of a captain in the India trade, who survived to lament his almost sudden loss. In St. Bride's Church-yard, Fleet-street, there is an inscription to the memory of his wife (Mary) who died June 18, 1796, in her thirty-sixth year.

Also the said William Bingley,  
died 23d October, 1799, aged 61.

Cold is that heart that beat in freedom's cause,  
The steady advocate of all her laws.  
Unmov'd by threats or bribes his race he ran,  
And lived and died the patriot—the man.

1799, Nov. 2. *Died*, WILLIAM SANDBY, many years a bookseller of high eminence, in Fleet-street, London; but exchanged that profession, about 1769, for the more lucrative one of a banker, in the old-established firm of Snow and Denne, in the Strand. He was the son of Dr. Sandby, prebendary of Worcester, and brother to Dr. George Sandby, master of Magdalene college, Cambridge. Mr. Sandby married to his third wife, 1787, Miss Fellows, of Walton-on-Thames. He died at Teddington, in Middlesex, in the eighty-second year of his age, deeply regretted by all who knew him.

1799, March. *The Historical, Biographical, Literary, and Scientific Magazine*, No. 1.

1799, Sept. 26. *Literary Leisure*. It ended December 16, 1800.

1799. *The Asiatic Annual Register*, vol. I.

1799. *The Shamrock*, established at Waterford, in Ireland, by Dr. Hearn.

1800, Jan. The booksellers of Manchester make a resolution of charging one halfpenny upon all sixpenny periodical publications, and one penny upon those of one shilling and upwards, conveyed by mail or coach.

1800. THE STANHOPE PRESS, the invention of the patriotic nobleman whose name it bears, and which will be handed down to posterity, after many expensive and laborious experiments succeeded, with the assistance of a very ingenious

mechanist (the late Mr. Walker\*) in bringing it to a state of perfection. The first press was finished, and its powers were tried at the office of William Bulmer, (the Shakspeare press) in Cleveland-row, St. James's, London, in which house it at present remains. In the formation of his iron press, earl Stanhope must have found many useful hints in M. Anisson's *Premier Mémoire sur l'Impression en Lettres, suivi de la Description d'une Nouvelle Presse exécutée pour le Service du Roi*; in which he says—"Je me suis attaché principalement à rendre son action et ses mouvemens les plus indépendans qu'il m'a été possible du maniemment déréglé des ouvriers auxquels elle est confiée." This has been particularly attended to in the Stanhope press, and nothing is left to the judgment of the pressman but the colouring.

1800, Feb. *Died*, EDMUND MONK, proprietor and printer of the *Chester Courant*.

1800. DA. ALEXANDER ADAM, of Edinburgh, published his *Classical Biography*, and for the copyright received £300. He was born at Rufford, near Forres, in Scotland, June 24, 1741, and died at Edinburgh December 18, 1809.

1800, March 15. JOSEPH BALDWIN, twenty-four years clerk to the company of stationers, many years deputy clerk of the crown, and registrar of the Amicable Society in Serjeant's Inn. He died universally respected, aged 75.

1800, March 30. *Died*, ROBERT FARIE, bookseller, Glasgow.

1800, April 1. *Died*, JOHN RIDER, many years a respectable printer in Little Britain, London. Returning home from stationers' hall, he dropped down in an apoplectic fit in Warwick-lane, and instantly expired. He was one of the sons of the rev. William Rider, B. A. lecturer of St. Vedast, Foster-lane, curate of St. Faith's, and many years sur-master of St. Paul's school. Author of a *History of England to the year 1763 inclusive*, in fifty pocket volumes; a *Commentary on the Bible*; an *English Dictionary*; and other works. He died March 30, 1785.

1800, April 4. *Died*, SOLOMON HODGSON, many years printer and publisher of the *Newcastle Chronicle*, in the conduct of which he uniformly advanced the genuine sentiments of his mind, uninfluenced by party, or any political society. Firmly attached to the principles of constitutional liberty, and actuated by the purest impulse of integrity and honour, he viewed with honest indignation, the corruptions too prevalent in society; possessing a spirit alive to

\* Now manufactured by S. J. Spiers, (son-in-law and successor to Mrs. Walker) 102, Dean-street, Oxford-street, London.

† Charles Stanhope, third earl Stanhope, was born in the year 1753, and educated at Eton and Geneva, where he passed ten years under the instruction of M. le Sage, well known as the author of a *Theory of Gravity*, and other works. Although lord Stanhope was chiefly known by his cotemporaries as a politician, it is rather as a philosopher that he made himself generally known to the world. In all his improvements relating to printing, his lordship would never suffer any of them to become subjects of patent or monopoly, but took the precaution of entering a notice or caveat at the patent office. He died December, 1816, in the sixty-fourth year of his age.

every benevolent emotion, he feelingly lamented the miseries of war; and so long as he could do it consistently with personal safety, he exercised the privilege of declaring his sentiments on every important subject with a boldness and freedom becoming a Briton; but always without descending to licentiousness, or unbecoming personality. In the intercourse of business and of private life, he was actuated by similar principles, and by his talents, honesty, and benevolence, engaged the attachment of a numerous circle of friends. Mr. Hodgson died in the fortieth year of his age. Mrs. Sarah Hodgson, his widow, carried on the business until her death, which happened at Newcastle, Sept. 10, 1822, from which time the *Newcastle Chronicle* has been conducted by her sons, S. and T. Hodgson.

1800. *Died*, J. WATERWORTH, printer and publisher of the *Blackburn Mail*.

1800. *Died*, HENRY SPENCER, bookseller, of Burnley, in Lancashire, aged fifty-eight years. Mr. Spencer was distinguished for eccentricity of character. His coffin, which was made of wood of his own growing, had been kept by him for several years prior to his death.

1800, April 25. *Died*, WILLIAM COWPER, a distinguished English poet. He was the son of Dr. Cowper, rector of Berkhamstead, where he was born, November 26, 1731, and lost his mother when he was six years old. His constitution was remarkably delicate from his infancy, and his mind was so tender as to be easily depressed into melancholy. Being designed for the law, he was placed under an eminent attorney; on quitting whom he entered of the inner temple, where he renewed an intimacy with his school-fellows, Colman Thornton, and Lloyd, and contributed three papers to the *Connoisseur*. At the age of thirty-one, he was nominated a clerk in the house of lords; but an unconquerable timidity prevented him from taking it. He was next appointed clerk of the journals, a situation which, it was supposed, would require no personal attendance; but an occasion occurring which rendered it necessary for the clerk to appear at the bar of the house, it had such an effect on his nerves, that he was obliged to resign the place. A morbid melancholy seized him, and it was found necessary to place him under the care of Dr. Cotton,\* at St. Albans. By the care of that benevolent physician he recovered his mental faculties; and from this time his ideas of religion were changed to a system of serenity. In 1763, he settled at Huntingdon, where he formed an acquaintance with a clergyman of the name of Unwin, in whose family he became an inmate. That gentleman being killed by a fall from his horse in 1767, Cowper and Mrs. Unwin went and settled at Olney, in Buckinghamshire, where they con-

tracted an intimacy with Mr. Newton, then curate of that parish. To a collection of hymns published by that gentleman our poet contributed sixty-eight. In 1782 appeared a volume of his poems, which did not excite much attention; but the second volume, in 1785, stamped his reputation as a first-rate poet, particularly by that exquisite piece *The Task*. Lady Austin, for whom the poet had a tender regard, being a great admirer of Milton, requested him to try his powers in blank verse; and on his asking her for a subject, she said, "Oh, you can write upon any; let it be this sofa." Thus originated one of the finest poems in our language. The same lady was also the occasion of the popular ballad of John Gilpin, which story she related to amuse Cowper in one of his gloomy moments; and it had such an effect upon him that he turned it into verse. About this time he engaged in translating *Homer* into Miltonic verse; and though the version is not so pleasing as that of Pope, it exhibits more of the original. In 1786, he removed to Weston, in Northamptonshire, with Mrs. Unwin, whom he regarded as a mother. After the publication of his *Homer*, he was persuaded to undertake the life of Milton, and a complete edition of his poetical works. Mr. Hayley\* was engaged in a similar design, which produced an intimacy between them, which continued till Cowper's death. To this friendship, the public is indebted for a biography, minute, elegant, and highly instructive, as can seldom be expected. In 1794, his majesty granted him a pension of £300 per annum, but the royal bounty yielded pleasure only to his friends, for he was now in a state of complete dejection, from which he never fully emerged. He continued, however, occasionally to write, and also finished a revival of his *Homer*, which has since been printed. This amiable man, and extraordinary genius, died at Dereham, in Norfolk, and lies buried in the parish church, where a monument is erected to his memory. "The language of Cowper," says Campbell, "has such a masculine idiomatic strength, and his manner, whether he rises into grace, or falls into negligence, has so much plain and familiar freedom, that we read no poetry with a deeper conviction of its sentiments having come from the author's heart; and of the enthusiasm, in whatever he describes, having been unfeigned. He blends the determination of age with an exquisite and ingenious sensibility; and though he sports very much with his subjects, yet when he is in earnest, there is a gravity of long-felt conviction in his sentiments, which gives an uncommon ripeness of character to his poetry."

\* William Hayley, author of the *Triumphs of Temper*, and other poems, was born at Chichester, Oct. 29, 1741, and died at Felpham, Nov. 13, 1820. In his *Life of Cowper*, which he published in 1802, he gave the first example of a species of biographical composition which seems to be now acknowledged as in some respects the best. The subject of the memoir was caused to display his own character, and to commemorate many biographical incidents by his letters—the biographer supplying only such a slender thread of narrative, as was sufficient to connect the whole, and to render it intelligible.

\* Nathaniel Cotton was an eminent physician and poet, who kept an asylum for lunatics many years at St. Albans, where he died at a very advanced age, Aug. 2, 1798. He wrote *Fictions in Verse for Younger Minds*, which have been frequently printed. He was also the author of poems in Dodsley's collection.

1800, *May 18*. The English baptist missionaries, who entered India in 1793, not being permitted to fix themselves within the territories belonging to the East India company, obtained leave to reside at Serampore,\* in Bengal; and these zealous men having procured a printing-press† and types from Calcutta, commenced their industrious and memorable typographical career, with an edition of the *New Testament*, in Bengalee, the first sheet of which was worked off on the above day. The first page of St. Matthew's gospel was taken off for a specimen on the 18th of March. The edition consisted of two thousand copies, seventeen hundred were printed on Patna paper, and three hundred on paper brought from England. Five hundred extra copies of St. Matthew's gospel were struck off for immediate gratuitous distribution. Their labours proceeded with unabated and uninterrupted ardour until the year 1812, under which year the printing-house was destroyed by fire.

1800, *June 3*. *Died*, WILLIAM ROUTH, printer and publisher of the *Bristol Journal*, in the prime of life; and on the following day, as Mrs. Routh, wife of George Routh, printer, was addressing a letter to him on the death of his brother (George Routh being at Bath for his health) she was suddenly taken ill, and expired almost instantly.

1800. *Died*, WILLIAM HAAS, an ingenious letter-founder at Basil. He improved the art of printing by many useful inventions; such as a balance-press, systematic sets of lines and spaces; a method of printing geographical charts and maps with moveable types, &c. The last-mentioned discovery, however, is ascribed to Breitkopf, a printer of Leipsic. See page 782, *ante*. Haas published *A Description of the Printing Press*.

1800, *Oct. 25*. *Died*, THOMAS MACKLIN, an eminent printseller, and proprietor of the *Poet's Gallery*, in Fleet-street, London, to whose spirited and enterprising exertions the professors of historical engraving and printing in this country were indebted for many brilliant opportunities of displaying and improving their talents in the exhibition of the *Poet's Gallery*. His splendid edition of the *Bible*, then on the eve of being completed, is an unrivalled monument of the taste and energy of the individual who planned and carried it into execution, and of the liberality of the nation whose munificence enabled him to accomplish so magnificent an undertaking. It exhibits the utmost perfection of both the arts of engraving and printing. No more were printed than were subscribed for. Mr. Macklin died in London, in the fortieth year of his age; and of him it may truly be said, that the arts lost a most industrious and enterprising

tradesman, and society a valuable and respectable member.

1800, *Nov. 11*. *Died*, JOHN ALBIN, principal bookseller at Spalding, in Lincolnshire, in the seventy-third year of his age.

1800, *Dec. 24*. Meeting of the masters and journeymen printers in London, to consider the state of the prices paid for their work.

1800, *Dec. 27*. *Died*, THOMAS CADELL, a very eminent and worthy bookseller of London, whose life furnishes another instance, (of the many recorded in this work) that application and industry seldom fail to meet with due reward. He was born in Wine-street, Bristol; and served an apprenticeship to Andrew Millar, noticed at page 718 *ante*. Mr. Cadell, in 1767, succeeded to the business; and, at an early period of life, was at the head of his profession. Introduced by Mr. Millar to writers of the first rank in literature, who had found in him their best Mæcenas—to Johnson, Hume, Warburton, Hurd, &c. &c.—he pursued the very same commendable track; and acting upon the liberal principle of his predecessor in respect to authors, enlarged upon it in an extent, which, at the same time that it did honour to his spirit, was well suited to the more enlightened period in which he carried on business. In conjunction with William and Andrew Strahan, munificent remunerations were held out to writers of the most eminent talents; and it is owing to the spirit and generosity of these worthy booksellers, that the world has been enriched by the labours of Robertson,\* Blackstone, Gibbon,† Burn, Henry,

\* William Robertson, LL.D. was born in the parish of Borthwick, Mid Lothian, in Scotland, in the year 1731, and educated at Edinburgh. In 1741 he was licensed to preach, in two years afterwards obtained the living of Glasmuir, in East Lothian. In 1749 appeared his *History of Scotland*, see page 721, *ante*. In 1769 he published his *History of the Reign of Charles V.* and his last considerable work, the *History of America*, appeared in 1777. Dr. Robertson had enjoyed several considerable church preferments, besides a pension of £200 a-year from the king; and being a man of prudence, temperance, and natural dignity of character the latter part of his life was spent in the enjoyment of almost every worldly blessing. He died at Edinburgh, June 11, 1793.

† Edward Gibbon was born at Putney, April 27, 1737, and died at Fletching, Jan. 16, 1794. The first volume of his *History of the Decline and Fall of the Roman Empire*, appeared in 1776, and the remaining five in the course of the twelve ensuing years. £60,000 has been gained by the booksellers, says a modern writer, out of Gibbon's *History of the Roman Empire*, though the author received but £600 for the copyright. It has been pronounced by the public to be a performance of vast and accurate research, and of enlarged and philosophical thinking; abounding in splendid passages and curious discussions; and written in a style, which, though affectingly sonorous and occasionally obscure, is such as to display in the author a thorough mastery of the English language. Notwithstanding an oblique attack upon Christianity, which was very generally condemned, it has taken a secure place among the English classics, and must ever form a conspicuous object in the literary history of the eighteenth century. The sixth volume of this great work was finished at Lausanne, when Gibbon makes the following remarks; "It was on the day, or rather night, of the 27th of June, 1787, between the hours of eleven and twelve, that I wrote the last lines of the last page, in a summer-house in my garden. After laying down my pen, I took several turns in a *serceus*, or covered walk of acacias, which commands a prospect of the country, the lake, and the mountains. The silver orb of the moon was reflected from the waters. I will not dissemble the first emotions of joy on the recovery of my freedom, and perhaps the establishment of my fame."

\* Serampore, a Danish settlement, is pleasantly situated on the banks of the Hoogly river, one of the streams of the Ganges, about fifteen miles to the north of Calcutta. It was founded by the Danes about the year 1676.

† This press had been purchased in September, 1798, by Dr. Carey, and was at first conveyed to his residence, at Munsabatt; but I do not find, says Dr. Cotton, that any use was made of it previously to the removal of the missionaries from that station to Serampore.

and numberless other of the ablest writers of the age. In 1793, Mr. Cadell retired from trade, in the full possession of his health and faculties, and with an ample fortune, the sole and satisfactory fruits of unremitting diligence, spirit, and integrity; leaving the business which he had established as the first in Great Britain, and perhaps in Europe, to Thomas, his only son, conjointly with Mr. Davies, who, following the alderman's example, have preserved the high reputation acquired from the liberality, honour, and integrity of their predecessors. Accustomed, however, from early days, to business, and conscious that an idle life was a disgrace to a man of clear intellects, sound judgments, and an active mind, he, with a laudable ambition, sought, and most honourably obtained, a seat in the magistracy of the city of London; being unanimously elected, March 30, 1798, to succeed his friend, Mr. Gill, as alderman of Walbrook ward. At Midsummer, 1800, a period when party spirit ran high, he was elected by a very honourable majority on a poll, with his friend, Mr. alderman Perring, to the shrievalty of London and Middlesex. To the Asylum, where he had long been a valuable treasurer, the Foundling Hospital, and various other public charities, of which he was an active governor, and where his presence gave animation to their proceedings, while his purse liberally aided their funds, his loss was great:—to a very extensive circle of friends, (and there are several, who had unbent their inmost souls with him for more than forty years) it was incalculable. He was eminently characterized by the rectitude of his judgment, the goodness of his heart, the benevolence of his disposition, and the urbanity of his manners; and, whether considered in his magisterial character, or in the more retired walks of social or domestic life, few men could be named, so well deserving of private veneration or public esteem. One of the latest public acts of his life was presenting to the company of stationers, of which he had been thirty-seven years a liveryman, a handsome painted window for the embellishment of their hall. By an affectionate wife, who died in January, 1786, he had one son and one daughter; both of whom he lived to see united in marriage, to his entire satisfaction; and who have now the comfort to reflect, that their father fulfilled the various duties allotted to him with the honour of a man and the integrity of a Christian. He died at his house in Bloomsbury-place, in the sixtieth year of his age. In a sermon preached by Mr. Hutchins (then chaplain to the lord mayor,) on the 9th of January following, a handsome compliment was paid to alderman Cadell, for "gentleness of manners, benevolence of disposition, purity of morals, tenderness to the unfortunate, and an unaffected deportment, in the various offices of citizen, magistrate, parent, and friend."

1800. *The Farmers' Magazine*, commenced by Archibald Constable, bookseller, Edinburgh, under the management of Robert Brown, an able East Lothian agriculturist. This magazine

appeared quarterly, enjoyed a considerable share of prosperity, but eventually sank with the house of the publisher in 1827.

1800. *A Monthly Magazine* was commenced at Chelmsford, in Essex: the editor, a man of taste and honour, had a calf's head for the frontispiece, which in the course of the work gave rise to the following epigram:

"In every quarter of this world so wide,  
John Bull means Englishman—the same world's pride;  
Proud may an Essex calf then surely be,  
A true descendant of John Bull is he."

1800, Dec. The following is a correct list of the Magazines, Reviews, and other monthly publications which existed at this time in London, with the price at which they were sold:

	d	s.
<i>Annals of Agriculture, Young's</i> .....	2	0

\* Matthew Wilks, a methodistical preacher of Tottenham-court chapel, married and settled at Bethnal-green, where to his other professions he established a wholesale stationery business, for the purpose of supplying the societies with which he was connected, paper for printing their magazines, journals, and other religious productions. He contrived to obtain the *Evangelical Magazine* from the hands of Mr. Thomas Williams, a bookseller in Stationers' court, who had been at the expense of establishing it, and was also its editor, and made the property of Mr. Wilks, and his partners to their no little advantage, considering the large numbers which were sold. By these means, and others of a similar description, Mr. Wilks contrived to realize a very handsome fortune.

† Founded by the rev. James Stanier Clarke, LL.B. and F.R.S. eldest son of the rev. Edward Clarke, who died November, 1796.

The following list will shew the number and increase of newspapers, and the amount of duty:

1753 .....	7,411,757	1779 .....	14,106,843
1760 .....	9,464,790	1780 .....	14,317,371
1774 .....	13,306,000	1790 .....	14,035,639
1778 .....	13,060,000	1791 .....	14,794,183
1776 .....	13,630,000	1792 .....	14,794,198
1777 .....	13,130,543	1793 .....	17,075,021
1778 .....	13,340,069		

1796. The number of newspapers sent through the London post-office during this year, was 8,600,000.

1797. Stamps on newspapers: England, £144,940 14s. 10d. —Scotland, £9,482 12s. 9d. —Total, £154,423 7s. 7d.

1798. The net duty received on advertisements in the United Kingdom was, for newspapers, £82,104; on pamphlets, £153; for stamps on newspapers, £154,423; England, £318,154; Scotland, 15,531; Ireland, £6,103.\*

1799. Advertisements in newspapers paid £103,590; in pamphlets, £108; stamps on newspapers, £180,340; England, £300,831; Scotland, £17,094; Ireland, £4,873.

1800. Advertisements in newspapers, £79,509; in pamphlets, £233; stamps on newspapers, £184,304; England, £330,817; Scotland, £18,754; Ireland, £6,873.

1800. The number and cost of all the new publications published in London during this year amounted to 695, and the cost of a single copy of each work, in boards, was £239 6s.

Having recorded the most particular events connected with the press of Great Britain during the eighteenth century, and given, however imperfectly, the progress which has been made in liberty and knowledge, we cannot refrain, in the first place, of drawing the attention of the young typographer to those names which shine so conspicuously in the annals of the press of this very important period. Though our limits have compelled us to be brief, regarding those worthy men, still they stand forth as bright examples, worthy of imitation, and excite him to pursue the same honourable course, which will, unless unforeseen misfortune and severe ill health intervene, lead to the same results:—that industry, perseverance, and integrity, will be rewarded with honour, wealth, and distinction.†

"I have always considered," says Goldsmith, "the press as the protector of our freedom; as a watchful guardian, capable of uniting the weak against the encroachment of power. What concerns the public most properly admits of public discussion." How different are the sentiments here expressed, to those of men, whose minds being warped by ignorance or prejudice, contend against the liberty of the press, or the education of the people: who vindicate and support that dark brooding bigotry that would chain down human intellect to creeds and systems devised in times of barbarity, and demonstrate how

truly, even in the present day, the abettors of them are the tyrants and hypocrites they are said to be. They will not erase a single letter from the exploded dogmas of their ancestors; they will not unclose one solitary link of the iron chain of rule which their predecessors wielded. They tremble at the thought of retributive justice, but they have to contend with

"Men, high-minded men  
With powers as far above dull brutes endued,  
In forest, brake, or den,  
As beasts excel cold rocks and brambles rude;  
Men who their duties know,  
But know their rights; and knowing dare maintain,  
Prevent the long-aimed blow,  
And crush the tyrant while they rend the chain."  
Sir William Jones.\*

In whatever country the freedom of the press has been tolerated, the intellectual improvement of society has advanced equally with national prosperity. Man has become a more free, a more industrious, a more rational, and a more happy creature. His comforts have become more abundant and less savage as his knowledge has extended. In proportion as the curb has been removed from his tongue, and the expansion of his mental faculties encouraged, in the same ratio has he become more useful to himself, and more beneficial to his fellow-creature. When will the stale doctrines of the convent be exploded? When will the mind be left unfettered, and the veil of ignorance be withdrawn by the hand of despotism? When will the rulers of the earth grow wise, and give their subjects the exercise of their own minds? It is true, they give them leave to think, but they must not communicate, they must not advise; they may abhor in their hearts, but their lips must not give the semblance of utterance to the strong reprobation they feel. In reference to our own country, Sheridan, in one of his impassioned moments, once said:—"Give me a tyrant king—give me a hostile house of lords—give me a corrupt house of commons—give me the press and I will overturn them all!"

\* Prior to 1817 no account was recorded in Ireland, but the stamp receipts on newspapers were united with all other branches.

† The following enumeration of printers, booksellers, and stationers, who acquired honour and wealth during the past century, may not be unacceptable:

Members of Parliament:—Churchill, Gay, Longman, Simmons, William Strahan, Andrew Strahan and Tonson.  
Lord Mayors of London:—Barber, Boydell, Gill, Jansen, and Wright.

Authors:—Almon, Bage, Bingley, Bowyer, Brice, Dodaley, Dutton, Franklin, Goadby, Henry, Jones, Nichols, Palmer, Richardson, Roddman, Russell, Smellie, Towers, Watson, Wynne, and many others.

Wealth:—Basket, Bowyers, Cadell, Cave, Churchills, Caslon, Davis, Dodaley, Franklin, Gill, Goy, Jackson, Knox, Lintots, Longman, Lounds, Millar, Osborne, Simmons, Strahans, Tonsons, and Wright.

\* Sir William Jones was born in London, in 1746, and educated at Oxford, where to his classical pursuits he added the study of the Persian and Arabic, and also the Spanish, Italian, and Portuguese. In 1770, he entered on the study of the law at the Temple. In 1783 he obtained the appointment of a judge of the supreme court at Calcutta, and the honour of knighthood on this occasion, and married Anna Maria Shepley, daughter of the bishop of St. Asaph. In April of that year he embarked for India, and on the voyage projected the establishment of a society in Bengal, for the purpose of illustrating oriental antiquities and literature. The volumes of its transactions are inestimable, and are enriched by several valuable productions from his pen. As judge he was indefatigable and impartial. He studied the native laws of the country, and became so versed in the Sanscrit and the codes of the Brahmins, as to gain the admiration of the most learned men in that country. Though eminent as an oriental scholar, Sir William also wrote some lyric pieces of great beauty, which are much admired, and have added to our current phraseology a few highly energetic and beautiful expressions. His *Ode in Imitation of Alceus*, is a heart-stirring effusion of patriotism. This excellent man died in India, April 2, 1794. His works were collected and published in 6 vols. 4to. 1799, and his *Life*, written by Sir John Shore, Lord Teignmouth, in one vol. 4to. in 1804. A beautiful monument has been erected to his memory in St. Paul's cathedral, by the East India company.

## NINETEENTH CENTURY.

In times ere yet the Passs had blest mankind,  
Perish'd unknown the noble works of mind;  
O'er trackless wastes, where Science lent no ray,  
And cheerless climes was genius doomed to stray.  
His usefulness as bounded as his fame,  
His body death—oblivion seized his name;  
The eternal essence to its source return'd,  
Unfelt its blessings, and its loss unmourn'd.  
How changed the auspices of those who wait  
In these our days at Fame's celestial gate;  
'Tis merit leads them through the sacred bound,  
Where flowers Elysian deck the holy ground;  
Fired with the theme, my muse would now combine  
Some names immortal in her mortal line.—*M'Creery.*

WHEN knowledge, instead of being bound up in books, and kept in libraries and retirement, is obtruded on the public in distinct sheets; when it is canvassed in every assembly, and exposed on every table, we cannot forbear reflecting upon that passage in the *Proverbs*: "Wisdom crieth without; she uttereth her voice in the streets; she crieth in the chief place of concourse, in the opening of the gates. In the city she uttereth her words, saying, How long, ye simple ones, will ye love simplicity? and the scorners delight in their scorning? and fools hate knowledge?" How well do these words apply to many of the present day, when the mechanic may equal in science, however inferior in genius, the friar, whom his cotemporaries feared as a magician. No man can complain in this country that the gates of knowledge are closed against him, and it is indeed his own fault if he will not enter the temple and enjoy the intellectual repast which is so amply and so cheaply provided. Books are multiplied on every hand and upon every subject; be his pursuits what they may, the poor man, with carefulness, can afford to obtain information. The press has gradually, but safely, burst the bands of intolerance and injustice asunder; and though bigotry will ever have her votaries, prejudice her slaves, and faction her partizans, the light of knowledge emitted from the press has driven the demons of injustice down the sky:—

"Mind, mind alone,  
Is light, and hope, and life, and power!  
Earth's deepest night, from this blest'd hour,  
The night of minds is gone!  
'The Press' all lands shall sing;  
The Press, the Press we bring,  
All lands to bless."

The truth has at length been discovered, that the more widely knowledge is spread, the more will they be prized whose happy lot it is to extend its bounds by discovering new truth, to multiply its uses by inventing new modes of applying it in practice; and that real knowledge

never promoted either turbulence or unbelief; but its progress is the forerunner of liberality and enlightened toleration. An intelligent class can never be, as a class, vicious; never, as a class, indolent; and it may be asked, What is it that distinguishes human society from a brutish herd, but the flourishing of the arts and sciences,—the free exercise of reason? "Some have objected," says Robert Hall, "to the instruction of the lower classes, from an apprehension that it would lift them above their sphere, make them dissatisfied with their station in life, and by impairing the habit of subordination, endanger the tranquillity of the state; an objection devoid, surely, of all force and validity. It is not easy to conceive in what manner instructing men in their duties can prompt them to neglect those duties; or how that enlargement of reason, which enables them to comprehend the true ground of authority, and the obligation to obedience, should indispose them to obey. The admirable mechanism of society, together with that subordination of ranks which is essential to its subsistence, is surely not an elaborate imposture, which the exercise of reason will detect and expose. This objection implies a reflection on the social order, equally impolitic, invidious, and unjust. Nothing, in reality, renders legitimate governments so insecure as extreme ignorance of the people. It is this which yields them an easy prey to seduction, makes them the victims of prejudice and false alarms, and so ferocious withal, that their interference in the time of public commotion is more to be dreaded than the eruption of a volcano."

The powers of the press are so universally recognized, that the time cannot be far distant when it will break down all the obstacles that are yet opposed to it upon the continent of Europe. It is by the press alone that the first successful assault upon intolerant governments will be made. How far it has already succeeded we will not say; but before man can enjoy the blessings of equitable laws he must first be

instructed; and before he will lend his aid to establish and protect such institutions, the press must first teach him their value. The selfish and besotted policy, which, under the specious, but false denomination of patriotism, seeks a monopoly of power, of instruction, or of wealth, and which, in its jealousy of a rival, exclaims at each advancement of the species, *delenda est Carthago*, is gradually disappearing from amongst the educated and the reflecting; and with this progress of practical wisdom and applicable philosophy, bad governments lose some of their means of doing evil.

"Until printing was very generally spread," says Mr. Babbage, in his *Bridgewater Treatise*, "civilization scarcely advanced by slow and languid steps; since that art has become cheap, its advances have been unparalleled, and its rate of progress vastly accelerated. It has been stated by some, that the civilization of the western world has resulted from its being the seat of the Christian religion. However much the mild tenor of its doctrines is calculated to assist in producing such an effect, that religion can but be injured by an unfounded statement. It is to the easy and cheap methods of communicating thought from man to man, which enable a country to sift, as it were, its whole people, and to produce, in its science, its literature, and its arts, not the brightest efforts of a limited class, but the highest exertions of the most powerful minds among a whole community—it is this which has given birth to the wide-spreading civilization of the present day, and which promises a futurity yet more prolific. Whoever is acquainted with the present state of science and the mechanical arts, and looks back over the inventions and civilization which the fourteen centuries subsequent to the introduction of Christianity have produced, and compares them with the advances made during the succeeding four centuries following the invention of printing, will have no doubt as to the effective cause. It is during these last three or four centuries that man, considered as a species, has commenced the development of his intellectual faculties; that he has emerged from a position in which he was almost the creature of instinct, to a state in which every step in advance facilitates the progress of his successors. In the first period, arts were discovered by individuals, and lost to the race: in the latter, the diffusion of ideas enabled the reasoning of one class to unite with the observations of another, and the most advanced point of one generation became the starting-post of the next."

1801, Jan. 23. *Died*, RICHARD SHAW, a worthy, unassuming printer, in Silver-street, Whitefriars. He died at Pentonville, aged sixty-five years.

1801, Feb. 17. MATTHIAS KOOPS, gent. of Westminster, obtained a patent for making paper from straw, hay, thistles, &c.

1801, March 26. *Died*, JOHN VOWELL, formerly an eminent stationer in Watling-street, London, aged ninety-three years. Till within

three weeks of his dissolution, he was an active and useful member of the court of assistants of the stationers' company, of which he was master in 1767, and had long been the father. He was universally esteemed for perfect urbanity of manners, and unaffected goodness of heart. He died at his apartments, in Zion college.

1801, March. *Died*, WILLIAM COLLINS, bookseller, Exchange-alley,\* London. His catalogues, for a considerable number of years, furnished several curious articles to the literary collectors. He died in Warwick-street, Golden-square, of a confirmed asthma.

1801, April 20. JOHN GAMBLE, of Leicester-square, London, obtained a patent for a machine for making paper, in single sheets, without seams or joinings, from one to twelve feet and upwards wide, and from forty-five feet and upwards in length.

1801, April. *Died*, THOMAS WOOD, printer and editor of the *Shrewsbury Chronicle* for nearly twenty-nine years; tender in all the offices of friendship, and deeply regretted by those around him in the relations of husband, father, master, and friend. His temper and deportment through life proved him to be actuated by the principles of Christianity; his last moments, cheered by the hopes of the gospel, were distinguished by patience, placidity, and as may be expected, his end was peace. He died at Shrewsbury, in the fifty-fifth year of his age.

1801, April 27. *Died*, THOMAS BROWNE, bookseller at Hull, Yorkshire, aged eighty-one.

1801, June 1. *Died*, GEORGE ROBINSON, an eminent bookseller in Paternoster-row. He was born at Dalston, in Cumberland, and about 1755, he went to London in search of such employment as he might be qualified for by a decent education, and a great share of natural good sense and shrewdness. His first engagement was in the house of Mr. John Rivington, and from which he went to that of Mr. Johnstone, on Ludgate-hill, where he remained until 1764, when he commenced business as a bookseller in Paternoster-row, in partnership with Mr. John Roberts, who died about 1766. The uniform habits of industry and punctuality which Mr. Robinson had displayed, while managing the concerns of others, pointed him out as one who might be interested. Mr. Robinson's active spirit, knowledge of business, and reputable connexion, soon enabled him to achieve the higher branches of the business, and become the rival of the most formidable of the old established houses; so that before the year 1780, he had the largest wholesale trade that was ever carried on by an individual. In 1784, he took into partnership his son and brother, who succeeded him. To the rise and progress of so great a concern, Mr. Robinson was an eminent proof how much may be done by attention, industry, and above all, inflexible integrity and perseverance.

Few men, probably, have been regretted by a

\* In 1778 he resided in Pope's Head-alley, where he was burnt out.

more extensive acquaintance, than Mr. Robinson; and it is particularly noticeable in his history, that amidst the strictest attention to business, he was throughout the whole of his early life enabled, by a due division of time, to appropriate more to social pleasures than many men could venture to do with impunity. For the social enjoyments of life, indeed, he was eminently qualified. He had improved the scanty education of a northern village by some reading, but principally by the company of literary men, and by a memory uncommonly tenacious. His own mind was shrewd, penetrating, and enriched by varied experience. He had likewise a great share of wit and vivacity; many of his *bons mots*, which have been pretty extensively circulated among his friends, would do credit to men of the first reputation in this minor department of genius. His sense of ridicule was remarkably strong, and few men excelled him in telling a story, of which he had a plentiful stock, and which he varied with circumstantial embellishments that were irresistibly laughable. Versed, too, in the literary and business-history of his time, his conversation was a rich fund of information, and his memory in dates and *minutiae* gave an authority which made him be frequently consulted when points in dispute were to be accurately ascertained. Of late years he visited less abroad, but was seldom happy without the company of his friends at home, who found themselves welcomed to a well-spread table, without ceremony and without affectation. He imposed no condition but that of punctuality to the hour of dinner; and in that particular, it is well known, he never relaxed to persons of rank or condition. Of him it may be truly said, no man discharged the duties of private life with more active zeal or more steady virtue; as a husband, a father, and a friend, he was warm and sincere, affectionate and tender. These, however, are the common features of every worthy man's character; but Mr. Robinson's death was felt and regretted on a broader and more public ground, as a loss to the world of letters. He was seized with an illness which proved fatal, on Monday, May 25, while at a meeting of booksellers, at the accustomed place, the Chapter coffee-house; from this he was obliged to retire hastily, and soon exhibited symptoms of fever; this abated so far, in the subsequent week, as to give hopes of recovery; these hopes were particularly encouraged, even on the evening, June 5, preceding his death, when he became calm, took his medicines willingly, and seemed, to all human appearance, free from fever. These symptoms, however, were fallacious; the snares of death were wound around him, and at five o'clock on Saturday morning he expired. He was interred in the burying-ground belonging to St. Faith's, in St. Paul's church-yard.

1801, June. Died, JOHN COPELAND, printer, at Reading, Berkshire, in the eighty-third year of his age. He had worked as a pressman in the office of the *Reading Mercury*, for sixty years,

with so much assiduity, sobriety, and regularity, as to obtain the name of *honest John*. He enjoyed a remarkable good state of health, and worked at his business, with his accustomed regularity, till within a short time of his death.

1801, June 10. MA. SPENCE, a bookseller, was sentenced to pay a fine of £50, and to suffer twelve months' imprisonment, for publishing a work entitled, *Spence's Restorer of Society*, which was deemed a seditious libel.

1801, June 27. An act of parliament was passed to indemnify all persons who have printed, published, or dispersed, or who shall publish or disperse any papers printed under the authority of any head officer of state, or of public boards, or other public authorities, from all penalties incurred by reason of the name and place of abode of the printer of such papers not being printed thereon.

1801, July 2. Irish literary property act passed, wherein it was directed, "that two copies of every printed book shall be delivered for Ireland." The claims extend *only* to books which should be entered in the register of stationers' hall, which entry is optional.

1801, Aug. 12. Died, THOMAS HASTINGS, long known as an itinerant bookseller and pamphleteer. He was a native of the bishoprick of Durham, and served his apprenticeship to his uncle, as a joiner and builder. After visiting most parts of the kingdom, he went to London, and worked for a while as a carpenter. The memorable election of Charles James Fox for Westminster, (1780) gave Mr. Hastings an opportunity to exert himself in the popular cause, and he produced a quarto pamphlet, intitled, the *Wars of Westminster*. This was soon followed by others in the style of oriental apologues, and he got considerable sums by hawking them about the town. From this period, it is believed, he wrought no more at his trade. For many years he had been in the habit of publishing, in different newspapers, on the 12th of August, a voluntary ode on the prince of Wales's birth-day, for which he annually received some small emolument at Carlton-house; but this he had discontinued some time by order. His last publications were the *Devil in London*, 12mo. and the *Regal Rambler*; or, *Lucifer's Travels*, 8vo. Mr. Hastings was a constant attendant on the popular Sunday orators; and in his habit very much adorned by a clerical appearance. His travelling name was *Dr. Green*. He was found dead in his bed, at his lodgings, in New-court, Moor-lane, Cripplegate, London. He was near sixty years of age.

1801, Sept. 1. Died, ROBERT BAGE, a paper maker, and a writer of no ordinary merit in the department of fictitious composition. He was one of that class of men occurring in Britain alone, who unite successfully the cultivation of letters with those mechanical pursuits, which, upon the continent, are considered incompatible with the character of an author. The case of a paper maker, or a printer, employing their own art upon their own publications, would be thought uncommon in France or Germany; yet such

were the stations of Bage, Bowyer, Richardson, Nichols, and a host of others, whose names are recorded in these pages, and whose labours add a lustre over the literature of their country.

The father of Robert Bage was a paper maker at Darley, near Derby, and was remarkable only for having had four wives. Robert was a son of the first, and was born at Darley, Feb. 29, 1728. His mother died soon after his birth; and his father, though he retained his mill, and continued to follow his occupation, removed to Derby, where his son received his education at a common school. His attainments were very remarkable, and such as excited the surprise and admiration of all who knew him. To a knowledge of the Latin language succeeded a knowledge of the art of making paper, which he acquired under the tuition of his father. At the age of twenty-three, Robert Bage married a young woman who possessed beauty, good sense, good temper, and money; the last aided him in the manufacture of paper, which he commenced at Elford, four miles from Tamworth, and conducted to the end of his days. Though no man was more attentive to business, and no one in the country made better paper, or so good of its kind, yet the direction of a manufactory, combined with his present literary attainments, did not satisfy the comprehensive mind of Bage. His manufactory, under his eye, went on with the regularity of a machine, and left him leisure to indulge his desire of knowledge. In the year 1765, Bage entered into partnership with three persons (one of whom was Dr. Darwin\*) in an extensive manufactory of iron; and at the end of fourteen years, when the partnership was terminated, he found himself a loser, it is believed, of £1500. In 1781 appeared his novel of *Mowat Henneth*, in two vols. which was sold to Lownds for £30. This was succeeded by *Barham Downs*, two vols. 1784; the *Fair Syrian*, two vols. about 1787; *James Wallace*, three vols. 1788; *Man as he is*, four vols. 1792; *Hemp-sprong*; or, *Man as he is not*, three vols. 1796. These works of Bage are of a high and decided merit. It is scarcely possible to read them without being amused, and to a certain degree instructed, and, what is without a parallel in the annals of literature, that of six different works, comprising a period of fifteen years, the last should be, as it

\* Erasmus Darwin, eminent as a physician and a poet, was born at Elston, near Newark, Nottinghamshire, and educated at Cambridge, where he took his bachelor's degree in medicine. From Cambridge he removed to Edinburgh, where he took his doctor's degree; after which he practised at Lichfield, with reputation; and in 1747, married Miss Howard, of that city, who died in 1770, leaving three sons. His second wife was the widow of Colonel Pole, who brought him a good fortune, so which he removed to Derby in 1781, where he passed the remainder of his life. He died suddenly at Bredsal, April 17, 1802.

Dr. Darwin's literary fame rests upon the *Botanic Garden*, with philosophical notes, in two parts. He was the author of papers in the philosophical transactions and a tract on female education, &c. He had also a share in the formation of the system of vegetables of Linnæus, published in the name of the botanical society at Lichfield.

See *Songs of the Press*, pages 66, 67, for some poetry and observations on the praise of printing, by Dr. Darwin.

Charles Darwin, his son, born at Lichfield, 1758, who promised fair to become eminent in medicine, died in 1792.

unquestionably is, the best. Several of his novels were translated into German, and published at Frankfort. William Hutton, the celebrated bookseller and author at Birmingham, purchased nearly all the paper which Bage made during forty-five years; and betwixt whom a strong friendship existed to the last. He had quitted Elford, and during the last eight years of his life resided at Tamworth, where he died, leaving his wife to lament his loss. In his person, Robert Bage was somewhat under the middle size, and rather slender, but well proportioned. His complexion was fair and ruddy; his hair light and curling; his countenance intelligent, mild, and placid. His manners were courteous, and his mind was firm. His integrity, honour, and devotion to truth, were underiating and incorruptible. His humanity, benevolence, and generosity, were not less conspicuous in private life than they were in the principal character of his works. He supplied persons he never saw with money, because he heard they were in want. He kept his servants and his horses to old age, and both men and quadrupeds were attached to him. He behaved to his sons (he had three) with the unremitting affection of a father; but as they grew up, he treated them as men and equals, and allowed them that independence of mind and conduct which he claimed for himself.

1801. *The Porcupine*. This was a daily newspaper started by William Cobbett,\* in London. It contained some articles of extraordinary talent and energy, one especially, which was read from every pulpit in the kingdom; and for which, Mr. Windham† declared in his place in the house of commons, the author deserved a statue of gold. The career of the *Porcupine* was not of long duration; he then commenced his far-famed *Weekly Register*, which for upwards of thirty years was the vehicle of his opinions and his feelings. About the time of his commencing the *Register*, he opened a bookseller's shop in Pall Mall.

1801, April 1. *The Orthodox Churchman's Magazine*, No. 1.

1801. *Monthly Musical Journal*, edited by Thomas Busby,‡ Mus. Doc. and LL.D.

1801. *Waterford Mirror*.

1802, Jan. 9. CHARLES HAYES, who kept a book-stall in Piccadilly, London, was prosecuted in the court of king's bench, by the society for promoting christian knowledge, for having on his stall a pamphlet called the *Man of Fashion*. Mr. Alley contended that the witness's merely

\* The first appearance of William Cobbett, on the political horizon, we have already noticed at page 777 *ante*, was at Philadelphia, as the author of *Peter Porcupine*, and a bookseller. From Philadelphia he was driven by the verdict of a jury, for a libel on Dr. Rush, with a verdict of five thousand dollars. Dec. 1799. He settled for a short time at New York, and published the *Swallowtail*, in which he held up to ridicule the judge, the jury, and the press, and others concerned in the late trial; he soon afterwards returned to England.

† Right Hon. William Windham, M.P., died June 4, 1810.  
‡ Dr. Busby, in conjunction with Dr. Arnold, published in 1796, the *Musical Dictionary*, 197 numbers; and in 1801, he published a *New and complete Musical Dictionary*, 8vo. third edition, 1812.

taking up a book was no proof of a publication by the defendant. Mr. Bosanquet insisted, that, as the book lay exposed to public view, it was a publication. The court, however, ruled in favour of Mr. Bosanquet, but the jury returned a verdict of *not guilty*.

1802, Feb. 1. *Died*, PAUL VAILLANT, an opulent and respectable bookseller in the Strand, London, in the eighty-seventh year of his age, being at that time father of the company of stationers, of which he had been a liveryman sixty-four years. He left two sons, one of them in holy orders; the other, well known and respected as a gentleman of great literary talents, and eminent as one of the counsellors at law in the corporation of London. In 1739, or 1740, Mr. Vaillant went to Paris, for the purpose of superintending the famous edition of *Cicero* by the abbé Olivet; and again, in 1759, to settle the plan for a new edition of *Tacitus*, by the abbé Brotier. He was one of the sheriffs of London and Middlesex in 1760, memorable for the conviction of a noble earl,\* who, previous to his execution, made Mr. Vaillant a present of his stop-watch, with many acknowledgments for his polite attentions and civilities; and he was also in the commission of the peace for Middlesex.† His grandfather (Paul Vaillant) was of a respectable Protestant family at Saumur, in the French province of Anjou. At the time of the revocation of the edict of Nantes, he escaped with his life from the bloody *Dragonnade* of the Hugonots by that merciless tyrant Louis XIV.; and in 1686, settled as a foreign bookseller in the Strand, opposite Southampton-street, (see page 664 *ante*), where himself, his sons Paul and Isaac, his grandson, the late Mr. Vaillant, and Mr. Elmsly, successively carried on the same trade, in the same house, till nearly the end of the eighteenth century.

1802, Feb. 19. *Died*, R. TRUEMAN, proprietor and printer of the *Exeter Flying Post*, which he had established and conducted for forty years.

1802, March. *Died*, HENRY SERJEANT, printer and bookseller, at Preston, Lancashire; a young man highly valued by all who knew him.

1802, March 8. The lord chancellor (Eldon) determined "that bibles printed by the king's printer in Scotland, cannot be sold in England."

1802. The German plan of disposing of books by means of *literary fairs*, was adopted in the United States of America: the first was held at New York, when it was proposed to hold them stately in that city.

1802. April 16. *Died*, Mr. BURGESS, printer to the university of Cambridge.

1802. May 3. *Died*, PETER ELSLEY, some time partner with, and many years successor to Paul Vaillant, in the Strand, in that department principally of an importer of foreign books. He was a native of Aberdeenshire, and to the tolerable education which it is in the power of almost

every Scotchman without much difficulty to attain, Mr. Elmsly had gradually superadded, as he advanced in life and prosperity, such a fund of general knowledge, and so uncommonly accurate a discrimination of language, that, had he chosen to have stood forward as a writer, he would have secured a permanent niche in the temple of fame. Nor was he less critically nice in the French language than his own. For a short time before his death he had wholly quitted business with a competent fortune, most handsomely acquired by consummate ability, the strictest integrity, and respected by every human being who knew him. He died at Brighton, in the sixty-seventh year of his age. His remains were conveyed to Sloane-street, London, and deposited in the family vault at Marybone, attended by a large party of friends, sincere mourners on the melancholy occasion; as for strength of mind, soundness of judgment, and unaffected friendship, he left not many equals. He left a widow to whom he had long been an affectionate husband. Mr. Elmsly resigned his business to his shopman, Mr. David Bremner; whose anxiety for acquiring wealth rendered him wholly careless of indulging himself in the ordinary comforts of life, and hurried him prematurely to the grave. He was succeeded by Messrs. James Payne and J. Mackinlay; the former of whom was the youngest son of Thomas Payne, of the Mews-gate, noticed at page 799, *ante*; the latter shopman to Mr. Elmsly.

1802. The printing office of Samuel Hamilton, of London, destroyed by fire. Amongst other property destroyed, was the second edition of the *Travels of Anacharsis the Younger, in Greece*, from the French of Barthelemy, seven vols. 8vo. It was then given to Mr. Gillett, to print, and finished within a few sheets, when the whole impression perished in a second conflagration,—a circumstance which gave rise to an expensive litigation between the printer and the proprietors of the work.—See under Dec. 12, 1805.

1802. The *Holy Bible*, printed in a new manner, with notes, ten vols. 8vo. by John Reeves, esq. F.R.S. This gentleman, who followed the profession of the law, became a sort of *lay-brother* of our profession, (in conjunction with George Eyre and Andrew Strahan, as king's printers) by means of the right hon. William Pitt, as a reward for some political services which he had rendered to the cause of that statesman. Mr. Reeves embarked pretty largely in his new profession of prayer-book and bible-printing, until his interest in the patent was purchased by Mr. Strahan. This mode of requiting political services in the reign of George III. gave rise to some parliamentary inquiries, which caused a new patent to be made out. Mr. John Reeves died at London, August 7, 1829.

1802 It was announced that 20,000 per day of the *Moniteur*, French newspaper, was printed.

1802. JOHN PARES, printer, of Leicester, was sentenced to twelve months' imprisonment, at the sessions held in that town, for publishing a song of a seditious tendency.

\* Lawrence Shirley, earl Ferrers, was committed to the tower, Feb. 30, 1760, for the murder of his steward, Mr. Johnson, and executed at Tyburn, May 8.

† Mrs. Vaillant died in London, Jan. 18, 1837, aged 91.

1802, June 5. *Died*, THOMAS SOWLER, of the firm of Sowler and Russell, printers and periodical publishers, at Manchester. He was born at Durham, December 9, 1765, and was the son of George Sowler, a letter-press printer of that city. Sincerely and universally respected in private life, he was highly esteemed by the trade and public generally, for his strict integrity and free and open bearing, and by his workmen as a kind, and in every sense, worthy employer. His only surviving son, Mr. Thomas Sowler, is the present proprietor and printer of the *Manchester Courier*, which was commenced Jan. 1, 1825.

1802, *Died*, JOHN BURDON, a very respectable bookseller, at Winchester, leaving four sons; one of whom, Charles Burdon, also a bookseller.

1802, WILLIAM BENT, bookseller, Paternoster-row, London, began the *Monthly Catalogue of New Publications*, 4to.\* From the *Modern Catalogue*, from 1792 to the end of 1802, eleven years, we find that 4096 new books were published, exclusive of reprints not altered in price, and also exclusive of pamphlets; deducting one-fifth for the reprints, we have an average of 372 new books per year.

1802, June 21. ALLEN M'LEOD, editor of the *Albion*, daily newspaper, who had been convicted of two libels on the earl of Clare, was sentenced to eighteen months' imprisonment in Newgate, on each count, making in the whole three years' imprisonment, and from the end of that period to find security to keep the peace for seven years, himself in £1000, and two sureties in £200 each.

1802, June 22. An act was passed for regulating the franking and postage of newspapers. By this act, the regulation requiring members of parliament to give notice of the place to which newspapers might be addressed to them fell into disuse, and if a member's name only appeared upon the cover, they were sent free to all parts of the United Kingdom. The free transmission of newspapers by the post was thus virtually thrown open to the public, and the origin of the establishment of agents amongst printers, booksellers, and others, for the supply of newspapers by post, may be dated from this period.

1802, July. *Died*, ROBERT ROSSER, formerly printer of the *Bristol Mercury*.

1802, July. PHILIP RUSHER, printer and bookseller, at Banbury, in Oxfordshire, obtained a patent for "various improvements and alterations in the form of printing types, and the manner in which printing is to be performed therewith, so as to diminish the trouble and expense of printing, and to render it more uniform and beautiful." From a copy of *Rasselas*, printed with Mr. Rusher's improved types, we consider them any thing but what the preamble of the patent would lead us to believe.

\* Mr. Bent also published a meteorological journal, kept in London, from 1793 to 1813, 8vo. (published annually); the London catalogue of books, to September, 1799, 8vo. 1799; appendix to ditto, to 1800, 8vo.; the modern catalogue, to 1805, 8vo. 1803; the new London catalogue, to 1807, 8vo. 1807; the London catalogue, to 1811, 8vo.; modern catalogue, to 1813; the London catalogue of books, from 1814 to 1834, by Robert Bent, Paternoster-row.

1802, Aug. 7. *Died*, — LEWIS, bookseller, in Great Russell-street, Covent-garden. He was one of the oldest booksellers in London; and used to relate that his father was a schoolfellow with Alexander Pope.

1802, Aug. 21. *Died*, THOMAS RICKABY, a printer of eminence, of Peterborough Court, Fleet-street, aged forty-nine years. He printed the *British Critic*. Mr. Rickaby was among the first who turned his attention to the beautiful minute;—printing in very small type below brevier had been pursued to a great degree of excellence but by very few printers. An annual work, of the pocket book class, called *Peacock's Polite Repository*, and a pocket dictionary called *Peacock's Johnson*, were among the best efforts of Mr. Rickaby's ingenuity.

1802, Sept. *Died*, DANIEL RICHARDS, many years father of the parish of St. Andrews, in Holborn, London, and where he had kept a stationer's shop for more than sixty years. He was also the senior member of the court of assistants of the stationers' company. At his death he was aged eighty-seven.

1802, Sept. *Died*, ALDERMAN SUTTON, bookseller, at Northampton, aged seventy-eight years.

1802, Nov. 29. *Died*, SAMUEL PATERSON, the well known and justly celebrated bookseller and auctioneer, of King-street, Covent-garden, London. He was the son of a respectable woollen draper in the parish of St. Paul, Covent-garden, and born 17th March, 1728. He lost his father when about the age of twelve years; and his guardian not only neglected him, but involved his property in his own bankruptcy, and sent him to France. Having there acquired a knowledge of foreign literature and publications beyond many persons of his age, he resolved to engage in the importation of foreign books; and when little more than twenty years old, opened a shop in the Strand: the only person who then carried on such a trade being Paul Vaillant. Though, by the misconduct of some who were charged with his commissions in several parts of the continent, it proved unsuccessful to the new adventurer, he continued in business till 1753. At the same early period in which he engaged in business he had married Miss Hamilton, a lady of the most respectable connexions in Scotland, still younger than himself; both their ages not making thirty-eight. He next commenced auctioneer in Essex house. This period of his life tended to develop completely those extraordinary talents in bibliography, (a science till then little attended to) which soon brought him into the notice of the literary world. His talent at cataloguing was unrivalled. Mr. Paterson was the author of *Coryat Junior*,\* three vols. 12mo. 1767; *Joineriana; or the Book of Scraps*, two vols. 12mo.; the *Templar*, a weekly paper, published by Brown, which was soon dropped; and *Speculations on Law and Lawyers*, applica-

\* *Odcumbian Banquet*, dished forth by Thomas the Coriast, and served in by a number of Noble Wits in prayers of his Crudities and Crambe too, 1611. Published by Ben Jonson.

ble to the manifest hardships, uncertainties, and abusive practice of the common law, 1788, 8vo. occasioned by his own distresses, the consequence of imprudent speculations and a numerous family; after struggling with which he was appointed librarian to the first marquis of Lansdown. After a union of near forty-five years, he lost his wife on November 25, 1790. Few men of this country had so much bibliographical knowledge as Mr. Paterson;\* and perhaps we never had a bookseller who knew so much of the contents of books generally; and he was particularly well acquainted with our English poets. If in his employment of taking catalogues, he met with a book he had not seen before, which excited his curiosity, or interested his feelings, they must be gratified, and his attendant might amuse himself as he chose. The consequence was that on many occasions catalogues could be procured only a few hours before the sale commenced. His eldest son, Charles, lieutenant of marines, and student of the academy of painting, died at Chatham, in his twentieth year, December 14, 1779. Two other sons, John and Samuel, obtained appointments as clerks in the Sun Fire Office; and one of the daughters married Mr. Pearson the celebrated glass stainer.

1802, Dec. Died, JOHN MAPPLES, printer, who was brought up in the office of Mr. John Nichols, in Red Lion Court, London; but being of a very volatile disposition, and possessing a considerable share of humour, he very early exchanged his situation in life for that of an itinerant player, and for many years made no inconsiderable figure in the *Dramatis Personæ* of various country theatres; particularly in those characters of old men that are marked with drollery. Ill health compelling him to quit the stage, he resumed his original profession in the house of his former employer; but from the se-

verity of his disorder, he passed half of his time on a sick bed, where, highly to the honour of humanity, his anguish was alleviated by his fellow-workmen, at not less than £100. By the same benevolent friends he was buried, aged 50.

1802, Dec. Died, JAMES RIVINGTON, king's printer, at New York, before the American revolution. Mr. Rivington was the eldest brother of Mr. John Rivington, who died in 1792, and was some time in partnership with Mr. Fletcher, in St. Paul's church-yard, as booksellers. He afterwards settled at New York, and obtained the office of king's printer, being at that time the oldest liveryman of the company of stationers.

1802, Jan. *The Projector*, No. 1. A paper published in the *Gentleman's Magazine*, of very distinguished merit; which successfully seized upon the reigning follies and vices of the day; and has displayed, in their exposure, a large fund of wit, humour, and delicate irony. The style is lively, perspicuous, and correct; the moral tendency uniformly good, and the exhibition of talent such as will secure for it a place in the *British Classical Essayists*. The author was Mr. Alexander Chalmers.

1802. *The Annual Review*, edited by Arthur Aikin, in conjunction with his brother, Charles Roguson Aikin.

1802. *The Monthly Register*, edited by John Dyer Collier.

1802. *The East India Register and Directory*, edited by Alexander Way Mason, and John Matthison,\* of the India house.

1802. *The London Review*, by Richard Cumberland,† the well-known dramatic writer.

"The Terence of England, the mender of hearts."

1802, Feb. *The Christian Observer*, No. 1.

1802, June 1. *The Tyne Mercury, and Northumberland and Durham Gazette*,‡ published by the proprietor and editor, Mr. John Mitchell. It is now conducted by his son and successor, Mr. William Andrew Mitchell.

1802, Nov. *The Adviser*, by John Bristead.

1792, Oct. *The Edinburgh Review; or, Critical Journal*, No. 1, with the following motto:

*Judex damnatur cum nocens aliosvitur.*

The contributors to this work, at its commencement, were Henry Brougham, Francis Jeffrey, Francis Horner, rev. Sydney Smith, Archibald Murray, and others, whose names have since shone so conspicuously in the annals of literature. Archibald Constable, was the publisher.

1802. *Ayr Advertiser*, by Mr. Peter Wilson.

1802. *Greenock Advertiser*, twice a-week.

\* The first person who attempted to give a sketch of universal bibliography and literary history, was the learned and laborious Christopher Augustus Hermann, professor in the University of Göttingen, in the year 1718, when he published a well known work, *Conspectus Republicæ Literariæ, sive Via ad Historiam Literariam*; which gradually went through seven editions, the last of which was published at Hanover, 1768. Numberless other works, analogous to this, were published in the same interval, in Germany. About the period alluded to, many detailed, descriptive, and rational catalogues of books appeared in the several countries of Europe, the art and the taste of constructing libraries became more general than in any preceding age; and the only thing which appears worthy of remark, and rather unaccountable, is that, even after the progress of philosophy or bibliography, the Germans in this department, have excelled every other people in Europe. The only historical system of national literature exhibited in Europe was that of the Italian, by Tiraboschi. Bibliography is, in strict language, a science; which consists in the knowledge of books, of their different editions and degrees of rarity and curiosity, their real and reputed value, and the ranks which they ought respectively to hold in a system of classification. General bibliography comprises works, or catalogues, whose design is to give us a knowledge of every kind of books whatsoever, — these are disposed either in alphabetical order, or according to their subject, or in an arbitrary manner. Special bibliography, has reference only to one class of books, and comprehends every work published on the subject on which it treats, while general bibliography makes a selection from among these same works, chooses what is best from each kind, and forms from them a whole of greater or less extent. — See the works of *Clarke, Horne, and Dibdin*.

\* Mr. Matthison died at Clapham Rise, in January, 1815, aged thirty-eight years.

† In this work, Mr. Cumberland undertook to conduct it on an entirely new plan, inasmuch as each article was to be published with the author's name annexed. He was supported by assistants of very considerable talents, but, after two or three numbers, the scheme became abortive. He was born Feb. 17, 1733, and died, May 7, 1811.

‡ In 1735 there was a *Durham Chronicle* in existence, but we have not been enabled to obtain any satisfactory information respecting the printer or publisher.

1802. Among the grants voted by parliament, was one of £1700 for the expense of copying manuscripts found at Herculaneum.

1803, Feb. 10, *Died*, WILLIAM GINOKR, of College-street, Westminster, bookseller to the royal society, aged seventy-six years, who was justly esteemed for industry, integrity, and every quality that adorns the Christian.

1803, Feb. 21. JEAN PELTIER, was found guilty, in the court of king's bench, London, before lord Ellenborough, and a special jury, of publishing a libel on Napoleon Bonaparte, first consul of the French republic, in a periodical work, called *L'Ambigu*.

1803, Feb. 22. *Died*, WILLIAM PINE, aged sixty-four years, a printer at Bristol, and the original printer of the *Bristol Gazette*.

1803, Feb. 28. ROBERT KIRKWOOD, engraver and copper-plate printer, Edinburgh, obtained a patent for certain improvements in the copper-plate printing press.

1803, March 5. *The Sydney Gazette and New South Wales Advertiser*, No. 1, established by George Howe, at Sydney, New South Wales.

The introduction of the art of printing, and the establishment of a newspaper, are really grand epochs in the history of a colony, or infant state. Only the ignorant or the bigoted and prejudiced can look on such events with an indifferent or inimical eye. The names of those men, however humble may have been their condition in life, who first introduced a breed of domestic animals—horses, cows, sheep, or pigs—before unknown in the country to which they emigrated; who first sowed grain, or planted a new tree or useful shrub; who first made a road; but, above all, those who carried the press to a savage land, ought to be preserved with more care than the names of the warriors and conquerors that have desolated the earth. Fortunately, as regards the last species of utility, or printing, we are enabled, by an article in the first number of the *New South Wales Magazine*, (August 1, 1833,) to give the history of the introduction of the press into New South Wales, and both the name and the history of the individual to whom the honour of that introduction was due. This individual was not a governor, or a judge, or a man in authority—he was not an Englishman, nor even a white man—but a poor creole from a West India island, where his father and brother were printers, and worked the government press,—see page 674, *ante*. The author of the article in the magazine has the right feeling on the subject. “As the names of Faust and Schœffer, Caxton and Wynkyn de Worde, are held in veneration as the earliest introducers of the inestimable art of printing into the northern world, it is but reasonable that Australia should assign a niche in her temple of fame to the memory of him who first exercised that art in her territory. The individual to whom this honour belongs was the late Mr. George Howe, the undoubted father of the *ars impressoria* in this southern region.”—For a notice of this worthy individual, and the progress of his press, see May 11, 1821, *post*.

1803, April. *Died*, JAMES SIBBALD, bookseller, proprietor of the Edinburgh circulating library,\* and editor of the *Edinburgh Magazine*. He was born at Whitlaw, near Selkirk, Roxburghshire, in Scotland, in 1747, where his father was a farmer, and which occupation he himself followed until May, 1779, when, owing to the depression which the American war produced in the value of farm stock, he disposed of his stock by auction, and repaired to Edinburgh, with about £100 in his pocket, in order to commence a new line of life. A taste for literature, and an acquaintance with Mr. Charles Elliott, bookseller, who was from the same district, induced him to enter as a kind of volunteer shopman for about a year. He then purchased the circulating library, and, in 1780 or 1781, commenced business as a bookseller in the Parliament-square, and carried on business with a degree of spirit and enterprise, beyond the most of his brethren. He was the first to introduce the better order of engravings into Edinburgh, in which department of trade he was for a considerable time eminently successful. Early in 1791, with the view of devoting himself more to literary pursuits, Mr. Sibbald made an arrangement for giving up the management of his business to two young men, Messrs. Laurie and Symington, who paid him an allowance out of the profits. After conducting the *Edinburgh Herald* for a short time, and arranging with Mr. Laurie concerning the library, he went to London, where he resided for some years, in the enjoyment of literary society, and the prosecution of various literary speculations, being supported by the small independency which he had thus secured to himself. While in London, his Scottish relations altogether lost sight of him; they neither knew where he lived, nor how he lived. At length his brother William, a merchant at Leith, made a particular inquiry into these circumstances, by a letter, which he sent through such a channel as would be sure of reaching him. The answer was comprised in the following words: “My lodging is in Soho, and my business is so so.” Having subsequently returned to Edinburgh, he there edited, in 1797, the *Vocal Magazine*, a selection of the most esteemed English, Scots, and Irish airs, ancient and modern, adapted for the harpsichord or violin. For such an employment he was qualified by a general acquaintance with music. In 1798, he published a work, entitled, *Record of the Public Ministry of Jesus Christ, &c.* This work was chiefly remarkable for the view which it took respecting the space of time occupied by the public ministration of Christ, which former writers had supposed to be three or four years,

\* The Edinburgh circulating library was established by Allan Ramsay, in 1725; and in 1757, it was sold to a Mr. Yair, whose widow carried it on till 1780, when it was sold to Mr. Sibbald. Under various circumstances it was conducted by Mr. Sibbald, till 1803, when his brother William carried it on under the superintendence of a Mr. Stephenson. Finding it by no means prosperous, and the latter gentleman having died, Mr. Sibbald disposed of it in 1806, to Mr. Alexander Mackay, who conducted it until a recent period, when it was broken up, and sold by auction.

but was represented by Mr. Sibbald as comprehended within twelve months. The latter years of this ingenious man were chiefly spent in the compilation of his well known *Chronicle of Scottish Poetry, and Glossary of the Scottish Language*, 1802, four volumes, 12mo; a work, says Mr. Chambers, of taste and erudition, which will perpetuate his name among those who have illustrated our national literature. Two portraits of Mr. Sibbald have been given by Kay; one representing him as he daily walked up the centre of the High-street of Edinburgh, with his hands behind his back, and an umbrella under his arm; another places him amidst a group of connoisseurs, who are inspecting a picture. He was a man of eccentric, but benevolent and amiable character. He belonged to a great number of convivial clubs, and was so much beloved by many of his associates in those fraternities, that for some years after his death, they celebrated his birth-day by a social meeting.

1803, July 2. *Died*, THOMAS EVANS, a considerable bookseller in Paternoster-row, to which situation he advanced himself by industry and perseverance, as he had, in common with many other respectable characters who have trod in the same path, very little to boast of in point of origin, living, when he first went to London, with Mr. William Johnston, bookseller, of Ludgate-street, in the humble capacity of porter. He afterwards became publisher of the *Morning Chronicle* and the *London Packet*, which introduced him to the acquaintance of Dr. Kenrick, Mr. Macfarlane, (author of the *History of the Reign of George III.*) and several other literary characters, from whose friendship and conversation he obtained much valuable information. During his publication of the former of these papers a paragraph appeared in it against Dr. Goldsmith, which so highly incensed the doctor, that he was determined to seek revenge; and no fitter object presenting itself than the publisher, he was resolved all the weight should fall upon his back. Accordingly he went to the office, cane in hand, and fell upon him in a most unmerciful manner.\* This Mr. Evans resented in

a true pugilistic style; and in a few moments the author of the *Vicar of Wakefield* was disarmed, and extended on the floor, to the no small diversion of the by-standers. Mr. Evans next succeeded to the business and extensive connexion of Messrs. Hawes, Clarke and Collins, Paternoster-row. The success he met with in this house was beyond his most anxious expectations; and the youths who were bred up under his instruction became the ornaments of their profession. He had for some years retired from business. He bequeathed the bulk of his fortune to Mr. Christopher Brown, (late assistant to Mr. Longman, bookseller, Paternoster-row, and father of Mr. Thomas Brown, now a partner in that respectable house,) with whom he had continued on terms of the closest friendship for above forty years. He left one surviving son, who was at sea; and a nephew of his was a clerk in the house of Messrs. Longman and Co. To his wife, with whom he had not lived during the last five years, he bequeathed £40 a-year, and also £20 a-year to a niece. The cause of separation from his wife was attributed to her partiality for one of her sons, who failed in business as a bookseller, in Paternoster-row, and afterwards was literally reduced to beggary, and died in the street about a year and a half before his father. Mr. Evans requested in his will that he might be buried without a coffin or shroud, and that the whole of his funeral expense should not exceed forty shillings.

1803, July 25. *Died*, THOMAS WALTER, for forty years a bookseller at Charing-cross, and eighteen years director of the Westminster department of the Phoenix fire-office. He was the only apprentice of Mr. Robert Dodsley, and one of the executors of Mr. James Dodsley. He was a man of the strictest honour both in professional and private life; and his unbounded benevolence was only exceeded by his urbanity and uncommon flow of animal spirits.

1803, Aug. 1. *Died*, WILLIAM WOODFALL, a printer and celebrated parliamentary reporter, and whose memory deserves to be particularly held in esteem, as one who so long, so zealously, and so largely contributed to the information of the political world, and to literature in general. He was the younger brother of Henry Samson Woodfall, and was early placed by his father under Mr. Richard Baldwin, of Paternoster-row, to learn the art of bookselling; from whose house he went back to his father's office, and assisted in the printing and editing of the *Public Advertiser*. He became so warm an amateur of the drama, that, to gratify his penchant for the stage, he made an excursion into Scotland, and performed several times for his amusement in the company of a Mr. Fisher. He used to relate many pleasant anecdotes of this jaunt, the most fortunate event of which, however, because it constituted the future happiness of his life, was his marriage with a most amiable woman, and with whom he returned to the metropolis about 1772, and engaged himself as editor of the *London Packet*. From this he was called by the

\* When the *John Bull* newspaper first started, in 1803, many gentlemen felt offended at the freedom of the editor's remarks. Epithets not carefully chosen are sometimes taken amiss, and process by law is tedious and disagreeable. A gallant colonel therefore—a near relation of an illustrious house—taking amiss some innocent freedom of the editor, determined to curb his wit by a smart application of the horse-whip. The colonel full of martial fury, went to the *John Bull* office, in Fleet-street, burning with revenge, grasping in his right hand the riding master's whip of the regiment. Intimating his wish to see the editor, was politely shown into a room, and informed that the editor would wait upon him instantly. Like a chafed lion, he walked up and down the room during the interval, flourishing his weapon of vengeance; when the door was opened, and in marched an individual of the Brobdignag species, clad in a thick white fuzzy great coat, his chin buried in a red cotton handkerchief, with a broad clinkin hat upon his head, and a most suspicious looking oak stick under his arm. "What might you want with me, sir?" asked this engaging looking individual. "I wish to see the editor." "I am the editor, sir, at your service," said this Brobdignag, taking from its rest his stick of about the thickness and size of a clothes' prop. "Indeed!" ejaculated the colonel, edging away towards the door; "oh, another time." "Whenever you please, sir," and they separated.

proprietors of the *Morning Chronicle* to the double station of printer and editor, which he filled with much credit to himself until the year 1789, when he commenced the *Diary*, which is already noticed at page 764, *ante*. Mr. Woodfall possessed the virtues of private life that endear a man to society, and was particularly distinguished for his literary talents. In 1793, he sought to be appointed remembrancer of the city of London, an office for which he was peculiarly qualified; but private friendships and superior interest prevailed. He was also devoted to the *belles lettres*; and, as such, was the intimate friend of Garrick, Goldsmith, Savage, (whose tragedy of *Sir Thomas Overbury* he prepared for exhibition, acted at Covent Garden in 1777,) and all the other members of the old literary school, of which he was one of the very few remaining disciples. He was so passionately fond of theatrical representations, as never to have missed the first performance of a new piece for at least forty years; and the public had so good an opinion of his taste, that his criticisms were decisive of the fall or fortune of the piece and the performer.\* Unfortunately for himself and his family, he placed all his hopes on the most precarious species of property, and became the proprietor of a newspaper, which his talents raised to eminence; but the talents of no individual could secure it a permanent station upon that eminence. The paper fell, and with it fell his hopes. Though disappointed, he was not to be diverted from his favourite pursuits. He was constant in his attendance at the bar of the house of lords, which he visited so lately as July 27, 1803. Although he was far advanced in life, he was active, animated, and in full possession of his mental faculties, without the appearance of any considerable waste of his physical strength. To a large family, entirely dependent upon his industry, his death was therefore an unexpected, deplorable, and afflicting event. He died, after a week's illness, in his fifty-eighth year, in Queen-street, Westminster; and his remains were interred on the 6th, in St. Margaret's church-yard.

1803. The British and Foreign Bible Society instituted by the right hon. sir John Shore, baron Teignmouth; the cause of which he has advocated, as its president, with great ability. He was born in Devonshire, in 1751, and early in life went to India in the civil service. In 1793 he was appointed governor general of Bengal, at which time he was created a baronet. He was the bosom friend of sir W. Jones, and succeeded him in the presidentship of the Asiatic society.

\* The family of the Woodfalls have long been distinguished both in the annals of typography and literature. Sophia Woodfall, (afterwards Mrs. McGibbon,) was the daughter of William Woodfall, and inherited from her parents a love for the stage; she performed at Covent-garden theatre with considerable eclat; and was for several years the principal heroine of tragedy, at the theatres royal Liverpool and Manchester, where she was not only admired for her tragic powers, but highly respected in private life. Before her marriage she produced *Frederick Montrose* or *the Adopted Son*, novel, 3 vols. 12mo. 1802; *Rosa*, or *the Child of the Abbey*, novel, 4 vols. 12mo. 1804.

1803, Aug. 7. Died, WILLIAM CHARNLEY, bookseller, Newcastle-upon-Tyne, aged seventy-six years, being the oldest in the trade in the North of England. Mr. Charnley served his apprenticeship to Martin Bryson, a respectable bookseller residing on the bridge in Newcastle, who was upon terms of intimacy and friendship with Allan Ramsay, of Edinburgh, and who once addressed a letter to Bryson, with the following superscription:

To Mr. Bryson, on Tyne bridge.  
An upright downright honest whig.\*

Mr. Emerson Charnley, who is styled by Dr. Dibdin,† the veteran emperor of Northumbrian booksellers, succeeded his father, and has carried on one of the most respectable bookselling businesses out of London.

1803. The first book printed at Northampton, capital of Hampshire county, in the state of Massachusetts, North America, was a work by Dr. Joseph Priestley,‡ entitled, *Notes on all the books of Scripture*, four vols. 8vo.

1803, Sept. 28. Died, RALPH GRIFFITHS, LL.D. the original institutor of the *Monthly Review*, and which, with unremitting perseverance, he conducted fifty-four years, assisted only by his son in the latter period of his life.§ He was originally a watch-maker at Stone, Staffordshire, and a steady attendant at the Presbyterian meeting at that place. Abandoning his trade he went to London, and turned bookseller, first on Ludgate-hill, afterwards in Paternoster-row, and finally in the Strand, where he had the misfortune to fail; and his *Review* being sold for the benefit of his creditors, was purchased by Mr. Collins, then an enterprising bookseller at Salisbury. Under Collins the work improved in variety and reputation, if not in sale;—and Griffiths, who had retained the management, regained the whole of the property itself about the year 1780. He now began a new series, and the profits of the work were so much increased, that he commenced a handsome establishment at Turnham Green; kept two carriages, and lived in style. He obtained, unsolicited, the degree of doctor of laws from an American college

\* This anecdote is recorded in *Sykes*, vol. i. p. 324.

† See Dibdin's *Northern Tour*, vol. i. p. 350, a work as deficient in information, as it is expensive in price; unworthy of its title, or the name of Dibdin.

‡ Dr. Joseph Priestley, the most celebrated philosopher of his time, was born at Fieldhead, near Halifax, Yorkshire, March 13, 1733, and educated at Daventry, under Dr. Ashworth. In 1761, he became tutor to the college at Warington, and there wrote several works, after which he resided six years at Leeds. In 1773, he became librarian to Lord Shelbourn, and in August, 1774, discovered *dephlogisticated air*, which has been called the birth-day of Pneumatic chemistry, which produced him great distinction. In 1778, he removed to Birmingham, and in 1791, a church and king mob burnt his house and library, and he removed, first to Hackney, and afterwards to Pennsylvania, where he died, February 6, 1804.

§ One of the earliest coadjutors of Dr. Griffiths, was Dr. William Rose, who has the credit of having written the first article in that valuable work. Dr. Rose was born in the county of Aberdeen, in Scotland, and for about thirty years was an inhabitant of Chiswick, where he kept an academy; he was a man of amiable manners, and much esteemed in the literary world. He died July 4, 1766, aged sixty-seven years.

Of either the literary life or domestic habits of Dr. Griffiths, little is known; in his character, industry and ingenuity were in an eminent degree combined; he was a steady advocate of literature; a firm friend, a cordial lover of the enjoyments of domestic happiness, and a zealous and successful promoter of the charms of social intercourse. There is a portrait of him in the *European Magazine* for January, 1804.\* The *Monthly Review* has in its progress been materially instrumental in promoting the interests of science, and diffusing a taste for critical literature in this country; and at the time of the death of its venerable conductor, in the eighty-third year of his age, it had attained the zenith of its glory. But the work having lost the mind which planned and reared it, maintains but a secondary rank among our literary journals.

1803, Aug. 25. *Died*, CHARLES BURDON, a bookseller at Winchester, aged twenty-four.

1803, Nov. 11. *Died*, JOHN KERBY, bookseller, Bond-street, London, aged sixty-three years.

1803, Dec. 10. *Died*, JOHN BROUGHTON RUNDHALL, bookseller and printer at Bristol, and printer of *Felix Farley's Bristol Journal*, in which he was succeeded by Mr. John Gutch, of whom Mr. Nichols observes, "This enterprising young bookseller, '*ex stirpe honesti oriundus in alma matre Oxoniensi*,' has only to proceed as he has begun, and he will in due time arrive at the summit of eminence."

WILLIAM SOMERTON, who died in February, 1804, had been employed upwards of fifty-three years on the above newspaper.

1803, Dec. 17. *Died*, JOHN GORE, proprietor and printer of the *Liverpool Advertiser*, to the deep regret of a large circle of acquaintance. His son, Mr. Johnson Gore, succeeded to the business, which he conducted for thirty years.

1803, Jan. 1. *The Manchester Telegraph and Weekly Advertiser*, No. 1, price sixpence, printed and published by James Edmond and Co. Bow-lane, Manchester, with the following motto:

Laugh where we must, be candid where we can.—Pope.

1803, Jan. 8. *The Pic Nic*; consisting of fourteen weekly numbers, making two volumes 12mo, was got up under the auspices of Fulk Greville, esq. author of *Reflection*, a poem, 4to. 1790, and *Letters to the Monthly Reviewers*, 8vo. 1790. The *Pic Nic* ended April 9, 1803.

1803, Feb. *The Monthly Spectator*, No. 1.

1803, Aug. 6. *The Mercantile Gazette*; and *Liverpool and Manchester Daily Advertiser*, No. 1, printed by J. White, at the Hope press, Liverpool, and sold by Gerard Banks, bookseller, St. Ann's-square, Manchester, price sixpence. This was the first attempt to establish a daily newspaper out of London, and originated with Dr. Solomon, the patentee of the well-known medicine, *Balm of Gilead*.

\* Dr. Griffiths, Dr. Rose, and the rev. Jacob Hiron, married the three daughters of Samuel Clerk, D.D., a respectable dissenting minister at St. Albans, who died in 1750. Mrs. Griffiths, the last survivor of the three sisters, died at Turham green, August 24, 1812.

1803. *The Poetical Magazine*, published by Vernor and Hood, and edited by David Carey, author of the *Pleasures of Nature*, and other poems, foolscap 8vo. 1803.

1803. *The Wanderer*. These essays occupy two volumes 12mo. and are said to be written by Charles Fothergill, esq. In 1813, he published *An Essay on the Philosophy, Study, and Use of Natural History*, 8vo.

1803, Nov. 12. *The Man in the Moon*; ended February 14, 1804. Said to be written by Mr. George Brewer, the author of *Hours of Leisure*.

1803. *The Argus*, printed and published by Joseph Aston, Manchester.

1803, Dec. 7. *The Townsman*, No. 1, printed and published by Gerard Banks, Manchester. The editor of this paper was the eccentric and well known Mr. James Watson.—See the *Spirit of the Doctor*.

1804, Jan. 20. *Died*, JOSEPH HARROP, printer and bookseller, at Manchester, and proprietor of the *Manchester Mercury*, which he established in 1752, aged sixty-seven years. He was succeeded in business by his son James Harrop, who, on Saturday, June 30, 1804, in addition to the *Mercury*, which was published on Tuesday, issued the first number of the *British Volunteer*, price sixpence. This paper obtained a good circulation by meeting the mail at Derby, and bringing the news to Manchester by express.

1804, Jan. The art of stereotype printing (with the approbation of lord Stanhope) was offered to the university of Cambridge, by Mr. Wilson, a printer of respectability in London, for their adoption and use in the printing of bibles, testaments and prayer-books, upon certain terms and conditions, one of which was said to be, paying to Mr. Wilson £4000 for the secret of the new invention.

1804, March. The bible society commenced under the auspices of Mr. Granville Sharpe.

1804, April 4. *Died*, PHILIP DECK, many years bookseller and postmaster at Bury St. Edmunds. He was a man who devoted his time in promoting every humane and charitable institution, as far as his power would admit, and whose humble abilities appeared in several religious tracts in support of religion and government. He was in the fifty-ninth year of his age.

1804, May 26. WILLIAM CORRETT, editor of the *Political Register*, found guilty in the court of king's bench for a libel against lord Hardwick and lord Redesdale, and the other officers of state in Ireland; and in the same court an action was brought by Mr. Plunkett, solicitor-general for Ireland, for libel, in which the jury awarded £500 damages.

1804. *Died*, ARMAND GASTON LE CAMUS, author of *Observations on the arrangement and classification of Libraries*; *A Memoir on Stereotype Printing*, and other works. He was one of the commissioners from the national convention, arrested by general Dumourier, and given up to the Austrians, who exchanged him afterwards for the young princess, the daughter of Louis XVI.

1804, June 21. *Died*, JOHN MARSH, printer, at George Town, near Washington, North America, aged fifty years. Mr. Marsh had been a bookseller and printer at Yarmouth and Norwich, and left England for North America, where he probably fell a sacrifice to the climate, from not being more early inured to it. As a man of honourable conduct and great urbanity, he was regretted by all who knew him in this country.

1804, July 10. *Died*, FRANCIS AMBROSE DIDOT, a very celebrated printer at Paris, in the seventy-fifth year of his age. He was the son of a printer and bookseller at Paris, in which city he was born in the year 1730, and received an excellent classical education. Full of enthusiasm for the advancement of the art of printing, young Didot determined to rival those celebrated printers, Joachim Ibarra, of Spain; Nisselius, of Leyden;\* and Baskerville, of England, and he lived to surpass them all. He brought his press to a state of excellence unattained by any of his contemporaries. He constructed mills for making fine paper; invented a press upon a large scale; and was the inventor of many other machines and instruments now commonly used in printing offices, all which have powerfully contributed to the modern advancement of the typographic art. The elegant editions published by order of Louis XVI. for the education of the dauphin, were the production of M. Didot's press, as well as the *Theatrical Selections* by Corneille, the works of Racine, *Telemachus*, Tasso's *Jerusalem*, two superb bibles, and a multiplicity of other inestimable works; each of which, on its publication, has emanated fresh beauties, and made nearer approaches to perfection. Didot sedulously endeavoured to unite in his family every talent auxiliary to the printing art: one of his sons became a celebrated type founder; and the voice of fame announces the superior rank which they both deservedly hold among the printers of the age. The life of Didot was the life of honour; his abilities were universally known and respected; but too strict an application to business and to study accelerated the death of this eminent man. At the age of seventy-three he read over five times, and carefully corrected every sheet of the stereotype edition of Montaigne, printed by his sons. He had likewise projected, and partly executed an index to that writer. His two sons, Peter and Firmin Didot, were the successors to his business and his fame, and to which they have added fresh laurels, by their typographic skill. Peter Francis Didot, brother of Francis Ambrose, died in 1795.

1804, July 25. *Died*, THOMAS MILLER, a very worthy and intelligent bookseller, and well known to men of literary curiosity for upwards of half a century, at his residence at Bungay, in Suffolk. He was born at Norwich, August 14,

1732. His father was by trade a pavier, and apprenticed him to a grocer; but his fondness for reading induced him to commence business as a bookseller, and for many years he enlarged his stock so as to make it an object of importance with collectors in all parts of the kingdom, who were not more pleased with his judicious selection of copies, than the integrity with which he transacted business. About 1782 he published a catalogue of his collection of books, engraved portraits, and coins, which for interest and value exceeded at that time any other country collection, except, perhaps, that of Mr. Edwards of Halifax. Mr. Miller was a great reader, and possessing an excellent memory, he acquired that fund of general knowledge, particularly of literary history, which rendered him an instructive and entertaining companion. In 1799 he became quite blind, but continued in business till his death. His son, William, was an eminent bookseller in Albemarle-street, London, who, on his retiring from business, in 1812, with an easy competence, acquired by habits of industry and polite attention, carried with him the high esteem and respect of his numerous friends and brethren. In 1795, when the fashion was very general for tradesmen to circulate provincial halfpennies, Mr. Miller sen. had a die cast, but an accident happening to one of the blocks when only twenty-three pieces were struck off, he, like a true antiquary, declined having a fresh one made. This coin, which is very finely engraved, and bears a strong profile likeness of himself, is known to collectors by the name of the *Miller Halfpenny*. He was extremely careful into whose hands the impressions went; and, when sold, fetches from three to five guineas. Had Mr. Miller, when a young man, settled in the metropolis, there is no doubt but his extensive knowledge in books, and natural unwearied industry, would have led to greater pecuniary advantages. Of Mr. Miller there is a good portrait.

1804. *Died*, WILLIAM JOHNSON, a bookseller of long established reputation in Ludgate-street. He relinquished the business to his son, about the year 1770, and was afterwards appointed stationer to the board of ordnance. He died at a very advanced age. His son, Mr. Edward Johnson, who inherited a good fortune from his maternal grandfather, Mr. Edward Owen, printer of the *Gazette*, died in Dublin, in 1796.

1804, Sept. 19. *Died*, JOHN WOODYER, many years partner with Mr. Thurlbourn, a respectable bookseller at Cambridge; after whose death Mr. Woodyer carried on the business alone, but was ultimately not successful. He was a man of extensive knowledge, placid disposition, and great probity. He was in the eighty-fifth year of his age, being at that time one of the oldest livery-men of the stationers' company.

1804, Sept. 19. *Died*, JAMES MATTHEWS, a very respectable bookseller and vender of medicines, at No. 18, in the Strand, London, successor to Samuel Leigh. He was a lay preacher in a chapel of his own at Whetstone. It is recorded that no man knew better how to make a bishop

\* John George Nisselius, a learned printer at Leyden, a German, born in the palatinate, was well versed in the oriental languages; and printed besides an *Hebrew Bible*, 1663, &c. many parts of the scriptures in the Ethiopic and Arabic languages. He died in 1663, before the *Hebrew Bible* was completed. As well as his own press he employed the Elzevirs to print for him.

than Mr. Matthews; and at the trade sales of the booksellers, which were then held at taverns, he was accustomed so to make a "bishop," that he was familiarly called by his brethren, bishop Matthews. He was the father of Charles Matthews, the celebrated comedian.\*

1804, Nov. 12. *Died*, GERARD BANCKS, who for many years carried on a very respectable business as a stationer and printer, in Exchange-street, Manchester, lamented by his relatives, and a large circle of acquaintance. Being a captain in Acker's volunteers, he was buried with military honours in St. Peter's church.

1804, Dec. 12. *Died*, JOHN BOYDELL, who has justly been called "the father of the arts in Great Britain." He was born, Jan. 19, 1719, at Dorrington, in Derbyshire, of which place his grandfather was vicar. Engaged himself in the profession of land surveyor, it is said that his father intended him for the same line; but, fortunately for the community, not less than his son, accident threw in the way of the latter, whilst yet young, Baddesley's views of different country seats, which so attracted his attention,

\* Charles Matthews was born on the 28th June, 1776, and educated at merchant tailor's school, and at the usual age was bound apprentice to his father. The bookseller was a Wesleyan methodist, and from religious motives did not permit his children to visit a theatre; but the circumstance of meeting with Robert William Ellistoe, informed that curiosity which prohibition had perhaps originally excited. By the connivance of a shopman, master Matthews stole out, and went to the two shilling gallery of old Drury. From that moment all occupation, save that of acting, became "stale, flat, and unprofitable."

In September, 1793, he stole away to Richmond, where he made his first public appearance on the stage. His father finding his son's mind fixed upon the stage, one day addressed him thus: "Charles, there are your indentures, and there are twenty guineas; I do not approve of the stage, but I will not oppose your wishes. At any time hereafter, should you feel inclined to turn to an honest calling, there are twenty guineas more, if you send for them, and your father's house is open to you." The second twenty guineas Matthews never claimed. The youth found himself, ere he was eighteen, with the wide world before him. His first appearance before a London audience, was on May 15, 1803, and he soon became a decided favourite with the town, and was engaged at Drury-lane. On the 2nd of April, 1818, he announced his intention of giving, at the English opera house, a monodramatic entertainment, called "Matthews at Home." Never, perhaps, did a project of such a nature so directly succeed; night after night, and season after season, the theatre was thronged. After six years entertainment, Mr. Matthews went in 1823 to America, where he was extremely well received by the public. Being libelled in the *Philadelphia Gazette*, he brought an action, and was awarded 5000 crowns damages. In the autumn of 1823, he returned to England, and joined with Yates in the Adelphi theatre. Matthews has been frequently misrepresented, and termed a mere mimic; but in fact, so far from his characters being individual imitations, they were more frequently the characters of his own conception, though alive to nature and consistent in themselves. Several imitators have followed his footsteps, but no one could make even a pretension to rivalry has as yet appeared. For seventeen years he, by his single exertions, delighted all England—"alone he did it." As a companion he was delightful, as a friend sincere, and as a husband and father exemplary. He was, with John Kemble and Braham, received as a guest by George IV.

Mr. Matthews died at Devonport, Devonshire, June 27, 1835. He was twice married, first to Miss C. Strong, of Exeter, a lady of respectable family, and the authoress of a volume of poems and some novels. She retired from the stage in September, 1818. His second wife was Miss Jackson, half sister to Miss Kelly. Mr. Charles Matthews, of the Olympic theatre, was intended by his father for an architect, but took to the stage, and made his first appearance Dec. 7, 1835. He was lately married to Mad. Vestris.

that young Boydell resolved to relinquish the pen for the graver, as an instrument far more worthy of his powers; and more likely to reward, as well as extend, the fame of his labours.—Whether genius be, as a great moralist is of opinion that it is, "a mind with strong powers accidentally directed to some particular object," it appears most certain that this rising genius was induced to acquire the art of engraving from accidentally contemplating the misrepresentation of a misshapen gothic castle.\* It appears almost impossible that an individual, who began the world in so humble circumstances, could have effected so much for the improvement of the arts, and of the national taste. At the age of twenty-one, he walked up to London, and bound himself apprentice to Mr. Tomms, an engraver, at a time when there were no very eminent engravers in England. Notwithstanding that he was now of age, his conduct, during his apprenticeship, is known to have been most assiduous. Having prosecuted his professional studies for six years, and finding himself to be a better artist than his teacher, he bought the last year of his apprenticeship from Mr. Tomms, and became his own master. Returning to his native village, he married an amiable female, the object of his early love, with whom he lived many years in great felicity. Amidst the scenes of his youth, he sketched drawings of several romantic spots, and remarkable buildings, which he subsequently engraved. Returning to the metropolis, he began to work for himself, and became a printseller of some eminence. Boydell saw the necessity of forcing the art of engraving by stimulating men of genius with suitable rewards; and seeing that the taste for prints began rapidly to extend, and having felt how sensibly his own interest suffered, together with the honour of his country, by the sums annually drawn from hence in return for the productions of French artists, began to look out for some English engraver who should equal, perhaps excel, them; and, in William Woollet,† he found one. The extraordinary encouragement which his endeavours experienced from the public was equal to the spirit and patriotism of his undertakings, and soon laid the foundation of an ample fortune. He was elected alderman of Cheap ward in 1782; sheriff in 1785; lord mayor in 1790; and in the same year master of the stationers' company. The English engravings, which were before considered much inferior to

\* "After his oracle, Dr. Johnson," says Mr. Gibbon, "my friend sir Joshua Reynolds denies all original genius any natural propensity of the mind to one art or science rather than another. Without engaging in a metaphysical, or rather a verbal dispute, I know, by experience, that from my early youth I aspired to the character of an historian."

† William Woollet, of humble though reputable origin, was born at Maldstone, in Kent, in August 1755. While an apprentice, he early distinguished himself, and many of his pieces have considerable merit. His chief engravings are the *Niobe*, from Wilson's celebrated picture, the *Death of General Wolfe*, from West's painting; and the *Fishery*. He died May 23, 1785, in his fifth year, and his remains were buried in St. Pancras' church-yard, where an upright grave-stone records his memory; but a more noble monument to his genius has been erected in the cloisters of Westminster abbey, from the classic chisel of Banks.

those of foreign nations, began from that time to be highly prized; and the exportation of them became a valuable article of commerce. Having done so much for the art of engraving, he resolved to direct his efforts to encouraging the art of painting in this country. To this effect he attempted that undertaking, the salutary effects of which have proved incalculably great, and which exhibited to an astonished and delighted age—the Shakspeare gallery. What with his engraving of prints at an unusual expense, and his labouring to establish this first British school of historical painting, he expended something more than three hundred and fifty thousand pounds.

Reflecting on the exertions of alderman Boydell, one cannot but regret that the property which his industry had so richly acquired was subject to its reverses. Owing to the French revolution, and the consequent war, this worthy man experienced such losses as to be under the necessity of procuring an act of parliament for leave to dispose of the paintings, &c. by lottery. The good old man had the satisfaction of living to see the act passed through both houses of parliament, and of being cheered in its progress by the eulogium of several individual members.\* It was rather singular that he should have just lived long enough to see the Shakspeare lottery disposed of; for, on the day he paid the debt of nature, not a ticket remained unsold. To every benevolent institution alderman Boydell was a generous benefactor and an attentive guardian. His remains were interred in great funeral state, in the afternoon of the 19th of December, in the church of St. Olave Jewry.†

Invincible determination seems to have been one of the constitutional qualities of alderman Boydell. Having once formed the resolution to become an engraver, nothing could divert him from pursuing his design. Indefatigability is requisite to successfulness. Boydell has shown, to those who desire to pursue his steps, that industry, patience, and perseverance, united to talents, and joined with conduct,‡ are, humanly speaking, certain to surmount all difficulties or impediments. Josiah Boydell, nephew to the above, was an alderman of the city of London, and also eminent as an engraver.

1804, Jan. *Censura Literaria Restituta*, by sir Egerton Brydges, bart.

\* In a sermon preached before the corporation of London, Jan 18, 1804, by the rev. John Perrin, a very high panegyric is paid to the labours of alderman Boydell.

† In 1779, he presented to the stationers' company Mr. West's celebrated painting of Alfred the Great dividing his last loaf with the stranger. This painting is placed over the master's chair in the court-room of the company. On the right hand of the chimney-place there is a whole-length portrait, inscribed, "Portrait of John Boydell, esq., lord mayor of the city of London; painted by Mr. Graham, and presented by him to the company of stationers, June 8, 1799." In the council-chamber of Guildhall are displayed both his patriotism and his ardour for the advancement of the arts. He presented to the corporation of the city of London, several valuable pictures.

‡ How different was the conduct of his companion, Chateleine, who in the same workshop was etching and engraving at one shilling an hour, frequently would ask for sixpence at the end of the first half hour, and retire to the ale-house to spend it.

1804. *The Galeonist*, by Hydra Polycephalus, esq. extends but to eleven numbers; and the greater part of these are employed in ridiculing and correcting the follies and vices of academical life. In a moral point of view, they deserve much praise. The metrical paraphrase of *Ossian*,\* in No. 8, is beautiful.—*Drake*.

1804. *The Intruder*. A periodical paper published at Aberdeen; and which, notwithstanding the local nature of part of its contents, possesses sufficient merit, both in style and matter, to instruct the general reader.

1804, July. *The Repertory of Arts and Manufactures*, No. 1.

1804, April 23. *The Miniature*, No. I. The essays under this title, the joint production, it is said, of four very young men, the sons of the marquis Wellesley, of Dr. Rennell, of Mr. Knight, and Mr. Canning, form the second periodical paper which issued from the college of Eton. The first edition consists of thirty-four numbers, forming an 8vo. volume, which was dedicated to Dr. Joseph Goodall, head master of Eton college. The second edition, in two vols. 12mo, consists of forty numbers. *The Miniature*, both in literary merit and knowledge of life and manners, is inferior to the *Microcosm*.

1804. *Imperial Review*.

1804. *The Edinburgh Medical and Surgical Journal*, published by Archibald Constable. It was continued till 1826, and was throughout a successful publication.

1805, March 20. *Died*, WILLIAM ROSE, a printer and bookseller at Lincoln, aged fifty-one years. His father had also been a respectable printer and bookseller there.

1805, July 2. *Died*, RICHARD BOND, aged eighty years. He had been a master printer of some eminence at Gloucester, but his business failed, and he was employed as a compositor, in the service of William, Bowyer, jun., in London. In 1792 he was elected to enjoy Mr. Bowyer's liberal bequest; being the fourth person who had been elected.

1805, July 5. *Died*, SAMUEL BROOKES, a deserving journeyman printer, whose modest merit justifies his being particularly noticed. Mild, unassuming, and courteous in his demeanour, he constantly gave satisfaction to his employers; and cheerfully toiled through life, for the maintenance of a numerous young family, two of whom he brought up to his own profession. He possessed an understanding of a superior cast; and had the honour of being frequently consulted by the right hon. George Rose,

\* A translation of the poems of Ossian, the son of Fingal, appeared in 1763. This performance of James Macpherson, excited a long and acrimonious controversy, in which Dr. Hugh Blair early distinguished himself. It produced some severe animadversions from Dr. Johnson, which the author resented, and added to his resentment some menacing expressions, which produced from the doctor that very spirited and intrepid letter which Boswell has published in his *Memoirs*. James Macpherson was born at Rathven, in the county of Inverness, July 1, 1738, and died Feb. 17, 1796. For a defence of lord North's administration, he obtained a place and a seat in the house of commons.

on the completion of his favourite plan for regulating friendly societies. Mr. Brookes died at Pentonville, near London, of a lingering consumption, aged fifty years.

1805, July 17. *Died*, JOHN FARMER, a very worthy and industrious compositor, whose father is noticed at page 759, *ante*. He was born in Jewin-street, London, and acquired the rudiments of his profession in the office of William Bowyer, jun. Fortunately for him, he married a careful hard-working woman, by whose unremitting assiduities his latter years of painful existence were rendered comparatively comfortable. So long as he was able, he diligently followed his regular employment, and closed his labours in the office where they commenced, in the employment of Mr. John Nichols, partner and successor to Mr. Bowyer, who was one of the most intimate companions of his early days, and retained a real regard for him through life. After long confinement by a complication of disorders, he died at Clerkenwell, aged sixty.

1805, Sept. 27. The magistrates determine that the act which requires the name of the printer to be affixed to the first and last pages of a book, does not apply to loose sheets.

1805, Oct. 13. *Died*, JOSEPH MERRILL, bookseller, at Cambridge, aged seventy years. It is recorded in Lysons's *History of Cambridgeshire*, page 153, that "In the year 1805, Mr. Joseph Merrill, of Cambridge, bookseller, bequeathed the sum of £1,667 bank stock to the trustees of Story's alms-houses, for the purpose of paying, by half yearly payments, the sum of £6 each to the eight poor persons of Jakenett's alms-houses; the remainder of the interest to be appropriated to the defraying of incidental expenses." In Great Mary's church-yard, Cambridge, there is the following epitaph on the two Mr. Merrills:

To the memory of  
JOHN MERRILL, Esq. Alderman,  
who served the office of Mayor in the year 1781.  
He departed this life Oct. 17th, 1801, aged 79.  
Also to the memory of  
JOSEPH MERRILL, Esq.  
Brother of the above Merrill,  
who departed this life Oct. 13th, 1805, aged 79.

1805, Dec. 12. *Died*, HENRY SAMSON WOODFALL, proprietor and printer of the *Public Advertiser*. He was the eldest son of Henry Woodfall, noted at page 720, *ante*, and born at the sign of the Rose and Crown, in Little Britain, on the 21st of June, 1739, O. S. Under the fostering attention of his grandfather, he received the rudiments of his education, and, before he had attained his fifth year, had the honour of receiving from Pope half-a-crown, for reading to him, with much fluency, a page of Homer, in the Greek language. He was afterwards sent to a respectable school at Twickenham; and at the age of little more than eleven years, he was removed to St. Paul's. On leaving that school he was taken apprentice by his father; and on attaining the age of nineteen, had committed to his charge the business of editing and printing the *Public Advertiser*, though his name did not appear to the paper till the 17th of November,

1780. From this period to the beginning of November, 1793, he continued uninterruptedly in the exercise of the laborious functions which a daily newspaper necessarily requires, more especially where the joint duties of editor and printer devolve on the same person, as in the case of Mr. Woodfall. During the course of so long a period, when parties ran extremely high, and particularly from the year 1769, when the celebrated Letters of *Junius*\* first appeared under that signature, it is not surprising that a printer should have occasionally got into some difficulties; and this Mr. Woodfall, after he had retired from business, used to speak of not unpleasantly, and apparently with satisfaction; not with exultation, as acting in opposition to the then administration, but as having passed through the perils to which he had been subjected, in publishing the party effusions of the most able writers of the day, without any serious inconvenience to the comforts he then enjoyed. The punishments consequent upon his political transgressions formed, he said, a kind of anti-climax of retribution: that he had been *finned* by the house of lords; *confined* by the house of commons; *finned and confined* by the court of king's bench; and *indicted* at the Old Bailey. In the conduct of the *Public Advertiser*, however, he was strictly impartial; and notwithstanding the great and deserved popularity of *Junius*, yet, by a reference to his papers of that day, it will be seen that as many very able letters on the ministerial side of the question were admitted as on that of the opposition, and without any other preference than priority of receipt, or than the temporary nature of the subject would demand. With regard to the line of conduct he had adopted respecting his paper, in a pecuniary point of view, it was always most scrupulously honourable and correct; and, though frequently offered money to suppress certain articles of intelligence, not pleasant to the particular individual, yet never could he be prevailed upon to forego what he deemed to be his duty to the public, for any consideration of such a kind, however much to his personal advantage. Mr. Woodfall succeeded his father, as a printer, in Paternoster-row, in the year 1769; and, on being offered the common councilship, vacant by the death of his father, declined it, on the ground, as he jokingly said, that it was his duty to record great actions, not to perform them. Mr. Woodfall retired from business on the destruction of his printing-office by fire, in December, 1793, having parted with the *Public Advertiser* in the preceding November. The paper was discontinued about two years after Mr. Woodfall parted with it. Mr. Woodfall was master of the stationers' company in the year 1797, of which he had been a liveryman upwards of 45 years. He resided at Chelsea during the last twelve years of his life, occasionally visiting his old and numerous

\* In 1812, Mr. George Woodfall, an eminent printer, and son of Mr. George Henry Woodfall, published the Letters of *Junius*, with fac-similes of his hand-writing, 3 vols. 8vo.

acquaintance, by whom he was highly respected for his good humour and social qualities. He had lived much in intimacy with Garrick and Colman, Smollett, (Leonidas) Glover, Goldsmith, Hawkesworth, Bonnel Thornton, and other wits of his day, by whose labours the *Public Advertiser* rose to a very high reputation, as the depository of literary humour, criticism, and information. In Mr. Woodfall's time the newspapers were more devoted to the interests of general literature than at present; and it was not unusual with men of the first talents to send their thoughts on subjects of manners, morals, and other domestic and instructive topics, which have been ill exchanged for the violence of party declamation. It remains only to add, that, in many cases, Mr. Woodfall acted as a liberal patron of early genius. He retired from active life, to enjoy the "*otium cum dignitate*" among a select circle of friends, who highly esteemed him for his amiable and inoffensive manners. His tomb, in Chelsea church-yard, is thus inscribed:

Sacred  
to the memory of  
Henry-Samson Woodfall, esq.  
many years an eminent printer in London,  
who departed this life Dec. 12, 1805,  
aged 66;  
a gentleman  
of a liberal mind and education;  
the associate and patron of  
many distinguished literary characters  
of the last age;  
exemplary in the discharge of his duty of  
husband, father, and friend.

1805, Dec. 12. Died, JOHN ALMON, printer, bookseller, and author, of Piccadilly, London. He was the son of John Almon,\* of Liverpool, who married Isabella, daughter of Gilbert and Margaret Thompson,† of Aughton, near Ormskirk, and, in right of his wife, became possessed of estates in North Meoles. The subject of this sketch was born Dec. 17, 1737, and received his education at Warrington. In March, 1751, he was put apprentice to Mr. Robert Williamson, of Liverpool, printer and bookseller. In the month of September, 1758, he left Liverpool, and went to the continent, and visited several places in Holland, and was a short time up the

Mediterranean; from thence he returned to England, and went to London; where being a perfect stranger, he at first sought employment as a journeyman printer. He worked for Mr. Watts, in Wild's-court, Lincoln's Inn-fields, where he had the same frame which had been occupied by Benjamin Franklin. He was but a short time in this situation, for he speedily got acquainted with the booksellers, by whom he was employed in some compilation, and writing pamphlets upon temporary subjects. The extraordinary success which attended the latter, induced Mr. Say, printer of the daily newspaper, called the *Gazetteer*, in the month of January, 1761, to engage him at a fixed salary, as an assistant to him in the conduct and management of his paper. In November, 1762, he published a review of Mr. Pitt's administration, which he dedicated to earl Temple, and which brought him acquainted with that nobleman, and who speedily introduced him to the notice of the duke of Newcastle, duke of Devonshire, marquis of Rockingham, and Mr. Wilks, and he also soon became known to the wits of the day. On the 27th of October, 1760, he married Miss Elizabeth Jackson, of Millbank, Westminster, by whom he had ten children. In 1763, the spirit of party advancing to a considerable height, he thought it a good opportunity to emancipate himself from a subaltern situation, and to create a more permanent property for himself and family. Under the auspices of lord Temple and his friends, he commenced bookseller in Piccadilly; and when the opposition club, called the *Coterie*, was established, in 1764, Mr. Almon was appointed bookseller and stationer to the club. This circumstance brought him a great flow of business; and the popularity of many of his political pamphlets, soon established his reputation as a publisher and author. He had boldness to publish writings which other booksellers would have rejected. The consequence of his upright and uncompromising conduct in avowing his sentiments in opposition to the measures of government, soon pointed him out as a fit object on whom to wreak their vengeance.\* The proceedings against him we have already noticed at the time they took place, at pages 721, 758. In 1775, he published the *New Foundling Hospital for Wit*, commonly a volume every year, which met with approbation. He afterwards revised, corrected, and methodized the whole, in the form it now appears. Naturally attached to a sedentary situation, his greatest fault was giving his confidence to unworthy servants, and permitting them to exercise that power which he ought to have kept in his own hands. Nor had he firmness to withstand their solicitations for

\* He lived for some time in one of his own houses in Liverpool, where all his children were born. In 1748, he went to Ferrol, in Spain, and from thence to Lisbon, and being fond of a maritime life, he served as a volunteer on board admiral Matthews's fleet. In 1744, Mrs. Almon went to Ireland to see her husband's relations, and on her return from Dublin to Liverpool, in the month of October, the vessel was wrecked on the coast of North Wales.

† This Margaret Thompson was daughter and heiress of Gilbert Wright, who owned considerable lands in the parishes of Heslith and Rufford, situated between Ormskirk and Preston, in Lancashire. It is remarkable that Richard Rhodes, stationer, in Fleet-street, in 1794, died a bachelor, possessed of upwards of £20,000, principally in money, which he bequeathed by will to his mother's sister (his mother and all his other relations being dead) and her heirs. At his death, his property was escheated to the crown for want of heirs, *pro defectu sanguinis*. His mother's sister was the wife of the above-mentioned Gilbert Wright. In 1767 John Almon attempted to revive the cause; but considering the expense, and the great and many difficulties in combatting an adverse administration, he was forced to abandon the hopes of becoming possessor of the property of his ancestors.

\* *Memoirs of John Almon, bookseller, of Piccadilly.* London: 1790. This very amusing and interesting account of Almon, most valuable for documents which it contains, shows his firm, able, and uncompromising opposition to the oppressive and tyrannical proceedings of government, and the base sycrervency of the members of parliament and the judges, was not published. Mr. Baimes, in his *History of Lancashire*, makes no mention of the worthy and patriotic individual.

favours. He was therefore duped, betrayed, plundered, and abused by them, according as it suited their occasional views. At length, ill health obliged him to seek for ease and recovery in retirement, which he flattered himself he should there obtain. With this view he quitted his business, in favour of a very worthy and respectable young man (Mr. Debreit) and went into the country. But he had scarcely settled there when he had the misfortune to lose his wife. He left London in June, 1781, and Mrs. Almon died in August following. This stroke affected him deeply, and he mentions it in more than one of his lyrics. In the month of September, 1784, he married the widow of William Parker, printer of the *General Advertiser*, and returned once more to London, and to business, taking up his residence in Fleet-street. He left ease and affluence, to encounter fatigue and rescue indigence. On this occasion, Mr. Macklin, the comedian, sent him the following letter, in answer to his application for an order, for a friend, to see his *Man of the World*.

"Dear Sir,—Your tenure in the *Man of the World* is long and legal, of full twenty years. You were the first man in the land, who encouraged the author in his hopes of success from that production; therefore in justice he sends you his fiat, which on all occasions will be ready for his old friend Almon. I sincerely congratulate you, myself, and the public, upon your return to the world of business. You were made for it. The press wants such spirits. It is the guardian of the times, and should be its monitor. I have not been on the other side of Temple-bar since your resurrection. Laziness, application, real or fancied illness, hindered me from wishing you joy of your new life in person. But my first visit shall be to discharge that duty.—I am, dear Sir, sincerely your friend and humble servant,

"Oct. 28, 1784. CHARLES MACKLIN.\*"

"Tavistock-row, Covent-garden."

In his new situation as printer of the *General Advertiser*, he was again the object of the enmity of the court. He was not long in Fleet-street, before he was chosen into the common council, in which he continued two years. The speculation of the *General Advertiser* injured his fortune; and he became a prisoner of the king's bench for a libel, and was afterwards an outlaw. Extricated at length from his difficulties, he returned again to England, and settled in Hertfordshire, where he died, leaving his widow in great distress. In 1804, Mr. Almon gave to the world the genuine correspondence of Mr. Wilkes, which was his last literary performance. His taste for poetry was far from being contemptible, and some of his lyrics are not without merit; many of his pieces appeared in the *New Foundling Hospital for Wit*, and in the *Asylum for Fugitive Pieces*.

\* Charles Macklin, or Mac Laughlin, was born at Westmouth, and became an eminent comedian and author of the *Man of the World*, and *Love-a-la-Mode*. He died July 11, 1797, and was buried at St. Paul's, Covent garden.

1805, Dec. 12. The printing office of Mr. Gillett, in Salisbury-court, Fleet-street, London, destroyed by fire. It was in this fire, that the *Travels of Anacharsis*, noticed at page 811, were consumed, which gave rise to the following trial in the court of common pleas, Guildhall, London, July 3, 1807.

*Gillett v. Mawman*.—Mr. Serjeant Vaughan opened the plaintiff's case, the substance of which was shortly this: Mr. Gillett had printed for Mr. Mawman, bookseller, a certain number of copies of a work, entitled, the *Travels of Anacharsis*. In 1725 Mr. Gillett's premises were destroyed by fire, and amongst other property the above work. At Christmas, Mr. Gillett sent in his general bill as a printer to Mr. Mawman; who set off all the property which belonged to him, and which had been consumed in the fire, which was £568 from the charge which had been made for the printing of the *Travels of Anacharsis*; and £1,106 10s. for paper belonging to the defendant, which had been given to Mr. Gillett for him to print various other works on for Mr. Mawman, and which also had been consumed.

It was contended, that there was a custom in the trade, as between bookseller and printer, by which the paper of the bookseller, and all other property belonging to him, wasted by the printer was at his own risk; and, therefore, the printer must not only pay for the loss of all the paper he had in hand belonging to the bookseller, but he must also lose the labour of the printing; in a word, that in case of fire, it was the custom of the trade, that the whole loss should be borne by the printer.

For Mr. Gillett, it was contended, that there existed no such custom, and that it was repugnant to common sense to attempt to establish it; Mr. Gillett had his house destroyed by fire, a circumstance which he could not help, consequently he was not responsible for the loss which had been sustained in this case.

Several witnesses said that such a custom did exist, and stated instances of Mr. Rickaby, Mr. H. S. Woodfall, and others, who paid for losses sustained by booksellers.

On the other hand, it appeared from the evidence of several witnesses, that they knew of no such custom as that set up by the booksellers, that the printer was to be at the risk of the loss of paper, &c. belonging to the bookseller in case of fire, when the paper was in the printer's hands.

The chief justice summed up the substantial parts of the evidence, and the jury found a verdict for the plaintiff for the sum of £145. 9s. 10d. being the sum admitted by the defendant to be due to him upon balance of accounts after allowing him his set off. They found no custom in this case.—See *Annual Register*, vol. 49, p. 455.

1805, Jan. 1. *The Mail*, No. 1, printed and published every Tuesday, by Joseph Aston, Manchester, price sixpence,

1805, Feb. *The Antiquary*. These essays were published in the *Monthly Magazine*.

1805. *The Clyde Commercial Advertiser*, published at Glasgow.

1805. *The Prince of Wales's Island Gazette*. This newspaper was published at Pulo Penang, which was the first place in that remote portion of Asia situated beyond the Ganges, reaching from Hindostan to the Pacific ocean; a region less known to Europe than any part of the world, except the interior of Africa. This paper continued in existence twenty-two years, when it fell for want of support. An *Essay on the Malay language*, by J. Shaw, bears for imprint, *Prince of Wales's Island, 1807.\**

1805. *The Sauterier*. These essays, the production of Mr. Hewson Clarke,† appeared in the *Time Mercury*, at Newcastle, during the years 1804 and 1805; and having reached forty-four numbers, was printed in a 12mo. form early in 1806. A second edition, two vols. 12mo. was published in the same year.

1805. *Melancholy Hours*. These essays, by Henry Kirke White,‡ appeared in the *Monthly Mirror*, during this year. They are twelve in number, and exhibit much feeling, taste, and judgment, and are written with correctness and purity of style.

1806, Jan. 25. Died, JOSEPH WHITFIELD, bookseller, at the Bridge end, Newcastle-upon-Tyne. His residence was in the Close.

1806. Printing established at Caraccas,§ a large city of Terra Firma in South America. The following notice of the typography of this city we owe to the inquiries of the baron Humboldt:||

\* It came into possession of the British in the year 1786, and through care has become a flourishing colony, and a general rendezvous of all persons trading to those parts of the east. Georgetown is the chief town on the island.

† Hewson Clarke was born at Maryport, in Cumberland, March 16, 1786, and admitted of Emmanuel college, Cambridge, in 1809. He has published the *Art of Pleasing*, printed at Cambridge, 8vo. 1807. *History of the Campaigns in Russia*, 8vo. 1813. *History of Wars, arising out of the French Revolution*; *Continuation of Hume*; and a *Supplement to Johnson's Lives of the Poets*. He has also been the editor of the *Scourge*, and several periodical journals.

‡ Henry Kirke White, whose splendid talents, extraordinary virtues, and premature death at the age of twenty-one, must be considered both by the literary and moral world, by the disciples of genius and of piety, as a heavy and irreparable loss. He was born at Nottingham, March 31, 1785, where his father was a butcher, and intended to bring up his son to the same trade. All the school education he received amounted to the acquirements of reading and writing his mother tongue, with some instruction in arithmetic and French, but he thirsted after more ample supplies; and already an ardent admirer of the beauties of nature, he revolted both from the occupation of a butcher and a hosier, to which latter business he was placed, when fourteen years of age. At the age of fifteen he was placed in the office of Messrs. Coldham and Enfield, attorneys, Nottingham; he died six years afterwards; yet the acquirements he gained, and the works he achieved in that short space, were such as have not frequently been equalled. In October, 1804, he quitted the law, and was entered of St. John's college, Cambridge, where he died, Oct. 19, 1806, universally regretted by all who knew him. *His Life and Remains*, published by Mr. Southey, form one of the most affecting and interesting productions which has, for many years, been given to the public.

§ On the 30th of March, 1812, the then flourishing city of Caraccas experienced one of the most awful visitations recorded in history, by an earthquake, which in less than the space of a single minute levelled nearly the entire city with the ground, and buried from nine to ten thousand of the inhabitants beneath the fallen ruins! It was founded by the Spaniards in the year 1567.

|| Baron Wilhelm Humboldt, a celebrated traveller, died April 7, 1835, aged sixty-seven years.

"When we remember, that in the United States of North America newspapers are published in small towns not exceeding three thousand inhabitants, we may be surprised to learn, that Caraccas, with a population of forty or fifty thousand souls, possessed no printing office before 1806; for we cannot give this name to the presses which served only from year to year to print a few pages of an almanack, or the pastoral letter of a bishop. A Frenchman, M. Delpeche, allied to one of the most respectable families in the country, has the merit of having first established a printing-office at Caraccas. It appears sufficiently extraordinary in modern times, to see an establishment of this kind, affording the greatest means of communication between men, follow, and not precede, a political revolution."—*Personal Narrative of Travels*, vol. iii. book 4, chap. 13.

1806. JAMES PHILIP PALM, a German bookseller, memorable as one of the victims of French ambition. He was a native of Wurtemberg, and was established in business at Nuremberg, in 1806, when that imperial city, possessing laws of its own, was suddenly occupied by the French army. Being accused of having distributed, in the spring of 1806, a pamphlet against Bonaparte, ascribed to M. Gentz, and entitled *Germany in its profound abasement*, from which the following lines is an extract:

#### BONAPARTE'S ECHO.

Je sais seul en ce lieu, personne ne m'écoute,	M'écoute.
Morbleu ! qui me répond ? Qui est avec moi ?	Moi.
Sais-tu si Londres résistera ?	Résistera.
Si Vienne et d'autres cours m'opposeraient toujours ?	Toujours.
Ah, ciel ! que dois-je attendre après tant de malheurs ?	Malheurs.
Après tant de heuts faits, que dois-je entreprendre ?	Rendre.
Rendre ! ce que j'ai acquis par des exploits inouïs ?	Oui.
Et quel serait le fin de tant des soins et des peines ?	Peines.
Enfin, que deviendrait de mon peuple malheureux ?	Heureux.
Que serais-je alors—moi, qui me crois immortel ?	Mortel.
L'univers n'est il pas rempli de mon nom ?	Non.
Autrefois mon nom seul inspirait la terreur	Erreur.
Triste écho ! laisse-moi, je m'ennuie, je me meurs	Meurs.

Palm was arrested by virtue of an order sent from Paris, and conducted to Braunau, where, three days after his arrival, he was arraigned before a military commission, when he alleged that he received by post the offensive pamphlet, and that he knew nothing of the author. He was, however, by this mock tribunal, condemned to be shot, and the sentence was carried into execution on the following day, notwithstanding the intercession of the inhabitants of Braunau. Palm was regarded throughout all Germany as a martyr; and subscriptions were opened for the benefit of his widow and five children, not only in his native country, but in London and at St. Petersburg, where the emperor and empress dowager became contributors.

1806, *March 25. Died*, MILES HINGESTON, bookseller, near Temple-bar, in the Strand, London. After having been several years in business, he retired to a comfortable situation in the ordnance office, and died much respected, at his house in the tower.

1806. *An extraordinary Case in Chancery fairly stated*. 8vo. Mrs. Mary Crowe, the writer of this pamphlet, her husband, and Mr. Delaboy, the printer, at Deptford, were imprisoned by order of the lord chancellor, for a libel on the court, contained in the above pamphlet.

1806, *April 7. Died*, THOMAS JONES, a worthy and respectable printer in Fetter-lane, London, aged seventy-five.

1806, *June 30. Died*, PETER WHYNN, an eminent bookseller in Paternoster-row, London. He had just purchased the elegant villa of Mr. Wilkinson, at Canonbury; but did not live to take possession. Mr. Whyne, was a man of strong intellect; and, with rather a rough exterior, possessed the milk of human kindness.—From habits of industry, imbibed in early life, and the aid of inflexible integrity, he had acquired a handsome competence, with the esteem of an extensive circle of friends. He died at Eltham, in Kent, leaving a widow, with two sons and three daughters.

1806, *Aug. 25. Died*, JAMES ROBSON, a very eminent bookseller, in Bond-street, London.—He was born in the year 1733, at Sebringham, in Cumberland, where his family had been settled from ancient times in the respectable condition of yeomen. He was educated at a neighbouring grammar school; and at the age of sixteen went to London, under the protection of his relation Mr. Brindley, then an eminent bookseller in New Bond-street. Mr. Robson succeeded him in business in 1759, which he carried on for more than forty years, with integrity, fame, and profit. He entered the career of active life with all the advantages of a solid and pious education, habits of frugality without meanness, a persevering industry, and manners peculiarly liberal and obliging, free alike from the pernicious and offensive vanity of assuming the habits of the higher ranks, or the insolent affectation of contemning them. Soon after he settled in business he made a considerable addition to his domestic comforts and his property, by marrying the only daughter of Mr. Perrot, an eminent builder, near Grosvenor-square, by whom he had a large family.\* About the year 1707, the dean and chapter of Westminster appointed Mr. Robson high bailiff of the city and liberty; but he resigned it some time before his death. He was also in the commission of the peace for the county of Middlesex, in which he had considerable property. In 1788, accompanied by his friend Mr. James Edwards,

bookseller, of Pall Mall, Mr. Robson undertook a journey to Venice, on purpose to examine the far-famed Pinelli library,\* the catalogue of which made six 8vo. volumes. This superb collection, by a bold and successful speculation, he secured, by offering a price for it which the executors and trustees of Maffei Pinelli, who died in Feb. 1785, found it their interest to accept; and during the severe winter of 1788-9, the books were, not without much hazard from the sea, brought safely to London; and sold by auction, at the great room in Conduit-street, in 1789 and 1790. The produce of the auction was £9,356. A sale catalogue was published in London in 1789, entitled *Bibliotheca Pinelliana*; a catalogue of the magnificent library of Maffei Pinelli, late of Venice, &c. in one thick volume 8vo. Mr. Robson's chief amusement, when relaxing from the tumult of the world, was that which delighted Isaac Walton; and the records of Hampton and Sunbury proclaim his skill and patience as an angler; where, with a few select companions, he occasionally whiled away the early dawn and evening shade in harmless sport. His conversation was mild, cheerful, intelligent, communicative, but never obtrusive; and as he had imbibed in his early education a familiar acquaintance with the Latin poets, was frequently illustrated by apt quotations.—Though very far removed from the character of a *bon vivant*, he was a member of a literary club of booksellers, held at the Shakspeare tavern; a friendly band, where congenial spirits, warmed, not heated, with the genuine juice of the grape, unreservedly poured out their whole souls in attic wit and repartee. After an association of about thirty-five years with this literary society, Mr. Robson was nearly the last survivor.

1806, *Aug. Died*, — FARMER, well known as a retailer of newspapers. He had acquired by his extraordinary industry, parsimony, and methods peculiar to himself, a sum amounting to £9000. His manners and external appearance indicated extreme poverty; his plaintive stories very often excited pity, and induced many to act with tenderness towards him. The following circumstance was related as the cause of Mr. Farmer's death. An old man, a news dealer, being much afflicted with disorders incident to advanced age, wished to dispose of his business; the sum demanded for it was £50. Mr. Farmer seemed inclined to purchase, but could not think of advancing so large a sum as £50 at one time, but, supposing the old man could not live long, agreed to allow him 27s. per week during his natural life. These terms were agreed to; the old man retired into the country, recovered his

\* His eldest son James, whom he intended to have succeeded him in business, unhappily lost his life, at the age of twenty years, by a fall from his horse, at Sebringham.—See *Gentleman's Magazine*, vol. iv. p. 439. His second son, George, was educated at Queen's college, Oxford, and obtained the vicarage of Chirke, and a prebend in the cathedral of St. Asaph. Mr. Robson had also five daughters, and was proprietor of Trinity chapel, Conduit-street.

\* The Pinelli collection of books long held a distinguished rank among the libraries of Europe, it was upwards of two hundred years forming by the family, and comprehended an unparalleled collection of Greek, Roman, and Italian authors, from the origin of printing, with many of the earliest editions printed on vellum, and finely illuminated; a considerable number of curious Greek and Latin manuscripts, (biblical, legal, and classical) from the eleventh to the sixteenth century, and the completest specimen hitherto known to exist, of an instrument written upon the ancient Egyptian papyrus, A.D. 572.

health, returned to London, exhibited his person before Mr. Farmer, which operated upon him so powerfully, that the whole of his thoughts were engrossed with it; he gradually declined in health, his spirits became depressed, "sharp misery seemed to have worn him to the bone," and, at last, distressed to part with the "darling object of his soul," in a flood of tears he retired to his garret, and in a few hours expired.

1806, *Sept.* Died, JOHN BELL, bookseller, at Edinburgh, who for the period of half a century, ranked among the first of his profession, and during several years of that period was the father of the trade. He was one of the original promoters of the society of booksellers of Edinburgh and Leith; and the first who filled the situation of *præsepo* thereof.

1806, *Sept.* The first *Almanack* printed at Constantinople, in Turkey.

1806, *Nov.* — BRAD, a printer, stabbed in the arm by two Italians, in Long Acre, London, of which he died. They were tried for the offence, but acquitted.

1806. *Hours of Leisure.* These essays were published in the *European Magazine*, and entitled *Essays after the manner of Goldsmith*. They were reprinted, with numerous additions, under the present title, in this year. Many of these papers were written by Mr. George Brewer, an attorney in London, and abound in the delineation of character and the description of incident, and the general tendency are useful.

1806. *The Antijacobin Review*, edited by John Gifford, esq. one of the magistrates at the police office, Worship-street, Shoreditch, London. Mr. Gifford was the author of a great number of works. He died at Bromley, March 6, 1818.

1806. *The British Indian Monitor*, by John Borthwick Gilchrist, LL.D. late of the Bengal medical establishment, and Hindustanee professor in the college of Fort William, and afterwards a banker in Edinburgh. He was the author of a number of works relating to the Indian languages. The *Indian Monitor* makes two vols. 8vo.

1807, *Jan. 6.* Died, CHRISTOPHER BROWN, who was well known among the booksellers of London for the last half century, having passed among them almost the whole of a long and active life. He was apprenticed in the house of Mr. Richard Baldwin, in Paternoster-row. He afterwards entered into the service of Mr. Longman, with whom he remained many years, as a faithful and active servant. See page 815, *ante*. No man ever left behind him a fairer or better earned reputation for scrupulous and inflexible integrity, for active zeal, constancy, and perseverance in discharging the several duties of the situation which had been confided to him.

1807, *Jan.* Died, THOMAS ALEXANDER, schoolmaster, at Tetbury, in Gloucestershire, aged sixty-eight years, during which period he never slept a night from his own house. He bequeathed his property to various charities, among which he ordered a *Bible* to be given to every couple that might be married in Tetbury church.

1807. *A Vindication of the Universities to a copy of every new publication.* By Edward Christian, esq., chief justice of the isle of Elv. Cambridge: printed at the university press. By R. Watts. 8vo. pp. 36.

A vindication of a right, which it would be to the credit of the national character speedily to abolish. The tax in support of these institutions should at least be general, and not imposed on a class, whose remuneration for their labour is, for the most part, very precarious. On works of an expensive nature in their production, such as books on natural history, antiquities, &c., and of which the number printed is very limited, the tax is most oppressive.—*Martin's Catalogue of private printed books*, page 107.

1807, *Jan. 19.* Died, JOHN STIRLING, printer and bookseller, Edinburgh.

1807. A printing-office established at Karass, a Scotch missionary settlement, in a village situated near the confluence of the rivers Cuma and Podcuma, in the Russian province of Caucasus between the Black sea and the Caspian, where in the course of this year five hundred copies of a folio edition of *St. Matthew's Gospel* were worked off on *blue paper*: and the entire *New Testament* in Turkish was printed here, by the Edinburgh missionary society, in 1813.

1807. For printing articles of impeachment, minutes of evidence, and copies of the trial of lord viscount Melville, £2,046 6s. paid out of the public treasury.

1807, *Feb.* Died, JAMES SIMMONS, printer and bookseller at Canterbury, whose life is a striking instance of what may be effected by industry and perseverance. "Mankind," observes the writer of an account of the subject of this memoir, "are but too fond of contemplating heroes; and launching their admiration on exploits, which they can never hope either to imitate or excel." Knowledge, estimated with reference to usefulness, is only to be gained, nevertheless, by an attentive investigation of the history of the middle classes of society, whose biography alone abounds with practical instruction. James Simmons, who afterwards sat in parliament for his native place, was born in an obscure part of the city of Canterbury, immediately in the vicinity of its cathedral, about the year 1740. His father was a barber, whose circumstances were confessedly poor, although himself was of honest repute; and his son was educated at the King's School, in Canterbury, an excellent institution, which was founded by Henry VIII. Being sent to London, while a boy, James became an apprentice to Mr. Thomas Greenhill, an eminent stationer, residing nearly opposite the Mansion-house, but whose residence has since been converted into a banking-house; thus, adopting the witticism of this gentleman's biographer, "still keeping up, although not its ancient firm, at least its ancient employment, stationers and bankers being both dealers in paper." Mr. Simmons, at length, entered into business on his own account, when, becoming a liveryman, he was shortly after put in nomination for the office

of sheriff. This occurred twice, during 1802 and 1806; but it was represented that the state of his health would incapacitate him for sustaining the arduous duties which the shrievalty necessarily imposes upon those who undertake it. Notwithstanding, therefore, the advantages he might have derived by continuing to reside in the capital, Mr. Simmons, still panting for his native air, repaired, about the year 1768, to Canterbury, where he established a printing-office, with the management of which he had previously made himself acquainted. He was at this period the only printer in Kent. The foundation both of his celebrity and property, property being the consequence of real celebrity, was here laid by him in the publication of the newspaper entitled the *Kentish Gazette*. Before his time, the *Kentish Post*, or *Canterbury News*, was the only paper devoted to that extensive opulent county: it consisted of just four foolscap folio pages, containing two or three advertisements; and was adorned with a woodcut, that occupied full one-third of the first leaf. He could not but improve on such a plan. Introducing a new type, and a new taste, his undertaking at once succeeded. Mr. Simmons soon became the first stationer, bookseller, &c. in the city that gave him birth. Mr. Simmons was in politics a whig; and was, during the short period the Rockingham administration were in power, appointed distributor of stamps for the county of Kent; the emoluments of which, estimated as considerable, are known to have essentially contributed to his actual wealth. Declining, from prudential views, the contests of party, and having already filled the highest civic offices of his native place, Mr. Simmons turned his attention to objects of general and practical utility. The first public act of this kind, in which this praiseworthy zeal became manifest, was the tender of his services to regulate the improvements agreed to be introduced into Canterbury; and such were the ability and attention evinced by him, especially as to the paving of the city, that he received the thanks of the corporation, accompanied with a piece of plate, of the value of £50. He was engaged in another great work. In 1794, Messrs. Simmons and Royle gave a premium of £2450 for a thirty years' lease of Abbot's and King's mill; and they expended on the building, together with its improvements, to the amount of £8000 more. Mr. Smeaton,\* however, the celebrated engineer, undertook the erection of a new mill, with such a power as should turn six, and even eight pair of shears, for the regular supply of the Canterbury market

with flour. Instead of converting this useful design, (which was finished by Mr. Abbot, of Canterbury, in a masterly style,) into a monopoly for the oppression of the inhabitants, and the avaricious accumulation of wealth, Mr. Simmons was enabled to realize projects infinitely more gratifying to his feelings. Its returns have been computed at £40,000 per annum; and he was also enabled to keep down the price of meal, and the assize of bread. Determined to effect both these ends, he cheerfully assisted the magistrates in adjusting the value of the quartern loaf; and, in 1800, issued an advertisement, by which he publicly invited the industrious poor to come in person for a supply of their necessities. Sensible of the various benefits extended to their city by this spirited citizen, in the accomplishment of which he had expended about two thousand guineas,\* his townsmen, at the general election in 1806, exhibited their sense of his public conduct, by electing him one of their representatives in parliament. But Mr. Simmons did not long enjoy this trust. He died as he had lived, however, in the service of those by whom it was conferred, during the February of 1807, whilst attending his duty in the house of commons.

1807, March 17. JOHN PRIDGEN, who had for nearly half a century carried on the business of a bookseller in Fleet-street, London; was one of the many instances that integrity and perseverance introduce their attendant votaries to ease, affluence, and satisfaction. To animate others to appreciate the value of unsullied honour, or bear up against the torrent of stern oppression, a few particulars respecting the life of this worthy man cannot be omitted. He was born July 20, 1728, at Old-Martin-hall, in the parishes of Ellesmere and Whittington, in Shropshire, of rather wealthy parents; but his father dying when he was only twelve years of age, and his mother marrying again, he soon experienced the withholden protection of his mother, and the most unmerciful and cruel treatment of his step-father. Indeed, the severity he endured was so great, that he was frequently laid up; and often rescued by his neighbours from the tyrannic grasp of his step-father. But, alas! nothing could

\* Amongst his many excellent undertakings of this kind, must be specified the improvement of some acres of land long since devoted to the ruins of the Dunghill, Dungeon, or Dane-John; names which sufficiently indicate the epoch at which, and the nation by whom, it was erected. This ancient fortress then stood on a tract of waste ground; and remained an uneven and rugged piece of pasture, until 1790, when Mr. Simmons commenced his salutary reform, not for his private advantage, but purely for the recreation and advantage of the public. On the side of the mound is a circular walk, having seats, which command views of the city and its environs; and upon the top stands a stone pillar, on one of the four marble tablets of which is the following

## INSCRIPTION.

"This field and hill were improved, and these terraces, walks, and plantations, made in the year 1790, for the use of the public, at the sole expense of JAMES SIMMONS, Esq. of this City, alderman and baker. To perpetuate the memory of which generous transaction, and as a mark of gratitude for his other Public Services, this pillar was erected by Voluntary Subscription, in the year 1803."

\* John Smeaton was born at Austerhorpe, Yorkshire, May 28, 1724. Though intended for the practice of the law by his father, himself an attorney, he was, pursuant to his own request, placed under a mathematical instrument maker. He was afterwards admitted a member of the Royal Society, where, in 1759, he obtained the gold medal for his paper on *The Natural Powers of Wind and Water to turn Mills and other Machines depending on a Circular Motion*. On the 2nd of April, 1757, the Eddystone Lighthouse was founded of stone, by Smeaton, and completed on the 24th of August, 1759. He died at Austerhorpe, Oct. 28, 1792.

subdue the inexorable temper of this tyrant ; and the oppressed youth determined to leave his home, and try his fortune in the metropolis. This happened soon after the breaking out of the French war in 1744, when, having proceeded on his journey as far as Worcester, and finding there a hot press for soldiers, he did not relish the probability of a military attachment, but adopted what he conceived to be the least of two evils, and returned back again. For this self-defensive offence he was regularly and systematically thrashed every Tuesday and Saturday, the days of his exit and return, for nearly three years, when, unable any longer to endure his unmerited sufferings, he once more bid an eternal adieu to his unpropitious habitation, and arrived in London, March 25, 1748, where he soon found protectors in Mr. John Nourse, in the Strand, and Mr. Richard Manby, Ludgate-hill ; the latter of whom he succeeded in business. The libraries of many eminent characters passed through his hands ; and, being content with small profits, he soon found himself supported by a numerous and respectable set of friends, not one of whom ever quitted him. To do good, was his delight ; to communicate happiness to all he could, was his unceasing aim. About 1782 he became totally blind ; but was relieved from that malady by the judicious hand of baron de Wenzel, and enjoyed his eye-sight to the last. He was naturally of a weak habit of body ; but his extreme temperance and uninterrupted complacency of mind, insured to him an almost constant flow of spirits. The following instance of his charity will prove the goodness of his heart : In the year 1800, on the failure of his less fortunate neighbour, he invited him to his house, and relinquished business, to give him the opportunity of keeping on the spot : his kind intentions met with success ; and he frequently expressed the pleasure he felt at seeing his friend prosper under his roof.\* He married, March 27, 1757, Anne daughter of Mr. Humphrey Gregory, of Twemloves, near Whitchurch, Shropshire, by whom he had fourteen children, nine of which died young. His wife died April 1, 1801. John, the eldest son, was educated at Oxford, and became vicar of Caddington, Bedfordshire ; a minor canon of St. Paul's, London, and St. Peter's, Westminster ; and one of the priests of his majesty's chapels-royal. The other son, Humphrey Gregory, was for a short time a bookseller, but retired from business. It may truly be said of Mr. John Pridden, that he was a most amiable and indulgent parent, a sincere friend, and, in the strictest sense, a truly honest man.

1807, April 9. WILLIAM KIRK, a well-known pressman, drowned whilst in a state of intoxication, in the river Nen, near Northampton. It was supposed that he was pushed in the river by one of two prostitutes, with whom he was walking.

\* Mr. Joseph Brasbridge, author of an autobiography entitled the *Trials of Experience*, was the individual thus favoured by Mr. Pridden, at that time a silversmith. He died Feb. 28, 1839, in his 90th year, at Highgate, where he had retired upon an independency.

1807, April. Died, MARK SUPPLE, many years known as a parliamentary reporter. In the vigour of his life his merit in that department was eminently conspicuous ; " he was a fellow of infinite jest," and often kept the gallery " in a roar."\*

1807, April 13. Died, ROBERT HERON, a writer of considerable erudition, and very extensive general information. For about eight years of his life he was much connected with the periodicals of London. In 1799 he conducted the political department of the *Historical Magazine*. At a subsequent period he was editor of the *Agricultural Magazine*. He was also a contributor to the old *Universal Magazine*, *Monthly Magazine*, *Antijacobin Review*, *Oxford Review*, and several other periodical publications. Mr. Heron possessed considerable ability as a parliamentary reporter ; and in that capacity was successively engaged by the proprietors of the *Oracle*, the *Porcupine*, and the *Morning Post*. About 1802-3, he obtained the editorship, with a share, of the *British Press and Globe*, two papers then recently established by the booksellers. He held this concern only a fortnight. He next, for several months, conducted *Lloyd's Evening Post*. Through the influence of an under secretary of state, he received a respectable salary as the nominal editor of a French newspaper published in London. About the same time (1805) he undertook the management of a weekly newspaper, called the *British Neptune*. While he

\* Peter Finnerly used to tell the following story of Mark Supple. Mark was big-boned, loud-voiced, and had as much wit and fun as an Irish porter could carry—often more than he could carry himself, or knew what to do with. He took his wine frequently at Bellamy's, and then went up into the gallery, and reported like a gentleman and a man of genius. The members hardly knew their own speeches again, but they admired his free and bold manner of dressing them up. None of them ever went to the printing-office of the *Morning Chronicle*, to complain that the tall Irishman had given a lame sneaking version of their sentiments : they pocketed the affront of their metamorphosis, and *faltered* speeches they had never made. His way was the hyperbole ; a strong view of orientalism, with a dash of the *hogtrotter*. His manner seemed to please, and he presumed upon it. One evening, as he sat at his post in the gallery, waiting the issues of things, and a hint to hang his own tropes and figures upon, a dead silence happened to prevail in the house. It was when Mr. Addington was speaking. The bold leader of the *press-gang* was never much on serious business bent, and at this time he was particularly full of meat and wine. Delighted, therefore, with the pause, but thinking that something might as well be going forward, he called out lustily, " A song from Mr. Speaker." Imagine Addington's long, prim, upright figure, his consternation, and utter want of preparation for, or of a clue to repel such an interruption of the rules and orders of parliament. The house was in a roar : Pitt, it is said, could hardly keep his seat for laughing. When the bustle and confusion were abated, the sergeant at arms went into the gallery to take the audacious culprit into custody, and indignantly desired to know who it was, but nobody would tell. Mark sat like a tower on the hindmost bench of the gallery, imperturbably in his own gravity, and safe in the faith of the brotherhood of reporters, who alone were in the secret. At length, as the mace-bearer was making fruitless enquiries, and getting impatient, Supple pointed to a fat quaker, who sat in the middle of the crowd, and nodded assent that he was the man. The quaker was, to his great surprise, taken into immediate custody ; but, after a short altercation and some further explanation, he was released, and the hero of our story put in his place for an hour or two, but let off on an assurance of his contrition, and of showing less wit and more discretion for the future.

held the latter engagement, he very imprudently criticised, with great severity, the *performance* of a play which was *not acted*. The performers justly felt themselves aggrieved, and three or four actions were commenced, but were afterwards compromised. In 1806, having resigned both the *French paper* and the *British Neptune*, Mr. Heron embarked in a literary speculation of his own, the *Fame* newspaper, which failed, and involved him in some serious pecuniary difficulties—difficulties which, no doubt, hastened his early dissolution. In 1806, he addressed a letter to Mr. Wilberforce, on the *Justice and Expediency of the Slave Trade*.

Robert Heron, whose attainments were of no ordinary description, was born at New Galloway, in the south-west of Scotland, Nov. 6, 1764. His father, John Heron, was a weaver, generally respected for his persevering industry and exemplary piety. At a very early age he became remarkable for the love he showed to learning, which induced his parents to give him the benefit of a liberal education as far as their means would allow. From his own savings out of a very limited income, and a small assistance from his parents, he was enabled to enter the university of Edinburgh at the end of the year 1780. His hopes of preferment at that time being centered in the church, he first applied himself to the course of study which that profession requires. Being well grounded in a knowledge of the French language, he found constant employment from booksellers in translating foreign works, and the money which he continued to receive was sufficient to maintain him in a respectable manner, if managed with prudence and discretion; but his unfortunate peculiarity of temper, and extravagant desire of supporting a style of living which nothing but a liberal and certain income would admit of, frequently reduced him to distress, and finally to the jail. While in confinement he engaged with Messrs. Morrison's of Perth, to write *A History of Scotland*, for which they were to pay him at the rate of three guineas a sheet, his creditors, at the same time, agreeing to release him for fifteen shillings in the pound, to be secured on two-thirds of the copyright. Before this arrangement was finally concluded, melancholy to relate, nearly the whole of the first volume of the *History of Scotland* was written in jail. It appeared in 1793, and one volume of the work was published every year successively, until the whole six were completed. In 1799, finding his views not likely to succeed any longer in Scotland, he was induced to go to London, and where, for the first few years of his residence, it appears he found good employment, and his application to study being very great, his profits and prospects were alike cheering, his income from his literary vocations being above £300 a-year. There was scarcely a publication then in London of any note but contained some of his fugitive writings. Unfortunately, his former bad habits returned, and while money continued to flow in, he indulged in the wildest extravagance—his pen was laid aside—and until

warned of his fate by the appearance of his last shilling, he seemed altogether devoid of reflection. Then he would betake himself to his work, as an enthusiast in every thing, confining himself for weeks to his chamber, dressed only in his shirt and morning gown, and commonly with a green veil over his eyes, which were weak, and inflamed by such fits of ill-regulated study. His friends and associates deserted him—some were offended at his total want of steadiness, others worn out by constant importunities, and not a few disgusted at the vanity and envy he displayed on too many occasions; added to all this, his employers found they could place no dependence on his promises, as he would only resume his pen when urged to it by stern necessity. Deep in debt, and harrassed by his creditors, who were all exasperated at his want of faith, he was at last consigned to the jail of Newgate, where he dragged on a very miserable existence for many months, and from whence he wrote a pathetic appeal to the literary fund, which is preserved in D'Israeli's *Calamities of Authors*. His last publication was a small work called the *Comforts of Life*, of which the first edition was sold in one week, and the second had a rapid sale.

The life of this accomplished writer was now fast drawing to a close. With a mind bowed down by want and despair, and a body emaciated from increasing disease, he was incapable of further exertion; and being removed to the fever institution, Gray's Inn-lane, as his last and only hope, in one week after his entrance there he breathed his last, without a friend to console or comfort him. Thus perished Robert Heron in the prime of life, whose memoir affords a striking instance of the impossibility of shielding genius from poverty and disgrace when blinded by passion or perverted by eccentricity. His appearance was at most times impressive and dignified; his figure above the middle size, stately and erect, and his countenance had a benevolent expression, though pale and care-worn from study and confinement. It is difficult to estimate the true depth of his genius by his miscellaneous publications in prose; his style was of a mixed description,—sometimes pompous and declamatory, at other times chaste and elegant. But it must be considered he was seldom allowed the choice of a subject, being all his life under the dictates of a publisher. With all his faults Robert Heron had still many redeeming virtues, and, above all, a strong sense of the respect which is due to religion and morality; but he committed the fatal error of being more a lover than a practiser of virtue.

1807, May. A printing-office established at Montevideo,\* in the province of Buenos Ayres, South America, with the following ceremonies, as related by Isaiah Thomas. "In May, 1807,

\* Montevideo was taken by the English, Feb. 3, 1807. Buenos Ayres was taken by Sir Home Popham, but was obliged to evacuate it; and a second attempt under General Whitelock, July 5, 1807, was most disgracefully conducted, and defeated. Sir Home Popham, the admiral, was reprimanded by a court-martial, and General White-lock, the commander in chief, was cashiered.

a printing-house was opened with much ceremony at Montevideo, on the river La Plata, in South America, when in the possession of the British fleet and army. The first printing performed at the press in this place was the *Prospectus of a Gazette*. The commander in chief, the admiral, and other principal officers of the province were present. The first sheet from this press was presented to the governor, the second to the admiral, and so according to their rank. William Scollay, a young gentleman from Boston, educated at Cambridge, Massachusetts, was appointed conductor of the press, and the editor of the *Gazette*, for which he received a very liberal salary.<sup>19</sup>

1807, June 4. *Died*, EDWARD DILLY, one of the most eminent and generous booksellers of his time. He was born May 22, 1739, at Southill, in Bedfordshire, where his family were of some consequence in the higher ranks of old English yeomen; and for which county his eldest brother, John Dilly, esq. who cultivated the paternal inheritance at Southill, served the office of high sheriff in 1783, and died March 18, 1806, aged seventy-five. Edward Dilly, the next brother, has already been noticed at page 744, *ante*.—So extensive were the connexions of Edward, as a bookseller, that he was happy to avail himself of the assistance of his brother Charles; who, after making a short tour in America, became a partner in Edward's trade; which, by his regular assiduity, was considerably extended. With the fortune of Edward, Charles inherited also his good qualities. Though neither of them had much pretensions to literature, they were zealous in cultivating the friendship of the literati. Their purchases of copyright were in such a princely style as had before their time been wholly unknown. To young and inexperienced authors, Mr. Charles Dilly, in particular, was a kind and faithful adviser; and to those who had occasion for it, his purse was at all times easy of access. In 1782, on a vacancy of an alderman for the ward of Cheap, Mr. Dilly was invited to accept the scarlet gown; but declined that honourable office in favour of Mr. Boydell. That of sheriff he escaped on the plea of non-conformity. The hospitable table, which Edward was famed for spreading, was continued by Charles—not with a prodigal, but with an unsparing hand. His parties were not large, but they were frequent; and in general, so judiciously grouped, as to create a pleasantness of intercourse not often to be found in mixed companies. Here Johnson and Wilkes forgot the animosities of Whig and Tory.\* Here high-church divines and pillars of the meeting-house relinquished their polemicks, and enjoyed uninterrupted con-

vivality. Here Cumberland, whilst he contributed his full proportion to the general hilarity of conversation, stored his own mind with some of those valuable observations which have both entertained and instructed an admiring public. Here Knox planned and matured not a few of his valuable Essays. Here Isaac Reed\* (than whom no visitor was more cordially welcomed by Charles Dilly) was sure to delight, whether in the mood to be a patient hearer, with now and then a short oracular response; or occasionally displaying those rich stores of erudition which he possessed. Here Crakelt refined on the labours of an Entick. Here many a writer of less eminence, after comfortably enjoying a mental and bodily repast, engaged in his task with double pleasure, from the satisfaction he experienced in the liberality of his employer. If ever the strict rule of decorum was by chance infringed on, it was on those occasional days when, unavoidable business preventing the master of the house from sitting so long with his guests as he could wish, the pleasure of entertaining them was deputed to his kind-hearted and pleasant friend James Boswell, who sometimes, in that capacity, has tried the strength of the *oldest bin*. After a life of uninterrupted labour for more than forty years, Mr. Dilly, almost on a sudden, relinquished business; which he disposed of, on terms mutually beneficial, to Mr. Joseph Mawman, at that time high in the same profession in the city of York. But the transition was too abrupt for Mr. Dilly. He found himself a solitary being, without the resource of an affectionate family to cheer his vacant hours; and, in the midst of affluence, he soon began to regret the loss of the counting-house and very pleasant rooms

to govern any man. The prejudice of the whig is for innovation. A Tory does not wish to give more real power to government, but that government should have more reverence. Then they differ as to the church. The Tory is not for giving more legal power to the clergy, but wishes they should have a considerable influence founded on the opinion of mankind; the whig is for limiting and watching them with a narrow jealousy.<sup>20</sup>

It is said in the *Spectator* that the whig and Tory are two creatures who are born with a secret antipathy to each other, and engage as naturally when they meet, as the elephant and rhinoceros.

\* Isaac Reed was the son of a baker in the parish of St. Dunstan in the West, London, and his early attainments were marked with that enthusiasm which frequently prevails in a strong uncultivated mind. He commenced his public life as a solicitor and conveyancer. But the law, however alluring its prospects, had not charms sufficient to engage his whole attention. His intimate knowledge of ancient English literature was unbounded; and there scarcely appeared any literary work in this country, of the least consequence, that required any extensive research, which had not the advantage of his liberal assistance. Even the labours of Dr. Johnson were benefited by his accuracy. His collection of books, which were chiefly English, was perhaps one of the most extensive in that kind that any private individual ever possessed. His own publications, though not very numerous, were all valuable. If ever there was a mind devoid of guile, it was Isaac Reed's; and an attempt to make "the worse appear the better cause," would have been with him a breach of moral obligation. He died at his chambers in Staple Inn, January 5, 1807, and was buried at Amwell. See *Bibliotheca Reesiana*; a catalogue of the curious and extensive library of the late Isaac Reed, Esq. of Staple Inn, deceased, comprehending a most extraordinary collection of books in English literature, &c.; sold by auction by Messrs. King and Lochee, November, 1807. 8vo.

\* "To almost every part of Johnson's distinction of a Whig and Tory," says Dr. Parr, "I assent; there is no part which does not contain judicious remarks and useful information. 'A wise Tory and wise Whig,' he says, 'I believe agree.' Their principles are the same, though their modes of thinking are different. A high Tory makes government unintelligible; it is lost in the clouds. A violent Whig makes it impracticable; he is for allowing so much liberty to every man that there is not power enough

in the Poultry; and actually acquired such a dejection of spirits as to occasion no small alarm to his friends. He was luckily, however, persuaded to adopt, in Brunswick-row, Queen-square, the sociability, if not the employment of the Poultry; and by the repeated visits of some inmates whom he highly esteemed, he was in a great measure roused from his melancholy; and continued to enjoy a few years of real comfort; distributing, not unfrequently, a portion of his large property in acts of the most disinterested beneficence. His bounty to individuals it would be improper to mention. But it must be recorded to his honour, that in his life-time he gave £700 consols to the company of stationers (of which he was master in 1800) for the purpose of securing perpetual annuities, of ten guineas each, to the widows of two liverymen of that company. A very few weeks also before his death he gave £100 to the sea-bathing infirmary at Margate; to which very excellent institution he added £200 more by his last will; with the like sum to the society for the relief of persons confined for small debts. He gave £100 to the society for the relief of the indigent blind; £100 to the society for the relief of the deaf and dumb; and £100 to the dispensary in Red Lion-street. He remembered also some of his old friends. To Daniel Braithwaite, esq. John Oswald Trotter, esq. and Miss Cumberland, he gave £1000 each; to Dr. Lettsom, Dr. Elliott, the Rev. J. H. Todd, and Mary Fowler, widow, £500 each. Among the other legacies were, to Mrs. Crakelt, wife of Mr. Crakelt, £20 a-year: to her daughter, Mrs. Eylard, £20 a-year; to Mrs. Mary Greaves, the daughter of his half-sister, £52 a-year; to Mrs. Coulson of Bedford £100 a-year; to Miss Coulson, one of his residuary legatees, to the children of her sister, Mrs. Seilman, £100; to the two Miss Davies's (daughters of the rev. Mr. Davies, perpetual curate of St. James's, Clerkenwell) £2000 each; to Mrs. Bodman and Mrs. May, all his shares in the Lancaster canal. And, besides other legacies, gave rings of ten guineas each to Mr. alderman Domville, and to Messrs. Baldwin, J. Nichols, Conant, Hughs, and Davies. The residue of his property (supposed to be about £60,000) to Miss Coulson, the two Miss Davies's Mrs. Bodman, and Mrs. May, who were all of them maternally related, his own name having become extinct. For the last twelve months his health evidently declined. He afterwards recovered so far as to undertake a journey to Ramsgate, on a visit to Mr. Cumberland, who happened to be at Tunbridge Wells with sir James Bland Burgess. Mr. Dilly arrived at Ramsgate on Saturday the 2d of May, 1807; and was on Sunday evening attacked by an oppression of breath, which took him off on the following morning. He was buried on the 12th, in the cemetery of St. George the Martyr, Queen-square, in a grave nearly adjoining that in which the famous Robert Nelson was deposited in 1715; the funeral being attended by a considerable number of his oldest friends.

1807, June 4. Died, ROBERT BUTLER, the proprietor and editor of the *Blackburn Mail*, aged forty-six years.

1807, July 28. RICHARD PHILLIPS, bookseller, of New Bridge-street, London, (late of Leicester,) elected sheriff of London and Middlesex, and was on this day translated from the musicians' to the stationers' company. On going up with an address in behalf of ministers, he received the honour of knighthood.

1807, July 31. Died, THOMAS MILLER, a respectable bookseller at Halesworth, in Suffolk, where he had carried on business for nearly half a century, and died in his eighty-fourth year.

1807, July. ELIHU WHITE, of Threadneedle-street, London, obtained a patent for a machine for casting or founding types, &c.

1807, Aug. 20. The printing-office of Mr. Swan, Crown-court, corner of Salisbury-square, entirely consumed by fire, and four other houses much damaged. Mr. Swan lost above £2,000 over his insurance.

1807, Oct. 9. Died, JOHN WINGRAVE, many years a bookbinder of eminence, in Red Lion-court, Fleet-street, London, in the eightieth year of his age. He had the honour of being patronized by the duke of Grafton, major Pearson, Isaac Reed, and several other first-rate collectors of curious books, and also by many of the first booksellers in London. He was a citizen of London, father of the bookbinding trade, and one of the oldest inhabitants of St. Dunstan's parish, of which he was constable in 1767; and apprehended the notorious Mrs. Brownrigg. He at that time published a curious *Narrative of the many cruelties inflicted upon her apprentice Mary Clifford, for which she received sentence of death, Sept. 12, 1767.*

1807, Oct. 13. Died, JOHN WRIGHT, of St. John's-square, Clerkenwell, London, an excellent printer, and a worthy man, in the thirty-eighth year of his age. Joseph Wright, his brother and successor, died, after a lingering illness, at his father's house in Leicestershire, May 1, 1809; and Edward Wright, a third brother, in the same profession, died April 26, 1810.

1807, Nov. 5. The warehouse of Mr. Bensley, printer, of Bolt-court, Fleet-street, London, destroyed, by fire, containing much valuable literary property.

1807, Dec. 13. Died, GEORGE BURBAGE, for upwards of thirty years a proprietor and printer of the *Nottingham Journal*, and a member of the senior council of the corporation of Nottingham. He had been in business as a bookseller and printer nearly sixty years; during which period, by his intense application and urbanity of manners, he obtained the respect of all ranks of society. He was aged eighty years. Mr. G. Stretton, who had been his apprentice, and also married his daughter, succeeded to his business.

1807, Dec. 13. Died, J. NORTHALL, of the firm of Northall and Dawson, booksellers, Stockport, Cheshire; a truly upright man, whose death was awfully sudden, dying in the arms of his partner.

1807, Dec. 17. Mr. Roworth obtained a verdict, with £100 damages against Mr. Wilkes, bookseller, for having pirated a work written by the plaintiff, called the *Art of Self-Defence with the broad sword*. This work, together with the prints, were copied into the *Encyclopædia Londinensis*, published by the defendant.

1807, Dec. Died, — COLEMAN, a very ingenious engraver in wood, whose talents had at different times procured him distinguished premiums from the society of arts, manufactures, &c.

1807, Jan. *The Athenæum*, No. 1. A magazine of literary and miscellaneous information, published monthly. Conducted by Dr. John Aikin.

1807, Feb. 7. *The Preston Journal*, No. 1. printed and published by Thomas Croft.

1807, Feb. *The Ruminator*. For this highly interesting series of moral and sentimental essays, we are indebted to the editor of *Censura Literaria*, in which miscellany the first number of the *Ruminator* appeared, and continued monthly.

1807. *The Director*, a weekly literary journal, the author of which modestly observes, that he considers himself "as a mere guide-post to direct the course of others to moral and intellectual excellence;" and we must do him justice to declare that he has brought forward a work of merit.—*Drake*.

1807. March 28. *The Sheffield Mercury*, No. 1. Printed and published by William Todd. This paper was conducted by Mr. Todd until the 4th of October, 1826, when it was purchased by Mr. George Ridge, and still continues.

1807. *The Inverness Journal*.

1807. *The Caledonia*, published at Glasgow.

1807, June. *The Inspector*, written under the assumed name of Simon Peep, esq.

1808, Jan. 10. Died, WILLIAM EDWARDS, bookseller at Halifax, in Yorkshire, aged 86 years. He was a character of very great eminence in his profession, and of no common estimation for the energies of his mind. The catalogues which he published were astonishingly rich in scarce and valuable books, of which the ornamental bindings were peculiarly elegant. He brought up several sons to his own profession, all of whom acquired very high celebrity.

1808, Feb. 8. The extensive printing-office of Mr. John Nichols, Red-lion-court, Fleet-street, London, entirely destroyed by fire, in which were consumed several valuable literary works, both printed and in progress.

1808, Feb. 22. Died, THOMAS ETHERINGTON, bookseller, of Rochester, and son of Mr. Etherington of York.

1808, Feb. 29. Died, HENRY LASHER GARDNER, bookseller, opposite St. Clement's, Strand.

1808, May 8. Died, Sir CHARLES CORBETT, bart. one of the oldest livermen of the company of stationers, aged about 76. He was, in the outset of life, well known as a bookseller, opposite St. Dunstan's church; where he afterwards kept a lottery-office; had dame Fortune at his command; and used to astonish the gaping crowd with the brilliancy of his nocturnal illumina-

tions. But it is not in the power of the keeper of a lottery-office to command success. A very unfortunate mistake in the sale of a chance of a ticket, which came up a prize of £20,000, proved fatal to Mr. Corbett, and was with difficulty compromised, the chance having fallen into the hands of Edward Roe Yeo, esq. at that time M.P. for Coventry. Some years after, the empty title of baronet (a title, in his case, not strictly recognised in the college of arms) descended to Mr. Corbett, which he assumed, though he might have received a handsome *douceur* from some other branch of the family, if he would relinquish it.—Melancholy to relate! the latter days of this inoffensive character were clouded by absolute penury. Except a very trifling pension from the company of stationers, he had no means of subsistence but the precarious one of being employed, when his infirmities and bad state of health would permit him, in a very subordinate portion of the labours of a journeyman bookbinder.

1808, May 19. Died, JOSEPH COOPER, many years a printer of eminence, died suddenly, in a fit, whilst walking near Chelsea. Not a few splendid volumes were produced unostentatiously from his press, before the modern system of fine printing became so very prevalent. But he was unfortunate in business. Having no children, he acquired a tone of life a little too theatrical, and much too companionable; for he had considerable talents, and abounded in pleasantry and the milk of human kindness. He provided also, at an inconvenient expense to himself, for some relatives in the East Indies, in hopes of a princely return; which he never received. He speculated also in an attempt to make a species of printing-ink superior to any before known; but was not in that instance particularly successful. The evening of his life, however, was made comfortable, by the friendship of Messrs. Wedgwood and Bentley, who found in him a valuable assistant in their counting-house, and who proved to him inestimable friends.

1808, June 14. Died, JOHN WALKDEN, (son of Richard Walkden, an old member of the company of stationers, who died in 1780), was a stationer in Shoe-lane, where he long carried on a very extensive trade, in quills particularly, and a beautifully black ink; and acquired a handsome fortune with an unexceptionable character. He was passionately fond of Handel's music, of which he possessed a sufficient quantity to make a sale of six days. At his house, in Highbury-place, he built a spacious music-room, in which he placed the bust of Handel over an excellent organ, on which he was a complete performer. He had also a house at Old Windsor, where he died.

1808, July 2. HARRIOT HART, the publisher, and HENRY WHITE, the proprietor and editor of the *Independent Whig*, Sunday newspaper, received the following sentence in the court of king's bench, by judge Grose, for a libel on lord Ellenborough, and the juries who tried Bennet and Chapman, two slave captains tried and

acquitted at the Old Bailey, for alleged murder of their respective crews : " that the defendants be imprisoned three years, Hart in Gloucester, and White in Dorchester jail, and at the expiration of that time, they give security for their good behaviour for five years in £500 each, and sureties in £250 each.

1808, June 1. *Died*, — TWOPENNY, bookseller, Nottingham.

1808, June. *Died*, SAMUEL GOADBY, stationer, at the royal exchange, London, in the eighty-ninth year of his age. It is hoped, that the remark will not be thought out of place; but, if a character is to be held up to the public as a proper subject for their respect and imitation, domestic and social virtues, piety and benevolence must form the grand outlines of a proper object of real respect. The hero, the statesman, the poet, or the painter, demand, and frequently, as such, deserve our admiration; but it is only to the man of domestic worth and social excellence, that the homage of the virtuous heart will ever be offered. Mr. Goadby was a man of universal benevolence, and of unwearied assiduity in every good work; to feel for misery, and relieve it, was the business of his life. He was the son of Samuel Goadby, who enjoyed a lucrative and respectable place under the city of London, was born in Moorfields, Sept. 20, 1719, and at a proper age was bound apprentice to a Mr. Virtue, a stationer at the royal exchange; and either a short time before Mr. Goadby had completed his apprenticeship, or very soon after, Mr. Virtue died, leaving a widow and two daughters. Mr. Goadby, at this early period of life, had conducted himself in so exemplary a manner, that it was thought right to take him into partnership with Mrs. Virtue; and at the expiration of eleven years, their interest was made one by marriage. Mrs. Goadby did not live more than fourteen years after their union; but, previous to her death, she said, that her marriage with Mr. Goadby was one of the most propitious circumstances of her life. Mr. Goadby was one of the six gentlemen, who about the year 1750, formed a society for the promotion of religious knowledge amongst the poor; and, for many years, he sent a rich supply of bibles, testaments, and pious books, for the poor of Hadleigh, and the villages around; and subscribed £50 to the patriotic fund; he was also, for many years, a subscriber to the lying-in charity, and to several dispensaries; and, by his will, left handsome legacies to the institutions he had subscribed to. Mr. Goadby's shop, at the royal exchange, was, for many years, in an evening, the meeting-place of a select party of men of superior abilities, for the purpose of conversation, and they had a very different effect upon the members of this friendly circle, to that produced by convivial meetings, where wine and riot preclude sentiment, and destroy reason. Mr. Goadby had survived every member of the circle, in which he had for many years enjoyed so much rational satisfaction. He had many singularities; he was very nice in his person; dressed very plain; but had made no

change in the cut of his coat for near fifty years. He was a dissenter from the ceremonies of the establishment; but he felt all that cordiality which Christianity inculcates, for every good man, though he might not be able to say *Amen* to his creed in every point. He was indefatigable in his endeavours to secure the everlasting and present felicity of his fellow-mortals. His expressive countenance would be illumined or be clouded, as the tale you told presented to his view a suffering or happy fellow-being; but his feelings did not pass off in the vapour of sensibility; for he was known, when near eighty years of age, to ascend a dark and dangerous staircase, to visit the abode of sickness and want; and there, with the gentle hand of charity, and the warm heart of a Christian, relieve and soften the sorrows inflicted by poverty and sickness. Such a man is so incalculable a blessing to society, that we are called upon, by every good principle, to appreciate, respect, and emulate.

Religion was his guide; he always stood firmly obedient unto what was good.

Mr. Goadby had been a widower forty-two years; and, though he had much perplexity and trouble throughout his long life, the domestic comfort he enjoyed for the last twenty years was derived from his marriage fifty-nine years before, by the kind attentions of his daughters-in-law. His remains were deposited in the same grave with his wife, in Bunhill-fields' burying-ground, June 22, and the funeral oration was delivered at the grave by the rev. Hugh Worthington, with a warmth of expression that evinced how justly he appreciated the excellence of his departed friend.

1808, July 4. The editors of seven London newspapers were fined £25 each, for the insertion of a paragraph reflecting on the conduct of the jury, whose case was referred to in that of Hart and White.

1808, July. *Died*, GEORGE LEWIS, bookseller, Worcester, an honest and industrious tradesman.

1808, Aug. 16. An action was tried in the court of king's bench, in which sir John Carr, knight,\* was plaintiff, and Vernor, Hood and Sharpe, booksellers, were defendants, to recover damages for the publication of a satirical work, called *My Pocket Book*,† in which the works of the plaintiff were held up to ridicule. The jury, under the direction of the judge, found a verdict for the defendants, considering the book a fair criticism. It appeared upon this trial, that sir John Carr had received for the copyright of the

\* Sir John Carr, knight of the Sicilian order of St. George and Constantine, was a native of Devonshire, and bred to the law. He received the honour of knighthood in 1806, from the duke of Bedford, when lord-lieutenant of Ireland, and also from his Sicilian majesty, and in 1811, he married a lady of fortune. He was the author of some poems, and a considerable contributor to the *Annual Review*.

† *My Pocket Book*; or, *Hints for a right Merrie and conceited Town*. 12mo. 1807. By Edward Dobbs, esq. of the Inner Temple, editor of the *Monthly Mirror*, a work chiefly relating to the stage. He also published the *Decameron of Boccaccio*, with remarks on his life and writings. 1804, and *Francis' Horace*, with additional notes. 4 vols. 12mo. 1807.

*Stranger in France; or, a Tour from Devonshire to Paris*, 4to. £100: for *A Northern Summer; or, Travels round the Baltic through Denmark, Sweden, Russia, part of Poland and Prussia*, in 1804, 4to. £500: for the *Stranger in Ireland; or, Travels in that Country*, 4to. 1806, £700. and for *A Tour through Holland along the right and left banks of the Rhine* in 1806, £600.

1808, Aug. 30. *Died*, WILLIAM BISTOW, aged forty-seven years. He was a printer and bookseller at Canterbury, alderman of that corporation, and treasurer of the eastern parts of the county of Kent.

1808, Oct. 20. *Died*, JOHN COOTE, bookseller in Paternoster-row. He was a native of Horsham, Sussex; but it is supposed that the family originally came from France. His talents rose above mediocrity; and he evinced fertility in the invention of schemes, but did not possess sufficient steadiness or patience to carry them into effect, or beneficial execution. He who can write a lively farce is generally a facetious companion, and that praise will not be denied to Mr. Coote. He produced, with great rapidity of composition, an opera and five farces, three of which have been printed; but he had not that weight of interest which was requisite to bring them on the stage. Mr. Coote had seven children, six of whom survived him.

1808, Jan. 7. *Died*, WILLIAM FLEXNEY, a bookseller long settled in Holborn, aged seventy-seven. He was the original publisher of Churchill's poems; who has thus immortalized him:

Let those who energy of diction prize,  
For Billingsgate, quit *Flexney*, and be wise.

1808, Jan. *The Reasoner*. This periodical forms a work of some merit; but which, in general, does not rise above mediocrity.—*Drake*.

1808, Jan. 1. *Hull Rockingham*, No. 1.

1808, Jan. 2. *The Berwick Advertiser*, No. 1, printed and published by Henry Richardson.

1808. *The Comet*, a mock newspaper, 8vo. by Eaton Stannard Barrett, student of the Middle Temple. Mr. Barrett was a native of Ireland, and author of *All the Talents*, a poem, 8vo, 1807. *Woman*, a poem, 1810, *The Heroine; or, Adventures of Cherubina*, a novel, three vols. 12mo. 2d. edit. 1814. This work has been pronounced not inferior, in wit and humour to the *Tristram Shandy*, of Sterne,\* and in point of plot infinitely beyond the *Don Quixote*, of Cervantes.

1808, Jan. 6. *The Liverpool Courier*, No. 1, printed and published by Thomas Kaye.

\* Lawrence Sterne was born at Clonmell, in Ireland, Nov. 24, 1713, and educated for the church, in which he obtained some preferments. He died March 16, 1766. His chief work was the *Life and Opinions of Tristram Shandy*, consisting of eight volumes, all of which were published in the course of six years. In the characters of uncle Toby and corporal Trim, he has, in the words of sir Walter Scott, "exalted and honoured humanity, and impressed upon his readers such a lively picture of kindness and benevolence, blended with courage, gallantry, and simplicity, that their hearts must be warmed whenever it is recalled to memory." In the last year of his life, Sterne published his *Sentimental Journey through France and Italy*, which is constructed with less eccentricity, and contains chapters of equal tenderness.

1808. *The Edinburgh Annual Register* commenced, and continued till 1825. Some of the earlier volumes of this work were written by sir Walter Scott and Mr. Southey; and it was throughout conducted with great ability.

1808. *The Edinburgh Encyclopedia*, commenced by Dr. (afterwards sir) David Brewster, and completed in 1830, in eighteen volumes.

1808. *The Perth Courier*.

1808. *The Christian Instructor*. This work was commenced at Edinburgh, by the rev. Andrew Thompson, an eminent divine of the church of Scotland, assisted by several of his clerical brethren, and is a work of great merit.

1808. *Nottingham Review*, printed and published by Charles Sutton.

1808, April 4. *The Spy*. In the title-page these essays are announced to be written "in the manner of the *Spectator*." It appears that the execution was not adequate to the intentions of the writer.—*Drake*.

1809, Feb. 12. *Died*, BENJAMIN UPHILL, a very worthy bookseller in May's buildings, Bedfordbury, London. The principal line of business which he pursued, as far as limited finances permitted, was, the purchasing of books at sales, and vending them again by small printed catalogues at marked and reasonable prices, in which his judgment and his fair dealing was duly appreciated by collectors. But, borne down by ill health, and keenly feeling the want of a proper capital, he sunk under a lingering disorder to a premature grave, aged forty-nine years.

1809, March 3. *Died*, JOHN PARTRIDGE, clerk to the company of stationers from 1759 to 1776, when he resigned the office to Joseph Baldwin, and retired to Croyden, where he died at the advanced age of ninety, having for several years before been totally blind.

1809, March. *Died*, MRS. HENRY CASLON,\* celebrated in the annals of type founding. On the decease of Mrs. Caslon,† in 1795, (see page 744, ante), the management of the foundry devolved on the above lady, who, possessing an excellent understanding, and being seconded by servants of zeal and ability, was enabled, though suffering severely under ill health, in a great measure to retrieve its credit. Finding the renown of William Caslon no longer efficacious in securing the sale of types, she resolved to have new founts cut. She commenced the work of renovation with a new canon, double pica, and pica, having the good fortune to secure the services of Mr. John Isaac Drury, a very able engraver, since deceased. The pica, an improvement on the style of Bodoni of Parma, was par-

\* Mrs. Henry Caslon was the widow of a grandson of the founder of this eminent family; and though she was married to Mr. Strong, a medical gentleman, in 1799, who died in 1803, we have chosen to designate her by the name of Caslon, as best known or appreciated by the profession.

† Her testamentary depositions required the interpositions of the lord chancellor, under whose orders the foundry was put up to auction, in March, 1799, and was bought by Mr. Henry Caslon, for £250. Such was the depreciation of the Caslon letter foundry, of which a third share, in 1792, sold for £2000.

ticularly admired, and had a most extensive sale. Finding herself, however, from the impaired state of her health, which suffered from pulmonary attacks, unable to sustain the exertions required in conducting so extensive a concern, she resolved, after the purchase of the foundry, to take as an active partner, Nathaniel Catherwood\*, who by his energy and knowledge of business fully equalled her expectations. This connection gave a new impetus to the improvements of the foundry, which did not cease during the lives of the partners, and their exertions were duly appreciated and encouraged by the printers. In 1808 the character of the foundry may be considered as completely retrieved, but the proprietors did not long live to enjoy their well-merited success. In the spring of 1808 Mrs. Caslon went to reside at Bristol botwells, for the benefit of the air, where death put a period to her long and extreme suffering. She was buried in the cathedral of Bristol.

Mr. Henry Caslon, son of the above lady, continued the foundry, and upheld it both in the eminence of its character and in its original name. Until 1821 he was in partnership with John James Catherwood, brother to Nathaniel, the former partner in the house. From 1821 to 1822 the business was carried on by Mr. Caslon alone, when he admitted into partnership Mr. Martin William Livermore.

1809. *Died*, CHARLES HERING, a bookbinder, of London; and, who after the death of Roger Payne, was considered the head of the craft.—He was an extremely skillful binder, and a remarkably industrious man. His bindings exhibit a strength and squareness, with a good style of finish, which renders his work of much value, and establishes the reputation accorded to him. His faults were a too great fondness for double headbands, and the use of brown paper linings, with a little inclination to the German taste. Possessing the reputation he did, the principal libraries of this country contain many of his bindings. Mr. J. Hering, his brother, succeeded to the business, and was one of the first binders that revived stamped calf binding.

1809, *April 17. Died*, GEORGE ROGERS, a respectable bookseller at Plymouth, Devonshire.

1809, *May 7. GEORGE BEAUMONT*, printer of the *British Guardian*, Sunday newspaper, was sentenced, in the court of king's bench, London, to two years' imprisonment in Newgate, to pay a fine of £50, and at the expiration of his imprisonment, to give security to the amount of £500 for his good behaviour, for a letter to his majesty, Geo. III. inserted in that paper, signed Tiberius Gracchus.

1809, *May 26. The printing-office of Mr. Smeaton*, in St. Martin's Lane, Charing-cross, London, destroyed by fire; and, unfortunate to relate, both Mr. Smeaton and his wife perished in the flames.

\* Nathaniel Catherwood, the worthy and active partner, did not long survive his associate, being seized with a typhus fever, which baffled the medical art. He died very generally regretted, June 6, 1809.

1809, *June 3. Died*, J. P. DE LA GRANGE, a French bookseller in Greek-street, Soho, London, aged seventy-one years.

1809, *June 29. The earl of Leicester* obtained a verdict of £1000 against the printer of the *Morning Herald*.

1809, *Aug. Died*, SAMUEL HARWARD, bookseller, at Charlton, Gloucestershire. He was a man of uncommon activity and exertion, and in the early part of his life kept no fewer than five different shops. He left behind him very considerable property, and a large and valuable collection of books.

1809, *Aug. 19. Died*, ELIZABETH BALDWIN, widow of Richard Baldwin, bookseller; she bequeathed by her will, £250 stock three per cents. the dividends to be laid out and expended in the purchase of five great coats, to be annually given to five poor liverymen or freemen of the company of stationers, in the first week in December, for ever.

1809, *Aug. 28. Died*, HENRY PARKER, sometime an eminent stationer and printseller, in Cornhill, and many years deputy of that ward. In 1774, he quitted business, on purchasing the important office of clerk of the chamber at guildhall, which he held till within a few months of his death; when, agreeably to the terms of his purchase, he alienated the office to Mr. James Boudon, his principal assistant. Mr. Parker was master of the stationers' company in 1801; where, as in every other department of life, his general knowledge of city business, and the remarkable placidity of his manners, very much endeared him to a circle of sincere friends. He died at Stoke Newington, in the eighty-fourth year of his age. His only son, John Henry Parker, was Gresham professor of divinity, and curate of Wanstead, in Essex.

1809, *Oct. 5. Died*, JAMES BATE, many years an eminent stationer in Cornhill, and one of the common-council for that ward. He was master of the stationers' company in 1799; and died at Chiswick. His father was the rev. James Bate, rector of St. Paul's, Deptford, who died in 1775.

1809, *Oct. 30. Died*, WILLIAM FENNER, bookseller, Paternoster-row, London, in the eighty-third year of his age, and father of the stationers' company. He was the son of William Fenner, printer, of Lombard-street, who was one of the partners with Ged, in his attempt at stereotype printing; after his death, about 1735, his widow was remarried to Mr. James Waugh, an apothecary, but continued to carry on the business of a printer till her death. The son was for some time her assistant and partner; and afterwards, for a short period, followed the profession of a bookseller in Paternoster-row; but, marrying early, and satisfied with a very moderate competence, he retired from the bustle of trade, in the prime of life; and, for more than forty years, prolonged a life, devoted to acts of kindness and philanthropy. He was master of the stationers' company in 1786, and to whom, in 1777, he

\* See page 738, ante.

gave a large silver coffee urn, with a set of teaspoons, &c.; and, by his last will, left a reversionary legacy of £2,500, three per cent. consols to the company; the interest of which (£75) to be thus applied: £50 in annuities of 50s. to ten poor freemen, and ten widows; £20 for a dinner for the court of assistants, who are to attend divine service, on the 19th of July, at St. Martin's church; 20s. to the clerk of the stationers' company; 30s. to the rector, for a sermon; 20s. to the curate for reading prayers; 5s. each to the clerk, organist, and sexton; and 5s. each to the beadle, porter, and housekeeper of the company. Possessing a strong mind, improved by habits of early industry, and gifted by nature with a fine manly form, improved by polished manners, the conversation of Mr. Fenner was always pleasing; his friendship was very generally courted; and his advice was frequently requested in cases of difficulty, and always given freely and judiciously. He had been twice married; and the second wife survived him; but he left no child.

1809, Dec. 20. *Died*, JOSEPH JOHNSON, an eminent bookseller in St. Paul's church-yard, London. He was the younger of two sons of a farmer at Everton, near Liverpool, where he was born, Nov. 15, 1738, and had therefore just completed the seventy-first year of his age. His family were dissenters of the baptist persuasion; and he was apprenticed, at a suitable age, to Mr. George Keith, a bookseller, in Gracechurch-street, who had married the daughter of the celebrated Dr. Gill. It was about the year 1760, that Mr. Johnson first entered into business for himself, in partnership with a Mr. Davenport; and nearly at the same period, he contracted an acquaintance with Mr. Fuseli, the celebrated painter. The partnership with Davenport being dissolved, Mr. Johnson formed a similar connexion with Mr. John Payne; and their business was carried on in Paternoster-row, till nearly the whole of their property was consumed by fire in 1770, no part of it being insured. By this time Mr. Johnson had acquired the highest character with those who knew him best, for integrity and a virtuous disposition; and now that he was on the ground, "his friends," as he expressed it to a particular acquaintance, "came about him, and set him up again." On this occasion, he removed to the shop in St. Paul's church-yard, where he dwelt for the remainder of his life. A short time after this epoch in his affairs, he became closely connected with the most liberal and learned branch of the Protestant dissenters in England. He published, in 1772, the poems of Ann Letitia Aikin, afterwards Mrs. Barbauld; and nearly at the same time, was placed in the same relation of publisher to Dr. Priestley, whose numerous writings were brought up by Mr. Johnson from that time forward. In 1774, when Theophilus Lindsey\* came to London, having given up a living of £400 per annum and rich expectancies, because he could not reconcile

his conscience to the articles of the church of England, he immediately formed a strict intimacy with Mr. Johnson. Mr. Lindsey's circumstances became greatly straitened by the sacrifice he had made; and Mr. Johnson procured, and caused to be fitted up for him, as a chapel, the great room in the house of Mr. Paterson, in Essex-street, in the Strand, and was extremely active in procuring subscriptions, and forming a regular religious establishment in that place, which he constantly attended, as long as Mr. Lindsey continued to officiate there. Mr. Johnson was so fortunate, (and this is one of the greatest honours that can fall to a bookseller) as to have been publisher to many of the most eminent authors of his time; among whom we may name William Cowper,\* John Horne Tooke,† Dr. Darwin, Dr. Priestley, Dr. Aikin, Dr. Enfield; Mr. Fuseli,‡ Mr. Bonycastle,§ Mr. Nicholson, Mr. Howard, Mrs. Barbauld,¶ Mary Wolstonecraft,\*\* and Miss Edgeworth. In May, 1788, he

\* Mr. Johnson first obtained the copyright of Cowper's *Poems*, which proved a source of great profit to him, in the following manner:—A relation of Cowper's called one evening, to the dusk, on Johnson, with a bundle of these poems, which he offered for publication, provided he would publish them at his own risk, and allow the author to have a few copies, to give to his friends. Johnson having, on perusal, approved of them, undertook the risk of publishing. Soon after they appeared, there was not a review that did not load them with the most scurrilous abuse, and condemned them to the better-shops. In consequence of the public mind being thus terrified or misled, these charming effusions lay in a corner of the bookseller's shop, as an unsaleable pile, for a long time. Some time afterwards, the same person appeared with another bundle of manuscripts from the same author, which were offered and accepted on similar terms. In this fresh collection was the admirable poem of the *Task*. Not alarmed at the fate of the former publication, and thoroughly assured as he was of their great merit, he resolved upon publishing them. Soon after they had appeared, the tone of the reviews became changed, and Cowper was hailed as the first poet of his age. The success of this second publication set the first in motion, and Johnson immediately reaped the fruits of his undaunted judgment. In 1818, the copyright was put up to sale among the members of the trade, in thirty-two shares. Twenty of these shares were sold at £212 per share, including printed copies in quires, to the amount of £89, which each purchaser was to take at a stipulated price; and twelve shares were retained in the hands of the proprietor. The work was satisfactorily proved, at the sale, to net £834 per annum. It had only two years of copyright, and yet this same copyright, with printed copies, produced, estimating the twelve shares which were retained, at the same price as those which were sold, the sum of £6764.

† John Horne Tooke, well known in the literary and political world, died March 18, 1812, aged seventy-six years. His valuable library was sold by Messrs. King and Loches, in the course of the following year.

‡ Dr. William Enfield was born at Sudbury in 1741, and educated at Daventry. He died at Norwich, Nov. 3, 1797. His *Sermons*, with his life prefixed, was published by Dr. Aikin, in three volumes.

§ Henry Fuseli, R.A. was born at Zurich, in Switzerland, and no doubt related to Gaspard Fuseli, bookseller, noticed at page 788 ante. At an early age he came to England, and by the encouragement of sir Joshua Reynolds, devoted himself to painting. One of his greatest efforts was the production of the Milton gallery, which was publicly exhibited in 1790. He died April 30, 1828.

¶ John Bonycastle, a celebrated mathematician, died at Woolwich, May 15, 1831.

‡ Anna Letitia Barbauld was the sister of Dr. John Aikin, and born at Kibworth, Leicestershire, June 28, 1743. About 1774, she married the rev. Richard Barbauld, a dissenting minister at Falsgrave, Suffolk, and died at Stoke Newington, March 9, 1835. She employed her excellent genius to the noblest ends, in enjoining infancy to virtue, and maturer age to a love of freedom.

\*\* Mary (Wolstonecraft) Godwin died Sept. 18, 1797.

\* Theophilus Lindsey was born at Middlewich, Cheshire, June 30, 1732, and died November 3, 1809. He was an eminent and upright divine.

began a periodical publication, called the *Analytical Review*. Mr. Johnson was a man remarkably superior to mercenary views. He often proposed and entered into the reprint of books, which he considered as conducive to the best interests of his species, without the possibility of being reimbursed but in a very long time, and probably not at all. He often purchased the manuscripts of worthy persons in distress, when he had no intention ever to send them to the press. His benevolent actions are much too numerous to be related in such a work as this. His mind was of so admirable a temper, as almost never to be worn out with importunity; and he was not to be turned aside by the ingratitude of those he benefitted from doing that which he judged to be right. In his latter years, Mr. Johnson was uncommonly reduced by a series of infirmities; he walked with difficulty; his frame was worn to a shadow; and, having mentioned on some occasion, that it was his desire to be borne to his grave by four poor men; he added, that in reality two would do, for, "they would have nothing to carry." Yet his faculties, and his power of conversation remained; and he scarcely remitted his attention to business, and not at all his disposition to be servicable to others. He was always found an advocate on the side of human nature and human virtue; recommending that line of conduct which springs from disinterestedness and a liberal feeling, and maintaining its practicability.

A handsome monument, in the north-east corner of Fulham church, is thus inscribed:

Here lies the remains of  
JOSEPH JOHNSON, late of Saint Paul's, London,  
who departed this life on the 30th day of December, 1809,  
aged 73 years.

A man equally distinguished by probity, industry, and disinterestedness in his intercourse with the public, and every domestic and social virtue in private life; beneficent without ostentation, ever ready to produce merit, and to relieve distress; unassuming in prosperity, not appalled by misfortune; inexorable to his own, indulgent to the wants of others; resigned and cheerful under the torture of a malady which he saw gradually destroy his life.

1809. There were sixty-three newspapers published in London: ninety-three in the country: twenty-four in Scotland: and fifty-seven in Ireland: making a total of 217 newspapers in the united kingdom.

1809, March 15. *The Moderator*. A periodical published in London, and written with elegance and candour.—*Drake*.

1809, April. *The Quarterly Review*, No. 1, edited by William Gifford,\* and published by Murray, Albemarle-street, London.

1809, Sept. 30. *Manchester Exchange Herald*, No. 1, printed and published by Joseph Aston.  
1809. *The Anti-gallican*. This newspaper was established by Lewis Goldsmith, notary public.

\* At Mr. Gifford's death, in 1826, he requested his executors to destroy all confidential papers, especially those relating to the *Review*; so that the *Illustrated Quarterly*, in which the names of the authors, and the prices paid for each article, are said to have been inserted, will never see the light. Amongst the contributors to the early numbers of the *Quarterly*, may be noticed Southey, Heber, Milman, Canning, Croker, Barrow, and others.

1808-9. *The Librarian*; being an account of scarce, valuable, and useful English Books, Manuscripts, Libraries, Public Records, &c.\* By James Savage, London, three vols. 8vo.

1809. *Bibliomania*; or, *Book Madness*; containing some account of the history, symptoms, and cure of this fatal disease, in an epistle to Richard Heber, esq. London, 87 pages. By the rev. Thomas Frognal Dibdin.

1809. *The Bibliomania*, an epistle to Richard Heber, esq. by John Ferriar, M. D. London, 4to. This little poem very lightly touches the subject; and, to the regret of the reader, concludes almost as soon as begun.—*Horne*.

1809, *Bibliosophia*; or, *Book Wisdom*; containing some account of that glorious avocation book collecting, &c. 8vo. By an Aspirant. The author was the rev. James Beresford, fellow of Merton college, Oxford.

1809. *Elements of General Knowledge*, introductory to useful books in the principal branches of Literature and Science, with lists of the most approved authors, including the best editions of the classics. By Henry Kett,† B. D. 7th edit. London, two vols. 8vo.

1809. *The Political Register*, Sunday newspaper, began by Francis William Blagdon, in avowed opposition to that of William Cobbett.

1810, March 31. *Died*, JOHN WILKES, of Ave Maria-lane, London, proprietor of the *Encyclopædia Londinensis*,‡ and formerly a bookseller at Winchester.

1810. *Died*, ROBERT CLERK, many years a bookseller and publisher in Parliament-square, Edinburgh. His father, John Clerk, a printer, was said to have been descended from Alexander Clerk, lord provost of the city of Edinburgh at the commencement of the seventeenth century. Mr. Clerk was born in 1738; and, about the age of seventeen, after finishing his apprenticeship, married Barbara, daughter of John Williamson, farmer at Bellside, near Linlithgow; and with her it is believed he obtained a small portion, which enabled him to commence bookseller on his own account. Although at the period the book trade of Edinburgh was comparatively limited, he succeeded in establishing a profitable business—having a good many bookbinders employed, and latterly engaging in several fortunate speculations as a publisher. In the course of a few years he purchased a house in the Cowgate, called "Kincaid's Land," where he resided some time. In 1782, he bought a property at Newhaven, known from its size by the name of the Whale. In 1809, having sold off his stock, and the Whale being without a tenant, Mr. Clerk let his house in Edinburgh, and retired to Newhaven. Here he continued for several years,

\* *The British Librarian*: an abstract of scarce books in all languages. By William Oldys: London, 1788, 8vo.

† The Rev. Henry Kett was drowned at Stanwell, June 30, 1835.

‡ The *Encyclopædia Londinensis* began 1776.

§ They had eight sons, six of whom died in infancy. Robert, the eldest, died in 1786; and Alexander, the only remaining son, is a solicitor-at-law, in Edinburgh.

¶ Among other works published by Mr. Clerk, was the *Builder's Jewel*, a book of considerable note in those days.

almost daily visited by his friends from Edinburgh, a party of whom, on Saturdays in particular, were in the habit of playing at quoits in his garden, and thereafter regaling themselves with a plentiful supply of gin and oysters, then and still a favourite indulgence at Newhaven. In 1800, in consequence of his wife's death, Mr. Clerk gave up housekeeping, and boarded with Mrs. Duguid, of "the Whale,"\* being then an inn, where his old friends rallied around him as formerly, to enjoy the sea breeze, and the choice things which the hostess was careful to provide for them. He died much regretted by his acquaintances, aged seventy-two, and was interred in the Grayfriar's churchyard. He was a jolly, warm-hearted individual—amusing in conversation, and partial to the company of his friends; but, though fond of rational enjoyment, he was equally an enemy to excess; and, in the words of one of his friends, now no more, there never existed a "more honest and inoffensive man." *Kay's Edinburgh Portraits*, p. 29.

1810, Feb. 14. JAMES PERRY, proprietor and editor of the *Morning Chronicle*, tried in the court of king's bench on the charge of having published a libel in that paper, copied from the *Examiner*, reflecting on the character of George III. Mr. Perry conducted his own case, and was acquitted. He published *A Report of the trial on an information ex officio of the King v. John Lambert and James Perry on a charge of libel*, in the *Morning Chronicle*, 8vo. 1810.

1810, March 25, Died, JOHN COOKE, an extensive publisher of works in weekly numbers, at the Shakspeare's head, Paternoster-row,† London, aged seventy-nine years.

1810, March 30. Died, ROBERT BALDWIN, many years a bookseller of considerable eminence in Paternoster-row, London, where his industry and integrity were almost proverbial; whilst his mild and conciliatory manners secured him the sincere regard of all who knew him. He was the nephew and successor of Richard

Baldwin, bookseller, noticed at page 738 ante, and was succeeded in Paternoster-row by Robert, son of an older nephew.

1810, Died, THOMAS KIRKGATE, for upwards of thirty years printer to Horace Walpole, earl of Oxford, at Strawberry hill, who liberally rewarded his long services in conducting his literary undertakings by a legacy of £100. Soon after his decease was published, *A catalogue of the valuable and curious collections, late the property of Mr. Thomas Kirkgate*. 1810. 8vo. The collectors of the Strawberry-hill publications, will find this catalogue of great utility, in furnishing them with a list of lord Orford's pieces. The books form only 424 articles of the catalogue, the remainder consisting of curious prints, drawings, painted glass, coins, &c.

1810, April 17. Died, JOHN IRELAND, bookseller, Market-place, Leicester, aged sixty-three. A man strictly independent in his principles, of great probity and much respected.

1810, April 26. Died, EDWARD WRIGHT, of the firm of Harding and Wright, printers in St. John's square, Clerkenwell, London. They were the printers of the *Monthly Mirror Magazine*.

1810, June 7. Died, WILLIAM DAWSON, of Paternoster-row, bookseller to the university of Oxford, aged sixty-five years. His life was a continued series of acts of kindness. He died at Hive House, Stanmore.

1810, June 17. Died, JAMES CHALMERS, printer to the city and university, and printer and proprietor of the *Aberdeen Journal*, which he conducted with uncommon ability, and steady and loyal consistency of principle for the long space of forty-six years. Few men have departed life in the city of Aberdeen with more unfeigned regret by a most numerous and highly-

ladder down when we find we no longer want it, these sort of publications must be confessed to have greatly contributed to lay the foundation of that literary taste and thirst for knowledge, which now pervades all classes. To give to such works as we have mentioned, all the attraction possible, the title-pages were copious to an extreme, enumerating the whole contents of the book: the authors were generally called *esquires*, and had two or three sounding christian names. In announcing the embellishments of these publications, language failed; and the terms, "beautiful," "elegant," "superb," and even "magnificent," became too poor to express their extreme merit. None of these puffers equalled Alexander Hogg. When the sale of a book began to slacken, this gentleman, like old Bernard Lintot, immediately employed some scribe to make him "a taking title; and the work, though not a line was altered, was brought out in a new edition; issued first in a feigned name, and subsequently published with a new title-page, as the production of "A Society of Gentlemen: the whole revised, corrected, and improved by William Thorntoe, esq. M. A., and other gentlemen." Hogg made money: but Cooke (whose journeyman he had been) exceeded him. He is said, by one work alone, *Southwell's Notes and Illustrations on the Bible*, to have cleared several thousand pounds, and he had many similar publications. He left a son, successor to his business and his ample fortune. James Harrison, of Paternoster-row, and afterwards of Fleet-street, in both which places he failed in business, projected some works of merit, particularly the *Nocturnal Magazine* and the *Poetical Magazine*. In 1806 he published the *Life of Lord Nelson*, two vols. 8vo. John Payne was an indefatigable manufacturer of books in numbers, under the high-sounding names of George Augustus Hervey, William Frederick Melmoth, &c. Some of these works were not wanting in merit, particular a *New History of Great Britain*, in five volumes 8vo: He wrote several works to which he added his own name

\* The Whale was totally destroyed by fire in 1834.

† Paternoster-row—now the greatest book mart in the world—did not begin to assume any consequence till the booksellers deserted Little Britain, in the reign of queen Anne. The south-west end, before that period, was more noted for mercers, lacemen, haberdashers, and similar trades: and a periodical newspaper, in 1707, adds to this list, "the sempstresses of Paternoster-row." One instance, however, of a bookseller living there, occurs much earlier, namely, in 1561, when Henry Denham, bookseller, lived at the *Star* in Paternoster-row, with the Latin motto,

"O homini sublimis edit"

From 1774, when we find John Bew publishing the *Ambulator* and other small works, the character of the trade in the Row became changed from old bookselling, or the issuing only of large and important new works by the principal houses, to general publishing, and particularly of periodicals. The issuing of works in weekly numbers was more particularly confined to Cooke, Hogg, and Harrison. These all stood prominent as publishers of what have been called "Paternoster-row Numbers;" namely, *Family Bibles*, with *Notes*; editions of *Foë's Book of Martyrs*, and the *Works of Flavius Josephus*; *New and complete Histories of England*, *Histories of London*, *Life of Christ*, and various other denominations of works, which, years back, more than now, were calculated to catch the attention of mechanics, and they were seen in the shape of handsome bound folios in several of their houses, and, however it may be customary to kick the

respectable circle of friends, to whom he was endeared by the best virtues that adorn social life—inflexible integrity, steady friendship, a disposition, elevated, humane, and charitable, a temper unusually cheerful, and a memory rich in anecdote and information, chiefly of the literary kind.—His father, who cultivated his profession for some years in London, in the printing-office of Mr. Watts (where he had the celebrated Dr. Franklin for his fellow-journeyman), was afterwards ranked among the literary printers of his time, and at his death was recorded as a gentleman "well skilled in the learned languages." His father was the rev. Jas. Chalmers, professor of divinity in the Marischal college, who died in 1744. About the year 1740, his son returned from London, and in 1746 established the *Aberdeen Journal*, at the close of the memorable rebellion, during which he was a considerable sufferer from his attachment to the house of Hanover. His son, the subject of this article, was born in March, 1742, and, after a classical and academical education at Marischal college, removed to London, and improved himself in the typographical art, both there and at Cambridge, until September, 1764, when the death of his father put him in possession of the establishment in his native city. Although now engaged in a business which afforded but little relaxation, and with the cares of a numerous family, he found leisure to indulge his love of literature by that extensive course of reading which rendered him a valuable member of the literary societies of the place. With many of the professors of both colleges, and particularly with the late Dr. Gilbert Gerard,\* and Beattie, he formed an intimacy which death only dissolved. Had he been able to devote more time to study, it was universally thought by all who knew him, that he might have excelled in any branch of polite literature. As a man of business he was more generally known for his unvaried integrity, industry, and punctuality, which recommended him to the confidence and friendship of men of the highest rank and superior attainments. In 1769, he married Margaret, youngest daughter of Mr. David Douglas, of London, by whom he left four sons and six daughters, who, with his afflicted widow, had to lament the loss of a tender husband, an indulgent father, and an affectionate and engaging friend and companion.

1810, July 9. WILLIAM CORBETT, author, THOS. CURZON HANSARD, printer, — BAGSHAW, news-vender, and — BUDD, bookseller, were tried in the court of king's bench, under Pitt's act, for a libel. It appears that Mr. Cobbett wrote an article for his *Political Register*, relative to the flogging of some of the sons and servants of English farmers, who were serving their period

in the local militia at Ely, in Cambridgeshire, for a trifling dispute or grumbling, construed by military law into mutiny, about an unpaid allowance for knapsacks. The ceremony was executed under a guard of the *German Legion*, which regiment happened to be then stationed at Newmarket. At that time it was thought but a degree less than sedition to speak even disrespectfully of our foreign mercenaries, especially if Germans; and sir Vicary Gibbs, then attorney-general, commenced a prosecution against Mr. Cobbett, author—Hansard, printer—Bagshaw, news-vender—and Budd, bookseller; for one and the same offence. Cobbett pleaded the general issue, and put himself upon his defence. Hansard, Bagshaw, and Budd, having no stomach for denying their respective avocations, or that they did print, or publish, or sell, the work in question; and, from nods and winks, having an idea of being excused the calling-up for judgment, even in case of a jury finding for the prosecutor (especially if they gave the attorney-general no trouble in proving *their* share of the crime), determined to take the chance of the verdict: and therefore said, we will trouble you with no defence—we let judgment go by default. But still further—Hansard was made a witness in the same cause for which he was to be tried as a culprit. He was served with a subpoena, to produce the manuscripts and give evidence of the hand writing, as a witness against Cobbett.\* However, Cobbett admitted the authorship; and the witness was not wanted. A verdict of guilty was found; and to the astonishment of all England, Cobbett, Hansard, Bagshaw, and Budd, were all brought up for, and received judgment of the court. William Cobbett was sentenced to be imprisoned two years in Newgate, and to pay a fine of £1,000, to keep the peace for seven years, in the sum of £3,000, and two sureties in £1,000 each; Hansard three months' imprisonment in the king's bench, and to find sureties for two years for his good behaviour: that of Bagshaw and Budd, two months each, and sureties also. The paper in which the article appeared, be it remembered, was published on Saturday morning, and the manuscripts were received from the author, in piece-meal, by the posts of Thursday and Friday, so that there was no possibility of contemplating, or of taking an *opinion learned in the law*, before hundreds of the number were circulated. Such were the proceedings of a government, whose leader, Mr. Pitt,† in framing measures for the *liberty of the press*, took especial care that the blessing he granted, was only the forerunner of a curse.—See Hansard's *Parl. Deb.* v. 34, p. 987.

\* Dr. Gilbert Gerard, author of the *Institutes of Biblical Criticism*, professor of Greek in the king's college, in the university of Aberdeen, died Sept. 28, 1816, aged fifty-five. His father was the rev. Dr. Alexander Gerard, an eminent divine and writer, and professor of divinity in Marischal college, Aberdeen, who died Feb. 22, 1796, aged 67 years.

\* In some observations upon this event, Cobbett says, "I have been labouring seventeen years, since I quitted the army. I have never known what it was to enjoy any of that which the world calls pleasure. From a beginning with nothing, I have acquired means of making some provision for a family of six children, (the remains of thirteen) besides having for several years maintained almost wholly as many children of my relations."

† William Pitt was the second son of the first earl of Chatham, born May 28, 1759, and died chancellor of the exchequer, Jan. 23, 1806.

1810, July 25. Died, THOMAS LUDLAM, who had filled the office of governor of Sierra Leone, and where he expired, on board the *Crocodile* frigate, in the thirty-fifth year of his age. He was the son of the rev. William Ludlam,\* and inherited no small share of his father's natural talent for scientific pursuits; which having been cultivated by a sound classical education, his first views in life, in conformity to the particular wishes of his father, were turned to the liberal profession of a printer; and in that capacity, says Mr. John Nichols,† I gladly bear testimony to the excellence of his conduct during a regular apprenticeship. Gentle and unassuming in his manners, and industrious in his habits of business, his conduct gave general satisfaction both to his equals and superiors. Soon after the expiration of his apprenticeship, an opportunity occurred, which was thought favourable both to his health, and his future fortune, of entering into the service of the Sierra Leone company; and in that infant colony he was for a considerable time one of the council, and at length became governor. On the colony being taken into the hands of the administration, a new governor was appointed by the crown; but Mr. Ludlam obtained an especial commission, with power to visit such parts of Africa as might be thought useful to the interests of Great Britain and the general cause of humanity; an undertaking for which, by his mild conciliatory manners, and by the experience acquired during a long residence at Sierra Leone, he was most eminently qualified. But his bodily strength was not equal to the task he had undertaken; and he fell a victim to disease, originally arising from a weak constitution; but with the pleasing consolation, both to himself and his surviving friends, that his life, though not a long one, was wholly passed in endeavours to be useful to all mankind.‡

1810. *The Book of Common Prayer*, in English, was printed at Verdun, in France, for the use of the English travellers who were detained by order of the French government after the breaking out of the war between the two countries, in 1803. The volume is in 12mo, and bears for imprint, Verdun, printed by Lewis Christophe, Place d'Armes, 1810.

1810, July 20. The printing-office of Mr. Paris, in Tooke's-court, Fleet-street, London, together with three houses, destroyed by fire, and one woman burnt to death.

1810. MATTHEW GALLAGHER, proprietor and printer of the *Trinidad Courant*, published *Let-*

*ters and Documents relative to the imprisonment of the author*, 12mo. By Matthew Gallagher, printer and proprietor of the *Trinidad Courant*.

1810, July 28. The printing-office of Mr. Gillet, in Salisbury-square, Fleet-street, London, totally destroyed by fire.

1810 A. T. DE HEARNE, of East Smithfield, London, obtained a patent for improvements on the printing and stamping presses.

1810, Dec. 11. Nineteen journeymen printers of the *Times* newspaper, London, convicted of a conspiracy,\* and were sentenced as follows:—Robert Howlett and John Gee, to be each fined one shilling and imprisoned two years in Newgate; William Clifton, Stephen Beckett, and George Westray, to be each fined one shilling, and imprisoned eighteen months; Stephen Hurley, Henry Byrne, and Thomas Woolley, to be each fined one shilling, and be imprisoned twelve months; Roderic Paskin, Edward Kidd, Wm. Williams, Corbet Lathom, William Coy, James McCarney, John M'Intosh, Nathaniel Collins, Malcolm Craig, John Simpson, and John Chapman, each to be fined one shilling, and imprisoned nine months.

1810. *The Pulpit*. This periodical was the production of Mr. Peter L. Courtier, (under the signature of Onesimus) an assistant in the house of Messrs. Rivingtons', booksellers, Paternoster-row; and forms two volumes 8vo. 1810-12.—Mr. L. Courtier was the author of several poems, and *Memoirs of the Life of the Rev. William Huntingdon*,† (by Onesimus,‡) 8vo. 1813.

1810. *The twelve labours of an editor, separately pitted against those of Hercules*, 12mo.

1810. *The Spy*, a periodical by James Hogg, the Ettrick shepherd, for which his little knowledge of society, and very poor education, by no means fitted him. It continued twelve months.

1810. *The Dumfries Courier* commenced. In 1818 this paper received an accession of talent of no common kind, in Mr. M'Diarmid, then a very young man, as editor and part proprietor. His enthusiastic interest in homely and rural matters—his piquant, lively, and often eloquent style—and the kindly benevolence that sparkles through all, render his lucubrations, even when they border on the marvellous, very attractive.

\* Combinations amongst journeymen were forbidden by law, June 21, 1799; which act was repealed, Aug. 1823.

† William Huntingdon died July 1, 1813.

‡ Letter to Onesimus, in answer to his remarks on William Huntingdon, 8vo. 1816 By William Smith, a preacher of the Huntingdonian description, who, in imitation of his master, of leather breeches memory, subscribed M.G., that is, "Miracle of Grace."

§ James Hogg, originally a shepherd in the secluded district of Ettrick, in Scotland, enjoys the merit of having, from the condition of an unlettered peasant, struggled through many unfavourable and adverse circumstances, into a literary reputation which many men possessing every advantage might well envy. His qualifications as a poet have been described as "great powers of versification, an unusual copiousness and facility in the use of poetical fiction and imagery, a lively conception of natural beauty, with a quick and prolific fancy to body forth his conceptions." His principal works are, the *Queen's Wake*, 1818; followed by two volumes of *Dramatic Tales*, the *Pilgrims of the Sun*, 1818; *Queen Hymns*, 1823; *Winter Evening Tales*, and the *Shepherd's Calendar*. He died November 21, 1833, aged 39 years.

\* Mr. Ludlam was fellow of St. John's college, Cambridge, rector of Cuckfield, in Suffolk, and was highly celebrated for his skill in mechanics and mathematics. He was author of a great number of works upon those subjects. He died March 19, 1798, aged seventy-one, and was buried at St. Mary's, in Leicester. Thomas Ludlam, his brother, was rector of Poston, in Leicestershire, confrator of Wigston's hospital, and an able poetic writer. See an account of him in the *Gent. Mag.* vol. 81. ii. page 492.

† See Nichols's *Literary Anecdotes*, vol. iii. 643.

‡ His mother erected a monument at Leicester to the memory of so excellent a son. William Ludlam, surgeon, at Leicester, a younger brother, died April 1, 1812. He was on the high path of professional eminence, and deservedly esteemed in public and private life.

1810. *The Imperial and County Annual Register*, two volumes 8vo. It seems to have been dropped after the first year.

1810. *New Caricature Magazine*, royal folio, by Thomas Rowlandson.

1811, Feb. 2. *Died*, WILLIAM RICHARDSON, many years a bookseller in Cornhill, London, aged seventy-five years.

1811, Feb. PETER FINNERTY,\* a reporter on the *Morning Chronicle*, received sentence in the court of king's bench for a libel on lord Castlereagh, for which he was condemned to an imprisonment of eighteen months in Lincoln jail, and to find security for his good behaviour for five years from that time, himself in £500, and two sureties in £200 each. He published *His Case, including the law proceedings against him, and his treatment in Lincoln jail*. 8vo.

1811. Mr. Finnerty died May 11, 1822.

1811, Feb. 8. The printing-office of Mr. Bernard, in Skinner-street, Snow-hill, London, destroyed by fire. It was occasioned by an accident in the press-room.

1811, Feb. 11. EUGENIUS ROCHE† was sentenced to be imprisoned twelve months in the Marshalsea, and to give security for his good behaviour for three years from that time, himself in £500, and two sureties in £250 each, for a libel in *The Day* morning newspaper, reflecting on the conduct of the military employed to preserve peace in Piccadilly, at the time of the serving of the speaker's warrant on sir Francis Burdett. On his liberation from confinement, Mr. Roche became editor of the *National Register*, a weekly paper; and subsequently the editor of a magazine called *Literary Recreations*. It is a curious fact, that in this periodical were printed some of the earliest productions of lord Byron, Allan Cunningham, and Gaspey.

1811, March 14. WALTER COX stood in the pillory, in Dublin, pursuant to his sentence, for a libel called the *Painter Cut*, published in the *Irish*

*Magazine*, recommending a separation betwixt Great Britain and Ireland by a French force.

1811, March 29. *Died*, JOHN TODD, aged seventy-five years, and who was for upwards of fifty years an eminent bookseller in Stonygate, in the city of York, where he succeeded Mr. Hildyard in 1757. Few country booksellers had exerted themselves with greater ardour and perseverance in the laborious pursuit of catalogue-making, with the respective value of each book attached, than Mr. Todd; of which the many curious and extensive collections, which he purchased and arranged at different periods, afford a sufficient proof. He was succeeded in his business by his two sons, who carried on the firm in such a manner, and on such a scale, as to cause their shop to be considered equal to any out of London.

1811, April 5. *Died*, ROBERT RAIKES, proprietor of the *Gloucester Journal*, which had been instituted by his father, and conducted for many years with approbation. The name of Robert Raikes will not soon be forgotten among those who have diffused light over the dark places of the earth full of the habitations of cruelty. He was born at Gloucester, September 14, in the year 1735, and was descended of a good family. The education Mr. Raikes received was liberal, and calculated for his future designation in life. At a proper season he was initiated into his father's business, which he afterwards conducted with punctuality, diligence, and care. Several pieces, among which may be pointed out the works of the dean of Gloucester,\* are such as will suffer nothing by any comparison with the productions of modern typography. The incidents of Mr. Raikes's life are few, and those not enough distinguished from the rest of the world to admit of a particular detail. It is sufficient to say, that in his business he was prosperous, and that his attention was not so wholly confined to it, but that he found time to turn his thoughts to subjects connected with the great interests of mankind, and the welfare of society. By this means some consolation has been afforded to sorrow and imprudence; some knowledge, and consequently happiness, to youth and inexperience. The first object which demanded his notice, was the miserable state of the county bridewell within the city of Gloucester, which, being part of the county jail, the persons committed by the magistrates, out of session, for petty offences, associated, through necessity, with felons of the worst description, with little or no means of subsistence from labour; with little, if any, allowance from the county; without either meat, drink, or clothing; dependent chiefly on the precarious charity of such as visited the prison, whether brought thither by business, curiosity, or compassion. To relieve these miserable and forlorn wretches, and to render their

\* Peter Finnerty was the most celebrated reporter of his day, and was engaged for many years on the *Morning Chronicle*, under Mr. Perry. He was the son of a tradesman at Loughrea, in the county of Galway, in Ireland. At an early age he had to seek his fortune at Dublin, and was brought up as a printer. In 1798 he succeeded Mr. Arthur O'Connor, as printer of the *Press*. The violence of that paper causing it to be prosecuted, he removed to London, and engaged himself as a parliamentary reporter. Having become acquainted with sir Home Popham, he sailed on the Walcheren expedition, for the purpose of writing its history; but being prevented carrying that object into effect, after a delay of some weeks, he returned to England, and resumed his occupation as a reporter. He died at Westminster, May 11, 1822, aged fifty-six years.

† A full and accurate report of the trial of the author, brought by Peter Finnerty against Samuel Tipper, publisher of the *Satirist*, for a libel: London, 1809, 8vo.

† Eugénius Roche, editor of the *Courier* London newspaper, died, deeply lamented by an extensive circle of acquaintance, in Hart-street, Bloomsbury, Nov. 9, 1829. He was born in Dublin, in 1786, and, before he was two years of age, his parents emigrated to France, where he received a liberal education, and in 1804 he returned to England, and devoted himself to literature. The only publications of Mr. Roche, that bear his name, are two tragedies, called the *Invasion* and *William Tell*; the latter of which was in rehearsal at Drury Lane when that theatre was destroyed by fire, and was consequently never produced. Mr. Roche also appeared as the author of words to a set of *French Melodies*, arranged by Madlle. Jams.

\* Josiah Tucker, a celebrated divine, was born at Langborne, in Carmarthenshire, in 1711. He was an able writer on commercial, political, and theological subjects. His principal performance is a *Treatise on Civil Government*, against Locke, 8vo. He died in 1799.

situation supportable at least, Mr. Raikes employed both his pen, his influence, and his property, to procure them the necessities of life; and, finding that ignorance was generally the principal cause of those enormities which brought them to become objects of his notice, he determined, if possible, to procure them some moral and religious instruction.

To every want and every woe,  
To gullit itself, when in distress,  
The balm of pity will impart,  
And all relief that bounty can bestow.

In this he succeeded, by means of bounties and encouragement, given to such of the prisoners as were able to read: and these, by being directed to proper books, improved both themselves and their fellow-prisoners, and afforded him great encouragement to persevere in the benevolent design. He then procured for them a supply of work, to preclude every excuse and temptation to idleness. Successful in this effort, he formed a more extensive plan of usefulness to society, which will transmit his name to posterity with those honours which are due to the great benefactors of mankind. This was the institution of Sunday schools, a plan which has been attended with the happiest effects.

Like a lone husbandman, forlorn,  
The man of Gloucester went,  
Bearing the seed of precious corn,  
And God the blessing sent.—*Mrs. Gilbert.*

The thought was suggested by accident. "Some business," says Mr. Raikes, "leading me one morning into the suburbs of the city, where the lowest of the people (who are principally employed in the pin manufactory) chiefly reside, I was struck with concern on seeing a group of children, wretchedly ragged, at play in the street. An inquiry of a neighbour produced an account of the miserable state and deplorable profligacy of these infants, more especially on a Sunday, when left to their own direction." This information suggested an idea, "that it would be at least a harmless attempt, if it should be productive of no good, should some little plan be formed to check this deplorable profanation of the sabbath. An agreement was soon after made with proper persons, to receive as many children on Sundays as should be sent, who were to be instructed in reading and in the church catechism, at a certain rate. The clergyman, who was curate of the parish at the time, undertook to superintend the schools, and examine the progress made.\* This happened about 1781, and the good consequences evidently appeared in the reformation and orderly behaviour

\* This worthy and benevolent clergyman was the rev. Mr. Stock, who had himself founded charity schools in two parishes of which he had before been curate. He took upon himself the inspection of the schools which Mr. Raikes had instituted. Mr. Raikes agreed to bear two-thirds of the expenditure necessary for their support, and Mr. Stock the other third; thereby it appears that this distinguished clergyman was an equal sharer with Mr. Raikes in the foundation of these useful institutions.

The Sunday-school Jubilee was held Sept. 14, 1831, the birth-day of Robert Raikes.

of those, who before were in every respect the opposite of decency or regularity. The effects were so apparent, that other parishes in Gloucester, and in various parts of the kingdom, adopted the scheme, which has by degrees become general, to the great advantage and comfort of the poor, and still more to the security and repose of the rich. Since the first institution, many thousands of children have been employed, to their own satisfaction, in acquiring such a portion of knowledge as will render them useful to society, without encouraging any disposition unfavourable to themselves or the world. Where riot and disorder were formerly to be seen, decency and decorum are now to be found; industry has taken the place of idleness, and profaneness has been obliged to give way to devotion. The outlines of a character so distinguished in the annals of his country as that of Robert Raikes, cannot fail to engage the reader. In proportion as he feels himself interested in the welfare of mankind, he will interest himself in every particular which concerns this bright example of unbending philanthropy.\* Mr. Raikes was for some years a member of the court of assistants of the stationers' company.

*R. Raikes*

His brother, Mr. Thomas Raikes, a very considerable Russian merchant, and long a director of the bank of England, established a rich and spreading family, very respectably connected, in the city of London.

Professor Austin remarks, on the education of the people, that it is not less incumbent on governments to forward the diffusion of knowledge, than to protect their subjects from one another by a due administration of justice, or to defend them by military force from the attacks of external enemies. A small fraction of the sums which are squandered in needless war would provide complete instruction for the working people—would give this important class that portion in the knowledge of the age which consists in the nature of their callings, and with the necessity of toiling for a livelihood.† And, further, bishop Tillotson, in one of his sermons, says, that education is the most effectual mode in reforming mankind, and that the most likely and hopeful reformation of the world must begin with children. Wholesome laws and good sermons are but slow ways, the most compendious way is a good education, this may be an effectual prevention of evil, whereas all after ways are but remedies.

\* Eulogium on Robert Raikes.—*Gentleman's Magazine*, vol. lviii. pp. 11, 15. *Nichols's Anecdotes*, vol. ix. 549.

† The first school, avowedly established in Great Britain, for the purpose of instructing adults, was formed in 1811, through the exertions of the rev. T. Charles, in Merionethshire. About the same time, and without any concert or connexion with the schools in Wales, an adult school was established at Bristol through the instrumentality of Mr. William Smith.

1811, *April*. The first attempt at printing by a machine was at this time. After many obstructions and delay, the sheet H of the *New Annual Register* for 1810, "Principal Occurrences," 3,000 copies, were printed by this machine; and is the first part of a book so printed.

1811, *Died*, ROBERT LODGE, printer and bookseller, of Woodbridge, Suffolk, where he had carried on his business with reputation for forty years, and died early in this year. His antiquarian tracts display considerable industry and research. His publications were, *Ordnances, &c. for Seckford's Almshouses in Woodbridge, Ato. Woodbridge Terrier, exhibiting an Account of all the Charters, with notes. Orders of the Free School in Woodbridge. Dowsing's Journal for demolishing Church Ornaments in Suffolk. History of Framlingham*, 1798.

1811, *May 22. Died*, GEORGE ROBINSON, an eminent bookseller of Paternoster-row, London. He was son of George Robinson, noticed at page 808, *ante*, and after the death of his father carried on the business conjointly with his uncle, John. His merits were accompanied by the most unassuming modesty; his good qualities were more solid than shining, more truly useful to himself and others than superficially glaring, or idly ostentatious. The successors to the extensive concern of the elder Mr. Robinson, were men of the highest integrity, and great skill in their profession. But the business was so immensely large, as to exceed their strength, when the grand pillar of the house was removed. Besides other unforeseen misfortunes, their exertions in trade were baffled in a single night, by the destruction of a printing office in which they happened to have property to a very large amount, by fire. Discouraged but not daunted, they met this misfortune with firmness, and for a long time struggled to free their vast affairs from the embarrassments which it had occasioned; but, finding their difficulties increase, instead of involving themselves still deeper, by resorting to the usual means of upholding a sinking credit, they met the evil day with resolution, and submitted their extensive concerns to an ordeal fatal to the credit of half the commercial world. They were declared bankrupts,\* and patiently investigated every account, and punctually fulfilled every engagement; a considerable surplus rewarded their labour and perseverance, and they rapidly emerged with the highest honour to themselves, their credit gathered strength from the shock, which a short time before had menaced its annihilation. The unremitting exertions of Mr. George Robinson, throughout the whole of these difficulties, perhaps, shortened his life; but he lived to see them crowned with success, and a comfortable provision made for those most dear to him.

1811, *May*. JOHN DRAKARD, proprietor and printer of the *Stamford News*, sentenced to pay a fine of £200, and to be imprisoned in Lincoln

jail for eighteen months, for a libel on flogging the military. The paragraph had been copied from the *London Examiner*. A subscription of £400 was raised towards the support of Mr. Drakard. He published the *Life of Colonel Wardle*. 1810.

1811, *May. Died*, MR. WALL, bookseller, at Kew, near London, where his family had been known for upwards of one hundred years, as booksellers, stationers, newsmen, and keepers of the circulating library since the commencement of that institution.

1811, *May. Died*, ALEXANDER BARTHOLOMAN, proprietor and printer of the *York Herald*, and one of the common councilmen for Walmgate ward, in the city of York, aged forty-nine years.

1811. *Account of the London Daily Newspapers*, 8vo. by James Savage, author of the *Librarian*, and some time assistant librarian of the London Institution.

1811, *July*. The printers, booksellers, type-founders, and press makers, of Holland and the Netherlands, were, by a decree published at Amsterdam, to have their names and residences registered.

1811, *Aug. 30. Died*, JOHN CRICKETT, of doctors' commons, marshal and serjeant-at-arms of the high court of admiralty. He was master of the stationers' company in 1810. He died at Hyde house, Edmonton, aged seventy-eight.

1811, *Aug. 31. Died*, HUGH BROWN, many years printer of the *Morning Herald*.

1811, *Aug*. The patent of king's printer for Ireland renewed for forty years.

1811, *Sept. Died*, WILLIAM TESSEYMAN, many years a respectable bookseller at York. He died at Beverley.

1811, *Sept. 25. Died*, JOSHUA EDDOWES, a respectable printer and bookseller at Shrewsbury, in the eighty-eighth year of his age.

1811, *Nov. 1. HENRY WHITE*, proprietor and editor of the *Independent Whig*, London, was tried but acquitted, for a libel, having been previously confined for three years in Dorchester jail.—See page 832 *ante*. In December, a meeting was held at the Crown and Anchor Tavern, in support of Mr. White, who for several years contended against the entire power of the crown lawyers. The following resolutions were carried:

1. That the liberty of the press is an inseparable part of a free constitution, and that they must exist or perish together.

2. That it appears to this meeting, that the manly and judicious conduct pursued by Mr. White, in his late struggle with the strong arm of power, in refusing to submit to a false confession, or to suffer judgment to go by default, has done signal service to the cause of truth.

3. That, taking into consideration the personal sufferings he has undergone in his banishment from society in a distant jail; the expenses incurred in the support of himself and printer, in their three years' imprisonment, and the consequent difficulties to which he is now exposed; it is earnestly recommended to the friends of

\* At the sale of the Robinsons', the copyright of *Vyse's Spelling Book* sold at the enormous price of £2500, with an annuity of fifty guineas to the author.

constitutional freedom, in whose cause the sacrifice has been made, to follow the example of the present meeting, and generously step forward to afford him that remuneration which he appears to be so justly entitled to.

1811, Nov. 12. *Died*, JOHN HAYES, bookseller, High Holborn, aged seventy-four. The abilities of Mr. Hayes were of no ordinary class, and his erudition very considerable.\*

1811. *The Gleaner*, a series of periodical essays, selected from papers not included in the British Essayists, four vols. 8vo. By Nathan Drake, M. D. He died at Hadleigh, in Suffolk, 1836, aged seventy years.

1811. *Town Talk; or, Living Manners*, 8vo. by John Agg.†

1811. *The Philosopher*. This periodical was the production of general Sarrazin.‡

1811. *Essays, Literary and Miscellaneous*, by Dr. John Aikin.§

1811. *The Times*, by A Bickerstaffe. These essays appeared in the *Gentleman's Magazine*.

1811, June 29. *The Westmoreland Advertiser and Kendal Chronicle*, No. 1, printed and published by Richard Lough|| at Kendal. It was long a subject of wonder and regret, that the county of Westmoreland should not produce a permanent newspaper before this period; though Kendal, so early as the time of Camden, was a very populous and respectable town.

1811, July 5. *The Liverpool Mercury*, No. 1, printed and published by Egerton Smith & Co.

1811. *The Montrose, Arbroath, and Brechin Review*, established, and was for many years distinguished by great ability of writing, while under the management of the late Mr. Watt.

\* A Mr. Samuel Hayes, a very respectable bookseller, in Oxford-street, London, was induced in the line of his profession, during the peace of Amiens, to visit France; and was for many years detained a prisoner by order of the French government.

† John Agg served his apprenticeship to a printer and bookseller at Evesham, after which he established himself in the same capacity at Bristol, where he published a newspaper under the name of the *Mercury*. He also proposed to print by subscription a *History of Bristol*, in numbers, but the design failed, and the author also. He then repaired to London, where he continued to live by writing and compiling various books, some of which possess ingenuity. In 1814 he was confined in the king's bench prison for a libel on Thomas Best, esq.

‡ General Sarrazin quitted the French service in 1810, and came to England from Cherbourg. Soon after his arrival here he made the most extravagant demands on our government for supposed services, which he valued at £3,000 a-year, £50,000 for what he had sacrificed, and £10,000 for immediate use, besides the rank of lieutenant-general, and other items equally moderate. He was the author of the *Confessions of Bonaparte to the cardinal Maury*, 8vo. *Memorial to the English Government*, 8vo. 1811. *History of the War in Spain and Portugal*, 8vo. 1813. This work gives a luminous view of the great scenes which occurred in the Peninsula, from the commencement of the contest, in 1807, to its termination in 1814.

§ Dr. John Aikin was born at Kibworth, in Leicestershire, Jan. 15, 1747, and died at Stoke Newington, Dec. 7, 1825. He originally practised as a surgeon, afterwards settled as a physician at Yarmouth, Norfolk, and for many years resided at Stoke Newington. He was the author of many essays in the *Monthly Magazine*, the *Athenaeum*, the *Classical Journal*, and the *Reflector*. Of the first he was editor for many years, and also of the second from its commencement to its close. He was also the author of a *General Biographical Dictionary*, in 10 vols. octo. published between the years 1799 and 1815, and other works of merit.

|| Richard Lough died at Kendal, Feb. 9, 1831, aged 41.

1812, Feb. 7. *Died*, JOHN PAUL MANSON, bookseller, King-street, Westminster, and afterwards of Gerard-street, Soho. Of him Mr. Dibdin observes, "In the present Caxton-loving age, with what avidity would such a number of this printer's books be sought after. They will rarely ever again appear in one collection so numerous or so perfect. I am well acquainted with the skill and liberality of Messrs. Payne, White, Egerton, and Evans—that these know and love Caxton as well as Aldus, Froben, and the Stephensens; but I question if, in the ocean of English black-letter, they have taken quite so deep a plunge as Mr. Manson, of Gerard-street, Soho. It is due to the spirit and perseverance of this latter bookseller, to notice his love of the imprints, colophons, and devices of our venerable English typographers. Professor Heyne could not have exhibited greater signs of joy at the sight of the Townley manuscript of *Homer*, than did Mr. Manson on the discovery of *Rastill's Pastimes of the People* among the books of Mr. Brand. If I wished for a collection of Rembrandt's or Nanteuil's prints, or of old portraits and black-lettered books, catalogued, I would, with the utmost confidence, resign the whole to the integrity and discrimination of Mr. Manson."—*Director*, vol. II. p. 38.

1812. A splendid mode of printing in burnished gold letters was invented by the late Mr. John Whittaker, an ingenious and eminent book-binder of Queen-street, Westminster; and who executed an edition of magna charta, from the original manuscript deposited in the British museum, on royal purple satin, and on superfine vellum paper.\* He also executed a most singularly splendid work in letters of gold, of the august ceremonial of the coronation of George IV. the execution is truly superb, and reflects the highest honour on the artist. As a binder, Mr. Whittaker was celebrated as the restorer of deficient portions of the works printed by Caxton and other early printers, by the use of brass type. He introduced a new style of binding, to which the name of *Etruscan* has been given.

1812. A fac-simile of the *Book of Psalms* was printed from the same manuscript and types as the *Codex Alexandrinus*, and published by the rev. H. H. Baber, one of the librarians of the British museum. The art of printing with types, so formed as precisely to resemble the characters of manuscript, was first practised at Florence, in the year 1741, when a fac-simile of the celebrated Medicean *Virgil* was published in small

\* Mr. Craspelet, a celebrated Parisian printer, well known for the beautiful editions which have issued from his press, made several experiments towards printing in gold letters: at length he succeeded, and executed in this style twelve copies of Audibert and Viollet's *Œuvres de Ronsard*. Callican, however, does not speak in the most favourable terms of these typographical refinements.—*Callican, Dict. Bibl.* tom. iv. p. 36. What his opinions might be at this time, on viewing the splendid productions of the British press, in gold, we cannot say.

† This style he employed for the binding of many of the copies of the Magna Charta, which is of a magnificent description. The covers are nearly a complete mass of gold ornament, appropriate to the times of king John. It is lined with crimson silk, richly gilt.

4to. This mode of printing has chiefly been confined to the rarest manuscripts; which, being liable to decay, have thus been preserved for every valuable purpose of collation.

1812, Feb. 12. Died, ANDREW CHERRY, an eminent dramatist. He was the eldest son of Mr. John Cherry, a noted printer and bookseller, in the city of Limerick, in Ireland, whose ancestors possessed a considerable estate, on which they for centuries resided, near Sheffield, in Yorkshire. They were of the persuasion of Friends, one of whom, disclaiming the mild tenets of the primitive church, and possessing a thirst for martial glory, followed the fortunes of William III. of England, and fought under him as cornet of horse in all the Irish wars, at the end of which he married an Irish lady, and settled at Croome, near the city of Limerick. Andrew Cherry was born in the city of Limerick, on the 11th of January, 1762, and received a liberal education. At eleven years of age, he was placed under the care of Mr. James Potts, a respectable printer, of Dame-street, in the city of Dublin; but a desire for the stage induced him to quit his original profession, about the time he had completed his apprenticeship. He was the author of the comedy of the *Soldier's Daughter*, 1804, and the *Travellers*; or, *Music's Fascination*, an opera.\*

1812. Queen Charlotte caused a printing press to be erected for her amusement at Frogmore-lodge, near Windsor; but the only publications from it were five sets of *Historical and Chronological Cards*, and two volumes of *Translations from the German*, in prose and verse.

Make us eternal truths receive,  
And practice all that we believe.—Dryden.

Printed by E. Harding, Frogmore-lodge, Windsor. 12mo. pp. 112. There is a leaf following the title, with this inscription:

"The gift of the queen to her beloved daughters—Charlotte-Augusta, Matilda, Augusta-Sophia, Elizabeth, Mary, and Sophia: and, with her majesty's permission, dedicated to their royal highnesses, by the translator. Ellis Cornelia Knight."

The other, entitled *Miscellaneous Poems*, with the same imprint and date, 4to. pp. 99. To each of these is prefixed a neat vignette of Frogmore-lodge. Only thirty copies of each work were struck off, and the press ceased.

1812, March 11. The valuable printing-office established in the mansion-house at Serampore, in the East Indies, conducted by the rev. William Carey, and his colleagues, was totally destroyed by fire; which consumed seven hundred reams of English paper, expressly sent out

for the Tamul and Cingalese New Testaments. Every thing in the office perished, except the six presses, which were in a side-room. Altogether two thousand reams of English paper, worth five thousand pounds, were lost; also founts of type in fourteen languages (besides English), together with the cases, imposing stones, brass rules, chases, and all other furniture. Printed books perished to the amount of 5,000 rupees; and manuscripts of the value of 7,000 rupees: the total loss was not under seven thousand pounds sterling. Nine editions of the New Testament, and five of the Old Testament, were stopped by this accident. But providentially no human life was lost in the calamity, and no man's health was injured. The important matrices were saved, and the paper manufactory was not damaged. The missionaries, not dispirited, speedily returned to their work; they recast types from the metal which the fire had melted; so that by the month of June, six out of twelve versions of the scriptures were again in progress. See their *Third Memoir of Translations of the Scriptures*.

1812. *The Bloody Journal*, kept by William Davidson, on board a Russian pirate, in the year 1789. Mediterranean: printed on board his majesty's ship *Caledonia*. 1812. 8vo. 34 pages, four of preface. This man served on board his majesty's ship *Niger*, in 1791, then under the command of admiral sir Richard Keates. The journal contains a horrible narrative of the enormities committed by the crew of the pirate, in which Davidson acknowledges that he and other Englishmen on board took the most active lead. He was afterwards accidentally drowned, while in his majesty's ship *Royal George*. Sir Walter Scott, who had heard of the existence of such a memoir, desired to find a poem upon the subject; obtained an authentic copy in 1811, which sir Richard Keates verified, with some further particulars of this man's story. But, on perusal, sir Walter Scott pronounced it too horrible for versification, and inserted the substance of it in the *Edinburgh Annual Register*, in 1812. A copy of this work is in the library of Corpus Christi college, Oxford.

1812. *The Cheap Magazine*, printed and published by George Miller, Dunbar, Scotland. This publication was one of the first attempts to diffuse a pure and useful literature among the less educated portion of Scotland. Mr. Miller was the author and compiler, and does equal credit to talent and intention. He was also the author of a work entitled *Popular Philosophy*; or, the *Book of Nature laid open*. Mr. Miller died July 23, 1835; and the following lines are from some verses to his memory.

\* Mr. Andrew Cherry was written to, with an offer of a very capital engagement from a manager, who, on a former occasion, had not behaved altogether well to him. Cherry sent him word, that he had been bit by him once, and he was resolved that he should not make two bites of A Cherry. At another time, in 1798, while performing *Druggell* with Lewis's *Sir Charles Rackett*, at the theatre-royal, Manchester; when in the quarrel scene, Cherry observes,—"Egad, he looks as if he was going to eat me." "Eat you!" (replied Lewis) yes—damme, I would not make two bites of A Cherry."

Within thy native district, first to rear  
The "Press," which in thy hands, was doomed to wear  
A chaster form:—No more, from door to door,  
The lounging pedlar hawked his poisoned lore;  
For now subservient to one virtuous end,  
Amusement with instruction, thou didst bend.  
And, in a where Brougham and Chambers blaze in day,  
Thou "went before, and gently cleared the way;"  
Unmindful of the magic of a name,  
In secret toil'd, and "blush'd to find it fame!"

1812, *March 25. Died*, GEORGE FREDERICK COOKE, a theatrical performer of the highest merit. He was born at Westminster, April 17, 1756. His father was a subaltern officer in the army, who, dying when young, left his wife in straitened circumstances. She went to reside at Berwick-upon-Tweed, where George Frederick was apprenticed to a printer; but he neglected the labours of the office, and engaged the *devils* and others of his companions, to assist him in performing plays. In consequence of this conduct, his indentures was cancelled, and he was dismissed. He was then tried in the navy, but his inclination for the stage overcame all restraint, and he at length joined an itinerant company of actors. He soon became the hero of the scene, and was engaged at York, Newcastle, Chester, Manchester, Liverpool, and other places. He acquired so much fame, that in 1794, he was engaged by the Dublin managers, where he performed four years. At length he made his appearance before a London audience, at Covent garden theatre, October 31, 1800, in the character of Richard III. His reputation was at once established as a histrionic performer of the first order. The talents of Cooke were obscured by indulgence in pernicious habits of intemperance, which ultimately destroyed his popularity.—Owing to the irregularity of his conduct, Cooke became the plague and terror of English managers; few, if any, of whom probably regretted his removal to the United States, where he had formed a theatrical engagement. In America he displayed the same powerful abilities, and the same vicious weakness, which had distinguished him in his native country. Death, hastened by intemperance, put an end to his career. He married Miss Alicia Daniels, a lady possessed of considerable talents as a public singer, whom he treated with great cruelty, and from whom he was separated in July, 1811, by a decree of the ecclesiastical court.\* It ought to be noticed, to the honour of the late Edmund Kean, that, during his visit to New York, in 1821, he erected a monument to the memory of Cooke, in the church of St. Paul, with the following epitaph:

Three kingdoms claim his birth,  
Both hemispheres pronounce his worth.

1812. During the months of May, June, and July, the noble collection of books belonging to the late John duke of Roxburghe,† was sold by auction, by Mr. Evans, at his grace's late residence, in St. James's-square, London. Few sales, perhaps, ever demanded and occupied so ample a share of public attention, as this of the late duke of Roxburghe, which lasted *forty-five days*, and called forth a competition of prices hitherto unrivalled in the annals of literary history. It is supposed that this library cost its late owner not more than £5,000, and produced

about £23,341. After the auction, a list of the prices was published, both on small and on royal paper, with references to the number of the lots. No. 6292 was the far-famed *Il Decamerone di Boccaccio*, fol. ediz. Venet. Valdarfer. This is certainly one of the scarcest, if not the very scarcest book extant. No other perfect copy is known to exist, after all the fruitless researches of more than 300 years. The biddings for this precious *morceau* were keen indeed: it was finally carried off by the marquis of Blandford, for TWO THOUSAND TWO HUNDRED AND SIXTY POUNDS! On the 17th of June, to commemorate this extraordinary sale, the *Roxburghe Club* was formed in London, consisting of thirty-one of the most eminent book-collectors in the kingdom—Earl Spencer, president.\*

### Bibliomaniac Ballad.

To the *Roxburghe Club*, by way of dedication,  
And all *black letter bugs* who have passed  
initiation: *These.*

MY late good-natur'd Eame oft would preach long & sage,  
Censure idling of youth, extol virtues of age:  
For he lov'd his old acres, old woods, and old rooks,  
And his old easy chair, with old wine, and old books.

As he's dead, it were well in his library seat,  
Conning technical phrases that he'd oft repeat,  
And old printer's names from their colophons catch,  
To write life, bibliographic:—take scrip of the sketch.

Though born *Georgii primi* he a CAXTON would prize  
'Bove ten full-bottom'd CAXTON to curl round his eyes:  
And the spell of *black letter* he ne'er thought absurd,  
For young *bibliomaniacs* love WYNNETH THE WORDE.

In a *rebus* no lady was half so deep read,  
Or statesman with devices ere cram'm'd so his head;  
He his *crests* thought unknown, but for WHITEHOUSE  
would pray,

And in dark WYNNETH'S morn, cry: "*arise, it is DAY!*"

Long a *LEONATE* he sought, and a *HOOD* kept with care,  
For saints, JULIAN NOTARY, and CHRISPIN were there;  
Though proud of an *EMPROUSE*, he'd an *OLIVE* display,  
But like *TOBE* to the poor he'd gave FANNY away.

No *POAST* he knew, he would swear by the *ROOD*,  
Had oak covers to equal his *BLACE*—or CAWOOD.  
That the *FIELD* and the *SHAW*, and the *BANES* dear at hand,  
Were unrival'd, except by his way—and COPLAND.

On the tow of dame fashion he laid little stress,  
Save *WOT-TON* and *SINGLE-TON* in *rebus* we guess;  
While *ORAP-TON* with *MIDDLE-TON* stood cheek by jowl,  
*Unique* mayster *TOLLING-TON* raptur'd his soul.

Oft with smile showing JOY he call'd ENGLAND his own;  
Boasted *BARLEY* though *short* and his *COARNE* stain'd and  
BROWN,

When *LYNNETH*'S goals were *foe'd* he'd a simile steal,  
'Twas in DO CASE to sacrifice ABRAHAM'S TALE.

He as *FISHER* caught *PRIZE* (Wallon tells no such thing)  
While the barb of his *HOUSE* held the BATE for a LING:

\* One of the principal founders of the Roxburghe club, was the late Joseph Haslewood, esq. and who at his death, which took place at London, Sept. 21, 1835, in the sixty-fourth year of his age, left a very curious manuscript volume, tracing the rise of that society, which emanated from the literati who attended the sale of the duke of Roxburghe, under the quaint title of the *Roxburghe Review*, and which records the annual festivities of the club from its first meeting, in 1812, to 1835, at the Old St. Alban's tavern, London. Although neither a classical scholar nor an elegant writer, Mr. Haslewood was a laborious and faithful editor of many rare and beautiful reprints of early English poetry and prose, which otherwise might have perished; and assisted several members in correcting and printing the volumes which they occasionally presented to the society.

\* *Memoirs of the celebrated George Frederick Cooke, esq. late of the theatre royal, Covent-garden*, 3 vols. 8vo. published in London, in 1813. By William Dunlap, some time proprietor of the New York theatre, and author of several dramatic pieces, printed in America.

† John Ker, third duke of Roxburghe, died March 19, 1804, aged sixty-four years.

Then he'd cousin a chapman of knight to the treat,  
Which the suttler and cooke serv'd with oaked that  
was best.

Wise or wode he would wont a bold rider gave bills,  
With stiverd & siverd seeking iohn, nice, and will's,  
As a fooler he'd wyte that no woodcocke could spring;  
At the more, or in marshes, oast of melin like siverd.

As he tipped his yocoras, malmey, or sack,  
With rinson like redel, standing close at his back,  
He held converse with setherst, godfray, or pagder,  
Or would chaunt all the carols of sels\* with new shakes.

If careless with billy machina he safe,  
A wolfe upon this side, and a lyon on that,  
Why his forther, or carter, or shepheard was bid,  
Of late, to place nelson as a guard to his sid.

Inkmoor as 'twas princely he ne'er would complain,  
That no splinter once prest him when luste fill'd his  
brain;  
He in sheets long'd for widows: widow redman his joy,  
He clasp'd widow charlewood and kept sverd to toy.

Thus his heart was wound, as love's bowe gave room,  
Widow yettwist was there, & the widows joan broome,  
Joan wolfe and joan erwin, and while soft thing's he'd  
utter,  
Of famous joan juode, he would melt for joan sutter.

The sygne of the sunne might its radiance exhaust,  
To count up from treveris to old german faust:  
He had powell for ireland, leekewir the scott,  
But wiche thackwell, uncertain, my name never got.

When his flower was crop'd he'd show mantell uncut,  
He'd a vowel insid, and made serey tax strut  
By Charles Lewis in hogkin, who bound his fall man,  
'Twas with scakley in bonds, dexter gliding the van.

Here learned clarker's pen might most glowingly speak,  
Of the bright blazing red in the letters goldiques:  
Of margins illumina'd, and how borders dyping  
Death and cardinal virtues, inviting to pray.

Then rich missal unfold, where the painter bears part,  
Whose colouring, though matchless, shows infantine art.  
In romance seek a monster that with no text agreeeth,  
Nor thing heavenly, earthly, or in wave beneath.

Nor forget the wood cuts that such raptures afford,  
Whose inventor founds lineage of Andreas Boorde:  
And refer for choice specimens stole from that mini,  
Unto Dirdin's new Ames, or a Tripprook's reprint.

But he's gone—can one trifler his memory save,  
Can his bishop inter him? his rove wal-de-orave?  
With but putting in boards can his spirit be fed?  
Why he ne'er got a copy until he was dead!

Ah, no, with his selumes would tarry his soul,  
Could folios, could big-belly'd quartoe control,  
Or octaves et infra; day, studious be seen  
With a twelves in morocco, or russia sixteen.

Shade of PATERSON, shall his collection disperse,  
And one alphabet crush every class prose and verse?  
Nor tell all that the imp, on fly leaf can portend?  
Nor imp: that he hallow'd and no devil could mend?

What his coll. and per. means, leave the novice to guess;  
Or, when made in fac-simile per. by M.S.  
Leave surprise and delight for manical lover,  
Neat joints, hollow back, and small squares to discover.

Leave EDITIO PRINCEPS, uncut, unique, rare,  
With small caps, and italics, friend LEION to declare  
By large paper catalogue at hammer's declension,  
As BEN measures margins to enter commission.

CHRISTOPHER VALDARFER.

The book trade, particularly that branch denominated "the rare and curious," was never in such a flourishing state as at the period of the dispersion of the magnificent library of the duke of Roxburghe: then truly was *Bibliomania* at its

height—every book stall was ransacked for old books, and the price rose with the universal desire to possess them: the infatuation was compared to the tulip mania;\* yet a few years afterwards, the late earl Spencer became the purchaser of the identical *Decamerone* of Boccaccio, for less than £900. The taste for book rarities seems to have passed away in a great degree. One volume, which sold at the Roxburghe sale for £150, was offered by Longmans', in Paternoster-row, for a third of that sum, and no desire was evinced by any "bibliomaniac" to possess it.

1812. At this time there were only twelve working wood engravers in London.

1812. *Died*, HENRY FAULKNER, celebrated as a honest, industrious, and excellent bookbinder, who, in his mode of rebinding ancient books, was not only scrupulously particular in the preservation of that important part of a volume, the margin: but in his ornaments of tooling, was at once tasteful and exact. Faulkner, after thus giving satisfaction to his patrons, and bidding fair to be the first binder of his day, died of a consumption, leaving a large family, which, it is but justice to state, were materially assisted by those who had respected their father.

1812, April 30. *Died*, HENRY LEMOINE, bookseller, who was for many years known to the trade as a translator of German and other languages, and compiler of many of the numerous tracts with which London abounds; he was also a frequent contributor of poetical essays to the *Gentleman's Magazine*; and other periodical works: he had for some years been a bookseller, in Bishopsgate church-yard. He published, in 1797, *Typographical Antiquities*; history, origin, and progress of the art of printing, from its first invention, in Germany, to the end of the seventeenth century; and from its introduction into England, by Caxton, to the present time: including, among a variety of curious and interesting matter, its progress in the provinces, with chronological lists of eminent printers, in England, Scotland, and Ireland. Together with anecdotes of several eminent literary characters, who have honoured the art by their attention to its improvement; also a particular and complete history of the Walpolian press, established at Strawberry-hill—with an accurate list of every publication issued therefrom, and the exact number printed thereof. At the conclusion is given a curious dissertation on the origin of the use of paper; also a complete history of the art of wood-cutting and engraving on copper, from its first invention in Italy, to its latest improvements in Great Britain: concluding with the

\* The tulip mania reached its height in the city of Haarlem, in the years 1636-7, when 16,000 florins were known to have been paid for a single root of that flower.

† Mr. Lemoine was the author of some verses to the memory of Mr. Francis Eginton, of Wandsworth, near Birmingham, justly celebrated for his ingenious discovery of painting and staining glass for surpassing that of the ancients, in which his numerous works (of which a good specimen may be seen in the window of stationers' hall, London, presented to that company by alderman Cadell,) will long continue a monument of his unrivalled abilities. He died March 25, 1805.

\* The faint rays of a well-preserved youth illumined his eyes, even at the verge of ninety-six, at the first perusal of those singular specimens of ancient Christmas melodies, reprinted in the *Bibliographical Miscellanies*, Oxford, 1815. It would be difficult to describe his joy when informed by his bookseller, that he had secured for him the last remaining copy.

adjudication of literary property, or the laws and terms to which authors, designers, and publishers are separately subject; with a catalogue of remarkable bibles and common prayer books, from the infancy of printing to the present time. Extracted from the best authorities, by Henry Lemoine, bibliop. London.

1812, *May. Died*, JOHN DAUAY, printer and bookseller, Lincoln, aged seventy-two years.—He was postmaster of the city of Lincoln, and father of Mr. DAUAY, printer, at Stafford.

1812. The sheets *c* and *z* of Clarkson's *Life of William Penn* were worked off by an entirely cylindrical press, which, with the aid of two men, worked off eight hundred sheets within the hour.

1812, *Aug.* The printing office of Mr. Flood, with several houses, at Canterbury, entirely consumed by fire, which threatened great devastation.

1812, *Aug.* DANIEL LOVELL, proprietor of the *Statesman*, sentenced, in the court of king's bench, to pay a fine to the king of £500; to be imprisoned in Newgate for eighteen months, to be computed from the expiration of his former sentence; and, at the end of the further term, to find security for three years, himself in £1000, and two sureties in £500 each, for a libel upon the commissioners for the transport service.

1812, *Oct. 9. Died*, DANIEL OGILVY, bookseller, of Middle-row, Holborn, London, aged seventy years. He died at Southgate.

1812, *Oct. 17. Died*, FRANCIS HODSON, many years proprietor, printer and publisher of the *Cambridge Chronicle*, aged seventy-five years. He had brought up a family of nearly twenty children.—Mrs. Hodson died Feb. 27, 1804.—Mr. Edward Hodson, their eldest son, who had succeeded to the business, died in Oct. 1817.

1812, *Oct. Died*, JOHN BARTLETT, printer, at Oxford, who came to a sudden death by falling into a hole on the castle hill, where he was conducting some friends for the purpose of viewing the city. He was in the 26th year of his age, and, after lingering nine days, he was removed by death from the bosom of an affectionate family, and a numerous circle of friends.

1812, *Nov. Died*, MYLES SWINNNY, nearly fifty years printer and proprietor of the *Birmingham Chronicle*. He died at Ashted, near Birmingham, aged seventy-four years.

1812, *Nov. Died*, JOHN WALTER, principal proprietor of the *Times*, London newspaper, in the seventy-fourth year of his age. It was reported that Mr. Walter had obtained a pension or sinecure of £700 a-year from Mr. Pitt.

1812, *Dec. 9.* JOHN and LEIGH HUNT, proprietors and editors of the *Examiner*, London Sunday newspaper, were found guilty in the court of king's bench, of a libel on the Prince Regent, and sentenced to two years' imprisonment each; to pay a fine of £500 each; and to find security for their good behaviour. The libel purported to be a reply to some fulsome verses on his royal highness, which had appeared in the *Morning Post*, in doggerel verse.

1812. *The Complete Family Bible*, with illustrative Notes, 2 vols. 4to. by the rev. John Styles.

1812, *Dec.* The university of Cambridge brought an action against the printer of Heywood's *Remarks on the Memoirs of the right hon. Charles James Fox*,\* for not delivering to them the copy, which, after entry, ought to have been delivered to them by the warehouse keeper of the stationers' company; and, after a trial and solemn argument, a judgment was given against the printer—according to the 8th of Anne.† By this odious and oppressive tax, eleven copies of every new work was levied on the publisher. One copy being claimed, of right, by the British museum, Sion college, and the universities of Oxford and Cambridge, in England—in Scotland, by the universities of Aberdeen, Glasgow, and Perth; the university and the advocates' library, at Edinburgh—in Ireland, by Trinity college and the king's ions, Dublin. This is an unjust, because an unequal tax, for eleven copies are to be given, whether a work is worth one guinea or ten; so that a publisher who prints 1,000 copies of a work, which sells for one guinea, has to pay only eleven guineas out of 1,000; whereas, another, who publishes only 100 copies of a work worth ten guineas, has to pay a tax of 110 guineas out of the same sum of 1,000. The above trial took place on the instigation of Edw. Christian, esq., and the pamphlet he printed, in 1807, (noticed at page 826 *ante*) was to render imperative and unavoidable this heavy tax upon literature. In answer to various arguments, that the expense of eleven copies seems altogether insignificant, and would hardly be felt, take the following facts:

Longman & Co. for the years 1812, 1813, & 1814, £5000	
White, Cochran, and Co. for the last 12 years on the quartos and folios alone, without including octavos and others. . . . .	5289
Cadell and Davies, for the last four years on the small paper copies . . . . .	1291
On ten books to one publisher . . . . .	5196
Daniels's Oriental Scenery . . . . .	2310
On Sibthorpe's Flora Græca . . . . .	2500
On Rees's Encyclopedia . . . . .	1406
Encyclopædia Londinensis . . . . .	1496
British Gallery of Engravings. . . . .	1963

1812. *The Friend*, by S. T. Coleridge.‡

1812. *Poetical Magazine*, published by Mr. Ackermann, of the Strand, London. It was in

\* The right hon. Charles James Fox was born Jan. 13, 1749, died Sept. 13, 1806, and buried in Westminster Abbey. For the *History of the Reign of James II.* 4to, commenced by Mr. Fox, and finished by his nephew, the present lord Holland, Mr. William Miller, bookseller, of Albemarle-street, London, gave £4,500, the largest sum then on record given for a work.

† *The Rights of Literature, or an inquiry into the policy and justice of the claims of certain public libraries on all the publishers and authors of the united kingdom, for eleven copies on the best paper of every new publication.* By John Britton. 8vo. 1814, Longman and Co.

By the statute 6 and 7 William IV. c. 110. the six named colleges—Sion college, London; the four universities of Scotland, and the king's-ion library, Dublin, are no longer liable to such copies: and they are to receive such annual sum from the government for any loss such library might sustain.

‡ Samuel Taylor Coleridge was born at Ottery St. Mary, Devonshire, in 1773, and educated at Jesus' college, Cambridge, and was one of those who formed what was called the *Lake School* of poets. He died 1834.

this publication that the celebrated *Tour of Dr. Syntax in Search of the Picturesque*, with engravings by Thomas Rowlandson,\* appeared.

1812. *The Scotchman*, published at Glasgow.  
1813, Jan. *Died*, GOTLOB SCHUTZLER, many years an eminent bookseller at Bristol.

1813, Jan. The following papers were published in London:—Eight morning; seven evening; seven every other evening; sixteen Sunday; eighteen other weekly. There were also published in the country 280 weekly publications throughout Great Britain and Ireland.

1813. *Bread and Bulls*, an apologetical oration, on the flourishing state of Spain in the reign of king Charles IV. delivered in the Plaza de Tores, Madrid, by don Gaspar de Jovellanos. Mediterranean: printed on board his majesty's ship, *Caledonia*, off Toulon. 4to. pp. 96.

The speech of doctor D. Antonio Joseph Ruiz de Padron, deputy to the cortes from the Canary Islands, spoken in the sitting of Jan. 18, 1813, relative to the inquisition.

The translation of these two political pamphlets is dedicated to vice-admiral sir Edward Pellew, bart. afterwards lord Exmouth, commander in chief in the Mediterranean.

1813, Feb. 21. *Died*, HENRY BALDWIN, printer of the *St. James's Chronicle*. He was (except one) the oldest member of the company of stationers, of which he had been a liveryman fifty-seven years, and was master in 1792. As a printer, he was of the old school—bred under Mr. Justice Ackers, of Clerkenwell, the original printer of the *London Magazine*; and he commenced business for himself under the most promising auspices—first in Whitefriars, then in Fleet-street, and finally in Bridge-street, in a house built purposely for him. Connected with a phalanx of the first-rate wits, Bonnel Thornton, David Garrick, the elder Colman, Stevens, and others, commenced the *St. James's Chronicle*, on the foundation of a very old newspaper of nearly the same title; and had the satisfaction of conducting it to a height of eminence unknown to any preceding journal. From early association with men of eminence both in the literary and fashionable world, Mr. Baldwin had acquired elegant habits, and, without any profound stock of literature, he sufficiently cultivated a mind naturally strong, to render his company and his conversation in the highest degree acceptable. But the firm rectitude of his mind, the real

tenderness of his heart, and the sincerity of his attachments, were best known in his domestic circle, and by his choice friends, who regretted in him the loss of one, who, in a rare and peculiar manner, united the sometimes opposed virtues of justice and generosity. About 1810, he lost two brothers, one older, the other younger than himself, and an only sister, all of a good old age; but their loss had a very visible effect on his usually cheerful spirits. Mr. Baldwin left two sons and three daughters, and a widow.

1813. A private press was erected at Lee priory, near Canterbury, the residence of sir Samuel Egerton Brydges, bart.\* The following notice of its origin is taken from his *Autobiography*, page 191, vol. 2. "In 1813, a compositor and pressman (Johnson† and Warwick) persuaded me, with much difficulty, to allow them to set up a private press in the priory. I consented, on express condition that I would have nothing to do with the expenses; but would gratuitously furnish them with copy, and they must run all hazards, and, of course, rely on such profits as they could get. These printers might have done very well if they had been decently prudent. They quarrelled as early as 1817, and Johnson quitted. The press was not finally given up till Dec. 1822."—See Martin's‡ *History of Books Privately Printed*, and Dibdin's *Bibliomania*.

1813, March 5. HENRY WHITE,§ proprietor and editor of the *Independent Whig*, was tried and found guilty, in the court of king's bench, of publishing a libel on the duke of Cumberland,|| insinuating that his royal highness was the murderer of his servant, Sellers; for which Mr. White was sentenced to fifteen months' imprisonment in Newgate, and to pay a fine of £200.

\* Sir Samuel Egerton Brydges died Sept. 8, 1837, at Grosjean, near Geneva, aged 75 years. He was addicted to poetry from very early life, and began printing his effusions about 1796. The most admired of these was a sonnet called *Echo and Silence*. He was also a literary antiquary of great acquirements, and was the originator of *Censura Literaria*, *Restituta*, and *British Bibliography*. He published several tales of considerable merit, and his historical researches have thrown great light on obscure portions of our annals. Not a few of his ablest performances of this kind, and some of his longer poems, were printed abroad, particularly at Geneva, near which city he latterly resided in great seclusion. For several years he scarcely quitted his bed, and, nevertheless, continued his labours with all the ardour and confidence of youth. At one period he was in possession of a very valuable library of old English literature, and he availed himself of it in the many curious and interesting reprints made at his private press of Lee Priory. At the time he was in parliament, he had a notion that he was destined by nature to become a great statesman and orator. His manners were sometimes eccentric, but very kind and cordial, and he was a warm encourager of all whom he saw struggling into action, and, as he thought, deserving popularity; but his estimate was sometimes more amiable than judicious. During the latter period of his life he never shaved, and his white beard and hair gave him a most venerable and patriarchal appearance.

† John Johnson, author of *Typographia; or, Printers' Instructor*, two volumes London, 1824, and now a master printer in London. John Warwick has been dead some years.

‡ John Martin, who has distinguished himself in the literary world, was a bookseller in Bond-street, London, and succeeded J. H. Wiffin, author of *Asiatic Hours*, &c. who died May 3, 1836, as librarian to the duke of Bedford.

§ Mr. White died at London, May 1, 1828.

|| Ascended the throne of Hanover June 20, 1837.

\* This well-known and admired artist was born in Old Ewry, London, July, 1756, of a very respectable family, and to a very early period gave promise of his future talent. The many works which his pencil illustrated are existing evidences of this. Many successions of plates for new editions of those popular volumes, *Dr. Syntax in Search of the Picturesque*, *The Dance of Death*, *The Dance of Life*, and other well-known productions of the versatile pen of so late ingenious Mr. Coombe, will ever be regarded as monuments of his graphic humour. No artist of the past or present school, perhaps, ever expressed so much as Rowlandson, with so little effort, or with so small and evident appearance of the absence of labour. He died in 1827.

William Coombe, author of the *Tour of Dr. Syntax*, *Johnny Quae Genua*, and the papers entitled the *Modern Pictorial*, in *Ackermann's Repository of Arts*, &c. died in Lambeth Road, London, June 18, 1823.

1813. In an edition of the *Liturgy*, printed in 4to. at Oxford, the second line—"O Lamb of God, that takest away the sins of the world"—is printed (at the end) "*the sins of the Lord.*"

1813, *March 17. Died*, NOAH ROLLASON, printer, of Coventry, and upwards of twenty-five years proprietor of the *Coventry Mercury*.

1813, *March 25. Died*, NATHANIEL COLLIS, an eminent bookseller at Kettering, Northamptonshire. The general disposition of this worthy octogenarian rendered him truly respectable to a large circle of acquaintance, as well as his sympathetic regard for all in distress, and more particularly for the poor, whom he amply relieved in his life, and did not forget at his death. He retained the full enjoyment of all his faculties to the last. He was at one time in partnership with Mr. Dash, in the same town.

1813, *April 21. Died*, THOMAS CURTIS, formerly an eminent wholesale stationer, in Fleet-street, Newgate-street, and Ludgate-hill; which latter place he quitted some years previous to his death, resigning business to his only son. He had been more than fifty-five years a liveryman of the company of stationers; and few men were more generally beloved and esteemed; his mild and conciliating manners having uniformly secured the friendship of all who were connected with him, either in business or in domestic life. He died at Camberwell, in his seventy-seventh year, and was brother-in-law to Henry Baldwin.

1813, *May. Died*, JAMES BOWLING, aged seventy-five years, formerly proprietor, editor, and printer of the *Leeds Mercury*, which he revived in 1767, and conducted with a degree of integrity and firmness that honoured a free press. He was one of the few provincial editors who raised a warning voice against those fatal measures which produced the ruinous hostilities that severed the American colonies from the British empire. In the year 1794, he resigned the conduct of his journal, and lived in retirement, employing himself, as long as strength and mental energy existed, in acts of benevolence.

1813, *May. Died*, E. EDWARDS, bookseller, Ruthin, Denbighshire, aged seventy-eight years. For upwards of forty years he might literally be said to be as stationary as his counter, for, excepting upon real emergency, he never parted from it from morning till night. By penurious saving he amassed the large sum of £4,600 in the three per cent. consols, besides other property; the whole of which he left, jointly, between two daughters, and in default of issue, in equal proportions to the Chester and Liverpool infirmaries; restraining one of his daughters from marrying men whose names he specified.

1813, *May. Died*, W. CLACHER, many years proprietor of the *Chelmsford Chronicle*, at Cottage-place, near Chelmsford, aged eighty years.

1813, *May. The Censor*, a periodical published at Oxford.

1813. The art of printing was introduced at Rio de Janeiro, the capital of Brazil, in South America. A *Portuguese and English Grammar* by Freitag, was printed here in the year 1820.

1813, *May. RICHARD BRINSLEY SHERIDAN*,\* esq. M. P. for the town of Stafford, was presented by his constituents with an elegant vase cup, on which was engraved the following inscription:

To the Right Hon. R. B. SHERIDAN,  
the eloquent, intrepid, and incorruptible  
Guardian of that Palladium  
of all the Civil, Religious, and Political  
Rights of Freemen,  
The Liberty of the Press.  
This Cup is presented  
by his friends of Stafford,  
as a small Tribute of their unbounded Admiration,  
Irrevocable Esteem, and eternal Gratitude.

1813, *July. Died*, ROBERT SPENCE, one of the proprietors of that extensively circulated paper the *York Herald*, and son of the eminent bookseller of that name.† He died at York, aged thirty-four years.

1813, *Aug. Died*, BENJAMIN ROBERT HAYDON, an eminent printer and bookseller, at Plymouth, aged fifty-five years. He was a man universally esteemed for the excellence of his disposition, and the benevolence of his mind. He was never so happy as when he could render himself useful to his friends; whilst the cheerfulness and good humour which were so conspicuous in his manners and conversation, endeared him to all his acquaintance.

1813, *Aug. 11. Died*, HENRY JAMES PYE, poet-laureate,‡ who, if he did not possess great genius, was not deficient in the patriotic spirit of the times. He was born in London in the year 1745, and educated at Magdalen college, Oxford, where he was created LL.D. in 1772, and in 1784 was in parliament for Berkshire. Mr. James Pye resumed the practice of writing a new-year ode; but after 1796, neither new-year nor birth-day odes appear in the periodical publications; and we are therefore inclined to suppose that the serious events of the war put a final stop to this tom-foolery. He translated the war verses of Tyrtæus the Spartan, for the purpose of animating the British militia against the French; and a board of general officers, much impressed by their weight and importance, agreed to give all the effect in their power to his intentions. The verses were accordingly read aloud at Warley-common and Barham-downs by the adjutants, at the head of five different regiments, at each camp; and much was expected. But before they were half finished, all the front ranks, and as many as were within hearing or *verse-shot*, dropped their arms suddenly, and were all found fast asleep. Marquis Townsend, who never approved of the scheme,

\* Richard Brinsley Sheridan was the third son of the celebrated Thomas Sheridan, and born in the city of Dublin, Oct. 30, 1751. As a parliamentary orator Sheridan stands unrivalled, and in real patriotism displayed more than his great leader Mr. Fox. He was the author of many dramatic pieces, and his *School for Scandal* is the most popular, and perhaps the most legitimate comedy of modern times. He died in London, July 7, 1816.

† Died Aug. 11, 1824, in his seventy-sixth year.  
‡ A *Defence of Poetry*, addressed to Henry James Pye, esq. with a specimen of a new version of *Telemachus*. By J. D'Irneli, esq. 4to. 1790. The whole edition, excepting a few copies that had been sold, was burned by the author.

wittily remarked, that the first of all poets had observed, that *Sleep* is the brother of *Death*. This laureate, who consented to the commutation of his butt of wine for twenty-seven pounds, was succeeded by Mr. Robert Southey, the present occupant of the title and its accompanying pension, and the first man of true poetical genius who has held it since the dismissal of Dryden. It is rather curious to observe, that the laureates appointed by the Stuarts were uniformly men of a high order of genius, and that those nominated by the Brunswick sovereigns, during the whole of the first century of their sway, were, with the single exception of Warton, the dullest pretenders to poetry who existed in their respective lifetimes.

Robert Southey, LL.D. as a poet, biographer, and historian, is unquestionably one of the first writers of the age. He has long been known to the trade as an author of all work; and original writing, compilations, and editorial superintendence, have, in turn, called forth the powers of his intellect, and the resources of his varied and comprehensive knowledge. He was born August 12, 1774, at Bristol, where his father carried on an extensive business as a wholesale linen-draper; and he received his education at Westminster and Baliol college, Oxford, with a view to the church.

1813, *Aug. Died*, D. BRUEWMAN, proprietor of the *Sunday Monitor*, &c. and many years an active printer and publisher of the metropolis. He died at Holloway.

1813, *Sept. Died*, WILLIAM APPLETON, bookseller, at Darlington, in the county of Durham, aged sixty-three years.

1813, *Nov. 1. JOHN RUTHVEN*, printer, of Edinburgh, obtained a patent for a machine or press for printing from types, blocks, or other surfaces.

1813, *Nov. 20. Died*, JOHN BAPTIST BODONI, the celebrated printer of Parma, and no doubt, the most distinguished in his profession during the eighteenth century. He was born at Saluzzo in the Sardinian states, Feb. 16, 1740, of a respectable but humble family. He learned the rudiments of his art in the office of his father. In his earlier days he showed a taste for design, and at hours of leisure engraved vignettes on wood, which have been since sought for by the amateurs. At eighteen years of age a desire to improve his condition induced him to undertake a journey to Rome. He left Saluzzo with a school-fellow, Dominic Costa, who expected to receive assistance from an uncle, at that time secretary to a Roman prelate. The two friends proceeded on their journey, but their money failed. Bodoni, by selling some of his engravings on wood to printers, procured sufficient to enable them to get to Rome. But, upon their arrival there, Costa's uncle told them he could do nothing for them, and advised them to return. Bodoni, discouraged by this unexpected reception, yielded to the advice; but, before he quitted Rome, thought he would visit the printing house of the Propaganda. His general de-

meanour and vivacity attracted the notice of the abbaté Ruggieri, the superintendent of that establishment, and, after an explanation, Bodoni had the good fortune to be engaged there as a workman. In this employment he attracted the notice of the cardinal Spinelli, at that time the head of the Propaganda, who became his patron, and by whose advice he attended a course of lectures on the oriental languages, in the university of La Sapienza, and learned to read Arabic and Hebrew. Being intrusted with the printing of the *Arab-Coptic Missal*, and the *Alphabetum Tibetanum*, edited by Père Giorgi, he so acquitted himself, that Ruggieri put his name at the end of the volume, with that of his town: *Romæ excudebat Johannes Baptista Bodonus Salutiensis, MDCCLXII.* Ruggieri's suicide, however, in 1766 (or as other accounts say, as early as 1762) rendered Bodoni's longer stay at Rome insupportable from regret. At this time he had also accepted a proposal to come to England, but going to Saluzzo to see his parents, he fell ill; and the marquis de Felino, in the interval, offering to place him at the head of the press intended to be established at Parma, upon the model of that of the Louvre, Bodoni broke his engagements, and settled there in 1768.

In 1771 he published specimens of his art in *Saggio Tipografico di fogli e majuscole*, in 8vo.; followed in 1774 by *Iscrizioni esotiche*, composed by J. B. de Rossi; and in 1775, on occasion of the marriage of the prince of Piedmont with the princess Clotilde of France, a third work of the same description, entitled *Epithalamia exotica lingua reddita*, exhibiting the alphabets of twenty-five languages. Between 1765 and 1788, although his fame became universal, his press was not over-actively employed.

In 1788 the chevalier d'Azara, the Spanish minister to Rome, made an offer to Bodoni to establish a press in his palace in that city, to print editions of the Greek, Latin, and Italian classics. Bodoni however refused his solicitations; and in 1789 the duke of Parma, unwilling that so eminent a printer should be drawn away by any one from his dominions, formed a similar project, and furnishing Bodoni with a portion of his palace and a press, some of the most beautiful editions of the classics known issued from it: more especially a *Horace* in folio, in a single volume, in 1791; *Virgil*, in two volumes in folio, in 1793; *Catullus, Tibullus, Propertius*, in 1794; and *Tacitus's Annals*, in three volumes, folio, in 1795. Dibdin says, of this last work, only thirty copies were printed, with a few on large paper. In 1794 Bodoni produced a most beautiful edition of the *Gerusalemme Liberata* of Tasso, in three vols. folio.

His most sumptuous work of all was his *Homer*, in three volumes, in folio, printed in 1808, with a prefatory dedication to the emperor Napoleon, in Italian, French, and Latin. When the French armies entered Italy, in the early part of the revolutionary war, Bodoni and his labours had received a marked protection. On the 21st of January, 1810, Bodoni presented a

copy of this splendid work, printed upon vellum, in two volumes, to the emperor, in the gallery at St. Cloud, and in return, received a pension of 3,000 francs. While Italy was under the French rule, Bodoni received the most tempting offers to quit Parma. Prince Eugene Beauharnois offered him the superintendence of the press at Milan, and Murat that of Naples; but he pleaded age and infirmities, and his wish to remain at Parma. In 1811, having received the Cross of the Two Sicilies from Murat, he proposed to publish for the education of the young prince, the son of Murat, a series of French classics, and commenced the execution of his project by a folio *Telemachus* in 1812. *Racine* was not published till 1814, after Bodoni's death.

Bodoni had long suffered from the gout, to which a fever was at last superadded, which terminated the life of this eminent typographer. Within a few months of his death Napoleon nominated him a chevalier de la Réunion, and sent him a present of 18,000 francs to aid him in the publication of the French classics.

In 1816 Bodoni's widow sent forth a work which Bodoni had prepared so long as 1809, the date of which year appears on the title-page, entitled *Le più insigni Pitture Parmensi indicate agli Amatori delle Belle Arti*, accompanied by engravings of the different pictures.

In 1818 the *Manuale Tipografico del Cavaliere Giambattista Bodoni*, containing specimens of his various types, appeared from the Bodonian press, the business of which was still carried on by his widow. It forms two splendid volumes in 4to. with his portrait prefixed.

Two works were printed by Bodoni in English; an edition of lord Orford's *Castle of Otranto*, printed for Edwards of Pall Mall, in 1791, 8vo; and an edition of Thomson's *Seasons*, in two sizes, folio and quarto, 1794.

Bodoni's classics were not all as correct as they were beautiful. Didot discovered about thirty errors in the *Virgil*, which were noticed in the preface to his own edition. Among the books belonging to George III. in the British museum, is one of twenty-five copies of the *Homer* on the largest paper, a most splendid specimen of typography. For more minute details of Bodoni's life, the reader may refer to Joseph de Lama's *Vita del Cavaliere Giambattista Bodoni*, 2 tom. Parma, 1816, the second volume of which is filled with an analytical catalogue of the productions of his press. A medallion with a portrait of Bodoni appears in the frontispiece to the first volume. See also the works of M. de Gregory Verceil, 8vo. and P. Passeroni, 8vo.

1813, Nov. 23. RICHARD MAKENZIE BACON, of the city of Norwich, printer; and BRYAN DONKIN, of Foot-place, Bermondsey, in the county of Surrey, engineer, obtained a patent for certain improvements in the implements or apparatus employed in printing, whether from types, from blocks, or from plates.

1813. WILLIAM CASLON, type-founder, Dorset-street, London, obtained a patent for improving printing types.

1813, Dec. JOHN MAGEE editor and proprietor of the *Dublin Evening Post*, found guilty of publishing a libel against the duke of Richmond, then lord-lieutenant of Ireland, and sentenced to pay a fine to the king of £500, to be imprisoned two years in Newgate, and to find sureties for his conduct for seven years, himself in £1000, and two others in £500 each. By a novel application of a temporary law, Mr. Magee's paper was suppressed by the disallowance of further stamps.

Mr. Ponsonby, a distinguished member of the Irish parliament, made a motion, impeaching the earl of Clonmell, chief justice of the court of king's bench, for an oppressive exercise of his power in the case of Mr. Magee. The charge was so clearly made out, that the crown lawyers in the house did not attempt to refute it, but contented themselves with shielding the chief justice from the consequences, by that majority of votes which it was in their power to interpose. Mr. Ponsonby, seeing how the matter was to go, warmly observed, that "he had done his duty in bringing the subject before the house; and he should leave it to them to do theirs. If the attorney-general was content to abandon the defence of his noble friend, the learned judge, by declining all argument, and trusting to the decision of the *Book of Numbers*, be it so; he was quite aware what would be the issue:—he might, it is true, lose his motion, but *lord Clonmell was d—for ever*." Mr. Ponsonby spoke prophetically. The question was indeed put, and negatived without a division; but the judicial character and mental feelings of lord Clonmell never recovered the blow. He survived but a few years.

1813, Dec. 2. *Died*, JOHN ROBINSON, the last surviving member of the bookselling firm of G. J. and J. Robinson, of Paternoster-row, many years the greatest trading booksellers and publishers known in this country. After the death of the elder George, and the failure of the house, he went into partnership with Mr. George Wilkie, with whom he carried on a respectable country trade, and held shares in many established books. He was a man of considerable ability, a lover of literature for its own sake, and of indefatigable and laborious attention to business. The family name is sustained in the trade, by the grandsons of the elder George, who reside in the house of the original firm; and it is but justice to state, that literature was scarcely under greater obligation to the name of Tonson, than it has been to the energetic and enterprising spirit of the family of the Robinsons. He died at Putney, in his sixty-first year, leaving a widow, and two sons, John, and Richard, the former a bookseller in Paternoster-row, who was assisted by his brother.

1813. *The Intellectual Repository of the New Church*, published quarterly, by Edward Parsons, a preacher of the calvinistical methodists, at Leeds, and one of the conductors of the *Evangelical Magazine*.

1813. *Pantologia; or, a Dictionary of Arts and Sciences*, twelve volumes royal 8vo. The general editor of this work was Dr. Olinthus Gregory,\* who furnished nearly three-fourths of the articles.

1813. *The Western Luminary*. This paper was established in the early part of the year, by Thomas Flindell, at Exeter, in 4to.

1813. *Western Star*, published at Glasgow.

1813. *The Glasgow Packet*.

1814, Jan. 12. Died, EVAN THOMAS, commonly called the rev. Evan Thomas, having once been in orders. He was a native of South Wales, and was classically versed in his vernacular tongue; was brought up a printer, and was at one time a swift and correct compositor; but he left the case and composing stick to take a flight among the stars, having been a judicial astronomer, a comet hunter, a dealer in the black art, and a teller of fortunes to the credulous. With all his sky knowledge, he was often out of sorts, till the walls of Shrewsbury workhouse received him, and where death finally capped his balls at the advanced age of eighty years.

1814, Jan. Died, JOHN BLAKE, proprietor of the *Maidstone Journal*, and one of the jurats of that town.

1814. *Chalceographimania; or, the Portrait Collector and Printers' Chronicle: with Insatiations of every description*;—a humorous poem, in four books, with copious explanatory notes. By Satiricus Sculptor, esq. London: 1814. 8vo. Of this the less is said the better.

1814, Feb. J. MAGEE,† proprietor of the *Dublin Evening Post*, sentenced to pay a fine of £1000, and to be imprisoned for six months, to commence from the expiration of his former sentence, and to give security to keep the peace, himself in £1000, and two sureties in £500 each. The cause of this further prosecution was the publishing the Kilkenny Catholic resolutions, which the chairman of the meeting, captain Bryan, had not the courage to avow.

1814, Feb. Died, ISAAC GARNER, printer, at Newcastle-upon-Tyne, aged fifty-five. He was a poet of considerable talent.

1814. Feb. Died, JONATHAN KNOTT, for many years an eminent printer and bookseller, at Birmingham, where he died, aged forty-seven years. In 1804, Mr. Knott, in conjunction with Mr. Robert Lloyd, purchased the copyright of *Ari's Birmingham Gazette*. As a member of society, his conduct was ever generous and noble; as a tradesman, liberal and irreproachable.

\* Olinthus Gregory was born at Yaxley, Huntingdonshire, in 1774, and at an early age he conceived a strong predilection for mathematics, and became a contributor to the *Lady's and Gentlemen's Diaries*. About 1796 he went to Cambridge, opened a bookseller's shop, and at the same time began to teach mathematics both in town and university. In 1802 he was invited to the royal military academy at Woolwich, where he was second mathematical master, and in the same year became editor of the *Gentleman's Diary*. In 1804-5 he took the degree of A. M. and in 1808 received a diploma as LL.D. Dr. Gregory took an extensive part in the early volumes of the *Retrospect of Philosophical, &c. Discoveries*.

† John Magee, esq. died Sept. 2, 1822, at Ashford, near Newrath bridge, in the county of Wicklow.

1814, March 18. Died, JOHN VINT, editor of the *Isle of Man Weekly Gazette*.\* Mr. Vint was a native of Newcastle-upon-Tyne,† and during his apprenticeship officiated as editor and compositor. He afterwards went to London, where he was engaged as sub-editor on the *Morning Post* and *Courier* daily papers. His next situation was the conductor of *Harrop's Manchester Mercury* and *British Volunteer*, and his final at Douglas, where he was suddenly removed from this life in the sixtieth year of his age. Distinguished as he was by his talents and industry, he was, however, still more distinguished by his virtues and exemplary conduct in the relations of domestic life.

1814, March. Died, WILLIAM LANE, formerly of the *Minerva* printing-office, London; from which concern he had retired about ten years, in favour of his late partner, Mr. Newman. He was long distinguished for his copious publications of novels, and for the energy with which he established circulating libraries in every town, and almost every village of the empire. For many years he was senior captain of one of the regiments of the London militia. No man knew the world better, and none better how to manage and enjoy it. He was twice married, but left no children. He died at Brighton, aged seventy-six.

1814, May 8. Died, WILLIAM NELSON GARDINER, bookseller, of Pall-mall, London. He was a man of great eccentricity of conduct; regardless of all the forms of civilized life, both in his dress and deportment. He possessed considerable knowledge of books, and was a very spirited engraver. Accumulated misery, both bodily and mental, led him to commit the rash deed of dying by his own hand. The evening before his death (the manner of which must excite the commiseration of every good man) he addressed a letter to the editor of the *Morning Chronicle*, who had shewn him repeated kindnesses, enclosing a "brief memoir of himself."‡ In this letter he declared that his sun was set for ever—that his business had nearly declined—his catalogue failed—his body was covered with disease—and he had determined to seek that asylum "where the weary are at rest." He was born at Dublin, June 11, 1766, of poor parents.

1814, May. Died, WILLIAM ADAMS, many years a very worthy bookseller at Loughborough, in Leicestershire, where he died, aged seventy.

1814, June. Died, JOHN STOCKDALE, bookseller, Piccadilly, London, where he had carried on business for forty-four years. He was aged sixty-five years.—See page 764, ante.

1814, July 7. Died, PETER BOWER, bookseller, and arch-beadle of the university of St. Andrews, which office he had held nearly seventy years, and was at the time of his death one of the oldest and most respectable booksellers in Europe. He was in his ninety-second year.

\* Mr. Beaton, proprietor of the *Isle of Man Weekly Gazette*, died July, 1814, universally regretted.

† Another account says he was born at Alnwick.

‡ See *Gentleman's Magazine*, vol. 84, p. 1. page 622-3.

1814, *July 29*. By 54 Geo. III. c. 156. the period of fourteen years for copyright in any author, and of a further term of fourteen years if he should be then living, were extended on this day to twenty-eight years, from the day of the first publication; and if the author should be living at the expiration of that term, then for the residue of his life; but the entry of the title-page correctly at stationers' hall, with the name and abode of the publisher, is required within one month after the day of the first sale within the bills of mortality, and three months if sold elsewhere. Before the act of Anne (see page 593 *ante*) copyright was a common law right. An author left the profits of his works to his children, or sold them for ever to another, with whom they became property of a like kind. The act of Anne related only to books entered at stationers' hall, as a more ready way of securing penalties. The sending the copies there was merely optional—the common law right still remaining. If this be deemed incorrect, then the act of Anne was a violation of an existing right, taking away an author's *fee simple* and allowing him a *conditional leasehold right in its place*. Lord Ellenborough always asserted that an author had a right at common law. Nine out of twelve judges, in 1769 and 1774, were of this opinion. Large estates had been vested in copyrights, and assigned from hand to hand, and as large sums, or larger, were given for copyrights before the act of Anne, as were given after it. In 1798 to enter a book at stationers' hall was considered optional, and the books given to corporate bodies were only those so entered, and so acknowledged by 41 Geo. III.; and in the case of Beckford and Hood, in the king's bench, the foregoing doctrine was confirmed. The omission to enter at stationers' hall prevented a prosecution for the penalties inflicted by the statutes, but left a satisfaction for the violation of copyright at common law still the same. In 1812, with the peculiar felicity of our lawyers in common sense and consistency, they reversed the foregoing opinions and precedents, and made every printed book liable to the demand of the corporate bodies before alluded to, and that in the teeth of private right and ancient usage. By the act of 1814, the author had an absolute right of his own works for twenty-eight years, and a renewable right for twenty-eight years more, if he was alive at the expiration at that period, else the copyright was lost, and his family, which before the decision of 1812 had a claim to copyright for ever if he had retained it, lost the property, which became any body's.\* Such a law is a mockery of protection, which under

\* The law of other countries is in this respect far more equitable than ours. In America, and in Prussia, Saxony, and Bavaria, only one copy of every work is required from the author; in France and Austria two copies are required; and in the Netherlands three. The governments of the most despotical states treat the authors better than they have hitherto been treated by the legislature of England.—*Edinburgh Review*, June, 1831.

For a masterly article, exposing the injustice and impolicy of the copyright acts, see No. 41 of the *Quarterly Review* for May, 1819.

pretence of benefiting literature, and literary men,—takes from them the inheritance of their labours, and by taking a number of books from them or their booksellers, enriches certain exclusive bodies which have ample means of their own.

1814, *Aug. 10*. *Died*, WILLIAM COWDROY, proprietor, editor, and printer, of the *Manchester Gazette*, aged sixty-two years. Mr. Cowdroy was a man of rare genius—a poet—a wit—a facetious companion—an unshaken patriot—a kind father—a firm friend—and a truly honest man. As conductor of the *Manchester Gazette*, his light punning paragraphs had no equal. His columns frequently supplied the newspapers with wit and humour on current topics; and many of his old compositions, with changes of name and date, were often revived at intervals of five or six years. At Chester, while he employed himself as editor and compositor, he displayed the singular faculty of composing his paragraphs without writing them; and some of his happiest efforts, in prose and verse were produced in that manner. He left four sons, all printers,\* and two daughters.†

The following lines are from a poem written to his memory by his friend Edward Rushton:

Ye lovers of social delights  
Whose bosoms are mild and humane,  
Ah! pause from your perilous rites,  
And mark for a moment my strain.  
Poor Cowdroy, by nature endowed  
With talents to please and illumine,  
To nature's dread fiat has bow'd,  
And silently sunk to the tomb.  
As the elephant's trunk can upraise  
The lords of the forest as straws,  
So Cowdroy could pen on a phrase,  
Or advocate nature's great cause.  
If hate ever rankled his breast,  
'Twas against the dark foes of mankind;  
And each claim that corrodes the oppress,  
'Twas the wish of his soul to unbind.  
His heart was the nest of the dove,  
There gentleness found an abode,  
And like the bright day-star, his love  
For the whole human family glow'd:  
But that bosom with feeling once fraught,  
And that tongue, the dispenser of mirth,  
And those eyes ever beaming with thought,  
All, all are descended to earth!

1814, *Aug. 12*. *Died*, CORNELIUS LEIGH, a worthy and universally respected journeyman printer at Manchester, where for upwards of half a century he was employed as pressman on *Harrop's Mercury*; and whose interest, records his employer, he was ever anxious to promote, and to whom he regularly discharged his duty with fidelity, diligence, and integrity.

\* William Cowdroy, who had been in partnership with John Slack, as printers and periodical publishers, in Salford, succeeded to his father's business, and died March 24, 1834.

Thomas Cowdroy had been in partnership with his brother William, but marrying the widow of a chemist and druggist, took to that business.

Benj. Cowdroy held a situation as a printer, in London. Citizen Howarth Cowdroy, in partnership with Mr. Rathbone, commenced a newspaper called the *Manchester Courier*, January 4, 1817. He died in 1828.

† Mrs. Clarke, his youngest daughter, appeared on the stage at Covent-garden, and other theatres, with considerable effect in tragedy.

1814, Aug. 29. *Died*, WILLIAM NICHOLSON, printer of the *Weekly Dispatch*, London, aged thirty-seven years. He was a native of Nether-wasdale, in Cumberland.

1814, Sept. DANIEL ISAAC EATON, a noted bookseller, of High Holborn, and Ave Maria Lane, London, after many vicissitudes died at Deptford. He stood two or three times in the pillory for different offences, and to avoid a heavier punishment emigrated to America, from whence he returned, when he fancied that no prosecution was to be dreaded. Falling again into his old practices, he was pilloried opposite Newgate for a blasphemous publication. During his confinement his business was carried on by a female, and a scandalous pamphlet, again calling for the notice of the government, he was brought up for judgment, but on delivering up the name of the author, he was released, and died soon afterwards in poverty and contempt.

1814, Nov. 22. *Died*, EDWARD RUSHTON, bookseller, of Liverpool, whom McCreery calls "a true friend to liberty, and an example of inflexible independence rare to be met with."

And Rushton—thou—whose independent soul  
Nor ill of life—nor adverse fates control;  
Thou' solemn darkness shroud thine orbs of light,  
Strong are thy beams of intellectual light;  
For like immortal Milton—thine the doom  
To strike thy harp amid the cheerless gloom.

It is peculiarly pleasing, says James Wilson,\* to observe how many individuals in the middle and lower ranks of life, without the advantages of education, have raised themselves to a distinguished place in society, by the cultivation of their literary talents; and among the many which are recorded in these pages, was Edward Rushton of Liverpool, who, though he did not attain to the higher departments of literature, was remarkable for the clearness and perspicuity of his style, and for employing his pen in the cause of humanity and truth. He was born in John-street, Liverpool, Nov. 11, 1756, and his education, which he received at the grammar school, terminated with his ninth year. Before he had entered his eleventh year he was bound apprentice to Watt and Gregson, and became a "sea boy on the high and giddy mast." He performed the various duties of his station with skill and credit; and before he was sixteen, he received the thanks of the captain and crew of the vessel, for his seaman-like conduct during a storm. Before he was seventeen, whilst yet in his apprenticeship, he signed articles as second mate of the vessel, in which, a short time before, he entered as cabin-boy; and so continued until the term of his indentures was expired. At this period, the offer of a superior situation induced him to proceed to the coast of Africa on a

slaving voyage. On this fatal voyage, whilst at Dominica, he was attacked by a violent inflammation of the eyes which in three weeks left him with the left eye totally destroyed, and the right eye entirely covered by an opacity of the cornea. This misfortune was occasioned by his exertions in assisting his brethren of the sable race, among whom an infectious fever had broken out.

In 1776, attended by his father, he visited London, and among other eminent men consulted the celebrated baron Wentzell, oculist to the king, who declared him incurable. In this hopeless situation, poor Rushton returned to Liverpool, and resided with his father, with whom he continued but a short time, as the violent temper of his stepmother compelled him to leave the house and maintain himself on four shillings a-week. An old aunt found him lodgings, and for seven years he existed on this miserable, and, considering the circumstances of his father, this shameful allowance. From this state he was removed to one much more comfortable. His father placed one of his daughters with Rushton in a tavern, where he lived for about two years, and while in this situation he married. Finding, however, his pecuniary circumstances rather diminishing than increasing, he gave up the business. He now entered into an engagement as editor of a newspaper, called the *Herald*, which for some time he pursued with pleasure but little profit, until finding it impossible to express himself in that independent and liberal manner, which his reason and his conscience dictated, he threw up his situation and had to begin the world once more. With thirty guineas, five children,\* and a wife to whose exertions he was greatly indebted, he commenced the business of a bookseller;† as no other seemed more agreeable to his taste, his habits, and his pursuits. At this time politics ran very high in Liverpool.

\* Edward Rushton, esq. the eminent barrister of London, is one of his sons, and who was at one time connected with the press in the establishing of the present *Liverpool Chronicle*, in 1826.

† Nathaniel Price, late a bookseller at Norwich, on quitting business in that city, exported goods to a considerable amount from London to America, and on his voyage thither, lost his sight in consequence of a severe cold. After much distress and fatigue, he at length arrived in his native country, after an absence of nearly five years. This remarkable man makes every part of his dress, from the shoes on his feet to the hat on his head. He has, since the loss of his sight, followed the employment of a bookbinder, and bound several books in the first style, and is, indeed, the first instance of a blind man being capable of binding books, that is known of. As a proof of his abilities, there is a quarto bible, elegantly bound by him, in the marquis of Blandford's library, Ston-hill, Oxfordshire. Strange as this may appear to those unacquainted with the extraordinary genius possessed by many of the blind, this account had been credited by many.—Wilson's *Biography of the Blind*.

A bookseller of the name of Winprecht, of the city of Augsburg, is one of the greatest curiosities of the place. He had the misfortune to be born blind; but whose enterprising spirit had enabled him to struggle successfully against the melancholy privations he was doomed to sustain, and to procure by his industry and intelligence a respectable and comfortable support for a large family dependent upon him. His library consists of more than eight thousand volumes, which are frequently subject to change and renewal, but as soon as he acquires a new stock, the particulars of each book are read to him by his wife, and his discrimination permits him to fix the value;

\* *Biography of the Blind; including the lives of all who have distinguished themselves as poets, philosophers, artists, &c. &c.* By James Wilson, who had been blind from his infancy. Birmingham: printed by J. W. Howell, and sold only by the author. 1833. Demy 15mo. The biographical sketch of the writer, prefixed to this volume, is a most extraordinary instance of the difficulties which the blind can overcome.

He had published several pieces, all in favour of the *rights of man*. He became a noted character, was marked and shot at; the lead passed close to his eyebrows, but did not do him the least injury. If by his manly and upright conduct he became the object of dislike to a clique of petty tyrants in his native town, he experienced the satisfaction of enjoying the steady attachment and unremitting attention of a few tried friends, who with him had rejoiced in the triumphs of liberty in whatever land they were achieved.—The purses of W. Roscoe\* and Rathbone, were offered to him; he was invited to take what sum he might want, he refused them both, determined to maintain his independence. About the year 1800, among his poetical productions, was the beautiful poem of *Mary le More*. In the summer of 1805, hearing of the repeated successes of Mr. Gibson of Manchester, as an oculist, he was induced to obtain his opinion, and after enduring five dreadful operations, he was, in the summer of 1807, ushered into that world from which for more than thirty years, he had been excluded. His feelings on this occasion are truly recorded in the lines addressed to Mr. Gibson on this happy event. During the last years of his life, Rushton did not write much, but those poems which he did produce, are excellent. *The Fire of English Liberty*, *Jemmy Armstrong*, *Stanzas addressed to Robert Southey*, are all strongly in favour of those principles which, with fire unsated, he preserved till the last moment of his existence. He was occasionally troubled with the gout—his health visibly declined—but under all afflictions he preserved his usual cheerfulness and gaiety till the last. His works are not numerous, but they are truly valuable for their moral excellence. They first appeared in the periodical journals of the day, and were afterwards collected together, and published under the title of the *Neglected Tar and other Poems*, London, 1804; these, with his *Letters to General Washington* and *Thomas Paine*,† are the only productions of his which were given to the public.

his touch enables him to recognize it at any period, however distant, and his memory never fails him in regard to its arrangement in his shop. His readiness to oblige, his honesty and information on books in general, has procured him a large custom; and, under such extraordinary natural disadvantages, he has become a useful, and happily will render himself a wealthy member of the society to which he belongs.

\* William Roscoe, from an obscure birth and scanty education, became by far the most eminent historical writer who appeared in the latter years of the eighteenth century. He was born in Bold-street, Liverpool, in 1752, and was first an attorney, afterwards a banker, and represented his native town in parliament. His *History of the Life of Lorenzo de Medici* appeared in 1795, in 3 vols. 4to. An eminent critic characterised it as a phenomenon in literature, and said it was 'pleasant to consider a gentleman, not under the auspices of a university, nor beneath the shelter of academic bowers, but in the practice of the law and business of great extent, resident in a remote provincial town, investigating and describing the rise and progress of every polite art in Italy at the revival of learning, with acuteness, depth, and precision; with the spirit of the poet and the depth of the historian.' In 1805, he published the *Life and Pontificate of Leo X.* in 4 vols. He died June 26, 1831, aged 80 years.

† Thomas Paine, author of the *Rights of Man*, was born at Thetford, in Norfolk, Jan. 29, 1757, and died at Baltimore, in North America, June 8, 1809.

1814, Nov. 28. On this day appeared the first newspaper ever printed by steam. The inventor was Frederick König,\* by birth a Saxon, and by occupation a printer; and the artisan by whom it was brought into action, was Mr. Baur, also a native of Saxony. The first steam-engine printing machine brought to maturity in this country, was erected for Mr. John Walters, proprietor of the *Times* newspaper, whose readers of this day were informed, that "they then held in their hands one of many thousand impressions of the first newspapers printed by steam." Whether Mr. König was indebted to Mr. Nicholson† for his elementary principles, or whether almost the same ideas spontaneously occurred to each individual, is a question that cannot at this time be ascertained.

And out of the witchcraft of their skill  
A creature he call'd to wait on his will—  
Half iron, half vapour, a dread to behold—  
Which evermore panting, and evermore roll'd,  
And utter'd his words a million fold:  
Forth sprang they in air, down raining like dew,  
And men fed upon them and mighty grew.

Mr. König, after failing in his application for encouragement and support at the hands of the most eminent printers in several of the continental capitals, turned his eyes towards England. Arriving in London about the year 1804, he submitted his scheme to several printers of repute, who, not being disposed to incur the risk of property which a series of experiments were sure to incur, and perhaps placing little confidence in a successful issue, received his overtures very coolly; but, on his being introduced to Mr. Bensley, senior, who, being attracted by König's plans, speedily entered into an arrangement with him. In a short time afterwards, Mr. Bensley was joined by Mr. George Woodfall, who, however, soon retired, and Mr. R. Taylor. It was at length discovered that the intended improvement of the common press could not be brought to bear, unless more radical alterations were invented. Cylindrical printing was now thought of—and after some two or three years of renewed exertion, a small machine was produced. Considerable promise of success attended this production; and after continued experiments

\* Mr. König, in the *Times* of Dec. 28, published a very interesting account of the origin and progress of his invention. He died January 18, 1833, at Oberzell, near Warburg, in the prime of life. For fourteen years Messrs. König and Baur had a large establishment at Oberzell, of presses and other machinery.

† William Nicholson, to whom both the public and the patentees of printing machines seem to be indebted, was a very ingenious mathematician and mechanic, died in June, 1815. He had been for some years in great difficulties, owing to the failure of many projects, and the multiplicity of his engagements. While in confinement for debt, he suffered his name to be prefixed to an *Encyclopædia*, in six volumes. Upon referring to the patent which Mr. Nicholson took out in 1796, it appears that he completely took the lead upon the subject of printing by machinery; and it is probable that had he joined the actual practice of the art of printing by machinery to his knowledge of the theory, little would have been left for subsequent mechanicians to perform, and still less to be claimed as their original inventions.

The *Literary Gazette* of October 26, 1822, contains a brief notice of the origin and progress of this invention, and its first application to the purposes of printing book-work, with an excellent view of the machine.

it was deemed practicable to extend the general principles to a more powerful machine. To print a newspaper was considered highly desirable—and on exhibiting to Mr. Walters the machine already erected, and showing what further improvements were contemplated, an agreement was entered into with that gentleman for the erection of two large machines for printing the *Times* newspaper. So secret had been the operations of the patentees, that but few persons knew of any attempt going on for the attainment of the above object; whilst among those connected with printing, it had often been talked of, but treated as chimerical.

The next advance in improvement was the manufacture of a machine for Messrs. Bensley, distinguished from the above by the mode of perfecting, or printing on both sides of the paper, and causing the pages to fall precisely on the back of one another. Deficiencies were now detected in the inking; and, after many attempts, an elastic preparation of glue, treacle, &c. was at length discovered and brought to perfection.\*

By this time the invention had attracted the attention of various individuals, who thought the manufacture of printing-machines an easier task than they afterwards found it to be; and far the greater number of attempts failed almost as soon as undertaken. A machine, much more simple in its construction, was brought out under the direction of some eminent English engineers.† These gentlemen were requested to apply their inking apparatus to Messrs. Bensley's machine; and at one stroke, as it were, forty wheels were removed—so great was the simplification: and at the same time the defects of the former system of communicating the ink to the types were most effectually remedied. Another important point respecting the new machine was, that it occupied scarcely half the space of the original one. The press of König, like most first attempts, was extremely complicated. It possessed sixty wheels. Applegath and Cowper's machine has sixteen only.‡ The inking apparatus of this machine is by far the most complete and economical that ever was invented. Nothing can be more perfect than the distribution of the ink, and its application to the types, while the exceeding accuracy and elegance of the workmanship, (since solely made by Messrs. E. and E. Cowper, now of London and Manchester,) can never be surpassed. The machines of these gentlemen have, therefore, not only entirely superseded König's machine,

but almost those of every other manufacturer; and their use has rapidly extended, not only in Great Britain, but throughout Europe. By repeated improvements they have reduced the number of wheels to six.

The following is a brief notice of four different machines, calculated to produce register and non-register sheets, under various modifications and rate of speed:

1. A machine with one cylinder, called a single, or hand machine, generally used for printing newspapers; it throws off from 900 to 1200 in the hour on one side, requiring two boys, one to lay on the paper, and the other to receive it when printed.\* The power of one man is sufficient to turn these single cylinder machines; but two or three are kept, who relieve each other at intervals.

2. A machine with two cylinders, called a double machine, but only printing from one form of types at the rate of from 1600 to 2200 in the hour, requiring two boys to lay on the sheets, and two to take them off, exclusively used for newspapers.†

3. A machine with four printing cylinders,‡ requiring the attendance of eight boys, and throwing off about 4,000 sheets within the hour.

4. This is called a book or perfecting machine, printing both sides of the sheet in register before it leaves the machine, and throwing off from 750 to 900 in the hour, requiring the attendance of one man and two boys. The printing machines of König, Walters, Bensley, Applegath and Cowper, Bacon, Donkin, Brightley, Winch, Cooper and Millar, sir William Congreve, Wood, Napier, Rutt, Bold, Spottiswoode, Parkins, and Hansard, all possess one and the same general principle, applied in a variety of forms; and the curious inquirer has only to investigate the vari-

\* The proprietors of the *News*, Sunday-paper, in an article addressed to their readers Dec. 8, 1833, publicly declare, "that now they are enabled, without any extra exertion, to work off from 1,300 to 1,500 in the hour;" and the *Courier*, of Nov. 14, 1833, says, "we think it right to announce to our readers, that the *Courier* is now printed by a machine of such extraordinary mechanical power, that it is capable of throwing off considerably above two thousand papers per hour; it has, indeed, on one occasion, produced at the rate of 2,900 impressions within the hour." Both of these speak of the single machine, and reckon by one side only; so that in each case, a second machine must be employed to perfect, or print on the other side.

† In 1829, a machine, with two cylinders, called a double machine, but only printing on one side, at the rate of from 1,300 to 2,400 sheets an hour, and made by Applegath and Cowper, for Messrs. Gray, Edinburgh, proprietors and publishers of the *North British Advertiser*.

‡ The invention of Augustus Applegath, in 1828, for the *London Times*. The inking apparatus was the invention of Mr. Cowper.

Mr. Helfarth, a printer at Erfurt, in Germany, invented a press to print eight sheets at a time. This machine, which may be made of any size, supplies 7,000 copies of each sheet in twelve hours, making 84,000 sheets printed on both sides. The machine is put in motion by one horse; and three men are sufficient to supply it with sheets and take them away. Each sheet perfects itself.

§ In the *Norwich Mercury* of Nov. 30, 1814, published by Mr. Bacon, there is a prospectus of his machine, and the progress which it had then made. See also *Roco's Cyclopaedia*, art. *Printing*.

The first printing machine set up in Ireland was made by Napier, for the *Dublin Evening Post*; and the first by steam was erected by Mr. Gunn, for P. D. Hardy, printer, Dublin, in July, 1833; and soon afterwards the *Dublin Evening Mail* was worked by a machine.

\* So sanguine were the patentees of having now arrived at the *ne plus ultra* of their labours, that they issued a prospectus, dated March 18, 1817—offering three different sorts of machines at a high scale of prices, and, besides demanding a large sum to be paid as purchase money for them, requiring a considerable annual premium, calculated upon a principle most effectually to prevent any one from venturing to erect a machine. It need scarcely be added, that after the issuing of this prospectus, the original patentees never sold a single machine!!

† Executed by Mr. Dryden, a very clever and ingenious engineer, who managed the extensive concern of Mr. Lloyd, under the instructions of Applegath and Cowper.

‡ Messrs. Applegath and Cowper commenced business as printers, in London, and with their machines produced work of such a description as surpassed every thing deemed practicable.

ous printing patents from the time of Nicholson, and he will find that they have become so involved in each other's ideas, that they cannot claim an exclusive right as a whole to any subsequent machine. To give a minute description of these different machines, would far exceed our limits, even if within our power.

The prejudice against cylindrical printing led to very numerous and expensive attempts to apply steam power to machines with flat printing surfaces. Some of those made by Mr. Napier have succeeded tolerably well, but they were never found to equal, either in point of expedition, quality of work, or economy, the cylindrical machine. To produce an impression with a flat surface from a large form, requires a force of about forty to fifty tons! and even with a cylinder, where a line only is impressed at a time, the pressure is little short of a ton. But, in the machine, to prevent any undue pressure of the cylinders upon the forms, there are wooden bearers of the same height as the types, screwed upon the end of the carriage under the ends of the cylinders; thus effectually shielding the types from the enormous and injurious pressure which a cylinder might, through accident or otherwise, be caused to exert.

A peculiar machine, the invention of Mr. Cowper, intended to print from convex stereotype plates, which, instead of being fixed flat upon blocks, are fastened upon cylinders, so as to give them a bent form, and the printing is effected with the face of the plates or type surface downwards; wherefore the paper is placed undermost instead of uppermost, as in all other modes of printing.\*

By the erection of steam presses, the three grand requisites, speediness of execution, quantity, and cheapness of labour, are procured to an extent demanded by the necessities of the age, and, without the aid of such machinery, the tide of knowledge and human improvement would be forced back greatly to the injury of society. Whatever may have been the prejudices of the profession with regard to cylindrical printing, the experience of a few years proved how ill-founded were those melancholy anticipations.—With the aid of stereotyping, the press of England presents the most extraordinary combination of intellectual and mechanical power in the world; and is, not only the means of disseminating knowledge among her own population, but also the high moral advantage of giving a tone to the literature of other nations, which shall be favourable to peace, and a right understanding of the common interests of mankind. Judging from the extraordinary perfection to which machine printing has been brought, it might justly appear that no further improvements could be effected on this department of the art of printing. But there is no discovered limit to human ingenuity. Every year is producing some curious if

not valuable addition to printing machinery, and at present no one can foresee the termination to this as well as any other class of improvements within the compass of British manufacturing industry.

1814. *The Holy Bible, with the Apocrypha*, illustrated with one thousand and fifty engravings, by the first artists, both ancient and modern, ruled with red lines throughout, and bound in nine volumes 4to. This bible is known by the name of FITTLER'S,\* the engraver.

1814. *The Military Magazine*, edited by captain Fairman, formerly of the Northampton militia, and afterwards aide-de-camp and military secretary to the governor and commander in chief of Curaçoa. He also attracted some notice by his pedestrian performances.

1814. *The Tradesman*, a monthly publication, edited by John Clennel, F. S. A. of Hackney.

1814. *The Philanthropist*, published quarterly.

1814. *Seren Gormer*, a weekly newspaper in the Welsh language, edited, printed, and published by David Jenkins, at Swansea, in South Wales. Mr. Jenkins died in May, 1822.

1814. *The Manchester Magazine; or, Chronicle of the Times*, published monthly, by Joseph Hemingway and Martin Began, price 1s.

1814, Sept. 10. *The Durham County Advertiser*, No. 1, was published in Durham, under the firm of Francis Humble and Co. This was originally the *Newcastle Advertiser*, and after having had various owners, was removed to Durham. It is at present (April, 1838,) published by Mr. Francis Humble.

1815, Jan. 1. Died, WILLIAM CREECH, bookseller, Edinburgh, of which city he had the honour of being twice lord provost, and where for half a century he was known to almost every family. He was the son of a most respectable clergyman, minister of Newbattle, and received a very complete classical education. In 1771, he succeeded to that part of the business of his early friend and patron, Mr. Kincard, at that time his majesty's printer for Scotland, which was not connected with the patent of king's printer. He continued in this business for the long period of fifty-four years, and was concerned in all the principal publications during that time. He was well-fitted to be an ornament to society: with a mind highly gifted and improved, he possessed the most pleasing manners, and that habitual cheerfulness and playfulness of fancy which rendered his company so fascinating. The frequent light pieces and essays which came from his pen, evinced the elegance of his taste, his knowledge of character, and his capability of a higher attainment in composition, if he had chosen to aim at it. Several of these essays were afterwards collected into one vol. 8vo. 1791, entitled: *Edinburgh Fugitive Pieces*, to which a portrait of him is prefixed.

\* Mr Jonathan Ridgeway, of London, obtained a patent for a method of casting and fixing metallic types upon cylinders, Sept. 1815.

\* James Fittler, engraver to his majesty, published *Scots Depicts, or the antiquities, castles, public buildings, gentlemen's seats, towns and picturesque scenery of Scotland, from drawings by Noddis, accompanied with letter-press descriptions*, imp. long 4to. 1801.

He was one of the original founders of the Speculative society of Edinburgh. It has perhaps fallen to the lot of few men to have enjoyed, more than Mr. Creech did, the correspondence and confidence of most of the literary characters who flourished in Scotland from about the middle to the end of the last century. His stock of books and copyrights were sold in July, 1815, at the Exchange coffee-house, Edinburgh.

1815, Jan. 10. *Died*, ROBERT GILBERT, a partner in the respectable firm of Law and Gilbert, printers, St. John's-square, London.

1815, Jan. 11. *Died*, JOHN YOUNG, proprietor and publisher of the *Inverness Journal*.

1815, Jan. 19. *Died*, R. WETHERALD, printer, at Durham, aged fifty-two years. He was the youngest son of Mr. R. Wetherald, who was the first that established the printing business at Sunderland, in the county of Durham.

1815, Jan. 23. *Died*, WILLIAM PHILLIPS, printer, Bristol.

1815, Jan. 26. *Died*, JOHN ROSE, printer and bookseller, Bristol. He was the author of *A Constitutional Catechism*, 8vo, 1795; and *Letters to the Right Hon. C. B. Bathurst relative to the imprisonment of John Gale Jones*, 8vo. 1811.

1815. BENJAMIN FOSTER, an ingenious compositor, in the employ of Mr. S. Hamilton, bookseller and printer, at Weybridge, invented the composition balls. The inventors of printing machinery soon caught the idea, and by running the composition as a coat upon wooden cylinders, produced the apparatus so long and unsuccessfully sought by lord Stanhope, and without which, no machine-printing would ever have succeeded. Mr. Foster was afterwards in business, in London, as a printers' ink manufacturer.

1815. *Died*, JOHN TRUSLER, LL. D. who may be considered the very cameleon of literature, and whose long and versatile life would furnish much amusement. He was born in London in 1735, and was bred to physic in a very humble line, though he afterwards contrived, without any academical education, to obtain orders, and for some time officiated as curate in and about London. In the year 1771, he started a project peculiar to himself, that of abridging the sermons of eminent divines, and printing them in the form of manuscripts, so as not only to save clergymen the trouble of composing their discourses, but even of transcribing them. The scheme succeeded, and to the disgrace of the age there were not wanting many dignitaries of the church who gave their encouragement to this scandalous species of quackery. Dr. Trusler next established a printing and bookselling business upon an extensive and very lucrative scale. He resided several years at Bath on the profits of his trade, and latterly on his estate on Englefield green, in Middlesex. This wholesale dealer in compilations manufactured a great number of works, several of which, however, it must be acknowledged, have the merit of utility. In 1798 he published an *Essay on Literary Property*, 8vo.

1815, March 30. *Died*, — DRURY, printer and bookseller, at Lincoln, aged fifty-seven years.

1815. *An account of the visit of his royal highness the prince Regent, and their imperial and royal majesties the emperor of Russia and king of Prussia, to the university of Oxford, in June, 1814.* Oxford: printed at the Clarendon press, 1815, folio, pp. 98, with a ground plan of the Radcliffe library, a view in outline, of the part of the interior of the theatre, and a sheet containing specimens of the various types used at the Clarendon press. This volume was not printed for sale. Twelve copies struck off for the royal personages, or public libraries. A copy was sold at the duke of York's\* sale for £4 14s.

1815. The stamp duty on newspapers was raised to fourpence, discount 20 per cent. Price to the public, sevenpence; to the trade, 13s. per quire of twenty-seven. The duty payable on pamphlets was, for one whole sheet, and not exceeding eight sheets in 8vo, or any lesser page, or not exceeding twelve sheets in 4to, or twenty sheets in folio, for every sheet of any kind of paper contained in one copy thereof, 3s.

1815. An act of parliament was passed, to provide for the collection and management of the stamp duties on pamphlets, almanacks, and newspapers, in Ireland.

1815, March. *Died*, JAMES GRIST, many years a respectable printer and bookseller at Portsmouth.

1815, April. *Died*, JAMES CLARIS, bookseller, at Canterbury, of which city he was a senior common councilman. In his profession, his knowledge was most extensive; and it was generally and truly remarked, that "he died without an enemy."

1815, June. *Died*, WILLIAM HENRY LUNN, a very eminent bookseller and proprietor of the Classical Library, Soho-square, London. Mr. Lunn resided as a bookseller at Cambridge for ten years. In March, 1797, he removed to London, and succeeded Mr. Samuel Hayes, in Oxford-street; and afterwards, with the approbation of his friends, established the Classical Library, upon a new and extensive plan. The views of Mr. Lunn were announced in a perspicuous and even elegant advertisement, with a tone of thinking far raised above the narrow and selfish views of a mind intent only upon profit. The fortune which Mr. Lunn inherited from his father, was very inconsiderable. On his first settlement in London, a part of the property bequeathed to him ultimately by his uncle, Mr. Rabutte, of Cambridge, amounting nearly to £10,000, came into his possession, and enabled him, doubtless, for some time to carry on with effect the concerns of the Classical Library. His vigilance and integrity were manifested in the good condition of his books; and perhaps his munificence was more to be commended than his discretion. The whole of his property was embarked in his trade, and under circumstances more favourable his accumulation must have been rapid. But he had to struggle with unusual and most stubborn difficulties. Like every

\* Born August 16, 1763, and died January 5, 1827.

other bookseller, Mr. Lunn was doomed to losses from the inability of his customers to make their payments. He dealt with men whose rank, whose delicacy, and upon some occasions, whose poverty protected them from that importunity with which the generality of tradesmen enforce their claims. In the mean time, for the support of his credit both at home and abroad, he was compelled to fulfil his own engagements without deduction and without delay. The return of peace, by opening a free communication with the continent, was beneficial to other traders, but most injurious to Mr. Lunn, and was, no doubt, the chief cause of those embarrassments which disturbed his spirits, and shortened his existence. Disappointed in his expectations—alarmed at the prospect of impending losses—perplexed by the application of creditors, whose demands he had frequently satisfied with exemplary punctuality—unaccustomed to propitiate the severe by supplication, to trick the artful by evasion, and to distress the friendly by delay, he was suddenly bereaved of that self-command, which, if he could have preserved it, would eventually have secured for him unsullied respectability, undiminished prosperity, and undisturbed tranquillity. But in the poignant anguish of his soul, delicacy prevailed over reason, and panic over fortitude.—Happily for the human race, all the extenuations which accompany such cases, are reserved for the tribunal of that Being, who knoweth of what we are made, and remembereth that we are but dust. Many a Christian will be disposed to commiserate the circumstances of Mr. Lunn's death, and many a man of letters may find reason to deplore the loss of his well meant, and well directed labours. Unfortunately Mrs. Lunn and her daughters had not the means of carrying on the business in which Mr. Lunn was engaged.—Their doom was to lament an affectionate husband and an indulgent father.

1815, *July*. *Died*, WILLIAM MARIA ANNE BRUNE, who from an humble birth, and the rank of a journeyman printer, became a celebrated marshal of the French army, a peer of the empire, and a counsellor of state. He was born at Brivez la Gaillarde, in March, 1763. At the breaking out of the French revolution, he was engaged as overseer of a printing-office at Limensin, and first became known by publishing some small works of his own composition. He afterwards devoted himself ardently to the cause of the revolution, became a member of the club *des Cordeliers*, and played an active part in the tempests of that period. In 1793, he entered the military service in the revolutionary army in the Gironde, and soon gave proofs of intrepidity and military talents. Afterwards he distinguished himself as general of brigade in the Italian army, in 1797, in the attack of Verona, and in the battle of Arcoli. In January, 1798, he received the chief command of the army sent against Switzerland: he entered that country without much opposition, and effected a new organization of the government. In 1799, he defeated the English in the north of Holland, near Bergen, and

compelled the duke of York to agree to the treaty of Alcmær, by which the English and Russians were to evacuate the north of Holland. In Jan. 1800, he was made a counsellor of state, and was placed at the head of the army of the west. In 1803, he went as ambassador to the court of Constantinople, and received from the Turkish ministry the highest marks of honour; and, during his absence, he was appointed a marshal of the empire. At the end of 1806, Napoleon appointed him governor-general of the Hanseatic towns, and soon after commander of the troops in Swedish Pomerania, against the king of Sweden. He drew upon himself the indignation of Napoleon, by allowing a personal interview with the king of Sweden, and also by favouring the English contraband trade in Hamburg. He was in consequence recalled, and suffered to remain without employment. After the revolution of 1814, he recognised Louis XVIII. and received the cross of Louis, but no appointment. This was the cause of declaring himself for Napoleon immediately upon his return from Elba, in 1815. He received the chief command of an important army in the south of France, and was made a peer. When circumstances changed again, he delayed a long time before he gave up Toulon, and sent in his resignation to the king. While retiring from Toulon to Paris, he perished, the victim of the most atrocious assassination, at Avignon, planned by the royalist reactionaries of that period, and directed by a well-known person, who, having betrayed his country in 1814, sought to recommend himself in 1815, by inflaming the passions and pointing the vengeance of a vindictive faction. The insurgents surrounded the hotel, and with loud shouts demanded the death of the marshal. In vain did the prefect and the mayor strive to defend him (as there were no troops in the city) for more than four hours, at the peril of their lives. The door was at last broke open, a crowd of murderers rushed into the chamber, and the unhappy marshal fell under a shower of balls, after a fruitless attempt to defend himself and justify his conduct. His body was exposed to the most shameful insults, and then dragged from the hotel to the bridge over the Rhone, from which it was thrown into the river. Thus perished marshal Brune, of whom it is recorded, "that during his command in Switzerland and Holland, he displayed a noble disinterestedness rarely equalled. He approved himself a good citizen, and a good Frenchman; he deceived no friends, betrayed no cause, sacrificed no principle, and passed through the ordeal of the revolution, and of the empire, without a stain on his character."

1815, *Sept. 20*. *Died*, WILLIAM HUTTON, bookseller and stationer, at Birmingham, aged ninety-two years; who from the very depths of poverty, and from a state of neglect and abandonment, fought his way up to wealth, and to no mean degree of literary fame. He was born at the bottom of Full-street, Derby, *Sept. 30*, 1723. His father was a master woolcomber; but two years after the birth of William, he

failed and became a journeyman. The education which the son received was, of course, very scanty, for at the age of seven years he was bound apprentice to the silk mill at Derby; and at fourteen he entered on a second apprenticeship to a stocking maker at Nottingham. From the age of twenty-one to twenty-seven, he worked at the latter trade. He had now acquired an inclination for reading; and, having met with three volumes of the *Gentleman's Magazine*, contrived, in an awkward manner, to bind them himself—a profession to which he afterwards applied himself with some success. He opened a shop at Southwell, at the rent of 20s. a-year, with about twenty-shillings-worth of books. Finding great labour and little profit from the market-day concern at Southwell, in February, 1750, he took a journey to Birmingham, in order to see if there were any probability of succeeding in a shop there. He found there were then three booksellers in Birmingham—Aris, Warren, and Wollaston; but he judged from the number, activity, intelligence, and prosperity of the inhabitants, that there might be room for a fourth in a small way; and he hoped that he, as an ant, would escape the notice or envy of the “three great men.” He took half a shop, for which he paid a shilling a-week. He soon after purchased the refuse of a dissenting minister’s library; and from that period his affairs began to wear a pleasant and promising aspect. At the end of the year he had saved £20, and, being persuaded to take a house of £8 a-year, he soon carried on business on a larger scale, and secured many valuable and intimate friendships. In 1756, he married Sarah Cock, the niece of Mr. Grace, a respectable farmer at Aston, near Birmingham, with whom he lived forty years,\* and by whom he had several children; and two of them, a son and daughter, survived him. Soon after his marriage he opened a paper warehouse, the first ever seen in Birmingham, and added the stationary business to that of bookselling, with so much success as to induce him in time to relinquish the latter altogether. At the age of fifty-six Mr. Hutton commenced author, and the first fruits of his application appeared in the *History of Birmingham, to the end of the year 1780*, 8vo. published in 1782, of which a fourth edition was published in 1815. In the riots of 1791, notwithstanding his pacific habits, his house, stock-in-trade, and furniture, in Birmingham, were destroyed, and the infuriated mob demolished his residence in the country.† At the age of sixty-nine, he retired from business with a handsome

fortune, and resided on Bennett’s hill, near Birmingham. In an essential point, Hutton stands as a shining example. When the race, after many a hard year’s labour, was fairly won, he showed no triumph or conceit; but was grateful, and as modest as when he knew the bitterness of other people’s bread, and of waiting at other men’s doors. His wealth did not make him purse-proud, (that most repulsive of all prides) and the consideration in which he was held by people of condition and rank, did not make him ashamed of the lowliness of his origin or of his poor relations. He enjoyed his faculties with uncommon vigour, though considerably advanced beyond the ordinary period of human existence. He had retired from business twenty-two years; but after he had ceased to receive any emolument from the concern, he attended it with the same regularity, first for his son, and afterwards for his grand-nephew, to whom it was successively given. Six days in the week he walked to the scene of his old employment and back again, though the distance was four miles and a half; and this he did to a very advanced age. One day, when he wanted but five of completing his ninetieth year, his strength failed before he reached his house, and he was carried home in a chair. His daughter, Catherine Hutton,\* published the *Autobiography*† of her father in 1816, which is full of example and encouragement to that vast majority of mankind whose inheritance is poverty and hardship; and shows the acquirement of knowledge under the pressure of the heaviest difficulties; and that there is many a point well stocked with comfort which the sober and persevering may be almost sure of reaching. Even as a literary composition, Hutton’s *Autobiography* has great merits: he condenses much meaning in few words; he describes events with astonishing vivacity; he is playful and pathetic by turns; his quiet drollery never misses the mark; and his deep, short, quick pathos affects us like Crabbe’s poems. Here, too, all is real, simple, and naïve, without any aiming at effect; and this makes the effect produced the stronger.

1815, Oct. 1. The university of Cambridge received from government during the seven previous years, as a drawback for the duty on paper printed at their press, the sum of £13,087 7s. 6d.; the university of Oxford, for the same period, the sum of £18,858 2s. 6d. The number of bibles printed at Cambridge during the seven previous years, was 392,000; of new testaments, 423,000; of prayer books, 194,000. At Oxford the number of bibles printed of all kinds was 460,500; of

\* Mrs. Hutton died Jan. 23, 1796.

† Mr. Hutton, in one of his *Letters* to John Nicholson, esq., says:—“Among other pursuits, I spent much time, and more attention, in conducting the court of requests, which, for nineteen years, chiefly devolved upon myself. But from the 14th of July, 1791, when the rioters chose to amuse themselves with the destruction of £10,000 worth of my property, I declined public business. Thus I paid, instead of being paid for my labours. As I had never with design, or neglect, offended any man, the surprise, the loss, the anxiety, the insult, the trouble, nearly brought me to the grave.”

\* She published the *Nicar Married*, a novel, in three vols. 12mo. 1823.

† Mr. Hutton’s literary labours were closed in 1811, by a *Trip to Coatham, a Watering-place in the North extremity of Yorkshire*; written in 1806, (in his 95th year,) and published in 1816; in which he thus takes leave of his readers:—“As it is, perhaps, the last time I shall appear before the world as an author, allow me the liberty of exhibiting my performances in that character. I took up my pen, and that with fear and trembling, at the advanced age of fifty-six, a period in which most authors lay it down. I drove the quill thirty years, in which time I wrote and published fourteen books.”

testaments, 386,000 ; of prayer books, 400,000 ; of catechisms, psalters, &c. 200,000. The value of the whole was £212,917 1s. 8d. Value of books not sacred, printed at Oxford, £24,000.

1815. The Glasgow stationers' company commenced. It originated from the bookbinders' society, which had been instituted at Glasgow so early as the year 1740.

1815. *Scribblemania ; or, the Printer's devil's Polychronicon, a sublime poem.* London, 8vo. A copy was sold at Brockett's sale for 6s. 6d.

1815, Oct. 22. Died, JOHN DEAN, printer and bookseller, at Congleton, in Cheshire, aged fifty-two years. Mr. Dean was an alderman of that corporation.

1815, Nov. 22. Died, JAMES LACKINGTON, the celebrated bookseller of Finsbury-square, London ; who, from a very humble birth, retired from the bookselling business with a competent fortune, the reward of his own ingenuity, industry, and tact. This remarkable individual, in his *Autobiography*, informs us that he was born at Wellington, in Somersetshire, August 31, 1746 ; that his father, George Lackington, was a journeyman shoemaker, and a person of such dissipated habits, that the whole charge of rearing his family fell upon his wife, a very industrious woman, who could not afford to pay two-pence a-week for schooling. At the age of fourteen he was bound apprentice to a shoemaker at Taunton, with whom he remained seven years, and worked as a journeyman at Bristol and other places. In 1770, he was married at St. Peter's church, Bristol, to a young woman named Nancy Smith, to whom he had been attached seven years. In August, 1773, he arrived in London, with two shillings and sixpence in his pocket, and soon obtained plenty of work. In June, 1774, he opened a little shop in Featherstone-street, in the parish of St. Luke, as a master shoemaker and bookseller ; and the first stock which he purchased was a bagful of old books, chiefly on divinity, for a guinea, and with some old scraps of leather, laid the foundation of his future good fortune. "At that time," says Lackington, "Mr. Wesley's people had a sum of money which was kept on purpose to lend out, for three months, without interest, to such of their society whose characters were good, and who wanted a temporary relief. To increase my little stock, I borrowed five pounds out of this fund, which was of great service to me. In our new situation we lived in a very frugal manner, often dining on potatoes, and quenching our thirst with water ; being absolutely determined, if possible, to make some provision for such dismal times as sickness, shortness of work, &c., which we had been frequently involved in before, and could scarcely help expecting not to be our fate again." In 1775 he lost his wife, which involved him in the deepest distress ; but on the 30th of January 1776, he married again. From this period, success attended him in all his business arrangements, as a dealer in old books ; and he mentions, that nothing did him so much good as the practice of selling only for ready

money. He also adopted the plan of publishing catalogues of his books : the first catalogue, he says, contained twelve thousand volumes. From buying small quantities of books, he rose to be able to purchase whole libraries, revisions of editions, and to contract with authors for manuscripts of works. This extensive and lucrative business now enabled him to live in a very superior style. "I discovered," says he, "that lodgings in the country were very healthy. The year after, my country lodging was transformed into a country house, and, in another year, the inconveniences attending a stage-coach were remedied by a chariot. As usual in such cases, the envy of the world pursued Lackington for his supposed extravagance ; but it appears he was strictly honourable in trade, and spent only what was his own. He assures his readers that he found the whole of what he was possessed of in "small profits, bound by industry, and clasped by economy." In 1792, the profits of his business amounted to £5000. The success of Lackington enabled him in 1798, to retire from the book-selling business with a competent fortune, the reward of his own ingenuity, industry, and tact, in the way of reprinting books at a cheap rate, leaving Mr. George Lackington, a third cousin, at the head of the firm. Lackington at first took up his residence in Gloucestershire. Subsequently, he purchased two estates in Alvestone, one of which was a genteel house, in which he made various improvements, and took up his abode, keeping a carriage, and living in great style. In his retirement, he again joined himself to the methodists, for whom he built and endowed different chapels, and, till the last, expressed his great sorrow for the manner in which he had spoken of that body in his published memoirs.\* He finally retired to Badleigh Sulterton, in Devonshire ; but soon after, his health declined, and at length his decease took place in the seventieth year of his age.

Mr. Lackington observed in the motto of his carriage, "Small gains do great things ;" and in him was exemplified the quotation very aptly selected for him in more than one of his catalogues : "Sutor ultra crepidam felicitat ansus."

1815, Dec. 22. Died, JOHN DREW, a worthy honest journeyman printer, aged seventy-two years. He had been a compositor in the employ of Messrs. Bowyer and Nichols, but, about 1785, becoming almost totally blind, he supported himself with credit as a bookseller and stationer in a small way, in Fetter-lane, Fleet-street, where he died. He had for some years enjoyed one of the pensions left by Mr. William Bowyer for the benefit of deserving journeyman printers.

1815, Dec. 30. Died, DANIEL BOND, who, in the capacity of a journeyman printer, afforded an example which others will do well to imitate. He was brought up under his father's eye in the printing-office of Mr. John Nichols, London ;

\* *Memoirs of the first forty-five years of his life*, 2vo. 1791. Mr. Lackington published *Confessions*, in which are added, *Letters on the bad consequences of having daughters educated at Boarding Schools*, 12mo. 1804.

and continued there (with the exception of a short period, during which he carried on business as a printer on his own account, but unsuccessfully) till his death. As a compositor, he was a most valuable assistant, and his steady service might always be relied on. Moral in his conduct, temperate and rationally frugal in his habits, mild and unassuming in his manners, it is no wonder, with such qualities and claims to esteem, that his death should have excited the sincere regret of those with whom he was connected. Mr. Bond to more general acquirements, added a considerable taste in music. He died at Battlebridge, in his fifty-sixth year.

1815. A private press was erected at Auchinleck, in the county of Ayr, in Scotland, the residence of sir Alexander Boswell, bart.\* He was seized with the "type fever,"† upon which he converted a little building near the house into a printing-office, a view of which is prefixed to some of the works there printed. The first fruit of this press was the *Tyrant's Fall*, 8vo. pp. 5. Auchinleck: printed by A. and J. Boswell, mcccxcv. By Alexander Boswell.

1815. A printing establishment was erected at Astrachan, a city in the Russian empire, at which was printed an edition of the *Tartar Turkish New Testament*, 1815. *The Psalter*, 1815. *The Gospel of St. Luke*, 1815. *The New Testament*, 1820.

1815. *Bibliographiana*, a collection of original literary contributions to Aston's *Manchester Exchange Herald*, and afterwards published for private distribution, in 12mo. consisting of twenty-four numbers. The principal contributors were F. R. Atkinson, esq. Mr. Nathan Hill, the late William Ford, bookseller, and others.

1815. The number of newspapers published in Great Britain was 252. Of these 55 were published in London, 15 daily, and 40 periodically; 122 in the country parts of England, 26 in Scotland, and 49 in Ireland. The total number of these papers printed during three months, ending April 1, 1815, was 5,890,621, making the annual average 22,762,764.

1815. The *Encyclopædia Metropolitana* commenced. This work comprises the twofold advantage of a philosophical and an alphabetical arrangement, and published in such portions throughout the successive volumes, as to insure to the work, at its completion, the latest discoveries and improvements relative to every subject. It was projected and arranged by S. T. Coleridge, who wrote the *General Introduction*. It forms twenty-five 4to volumes, and has gone through several editions.

1816, Jan. 17. Died, THOMAS BILLINGE, printer and proprietor of the *Liverpool Advertiser*, and afterwards of the *Liverpool Marine Intelligencer*, in the seventy-fifth year of his age. His wife died in April, 1804.

1816, Jan. 28. Died, ROBERT TRUEMAN, junior, one of the proprietors and editor of the *Exeter Flying Post*, and a member of the common council of that city, aged forty-nine years.

1816, Feb. 16. Died, WILLIAM PICK, of York, printer and publisher of the *Historical Racing Calendar*, *Turf Register*, *Sportman's Vade Mecum*, &c. in the fifty-seventh year of his age.

1816, March. Died, JOSEPH MAGUIRE, printer, formerly of Baltimore, and for many years a reporter of the proceedings of congress, at Washington. This learned and ingenious young typographer at different times amused the public through the columns of the *Portfolio*, and the columns of the different newspapers. His last productions were the admirable letters under the signature of "Nicholas Pedrossa," which have so often afforded a fund of entertainments.—He was perfectly versed in the dead, and several of the living languages; he was a poet of no ordinary merit, an accomplished stenographer; a belles lettres scholar, scarcely inferior to any in the age: a printer of taste and skill, and a man of the most generous and upright principles; yet eccentricity and frailty buried all these admirable qualities in obscurity; and we see, sinking in a grave, dug by himself in early life, one on whom nature and education had bestowed almost all the shining gifts which adorn humanity.

1816, March 25. Died, RICHARD DOWELL, at Dulwich college, where he had filled the office of organist for thirty-four years, with the greatest satisfaction to his brother collegians, and highly respected by the neighbouring gentry. He was born at Great Geddon, in Huntingdonshire, in 1748: his father was one of the proprietors of the York coach, which he drove himself. At the age of fourteen he brought his son Richard to London, and he was bound an apprentice in the printing-office of Messrs. Bowyer and Nichols, where he conducted himself with great credit and satisfaction, and laid the foundation of his good fortune in future life. He continued in that office several years. Mr. Dowell, though diligent in business, filled up his leisure hours with the study of music, in which he made great proficiency. When an advertisement appeared, inviting candidates for the office of organist at Dulwich college, Mr. Dowell was chosen one of the two candidates to draw lots. Two bits of paper, of equal size and folding are put into a glass, and then held to the candidates. It was offered to Dowell first;—with a trembling hand he took one, the other sticking to it came out of the glass, and dropped upon the floor. The master asked him if he would keep that he had got, or take the one that fell; he hesitated, fearful that he had let the prize slip through his fingers; but after a little while said, with a faltering voice, he would keep that he had got; but he had not courage to open it. His opponent, who was no less a man afterwards than the famous Dr. Burney, eagerly opened the other, which appeared a blank. Dowell then opened the other, and to

\* Eldest son of James Boswell, the biographer of Johnson. He was created a baronet in 1821, and killed in a duel with James Stuart, esq. arising out of a political quarrel, March 20, 1822.

† See *Bibliographical Decameron*, vol. iii. p. 454.

his unspeakable comfort saw the words "God's Gift;" and a gracious gift it was, for if it had not been so, he might, for ought he knew, have been obliged to seek parish relief, as his eyes failed him so much, that soon after his induction he was totally unable to work at his profession; and as he frequently said, "God sent him there to fit him for heaven." His heart was filled with gratitude to his very reverend patron, Dr. Percy,\* and he continued to discharge his duty until within a short time of his decease, which took place in his sixty-eighth year.

1816, May 23. *Died*, CALER STOWER, a very ingenious and industrious printer, of Hackney, where he carried on a respectable business, and died, aged thirty-seven years, leaving a widow and four children to deplore his loss. He was a native of Taunton, in Somersetshire, and first commenced business in Paternoster-row, London. Mr. Stower was the author of *Typographical Marks used in correcting Proofs explained and exemplified*, 8vo. 1805. *The Compositor's and Pressman's Guide to the Art of Printing*, royal 12mo. 1808. *The Printer's Grammar*, 8vo. 1808. *The Printer's Price Book*, 8vo. 1814.—"The press," says Mr. Stower, "is the great engine by which man is enabled to improve the faculties of his nature; it is the preserver of the knowledge and acquirements of former generations, and the great barrier when not prevented by the hand of power, against the debasement of the human mind, and the equalizing effects of despotism."

1816. *Bibliotheca Anglo Poetica*. This publication is a splendid catalogue of old English poetry, compiled by Mr. Griffiths, for Messrs. Longman, in Paternoster-row, London, which excited great interest among the book collectors. In this catalogue it is stated, that, as many gentlemen might wish to possess one of the precious volumes, the "affair" would be decided by ballot. At the present such an announcement would be considered a jest. Even the books which emanated from the press of William Caxton, which a few years back would have produced from £150 to £200 and upwards, may be now occasionally met with for £15 or £20. To prove that even at the above period books had begun to fall in price, the far-famed *Bedford Missal*, at the sale of James Edwards, esq. of Harrow,

April 11, 1815, was sold to the marquis of Blandford for £887 11s. *Sic transit gloria mundi*.—At this sale was also sold a very curious and valuable manuscript, entitled *Psalterium Græco Latinum*, folio, of the ninth century, upon vellum, written in a very fair and legible hand, with this peculiarity, the Greek is written in Roman. The marquis of Douglas was the purchaser at £1105s.

1816. *The Holy Bible*, 32mo. beautifully printed by Mr. Corrall, of London. This diamond edition of the bible and prayer book, in the beauty of eye-straining minuteness surpassed all others, and took the lead of all future efforts. Charles Whittingham, in small editions of the *Common Prayer*, was eminently successful.

1816, June 18. *Died*, ISAAC CLAWKE, bookseller, Market-place, Manchester, aged seventy-three years. By his general integrity of character, and accuracy and punctuality in business, few tradesmen gained higher respect than Mr. Clarke.

1816. The rev. J. KAM, a missionary from the London society, erected a printing press at Ambowna, metropolis of the Dutch Molucca isles, in the Indian ocean. In 1820, a second press was sent from London.

1816. The first circulating library in Glasgow, established by John Smith: it contained 20,000 volumes.

1816. Bibles issued from the Glasgow university printing-office, during the year, 200,000; and about 2,500,000 other books and tracts.

1816. *The Encyclopædia Edinensis* commenced, edited by J. Miller, forms six volumes 4to.

1816. *Journal of Science and the Arts*, published quarterly, edited at the royal institution of Great Britain.

1816. *The Colonial Times*, printed and published by Mr. A. Bent, at Hobart town, a British settlement, established on the south-east coast of Van Dieman's land, in 1804. *The Hobart Town Gazette* was instituted in 1816. The first book from this press was the *History of a fugitive exile named Michael Howe, who at the head of twenty-eight other runaways disturbed the tranquillity of the colony for six years*, 8vo. 1818. This work derives importance from the singularity of the circumstance, and from the story. A copy is in the Bodleian library, Oxford.

1817, Feb. Cobbett's *Political Register* obtained a sale of fifty thousand copies weekly.

1817. *The Literary Gazette* commenced. it was the first newspaper devoted to literature in England.

1817, March 14. *Died*, JAMES GIBSON, printer and bookseller, as Malton, Yorkshire, in the 36th year of his age. Mr. Gibson went to the assizes at York, as a witness, in apparently perfect health; he was suddenly seized at his inn during the evening of the 13th, and died the following morning. A very awful instance of the uncertainty of human life. He was most exact and punctual in all his transactions as a tradesman, and in all his public duties; a cheerful companion; a warm sincere friend; never forgetful of benefits received; and exemplary in all the relative duties of life.

\* Thomas Percy, whose literary talents need no encomium, was a native of Bridgnorth, in Shropshire, and educated at Oxford. He was rector of Wilbyre, and vicar of Easton Mauditt, in Northamptonshire; in 1778, he was dean of Carlisle, and in 1782, bishop of Dromore, in Ireland, where he died Sept. 30, 1811. In 1764, he furnished notes for an edition of the *Spectator* and *Guardian*, for which the Tomsons gave him one hundred guineas. In 1765, he gave to the world his *Reliques of Ancient English Poetry*, which constitutes an era in the history of English literature in the eighteenth century, and may be described as having been the means of awakening a taste for the unaffected strains of simple narrative and genuine passion. This work has gone through several editions. In 1776, he conducted the *Northumberland Housebold Book* through the press. For more than half a century Dr. Percy was well known by various learned and ingenious publications, and distinguished by the most active and exemplary public and private virtues. His only son died April 2, 1782.

1817. According to the catalogue of the library of the British and Foreign Bible Society, *Selections from the Scriptures*, in modern Greek, were printed at Corfu, capital of the island of Corfu, in the Ionian sea, probably by the rev. S. Wilson. In 1818 and the following years we have a series of *Corfu Gazettes*, published at the government press, both in Italian and in modern Greek. At a more recent period, Mr. Lowndes, an English missionary, printed an *Albanian version of the Scriptures*, at Corfu, which is supposed to be the first book ever printed in that language.

1817. The English Baptist missionaries, at Serampore, presented a press and types, in 1816, to the American Baptists, which were set up at Rangoon, a large city and seaport of the Burmese empire, and early in 1817, Mr. Hough, printer, executed a *Summary of Christian doctrine*, in seven pages, and a *Catechism*, of six pages; one thousand copies of the former, and three thousand copies of the latter work were printed. In the same year the *Gospel of St. Matthew*, translated into the Burmese language by Mr. F. Carey,\* was printed at Rangoon.

1817. *April. Blackwood's Magazine*, commenced by William Blackwood, Edinburgh. In the management of the magazine, Mr. Blackwood at all times bore in his own person the duties connected with the editorship for seventeen years;† with a degree of skill, on which it is not too much to say, that no small portion of the success of the work depended; and it eventually reached a circulation not much short of ten thousand copies; and, while reprinted in America, found its way from the publisher's warehouse into every other part of the world where the English language was spoken. Instead of the lame literary essays, and topographical and antiquarian notices which formerly filled most of the magazines, Blackwood's presented articles of fiction, criticism, and observation, equal to the best composition of the kind which appeared in any other shape; to which were in time added political disquisitions, and it has ever since been a strenuous advocate for tory principles.

1817. *The Bibliographical Decameron; or ten days' pleasant discourse upon illuminated manuscripts, and subjects connected with early engraving, typography, and bibliography.* By the rev. Thomas Frognal Dibdin. 3 vols. 8vo. 1817.

1817, May 22. ROGER DIDOT, formerly a paper manufacturer in France, but now of Paddington, Middlesex, son of Peter Francis Didot, jun. late a celebrated printer in Paris, deceased, obtained a patent for certain improvements upon the machines already in use for making wove and laid paper in continued lengths, or separate sheets.

1817. Mr. John Murray, the eminent publisher, in Albemarle-street, London, bought the works of the rev. George Crabbe,\* for which he gave the munificent sum of £3000.

1817, June 6. THOMAS JONATHAN WOOLEA, proprietor and editor of the *Black Dwarf*, was tried in the court of king's bench, London, for a presumed libel on his majesty's ministers; when doubts arose respecting the validity of the verdict of guilty, there being ground to believe the jury were not unanimous.

1817, June. A petition from Thomas Fisher to the House of Commons, against the act of parliament for enforcing eleven copies of a work which he was about to publish.† Mr. Fisher published, in 1813, *The present circumstances of literary property in England considered, in a Letter to a member of parliament.* London, 1813. 8vo. See *Gentleman's Magazine* for 1813.

1817, July 1. *Myers's Mercantile Advertiser*, No. 1, printed and published by James and Jonathan Smith, Liverpool. This paper was commenced and edited by Thomas Marshall Myers, whose name it bears.

1817, July. BLEALE BLACKWELL, esq. gave to the stationers' company so much bank stock as at the time of his death would produce the annual sum of £100, to be every year distributed equally amongst twenty deserving journeymen letter-press printers; the first distribution of which took place in October, 1821.

1817, Dec. 18, 19, 20. WILLIAM HONE, bookseller, London, tried in the court of king's bench, before Lord Ellenborough,‡ for publishing three separate parodies, and acquitted, after an extemporaneous defence of seven hours on the first charge, eight hours on the second, and nine hours on the third.

\* George Crabbe was born December 24, 1754, at Aldborough, in Suffolk, where his father was an officer of the customs. He was educated at the village school, and in 1768 was apprenticed to a surgeon. In 1782, through the interest of Mr. Burke, he was ordained by Dr. Yonge, then bishop of Norwich. It early occurred to him, that if the characters of rustic society were painted in their actual lineaments, without the elevation and embellishment which the poetry of all ages had given to them, the result would be something strikingly novel, and not destitute of a moral use. *The Village*, a poem in two books, published in 1783, was formed upon this plan; and its correct, though sometimes unseemly descriptions, made a strong impression upon the public mind. It was followed, in 1785, by a short poem entitled *The Newspaper*, after which for many years Mr. Crabbe devoted himself to his clerical duties, and to theological study. In 1807, he re-appeared before the literary world with *The Parish Register*, a longer composition than either of the preceding, but devoted to the same unflattering views of rural life. *The Borough* (1810), *Tales in Verse* (1812), and *Tales of the Hall* (1819), were poetical works of considerable magnitude, published by Mr. Crabbe during his lifetime; and a third series of *Tales* appeared after his death, which took place Feb. 3, 1832. With all his severity, he has much tenderness; and it must excite our surprise that this quality is more apparent in his later than in his earlier poems. His works are also distinguished throughout by high moral aims.

† Statement of the Grievances imposed on authors and publishers by the late copyright act. By sir Egerton Brydges, bart. 1818.

‡ Edward Law, lord Ellenborough, was one of the sons of Edmund Law, bishop of Carlisle, who died August 14, 1787, and brother to George Henry Law, first bishop of Chester and afterwards of Ely. He resigned the chief justiceship September 21, and died Dec. 13, 1818.

\* In 1814, Mr. Carey obtained leave from the king of Ava, the ancient capital of the Burmese empire in the east, to erect a printing-office in that city, for the purpose of publishing the Holy Scriptures in the Burmese language; which permission was immediately granted.

† The amiable Thomas Friggle was the editor of *Blackwood's Magazine* during the first six months of its existence, and for many years secretary to the London Anti-Slavery Society. He died at London, December 5, 1835.

1817. **LITHOGRAPHY**, the invention of Alois Senefelder, introduced into England by Mr. R. Ackermann, bookseller, of the Strand, London, and M. Willich.

1817. *The Round Table; a collection of Essays on Literature, Men, and Manners.* These essays were the production of William Hazlitt\* and Leigh Hunt, and first appeared in the columns of the *Examiner* newspaper, and collected into two volumes 8vo.

1817. *The Sheffield Independent*, printed and published by Henry Andrew Bacon.†

1817. *Literary Advertiser*, published in London.

1817. *Shadgett's Weekly Review.* This paper was set up expressly to counteract the inflammatory publications of Cobbett, Wooler, Sherwin, Hone, and their coadjutors.

1817. *The Indo-Chinese Gleaner*, an excellent quarterly publication, well known to orientalists: this was planned and conducted by Dr. Milne, in 1817, when the Dutch were owners of Malacca; and it continued until 1822, when Dr. Milne died, and his publication dropped.

1818, Jan. 7. **Died, PETER GEDGE**, the respectable and intelligent proprietor and editor of the *Bury and Norwich Post*,‡ which was first published by him on Thursday, July 11, 1782; the first number was given gratis, and afterwards sold at threepence. Mr. Gedge died at Bury St. Edmund's, aged fifty-nine years, and was buried in the parish church of St. Mary, with the following epitaph on a marble tablet.

\* Near this place are deposited the remains of Peter Gedge, printer, who established the first newspaper that has ever been published in this town. Like a worn out type, he is returned to the founder, in the hope of being recast in a better and more perfect mould.

1818, Jan. 10. **Died, MATTHEW BROWN** printer, late of St. John's-square, Clerkenwell.

\* William Hazlitt, the well known critical and miscellaneous writer, was born in Shropshire, and educated at the Unitarian college, at Hackney. He began life as an artist, and thus obtained a knowledge of art, which qualified him for the criticism in which he was afterwards eminent. He then came to London, and was engaged as parliamentary reporter for some of the daily papers, particularly, about 1809 and 1810, for the *Morning Chronicle*. From this laborious but useful drudgery, he was promoted to purveyor of theatrical criticisms, and other occasional paragraphs. Mr. Hazlitt's first acknowledged literary production was *An Essay on the Principles of Human Action*, in which much metaphysical acuteness seems to have been displayed. But the work by which Hazlitt will be remembered, and through which he desired to transmit his name to posterity, is the *Life of Napoleon Bonaparte*. It was the greatest undertaking in which he ever engaged. It exhibits his powerful mind in a position most favourable for its display; and presents an imperishable record of the strength and versatility of his genius. For some unaccountable reason, which Hazlitt could never fathom, *Blackwood's Magazine* took an extraordinary pleasure in ridiculing him. They went beyond ridicule—they made him appear all that was base in public and private, until at last his fame became a sort of dangerous notoriety. It was not surprising that a man of Hazlitt's solitary habits should feel and resent this in his brooding moods. He did resent it, and fearfully, and the passion of revenge was instilled into his being, subdued only by the imperious presence of philosophy. He died Sept. 18, 1830. He was twice married, and left an only son.

† There was a newspaper published in Sheffield about 1736, called the *Sheffield Public Advertiser*, bearing the name of William Ward, as printer.

‡ The first title was the *Bury Post and Universal Advertiser*.

He was the son of Robert Brown, many years a printer in Windmill-court, West Smithfield.—Both the father and son were respectable in their profession; and from their presses have issued many good and correct editions of the Greek and Roman classics. Mr. Robert Brown was master of the stationers' company in 1777, and died in the year 1781. Matthew had been a liveryman of the same company more than fifty years; and was much esteemed by those who intimately knew him. He was modest and unassuming, and occasionally exhibited a vein of pleasantry and wit. His efforts in business were not successful. Yet his latter days were cheered by the kind regard of some of his oldest friends; and he had the satisfaction of having been selected as a proper person to enjoy an annuity of £30 bequeathed by Mr. William Bowyer, jun. to be given to a learned printer, under the sanction of the stationers' company. He died at the age of seventy-two years, leaving five dutiful and affectionate children. He was succeeded by Thomas Farnworth as the annuitant of Mr. Bowyer.\*

1818. *Asa Spencer*, afterwards of the firm of Draper, Underwood, & Co., introduced into England the art of *medallic engraving*. It has been ascertained beyond all doubt, that this invention is not of domestic growth in England. It was in the year 1817 that a die-sinker of the name of Christian Gobrecht, then living at Philadelphia, produced by a machine an engraving, upon copper, of the medallic head of the emperor Alexander of Russia, several impressions of which were distributed in that city. This machine was principally designed for ruling straight and waved lines; it was employed in London, and its uses exhibited and explained by Mr. Spencer, to several artists.

1818. The art of printing introduced into the Society islands at Tahiti or Otahete, and the first books executed were the *Spelling Book*, 2600 copies; a *Tahitian Catechism*, 2,300 copies; a collection of *texts or extracts from Scripture*; and the *Gospel of St. Luke*, which bear for imprint, *Tahiti, printed at the Windward Mission press*. The press was erected at Afareaitu, under the direction of their king, Pomare, who took an especial interest in the proceedings of the first work, and who requested that he might be sent for whenever the press should begin to work. A letter having been sent to inform him, says the missionary, that we were nearly ready, he hastened to the printing office, accompanied by a few favourite chiefs, and followed by a large concourse of people. I took the composing-stick in my hand, and observing Pomare looking with curious delight at the new and shining types, I asked him if he would like to put together the first A. B., or alphabet. His countenance lighted up as he answered in the affirmative. I then placed the composing-stick in his hand; he took the capital letters, one by one, and made up the alphabet.

\* A more detailed account of these charitable donations and benefactions will be found in a pamphlet of 23 pages, printed by order of the court, in 1819, and given to each liveryman.

He put the small letters together in the same manner; and the few monosyllables composing the first page of the small spelling-book, were afterwards added. The king examined, with great minuteness and pleasure, the form as it lay on the press, and prepared to take off the first sheet ever printed in his dominions. Having been told how it was done, he jocosely charged his companions not to look very particularly at him, or to laugh if he should not do it right. I put the ink-ball into his hand, and directed him to strike it two or three times upon the face of the letters: this he did, and then placing a sheet of clean paper upon the parchment, it was covered down, turned under the press, and the king was directed to pull the handle: he did so, and when the printed sheet was lifted up, the chiefs and assistants rushed towards it, to see what effect the king's pressure had produced. When they beheld the letters black and large, and well-defined, there was a simultaneous expression of wonder and delight. The king took up the sheet, and having looked first at the paper, and then at the types, with attentive admiration, handed it to one of his chiefs and expressed a wish to take another. He printed two more: and while he was so engaged, the first sheet was shown to the crowd without, who, when they saw it, raised one general shout of astonishment and joy. The king with his attendants passed by the printing-office every afternoon, and seldom omitted to call, and spend some time in watching the progress of the work. The curiosity awakened in the inhabitants of Asareaita by the establishment of the press, was soon satisfied; day after day Pomare visited the printing-office; the chiefs applied to be admitted inside, while the people thronged the windows, doors, and every crevice through which they could peep, often involuntarily exclaiming, *Berita-ni-e! fenua paari*, O Britain! land of skill, or knowledge. The press soon became a matter of universal conversation; and the facility with which books could be multiplied, filled the minds of the people in general with wonderful delight. Multitudes arrived from every district of Eimeo, and even from other islands, to procure books and to see this astonishing machine. In 1820, a printing establishment was formed at Burder's point, a missionary station on the north east coast of the island of Otaheite.

1818. *Hints on the propriety of establishing a typographical society in Newcastle-upon-Tyne.* Newcastle: printed for Emerson Charnley, MDCCCXVIII. pp. 8. Written by Mr. Brockett. A short time after printing these hints, the author and several other literary gentlemen belonging to Newcastle and its neighbourhood, formed themselves into a society, and agreed that the same should be denominated *The Typographical Society of Newcastle-upon-Tyne*, and that their number should not exceed thirty. Two hundred copies were printed.—For the origin of this society, and the works printed by its members, see Martin's *History of Private Presses*, and the *Newcastle Reprints and Local Tracts*.

1818, March 30. Died, THOMAS BENNETT, a deserving and intelligent journeyman printer, of London. He was born at Chichester, Sussex, Feb. 12, 1745. In 1760 he was apprenticed to Mr. Lewis, printer, of Paternoster-row, London. At the expiration of his apprenticeship, (after working a short time with Mr. Richardson, author of *Pamela*, &c.) he entered into the employment of Messrs. Bowyer and Nichols,\* with whom he continued forty-seven years, and was so fortunate as to enjoy two pensions which those benevolent gentlemen had severally allotted for indigent aged printers. He was secretary to the Union society, established for benevolent purposes, and affording money, in cases of death, of a member or his wife. Though anxious to be generally useful, his family was the first object of his attention; and the tender regard which was felt for him by his wife and children, prove him to have been a kind husband and an affectionate father. His last trial he bore with the resignation that became a christian, and his intellects remained unclouded to the last.

1818, April 23. AUGUSTUS APFLEGATH, of Nelson-square, Great Surry-street, Surry, printer, obtained a patent for certain improvements in the art of casting stereotype or other plates, for printing bank or bankers' notes, or other printed impressions, where difficulty of imitation is a desideratum.

A very ingenious apparatus for printing bank notes was invented by Mr. Solly, but we believe never fully adopted by the bank of England. It is described in a volume published by the society of arts, and containing their report on the best means of preventing the forgery of bank notes.

1818. MESSRS. COWPER and APFLEGATH, obtained a patent for improvement in printing presses to work by steam, and for rollers for distributing the ink.

1818, April 24. Died, JOHN GAIFFITHS, proprietor of the *Cheltenham Chronicle*.

1818, June 20. A fire broke out on the premises of Mr. Joseph Downes, printer, Temple-bar, in the Strand, London, which entirely consumed the interior, and a large stock of books, printing materials, and other valuable property.

\* John Nichols, esq. now a member of the court of assistants, transferred to the company, in June, 1817, £500 per cent. annuities, "as an addition of a small supplement to the works of my late friend and partner, Mr. William Bowyer," to pay the dividends to the persons mentioned in the following list; one of whom has worked for me more than fifty years, another much more than forty, and the others nearly thirty years.

£18 a year to Thomas Bennett, in addition to the annuity he now enjoys.

£5 a year to William Morlis, in addition to what he now enjoys, or may hereafter enjoy.

On the death of Bennett, his £18 to be divided into three annuities—for James Rousseau, John Meeson, and James Robinson, if then living—otherwise to any other compositor or pressman, of good character, not less than 45 years of age, and who shall have been at least 51 years free of the stationers' company.

On the death of Morlis, his five pounds to be added to the person who then stands first on the list; so that eventually there will only be one annuitant of ten pounds, and two of five pounds each.

The annuities to be paid at the same times as those of Mr. Bowyer. J. N.

1818. **GEORGE CLYMER**, of Philadelphia, in North America, arrived in London, and took out a patent for the *Columbian Press*, which he had invented some years before in America. No greater eulogium can be paid to this beautiful piece of mechanism, than the fact, that where the art of printing has extended its blessing, the *Columbian press* distributes the favour.

1818, *July 9. Died*, **RICHARD BEATNIFFE**, an eminent bookseller at Norwich, and author of the *Norfolk Tour*. This worthy man was a native of Louth, in Lincolnshire, and was born in 1740. He was brought up by his uncle, the rev. Samuel Beatniffe, rector of Gaywood and Bawsey, in the county of Norfolk, whose kindness and attention he gratefully acknowledges in his *Norfolk Tour*. At an early age he was placed with Mr. Hollingworth, a bookseller, at Lynn, when, having become dissatisfied with his situation, he waited on his uncle, at Gaywood, to complain of the harsh treatment of his master. His uncle, after eying him attentively, said, "Richard, you look well;" to which Richard immediately replied, "Yes, sir, I am perfectly well in health." "Then go back to your master," said his uncle, "and serve out your apprenticeship, and never come to me again with your complaints." This advice of the uncle was implicitly obeyed, and Mr. Beatniffe completed his term of servitude to the complete satisfaction of his master. He was, however, the only apprentice that ever did; for although Mr. Hollingworth was in business for more than forty years, and always had four apprentices at a time, they all, with the exception of Mr. Beatniffe, either ran away, went to sea, or enlisted into some regiment. Nor will this occasion any surprise, when it is known they were all compelled to sleep in the same bed, had clean sheets but once a-year, and were dieted in the most economical manner. At the expiration of his apprenticeship, Mr. Hollingworth offered him the hand of his daughter, accompanied with the tempting lure of a share in his business; but the lady being very deformed, and not according to Mr. Beatniffe's taste, he declined the offer, and repaired to Norwich. Here he worked for some years as a journeyman bookbinder. On the failure of Mr. Jonathan Glead, a bookseller, in London-lane, in the parish of St. Andrew, Mr. Beatniffe, with the assistance of his old master, who generously lent him £500, purchased the stock, and commenced business on his own account. After having been settled here a short time, a dignitary of the cathedral stopped at the door, and inquired who had taken the concern? On being told that it was Mr. Beatniffe, he replied, "Then I give him half a-year." His first catalogue was published in 1779, and his last in 1803, to which an appendix appeared in 1808. In politics he was a very warm and decided tory; and on one of his workmen once voting against that interest at a general election, was observed to shed tears. For many years Mr. Beatniffe was supposed to possess as large and as valuable a stock of old books as any provincial

bookseller in the kingdom. His decease took place at Norwich, in the seventy-ninth year of his age. His very valuable stock of books was disposed of by auction. His remains were deposited in the nave of the church of St. Peter at Maneroft, in Norwich, where on a flat stone is the following inscription to his memory:

To the memory of  
RICHARD BEATNIFFE,  
who died July the 9th, 1818,  
aged 78;

also  
Martha Dinah, wife of  
Richard Beatniffe,  
who died June the 6th, 1816,  
aged 49.

Mr. Richard Beatniffe will be remembered with respect by those who shared in the pleasure of his acquaintance: he was particularly blunt in his manners to his customers, and many instances of his singularity in this respect are related; the following is well authenticated. A Scotch nobleman once called to purchase a bible: the bookseller took one down, and named his price. "O, mon!" quoth his lordship, "I could buy it for much less at Edinburgh!" "Then, my lord," replied Mr. Beatniffe, replacing the volume on the shelf, and abruptly quitting his lordship, "go to Edinburgh for it."

1818, *July 28. The Kaleidoscope*,\* No. 1. Printed and published by Egerton Smith and Co., Liverpool. This weekly publication, price threepence, was conducted with very considerable ability for many years.

1818, *Aug. 11. Died*, **JOHN GOUGH**, bookseller, Dublin, a member of the Society of Friends. He was son of the celebrated John Gough, author of a *Treatise on Arithmetic*, *History of the Quakers*, and other works; and who, with his cotemporary, John Rutt, contributed to raise high in Dublin the literary character of the sect to which they belonged. John Gough the younger, like his father, engaged with zeal in useful literary pursuits: he commenced the business of a bookseller in Meath-street, and was long famous for compiling, editing, and publishing cheap tracts and books for the instruction of children. His last and most original was, *A Tour through Ireland in the years 1813 and 1814*, published in one large octavo volume. In order to answer, with more appearance of impartiality, the strictures of some English writer, it is stated in the title-page that this tour was also written by an Englishman, a fiction not according either with the scrupulous veracity of his own character, or with that of the sect to which he belonged; nor was it of any use, as the honest zeal of the author soon betrayed his country, in confuting some of those absurd calumnies which had been uttered against it. He seemed to inherit from his father not only his moral but his physical organization, the same literary and the same

\* This name was derived from the *Kaleidoscope*, a new optical instrument, invented by Dr. Brewster of Edinburgh, in the year 1818.

constitutional propensity. The father died suddenly in the act of revising his *Tour through Ireland*. He had left his desk to procure some medicines for his wife, and dropped dead while in the act of leaving the apothecary's shop.

1818, Sept. 10. *Died*, STEPHEN JACKSON, for more than forty-three years the respectable proprietor and editor of the *Ipswich Journal*, and nephew of Mr. Craighton, who first printed that paper Feb. 17, 1739. Mr. Jackson was in the employment of Mr. Woodfall, in London, at the time the *Letters of Junius*\* were printed. He died at Ipswich, aged seventy-one years, and was succeeded by his eldest son, Mr. Postle Jackson, as proprietor of the *Ipswich Journal*.

1818, Oct. 28. *Died*, GRIFFITH WRIGHT, proprietor of the *Leeds Intelligencer*, which he established in the year 1754; and was, perhaps, at the time of his death, the oldest proprietor of a newspaper in the kingdom. He died at Harehills, near Leeds, aged eighty-seven years.

William Nichols was for about forty years a compositor in the *Leeds Intelligencer* office; he also filled several public situations in the town, viz., clerk of the markets, serjeant-at-mace, &c. and was a man much respected for his upright honest conduct. He died Dec. 22, 1815.

1818, Nov. 4. JAMES HAWLEY, JOHN JACKSON, DANIEL GULSTON, and CHARLES PRIEST, pressmen, in the employ of Mr. Thorne, printer, Red Lion-court, Fleet-street, London, were convicted, at Guildhall, of printing almanacks upon unstamped paper, from the forms they were employed to work for the stationers' company.—The charge was fully proved against them, and they were sentenced to hard labour in the house of correction; Jackson and Priest, three months; Hawley, two months; and Gulston, one month.

1818, Dec. 24. *Died*, JAMES CRUTWELL,† proprietor and editor of the *Dorchester and Sherborne Journal*; in the conducting of which he displayed that love for his country, which in a narrower sphere he uniformly exemplified to every object around him. He died at Sherborne, aged forty-six years.

\* Sir Philip Francis, son of Dr. Francis, the translator of *Borace*, was a miscellaneous writer of repute, and the supposed author of *Junius*. He died December 31, 1818.

† Richard Crutwell, proprietor and editor of the *Bath Chronicle*, was unfortunately overlooked at the proper time. He died at Cheltenham, June 1, 1793. A conscientious performance of his duty towards God, and an unbounded benevolence towards his fellow-creatures, were his rules of action in every relation of his state and situation. If we consider him in a professional point of view, the deservedly celebrated *Bible* of bishop Wilson, in 3 vols. 4to, which he printed, and the extensive circulation of the *Bath Chronicle*, which his own unremitting exertion raised to respectability, are monuments of his superior skill and persevering industry. But, if we view him in the more endearing lights of a neighbour, father, and a christian, his memory takes a farther hold on our regard and respect. His friendship was warm, sincere, and active; his heart, tender and affectionate; his religion, pure and practical. This, indeed, was a principle which he never lost sight of, amid the hurry of business, or in the quiet of domestic enjoyment; genuine, fervent, and sincere, it animated him with hope in the hour of affliction, enabled him to bear the pains and languor of a tedious illness with calmness and resignation, and, when the night of the grave opened upon him, to repose his head upon the pillow of death in tranquillity and peace.

1818, Jan. 3. *The Manchester Observer*, No. 1. Printed and published by the proprietor, Thomas Rogerson. Saturday. This paper, after changing hands many times,\* was discontinued, June 21, 1821.

1818, May 23. *The Westmorland Gazette*, No. 1, published at Kendal.

1818. *The Scotsman*, published at Edinburgh.

1818. *The Edinburgh Magazine*.

1818. *The Edinburgh Philosophical Journal*.

1818, Nov. 7. *The Spectator*, No. 1. Printed by Thomas Wilkinson, for John Knight, Manchester. Saturday.

1819, Jan. 1. *Died*, WILLIAM HARROD, a worthy but eccentric printer and bookseller. He was the son of a respectable printer and bookseller at Market Harborough, in Leicestershire, who was also master of the free school in that town. William was bred to his father's profession; and, after having worked some time as a journeyman in London, commenced business on his own account, at Stamford, where he became an alderman; and published the *History and Antiquities of Stamford and St. Martin*, compiled chiefly from the annals of the rev. F. Peck, with notes; to which is added, their present state, including Burghley, 1789, two vols. 12mo. In 1788 he projected a republication and continuation of Wright's *History and Antiquities of Rutland*; but the work was discontinued, after the appearance of two numbers, for want of proper encouragement. Whilst residing at Stamford, he also commenced a newspaper, of which he was the editor and the sole working printer; but the sale not being at all encouraging, he soon desisted. He afterwards removed to Mansfield; and published the *History of Mansfield and its Environs*, in two parts, 1804, 4to. On a smartly contested election for the town of Nottingham, Mr. Harrod compiled and published a very facetious volume, under the title of *Coke and Birch*. The paper war, carried on at the Nottingham election, 1803; containing the whole of the addresses, songs, squibs, &c. On the death of his father, which took place December 11, 1806, Mr. Harrod returned to Market Harborough, the place of his nativity, and published the *History of Market Harborough, in Leicestershire, and its Vicinity*, 1808. Here he hoped to have ended his days with comfort, but a second marriage embroiled him in difficulties, which at length compelled him to relinquish his business, and his death took place at Birmingham in consequence of an apoplectic fit. He left a son and two daughters by the first wife, and two young children by the second. Notwithstanding his eccentricities, Mr. Harrod was much respected.

\* Mr. James Wroe, now a bookseller at Manchester, was a proprietor of the *Manchester Observer*, and in the course of four months had no less than thirteen processes against him and his family, for what were deemed libels. On September 22, 1819, Mrs. Wroe and a shop boy were taken into custody for merely vending the papers (Mr. Wroe being then in prison); she had an infant only five months old at her breast, and, after being some time in custody, was discharged upon two persons giving bail for £20 each. This was the second time she was in prison within ten days.

1819. **SIR THOMAS PHILLIPS**, bart., of Middledale, in Wiltshire, a diligent collector of manuscripts and rare books, erected a private press at his residence, at which he struck off from time to time a few catalogues of some of his collections, and other pieces, but none of them bears an imprint, except one, the Catalogue of Anthony à Wood's manuscripts, which has, *Typis medio-montanis, in turre Latiniensi reimpressus*. 1824.

1819, *March*. **BENJAMIN FOSTER**, of Blackfriars-road, London, invented an inking cylinder for the purpose of distributing the ink in more equal proportions before it is taken on the roller that passes over the types.

1819, *April*. **Died**, **J. PARKHOUSE**, printer and bookseller, of Tiverton, in Devonshire, of which place he was also a native, and was descended in the female line from the family of Gay, the poet. He was originally designed for the church; but on the death of his patrons, or some other disappointment, he commenced printer and bookseller. For many years he had been engaged in preparing for the press a *Talmudic Lexicon*. He was a member of the corporation of Tiverton, and a man of singular industry and unbounded reputation.\*

1819, *May* 18. **Died**, **WILLIAM COKE**, bookseller, at Leith, who carried on business, in the same premises, for the long period of fifty-five years, and was father of the bookselling profession in Scotland. He commenced bookseller in 1764, in the shop now occupied by Messrs. Reid and Son; and his stock, consisting principally of minor publications, and the common articles of stationery, was not very extensive. By perseverance and economy, his trade gradually increased, though it is somewhat doubtful if ever he attained to easy circumstances. He was a most indefatigable person, however; for he has been known to travel to Edinburgh three or four times in one day for the purpose of supplying the orders of his customers; and he would have performed the journey to obtain a sixpenny pamphlet.† He was a ready-money dealer; and whatever he purchased was paid in cash, and carried away by him on the instant. Mr. Coke possessed a rather quick and irritable temper, and his politics being decidedly of the

Pitt school, he was often embroiled in some laughable altercations. One day, having overheated himself so much in walking from Leith to Edinburgh, that on arriving at his friend baillie Creech, the publisher's shop, he sent for a small quantity of whiskey to bathe his forehead, as the fatigue had produced a very severe headache. Creech, who entered whilst the remedy was applying, exclaimed—"Bless me! what's that you are doing Mr. Coke?" "Rubbing my head with whiskey," was the reply. "No wonder," rejoined the civic Joe Miller, "that you are so very hot-headed!" Mr. Coke lived to be above eighty years of age. He was married and had a family. His son went to sea, and was never heard of. Three of his daughters resided in Edinburgh; we cannot say how many are alive.—From *Kay's Edinburgh Portraits*.

1819, *May* 24. **WILLIAM RUTT**, printer and stereotype founder at Shacklewell, near London, obtained a patent for improvements in printing machines, which improvements do not extend to the inking apparatus.

1819. Messrs. Perkins and Co. of Philadelphia, introduced into London a mode of engraving on soft steel, which, when hardened, will multiply fine impressions indefinitely.

1819, *June*. **Died**, **FRANCIS WILLIAM BLADEN**, an active and laborious writer for the press, and some time co-editor of the *Morning Post*. He began his career as a horn-boy to vend the *Sun*, whenever it contained extraordinary news; then became amanuensis to the late Mr. Willich, under whom he studied the German and French languages, and afterwards set up for himself as editor of a monthly volume of translated travels. He soon after appeared as editor of an annual volume, called the *Flowers of Literature*,\* and as conductor of a newspaper called the *Phoenix*.—He commenced a Sunday newspaper, called the *Political Register*, in opposition to Mr. William Cobbett, but was ruined by the speculation. As none of these, nor other projects, would provide for a growing family, he latterly lived on a salary derived from assisting in the management of the *Morning Post*. Incessant care undermined his constitution, and he sunk under a general decline in the forty-second year of his age. His connections and immediate interests led him to support the administration and measures of the day; but in his private character he was amiable, ingenuous, and benevolent. Mr. Bladen had long in his possession a copy of the *Book*,† as it was emphatically denominated, and announced his intention of publishing its contents in his newspaper, but was prevented by an injunction from the lord chancellor.

1819, *June* 9. **Died**, **ROBERT PECK**, for upwards of twenty years the printer and proprietor of the *Hull Packet*. He died at Kingston-upon-Hull, aged forty-five years, much respected.

\* Mrs. Hannah Cowley, author of the *Belle's Stratagem*, and other comedies, was the daughter of Mr. Parkhouse, and was born at Tiverton, in 1743. In 1772 she married Mr. Cowley, in the service of the East India Company at Bengal, by whom she had several children. It was not until the year 1776 that Mrs. Cowley appeared as a dramatic writer, but such was the success of her first piece that she was induced to proceed, and produced many comedies and farces in quick succession. In all, with considerable elegance and variety of style, she combines that happy observation of natural life and manners which furnishes well-discriminated characters, and apposite humour and satire, free from the unreal exaggerations of imagination. Mrs. Cowley was the "Anna Matilda" of the "Della Crusca" school. She died at Tiverton, March 11, 1809.

† A calculation was made from Mr. Coke's own information, respecting his journeys between Leith and Edinburgh, when it was found that he had walked a distance more than twice equal to the circumference of the globe. The late Mr. David Ramsay, publisher of the *Courant*, used to compare him to a squirrel in a cage, always endeavouring to get to the top.

\* *Flowers of Literature*, 1802-9, 7 vols. 12mo. The early volumes were compiled in association with the late rev F. Prevost.

† *Letters to the Princess of Wales, comprising the only true History of the celebrated Book*, 8vo. 1813.

1819, June 16. *Died*, THOMAS HALL, for many years the highly respected proprietor of the *Worcester Herald*. He died at his residence at Cheltenham, aged sixty-three years.

1819. The English church missionary society sent out Mr. Thomas Brown to Benares, a large and celebrated city of great antiquity, situated on the left bank of the river Ganges, capital of the district of Benares, in Hindostan, with all the materials of a printing establishment.

1819, June. Mr. Daniel Lizars, engraver, of Edinburgh, invented a method of engraving upon copper to imitate a wood cut, the first specimen of which appeared in the frontispiece to *Peter's Letters to his Kinsfolk*, three vols. 8vo. 1819.

1819. MATTHEW WEST, printer, Capel-street, Dublin, introduced the first public stereotype foundry into Ireland.

1819, June 26. The premises of Messrs. Bensley and Son, printers, extending from Bolt-court to the back of Gough-square, Fleet-street, London, totally destroyed by fire, including the printing offices, warehouses, and a part of the dwelling-house in Bolt-court, formerly the residence of Dr. Johnson; several other houses were much damaged.

1819. Composition rollers were introduced to the profession, which rapidly became general.

1819. Stereotype applied in printing tabular work, in Coxhead's *Ready Reckoner*, and of *Logarithms*.

1819, July 12. *Died*, ROBERT CHRISTOPHER, printer and bookseller, at Stockton-upon-Tees, Durham, in his sixty-ninth year. He had been in business nearly fifty years. During the whole of this period he was remarkable for assiduity, punctuality, and scrupulous integrity; wheresoever known he was respected. His whole life was marked by such liberality and beneficence, as more know how to praise, than how to imitate.

1819, Nov. 16. RICHARD CARLISLE, bookseller, Fleet-street, London, convicted of publishing Paine's *Age of Reason*, and sentenced to three years' imprisonment in Dorchester jail, and fined £1500.

1819. *The Indicator*. This was a weekly publication by Leigh Hunt, and was a professed attempt to revive the interest that had been taken more than a century before, in such periodical essays, recommended neither by party politics nor any other stimulus derived from the topics and passions of the day, but addressing themselves to our common humanity in its permanent tastes and affections. We fear the design was not crowned with any very large success. The circulation of the work was but limited; and the lot of the author was to find at most "fit audience, though few." In 1834 the papers were collected, and published in two volumes, crown 8vo. price 12s.

1819, Nov. 1. *The North Georgia Gazette and Winter Chronicle*, No. 1. During the voyage undertaken for the discovery of a north-west passage by captain Edward Parry, in the ships *Hecla* and *Griper*, in 1819 and 1820, a printing press, which had been taken on board the *Hecla*,

was set to work, upon the ships being iceblocked for the winter, in Winter Harbour, off Melville island, situate in the North polar sea, in latitude 74 N. longitude 112 W. and the above paper was published until the 20th of March, 1820, when No. 21, closed the labours of the press.—This paper was afterwards reprinted in London.

1819, Dec. 15. A meeting of booksellers and printers, resident in the city of London and the neighbourhood thereof, was held at the London coffee-house, Ludgate-hill, to consider the provisions of a bill then before parliament, for the more effectual prevention and punishment of blasphemous and seditious libels, Joseph Butterworth, esq. in the chair. The resolutions embodied in this petition, for eloquence and argument, are not to be surpassed by any production of the same nature. Its effect was, to place Botany Bay one stage more distant, by the intervention of such a trifle as "*simple banishment*" at the offender's own expense, to a foreign country.

1819, Dec. 30. Act 60 Geo. III. c. viii.—*For the more effectual prevention and punishment of blasphemous and seditious Libels:—*

1. That from and after the passing of the act, in every case in which any verdict or judgment by default shall be had against any person for composing, printing, or publishing any blasphemous libel, or any seditious libel, tending to bring into hatred or contempt the person of his majesty, his heirs or successors, or the regent, or the government and constitution of the united kingdom as by law established, or either house of parliament, or to excite his majesty's subjects to attempt the alteration of any matter in church or state as by law established, otherwise than by lawful means, it shall be lawful for the judge, or the court before whom or in which such verdict shall have been given, or the court in which such judgment by default shall be had, to make an order for the seizure and carrying away and detaining in safe custody, in such manner as shall be directed in such order, all copies of the libel which shall be in the possession of the person against whom such verdict or judgment shall have been had, or in the possession of any other person named in the order for his use; evidence upon oath having been previously given to the satisfaction of such court or judge, that a copy or copies of the said libel is or are in the possession of such other person for the use of the person against whom such verdict or judgment shall have been had as aforesaid; and in every such case it shall be lawful for any justice of the peace, or for any constable or other peace-officer acting under any such order, or for any person or persons acting with or in aid of any such justice of the peace, constable, or other peace-officer, to search for any copies of such libel in any house, building, or other place whatsoever belonging to the person against whom any such verdict or judgment shall have been had, or to any other person so named, in whose possession any copies of any such libel, belonging to the person against whom any such verdict or judg-

ment shall have been had, shall be; and in case admission shall be refused or not obtained within a reasonable time after it shall have been first demanded, to enter by force by day into any such house, building, or place whatsoever, and to carry away all copies of the libel there found, and to detain the same in safe custody until the same shall be restored under the provisions of this act, or disposed of according to any further order made in relation thereto.

2. That if in any case as aforesaid judgment shall be arrested, or if, after judgment shall have been entered, the same shall be reversed upon any writ of error, all copies so seized shall be forthwith returned to the person or persons from whom the same shall have been so taken as aforesaid, free of all charge and expense, and without the payment of any fees whatever; and in every case in which final judgment shall be entered upon the verdict so found against the person or persons charged with having composed, printed, or published such libel, then all copies so seized shall be disposed of as the court in which such judgment shall be given shall order and direct.

3. Provided that in Scotland, in every case in which any person or persons shall be found guilty before the court of justiciary, of composing, printing, or publishing any blasphemous or seditious libel, or where sentence of fugitation shall have been pronounced against any person or persons, in consequence of their failing to appear to answer to any indictment charging them with having composed, printed, or published any such libel, then and in either of such cases, it shall and may be lawful for the said court to make an order for the seizure, carrying away, and detaining in safe custody, all copies of the libel in the possession of any such person or persons, or in the possession of any other person or persons named in such order, for his or their use, evidence upon oath having been previously given to the satisfaction of such court or judge, that a copy or copies of the said libel is or are in the possession of such other person for the use of the person against whom such verdict or judgment shall have been had as aforesaid; and every such order so made shall and may be carried into effect, in such and the same manner as any order made by the court of justiciary, or any circuit court of justiciary, may be carried into effect according to the law and practice of Scotland: provided always, that in the event of any person or persons being reponed against any such sentence of fugitation, and being thereafter acquitted, all copies so seized shall be forthwith returned to the person or persons from whom the same shall have been so taken as aforesaid; and in all other cases, the copies so seized shall be disposed of in such manner as the said court may direct.

4. That if any person shall be legally convicted of having, after the passing of this act, composed, printed, or published any blasphemous libel or any other seditious libel as aforesaid, and shall, after being so convicted, offend a second

time, and be thereof legally convicted before any commission of oyer and terminer or gaol delivery, or in his majesty's court of king's bench, such person may, on such second conviction, be adjudged, at the discretion of the court, either to suffer such punishment as may now by law be inflicted in cases of high misdemeanors, or to be banished from the united kingdom, and all other parts of his majesty's dominions, for such term of years as the court in which such conviction shall take place shall order.

5. That in case any person so sentenced and ordered to be banished as aforesaid, shall not depart from this united kingdom within thirty days after the pronouncing of such sentence and order as aforesaid, for the purpose of going into such banishment as aforesaid, it shall and may be lawful to and for his majesty to convey such person to such parts out of the dominions of his said majesty, as his majesty by and with the advice of his privy council shall direct.

6. That if any offender, who shall be so ordered by any such court as aforesaid to be banished in manner aforesaid, shall after the end of forty days from the time such sentence and order hath been pronounced, be at large within any part of the united kingdom, or any other part of his majesty's dominions, without some lawful cause, before the expiration of the term for which such offender shall have been so ordered to be banished as aforesaid, every such offender being so at large as aforesaid, being thereof lawfully convicted, shall be transported to such place as shall be appointed by his majesty for any term not exceeding fourteen years; and such offender may be tried, either before any justices of assize, oyer and terminer, great sessions, or gaol delivery, for the county, city, liberty, borough, or place where such offender shall be apprehended and taken, or where he or she was sentenced to banishment; and the clerk of assize, clerk of the peace, or other clerk or officer of the court having the custody of the records where such order of banishment shall have been made, shall, when thereunto required on his majesty's behalf, make out and give a certificate in writing, signed by him, containing the effect and substance only (omitting the formal part) of every indictment and conviction of such offender, and of the order for his or her banishment, to the justices of assize, oyer and terminer, great sessions, or gaol delivery, where such offender shall be indicted, for which certificate six shillings and eightpence, and no more shall be paid, and which certificate shall be sufficient proof of the conviction and order for banishment of any such offender.

The remaining clauses relate only to the mode of proceeding in case of former conviction, limitation of actions, &c.

1819. Act 60 Geo. III. cap. ix.—*To subject certain Publications to the Duties of Stamps upon Newspapers, and to make other regulations for restraining the abuses arising from the publication of blasphemous and seditious Libels:*

Recites, that pamphlets and printed papers

containing observations upon public events and occurrences, tending to excite hatred and contempt of the government and constitution of these realms as by law established, and also vilifying our holy religion, have lately been published in great numbers, and at very small prices; and it is expedient that the same should be restrained, and enacts:

1. That all pamphlets and papers containing any public news, intelligence, or occurrences, or any remarks or observations thereon, or upon any matter in church or state, printed in any part of the united kingdom for sale, and published periodically, or in parts or numbers, at intervals not exceeding twenty-six days between the publication of any two such pamphlets or papers, parts or numbers, where any of the said pamphlets or papers, parts or numbers respectively, shall not exceed two sheets, or shall be published for sale for a less sum than sixpence, exclusive of the duty by this act imposed thereon, shall be deemed and taken to be newspapers within the true intent and meaning of several other acts of parliament now in force relating to newspapers; and be subject to such and the same duties of stamps, with such and the same allowances and discounts, as newspapers printed in Great Britain and Ireland respectively, now are subject unto, under, and by virtue of the said recited acts of parliament, and shall be printed, published, and distributed under and subject to all such and the like rules, regulations, restrictions, provisions, penalties, and forfeitures, as are contained in the said recited acts, or either of them.

2. That no quantity of paper less than a quantity equal to twenty-one inches in length and seventeen inches in breadth, in whatever way or form the same may be made, or may be divided into leaves, or in whatever way the same may be printed, shall be deemed or taken to be a sheet of paper within the meaning and for the purposes of this act.

3. That no cover or blank leaf, or any other leaf upon which any advertisement or other notice shall be printed, shall, for the purposes of this act be deemed or taken to be a part of any such pamphlet, paper, part, or number aforesaid.

4. That all pamphlets and papers containing any public news, intelligence, or occurrences, or any such remarks or observations as aforesaid, printed for sale, and published periodically, or in parts or numbers, at intervals exceeding twenty-six days between any two such pamphlets or papers, parts or numbers, and which said pamphlets, papers, parts, or numbers respectively, shall not exceed two sheets, or which shall be published for sale at a less price than sixpence, shall be first published on the first day of every calendar month, or within two days before or after that day, and at no other time; and that if any person or persons shall first publish or cause to be published any such pamphlet, paper, part, or number aforesaid, on any other day or time, he or they shall forfeit for every such offence the sum of twenty pounds.

5. That upon every pamphlet or paper containing any public news, intelligence, or occurrences, or any remarks or observations thereon, or upon any matter in church or state, printed in any part of the united kingdom for sale, and published periodically, or in parts or numbers, at intervals not exceeding twenty-six days between the publication of any two such pamphlets or papers, parts or numbers, and upon every part or number thereof, shall be printed the full price at which every such pamphlet, paper, part, or number shall be published for sale, and also the day on which the same is first published; and if any person shall publish any such pamphlet, paper, part or number, without the said price and day being printed thereon, or if any person shall at any time within two months after the day of publication printed thereon as aforesaid, sell or expose to sale any such pamphlet, paper, part, or number, or any portion or part of such pamphlet, paper, part, or number, upon which the price so printed as aforesaid shall be sixpence, or above that sum, for a less price than sixpence, every such person shall for every such offence forfeit and pay the sum of twenty pounds.

6. Provided always, that nothing in this act shall extend or be construed to extend to subject any person publishing any pamphlet or paper to any penalty for any allowance in price made by the person for whom and on whose behalf, and for whose profit, benefit, or advantage, the same shall have been first published, to any bookseller or distributor, or other person to whom the same shall be sold for the purpose of retailing the same.

7. That all pamphlets and papers which are by this act declared to be subject to the stamp duties upon newspapers, shall be freed and discharged from all the stamp duties and regulations contained in any act of parliament relating to pamphlets.

8. That no person, from and after thirty days after the passing of this act, shall print or publish for sale, any newspaper, or any pamphlet or other paper containing any public news, intelligence, or occurrences, or any remarks or observations thereon, or upon any matter in church or state, which shall not exceed two sheets, or which shall be published for sale at a less price than sixpence, until he or she shall have entered into a recognizance, in the sum of three hundred pounds, if such newspaper, pamphlet, or paper shall be printed in London or within twenty miles thereof, and in the sum of two hundred pounds, if such newspaper, &c. shall be printed elsewhere in the united kingdom, and his or her sureties in a like sum in the whole, conditioned that such printer or publisher shall pay to his majesty, his heirs and successors, every such fine or penalty as may at any time be imposed upon or adjudged against him or her, by reason of any conviction for printing or publishing any blasphemous or seditious libel, at any time after the entering into such recognizance or executing such bond; and that every person who shall print or first publish any such newspaper, pamphlet, or other paper, without having entered

into such recognizance, or executed and delivered such bond with such sureties as aforesaid, shall, for every such offence, forfeit the sum of £20.

9. If sureties pay any part of the money for which they are bound, or become bankrupt, new recognizance or bond with sureties must be given.

10. Provided sureties may withdraw from recognizance upon giving notice, and new recognizance to be entered into.

11. Bonds not to be subject to stamp duty.

12. Lists of recognizances and bonds taken, to be transmitted to commissioners of stamps in England, Scotland, and Ireland, respectively.

13. And whereas the printer or publisher of any newspaper, and of any pamphlet and paper hereby enacted to be deemed and taken to be a newspaper, will, after the passing of this act, be bound, under and by virtue of the provisions contained in the said acts made and passed in the thirty-eighth and fifty-fifth years of his majesty's reign respectively, to deliver to the commissioners of stamps in Great Britain and Ireland respectively, or some distributor of stamps or other officer, on the day on which the same is published, or within a certain time afterwards, one of the newspapers, pamphlets, or papers so published, signed as in the said acts is respectively directed: and whereas it is expedient that the same or similar provisions and regulations should extend and be applied to all pamphlets and papers, whether published periodically or not, and which shall contain any public news, intelligence, or occurrence, or any remarks or observations thereon, or upon any matter in church or state, and which shall not exceed two sheets as aforesaid, or which shall be published for sale at a less price than sixpence; be it therefore enacted, that from and after ten days after the passing of this act, the printer or publisher of any pamphlet or other paper for sale, containing any public news, intelligence, or occurrences, or any remarks or observations thereon, or on any matter in church or state, shall, upon every day upon which the same shall be published, or within six days after, deliver to the commissioners of stamps for Great Britain and Ireland respectively, at their head offices, or to some distributor or officer to be appointed by them to receive the same, and whom they are hereby required to appoint for that purpose, one of the pamphlets or papers so published upon each such day, signed by the printer or publisher thereof, in his hand-writing, with his name and place of abode; and the same shall be carefully kept by the said commissioners, or such distributor or officer as aforesaid, in such manner as the said commissioners shall direct; and such printer or publisher shall be entitled to demand and receive from the commissioners, or such distributor or officer, the amount of the retail price of such pamphlet or paper so delivered; and in every case in which the printer and publisher of such pamphlet or paper shall neglect to deliver one such pamphlet or paper in the manner hereinbefore directed, such printer and publisher shall, for every such neglect respectively, forfeit and lose £100.

14. Provided always, that in case the said commissioners, or such distributor or officer aforesaid, shall refuse to receive or pay for any copy of such pamphlet or paper offered to be delivered to them or him as aforesaid, for or on account of the same not being within the true intent and meaning of this act, such commissioners, distributor, or officer shall, if required so to do, give and deliver to such printer or publisher a certificate in writing, that a copy of such pamphlet or paper had been by him duly offered to be delivered, and such printer or publisher shall thereupon be freed and discharged from any penalty for not having delivered such copy as aforesaid.

15. That if any person shall sell or expose to sale any pamphlet or other paper not being duly stamped, if required to be stamped, such person shall, for every such offence, forfeit the sum of twenty pounds.

16. That it shall be lawful for any of his majesty's courts of record at Westminster or Dublin, or of great session in Wales, or any judge thereof respectively, or for any court of quarter or general sessions of the peace, or for any justice of the peace before whom any person charged with having printed or published any blasphemous, seditious, or malicious libel, shall be brought for the purpose of giving bail upon such charge, to make it a part of the condition of the recognizance to be entered into by such person and his or her bail, that the person so charged shall be of good behaviour during the continuance of such recognizance.

17. Recovery of penalties. Provided always, that no larger amount in the whole than one hundred pounds shall be recoverable or recovered before any justices of the peace, for any such penalties incurred in any one day; any thing in this act, or any other acts of parliament contained to the contrary notwithstanding.

18. Two or more justices to determine offences, and may mitigate penalties.

19. Penalty on persons summoned as witnesses not appearing, &c.

20 to 25. Relate to the forms of conviction, commencing actions for penalties, management of the duties, allowance of discounts, &c.

26. That nothing in this act shall extend to acts of parliament, proclamations, orders of council, forms of prayer and thanksgiving, and acts of state ordered to be printed by his majesty, his heirs or successors, or his or their sufficient and authorised officer; or to any printed votes or other matters by order of either house of parliament; or to books commonly used in the schools of Great Britain or Ireland, or books or papers containing only matters of devotion, piety, or charity; or daily accounts; or bills of goods, imported and exported; or warrants or certificates for the delivery of goods; and the weekly bills of mortality; or to papers containing any lists of prices current, or of the state of the markets, or any account of the arrival, sailing, or other circumstances relating to merchant ships or vessels; or of any other matter wholly of a commercial

nature; provided such bills, lists, or accounts do not contain any other matter than what hath been usually comprised therein; or to the printers or publishers of the foregoing matters, or any or either of them.

27. That nothing in this act contained shall extend or be construed to extend to charge with stamp duties any work re-printed and re-published in parts or numbers, whether such work shall be wholly reprinted or shall be republished in an abridged form; provided that the work so reprinted and re-published shall have been first printed and published two years at the least previous to such re-printing and re-publication, and provided the said work was not first published in parts or numbers.

The above enactments were designed to trample down all liberty of the press in this country, and they were placed upon the statute book during the ministry of lord Castlereagh,\* and denominated, *par excellence*, the "Six Acts," compared with which, all former severities vanish into trifles. In the regular exercise of his calling, in order to obtain a livelihood, the British printer was made a perpetual candidate for imprisonment, banishment, or transportation. He was, moreover, constrained to involve friends as sureties before he could undertake some particular branch of his business; and thus subject himself to the payment of any FINE that might be imposed for offences not definable by a written law, but arbitrarily engendered in the breast of any attorney-general—magnified in the microscopic eyes of a special jury—and assuming some monstrous shape on being exposed to the fiat of any time-serving judge.

A short time clearly proved how futile and abortive in the extreme was these severe enactments, so far as the suppression of violent invectives against the ministry, or seditious writings was intended by it, but supereminently calculated to encourage newspaper monopoly. The operation of any restrictive laws against the press has invariably led to the contrary results to those contemplated. We have shewn the origin and progress of the tax raised progressively, penny after penny, with the increasing thirst for information among the people, until it amounted to one hundred per cent. upon the original price of a newspaper, and proved the most impolitic tax that ever was made a source of revenue. The tax was overlooked in the restlessness of the times, and amid the whirlwind of other taxes with which the people were saddled. The British ministry had a double object in view in taxing newspapers. The first was revenue; and the second, the banishment of immoral and slanderous publications from general circulation. A third object may be added; namely, the limitation of public animadversions on their conduct to as narrow a circle as possible, by enhancing the market price of them. Did it serve

the purpose? Except in the way of emolument, did it produce any beneficial or moral effect? Did it even answer the main end they had in view by it? We submit it did not. The ministerial press suffered by these measures to a far greater extent than the opposition press did. Neither Mr. Percival\* nor lord Londonderry could recognise one of the first maxims of Mr. Pitt; which was, to let the press correct the press, and to permit scurrility and abuse to be neutralized by their over excesses, and be rendered nerveless and powerless by the ridicule of one writer, the indignant declamation of another, the contempt of a third, and the hatred of every silent or neutral party. The press and the press alone, can correct its own abuses and licentiousness. If these abuses are put down in any other way, it must be by the total destruction of the press itself. In short, these measures have been the unfortunate means of making newspapers more the slaves, the mere machines of faction, than they ever were before. The price narrowed the selection, and effectually interposed, so far as the labouring classes were concerned, between the desire to obtain information, and the exercise of free discussion. The more diversified public opinion is, the less extensive will be its ramifications, and the less danger to the monarchy is to be apprehended from it; therefore, the best security would be to let the press be unfettered and untaxed, and the fullest scope given to every writer to develop his views, and to every reader to exercise his judgment as he pleases.†

1819, *Dec. Died*, BAYAN M'SWYNY, printer of the *Courier* London newspaper since its commencement in 1792.

1819. The *National Omnibus*, in eight pages folio. This periodical was given gratis to coffee houses, and sold for one penny by the newsmen, the necessary remuneration being looked for from the profit of the advertisements inserted in it. At first fortnightly, and afterwards weekly.

1819, *Feb.* The *Imperial Magazine; or, Compendium of Religious, Moral, and Philosophical Knowledge*, No. 1, printed and published by Henry Fisher, printer in ordinary to his majesty, at the Caxton printing-office, Liverpool. 1s.

1819, *April 24.* The *Yorkshire Gazette*, published at York.

1819. *Pamphleteer*.

1819. *The Musical Magazine*.

\* The right hon. Spencer Percival, chancellor of the exchequer, was assassinated in the lobby of the house of commons, May 11, 1812, by John Bellingham, who was executed for the offence on the 18th.

† To show the rapid extension of newspapers in the absence of all taxes upon them, we have only to look to America, and there we shall find the numbers to be amazing. In 1790, in the North American colonies, there were but seven newspapers; in 1775, there were thirty-seven; in 1810, in the United States alone, there were three hundred and fifty-nine, including twenty-five published daily, which circulated 22,300,000 copies in the year, in 1827, six hundred and forty, circulating about thirty millions of copies; and in 1834, there were one thousand two hundred and sixty-five. These papers can be sent by post to the distance of a hundred miles, for the postage of about a halfpenny. The population of the States was then about 15,000,000; and they have more newspapers than the whole of Europe with 190,000,000.

\* Robert Stewart, was born June 18, 1769, succeeded his father as marquis of Londonderry, in 1811, and died, by his own hand, at North Cray in Kent, August 12, 1822.

1819, *May 6. The Recorder*, No. 1. Printed by John Leigh, for Joseph Macardy, Manchester.

1819, *Aug. 28. The Patriot*. Printed and published by Joseph Aston, Manchester.

1820, *Jan. 26. Died*, HENRY ANDREWS, stationer and bookseller, at Royston, in Cambridgeshire, aged seventy-six, who during the forty years preceding, manufactured *Moore's Almanack* for the stationers' company. He was born at Frieston, near Grantham, Lincolnshire, of poor parents. At a suitable age he was sent from home to earn his living, and the first situation he filled was at Sleaford as servant to a shopkeeper; after this he went to Lincoln to wait upon a lady, and devoted his leisure hours in making hour-glasses and weather-glasses. His last situation of this kind was in the service of J. Verinum, esq. who finding him so intent upon study, allowed him a few hours every day for that purpose. About 1764, he opened a school at Basingthorpe, near Grantham, and afterwards engaged as an usher in a clergyman's boarding-school at Stilton. He then settled in Cambridge, where he proposed residing, in expectation that he might derive some advantage in prosecuting his studies, from the men of science in the university; but the noise and bustle of the town not being agreeable to him, he left Cambridge, and went to reside at Royston, where he opened a school at the age of twenty-three, and at this place he continued as schoolmaster and bookseller until his death, which happened after a short illness. Mr. Andrews was intimate with many men of science, by whom he was much respected. He was well informed in the exact science, and his "*Vox Stellarum*" was as profound in occult science as "*Season on the Seasons*," and "*Poor Robin*, the worthy knight of the burnt island," two other almanacks long extinct. A few years before his death, Mr. Andrews predicted to a friend that people would soon know better than to buy, or be influenced by the prophecies which his employers required him to write. Since the tax has been taken off almanacks,\* the reading of Moore's prophecies has been chiefly confined to weak-minded gossips, and illiterate people.

1820, *Jan. The Lonsdale Magazine*, edited by John Briggs,\* printed and published monthly, at Kirkby Lonsdale, Westmoreland. In the prospectus to this work the editor says, that "A monthly magazine may be properly compared to an orderly flower garden, where all classes of society may spend an hour in rational enjoyment; for where the bouquet is so various, it is presumed, something will be found to gratify the most capricious fancy. It is intended to serve

as a stage, on which the sons of genius may exercise their literary powers behind a friendly veil. Where, whatever may be the peculiar forte of the writers, they have an opportunity of making trial of its strength, without subjecting themselves to the ridicule of personal criticism."

1820, *Jan. Cobbett's Evening Post*. This newspaper was started by William Cobbett,\* in London, for the purpose of advancing his claims to a seat in parliament. It did not, however, effect its object, or continue long in existence. He was defeated at Coventry.

1820, *Jan. 29. Died*, GEORGE III. king of England, in the eighty-second year of his age. Thus terminated a reign of fifty-nine years and a quarter, the longest and most interesting in the English annals. His consort, queen Charlotte, died at Kew, Nov. 17, 1818, in the seventy-fifth year of her age.

1820. *Rees's Cyclopaedia*, thirty-nine volumes 4to. in seventy-nine parts, with six supplementary parts, and numerous engravings, London, 1802-20. On the completion of this great work, Dr. Rees† and the proprietors stated in an address, that the entire cost of the work when finished, was above £300,000, an expenditure on a single work which has no parallel in the history of literature.

1820, *March 22. Died*, JOSEPH CLARKE, bookseller, Market-place, Manchester, aged eighty-one years. He was brother and partner of Mr. Isaac Clarke, noticed at page 864, *ante*.

1820, *March 5. Died*, JOHN EVANS, many years a printer in Long-lane, West Smithfield, London, in his sixty-seventh year.

1820, *March*. A destructive fire broke out on the premises of Messrs. Gye and Balne, printers, Gracechurch-street, London, which entirely consumed the whole of their extensive establishment, and greatly damaged twelve adjoining houses.

1820. *A Memoir on the Origin of Printing*, addressed to John Topham, by Ralph Willst. This elaborate disquisition originally appeared in the eleventh volume of the *Archæologia*,—Newcastle, 1818—thirty-two copies printed with a preface, by J. T. Brockett—Newcastle, 1820, one hundred and fifty copies printed. Large paper thirty copies printed.

\* To avoid the political storm which brought Hone and Wooler to trial, Mr. Cobbett left England for America in March, 1817, and returned in the autumn of 1819, when he was invited to a public dinner in London, December 3.

† Abraham Rees, D.D., F.R.S., F.L.S., &c., was the son of Lewis Rees, a dissenting minister of great celebrity in the county of Montgomery, North Wales; and by his mother's side was collaterally descended from the celebrated John Penry, the martyr of Elizabeth's days. At what time Dr. Rees left his native country we do not know, but his settlement as pastor of a congregation was at St. Thomas's, Southwark, about 1766. It was in 1791 that the first numbers of *Chambers's Cyclopaedia*, edited by Dr. Rees, appeared in four volumes folio. The first volume of the 4to. *Cyclopaedia* appeared in 1802. He was a great benefactor to his native country, and a Protestant dissenter on deliberate and rational conviction. He died June 9, 1825, in his eighty-second year, and was buried in Bunhill Fields. He was the author of a great number of works, which do great credit to his judgment as a scholar and divine. In 1788 he published *The Advantages of Knowledge, a Sermon preached before the Supporters of the New College at Hackney*, 8vo. 1788.

\* *The Remains of John Briggs, late editor of the Lonsdale Magazine and of the Westmorland Gazette, containing Letters from the Lakes, &c. &c.*, 1823, printed by Arthur Foster, Kirkby Lonsdale. He was entirely the founder of his own fortune, being born of poor parents, near the village of Cartmel, in Lancashire, on Christmas day, 1788, and early initiated into his father's trade, that of a basket maker. By application to literature, he was enabled to become a bright ornament, but died at the early age of forty-six, November 21, 1824.

† Repealed July 27, 1834, to the amount of £25,000.

1820, April 3. *Died*, RICHARD EDWARD MEACIER, many years bookseller to the university of Dublin, in which city he died, aged sixty years. He was of an ancient and highly respectable hugonot family. The perfect simplicity of his character, his sincere piety, combined with his many amiable and exalted qualities, will long endear his memory to all who enjoyed his acquaintance; and his death was a loss to the booksellers of Ireland that could not be easily repaired.

1820, April 15. *Died*, JOHN WARE, printer, proprietor, and editor of the *Cumberland Packet* (published at Whitehaven) since its commencement, in October, 1774. He died at Whitehaven, aged sixty-six years.

1820. *Died*, SAMPSON PERRY, many years connected with the London press, as proprietor, editor, and author. He had just received his discharge from the insolvent debtor's court, and returned home in exceeding good spirits. Mrs. Perry had prepared dinner, to which he sat down, laughing and making some humorous observations; but just as he was conveying some food to his mouth, he fell back in his chair, exclaiming "Lord have mercy upon us!" and instantly expired. Surgeons were sent for, but the vital spark had fled. He was born at Aston, near Birmingham. His life had been full of vicissitudes, and he had many narrow escapes with his life, in situations of great danger. He was for some time surgeon of the Middlesex militia, and a vendor of a nostrum for the cure of the stone and gravel, but devoting himself to political pursuits he became, in 1792, editor of a scandalous paper, called the *Argus*, or *General Observer of the Moral, Political, and Commercial World*. This publication, at the commencement of the French revolution, was distinguished for its virulence and industry in disseminating republican doctrines. For a libel in this journal he was prosecuted and convicted, on which he withdrew to Paris, where he contracted an intimacy with Thomas Paine, and others. He was imprisoned nine times in French prisons, and during the reign of M. Robespierre he was confined with Thomas Paine, and condemned to death, without the then thought unnecessary form of trial. He escaped his dreadful doom by the following singular fortunate circumstance:—his prison or cell door was hinged upon a swivel, and by the least motion would turn round any way. The custom was to mark with red chalk the doors of the cells of those who were condemned to death, and his door was marked, but the turnkey leaving the cell in the morning appointed for execution, accidentally let the door turn round, not observing by this motion the door was reversed, the "mark of death" was inside instead of out. Before he noticed the circumstance, the officers of execution arrived, and took from every cell marked with red chalk the victims of revolutionary fury; and perceiving Mr. Perry's cell not marked, they passed it, and when the gaoler again came round and opened the door, he was thunderstruck on

finding Mr. Perry and Paine alive; but ere the gaoler had time to apprise any person, he was shot by the mob who had just burst open the prison, and who liberated the captives as the monster Robespierre\* was led bleeding to the scaffold. After this he returned to England, where he was taken up on the outlawry which he had incurred by not appearing for judgment on his former conviction. He remained in Newgate till a change of ministry, and then was liberated. He afterwards purchased the *Statesman*, which he edited for two or three years, and then resold it.

1820, April 28. *Died*, WILLIAM DAVIES, of the respectable firm of Cadell and Davies, booksellers, in the Strand, London. He was a gentleman of liberal principles and unsullied purity in all his dealings.

1820. RICHARD WATTS took out a patent for improvements in inking printing types with rollers, and in placing and conveying the paper; and giving the pressure by a cylinder.

1820. DANIEL TREADWELL, of America, took out a patent for certain improvements in the construction of printing presses, which were manufactured by Mr. Napier. The power necessary for giving the impression is obtained by means of a lever or treadle worked by the feet, instead of horizontal levers as applied to that purpose in the Stanhope and other presses.

1820. ROBERT WINCH, of Shoe-lane, London, took out a patent for certain improvements on machines, or presses, chiefly applicable to printing. These were for the purpose of self-inking the types, supplying the paper, and printing the sheet at one operation.

1820. THOMAS PARKIN took out a patent for an ink apparatus, for the purpose of enabling one man to perform all the operations of press-work.

1820, April 28. The proprietor of the *Observer*, London newspaper, was fined £500 for inserting the proceedings on the trial of Thistlewood and others for high treason. The court of king's bench had interdicted the publication of any of the evidence, in any of the public prints, until a specified time. The proprietor of the *Observer*, however, refused to obey this order, and published a full report of the proceedings in his next number. For this contempt he was brought before the court, and fined in the sum of £500; but such was the demand for the paper that contained matter so interesting, that he was enabled, from the profits of his extra sale alone,

\* Maximilian Isidore Robespierre was born at Arras, of a poor family, in 1759. On the breaking out of the revolution he became a member of the National Assembly, and commenced a newspaper called *L'Union, ou Journal de la Liberté*, conducted with extreme violence. He became the chief of the Jacobins, and at length obtained the supreme command in France. To maintain his power he had recourse to the most cruel expedients. The prisons were crowded with unfortunate victims of all ages and of both sexes. Numbers were daily put to death, and the streets were deluged with blood. At length a conspiracy was formed against the tyrant, and he was led to the guillotine with twenty-two of his accomplices, July 28, 1794.

† Query. Did the name introduce the invention, or the invention the name, *Hemard*.

to liquidate the fine,\* pocket the excess, and laugh alike at the impotency of the court and the credulity of the public.

1820, June 11. *Died*, EDWARD HUMBLE, or Oumble, printer and bookseller, at Newcastle-upon-Tyne, and one of the proprietors of the *County Durham Advertiser*. He was in the sixty-seventh year of his age, and was highly respected by a large circle of acquaintance.

1820, Sept. *Died*, RICHARD SEDGWICK, printer and bookseller, at Bradford, in Yorkshire, aged fifty-nine years, a man of the strictest integrity. He was brother to the rev. Mr. Sedgwick, vicar of Mirfield.

1820, Sept. *Died*, JOHN WHEBLE, printer and bookseller, of Warwick-square, London, and for sixteen years a much respected representative of the ward of Farringdon within, in the court of common council of the city of London. He was born in the year 1746, at Gatcombe, in the Isle of Wight. In the year 1758 he was apprenticed to his relative, Mr. Wilkie, the well-known bookseller and publisher in St. Paul's church-yard. Early in life Mr. Wheble commenced business on his own account, but notwithstanding the steady and industrious exertions of ten or twelve years, his first attempt was not successful. During the term of this business, however, he was the publisher of the *Middlesex Journal*, a paper at that time in considerable repute, and which brought him into a political connexion with the opposition party of those days, and particularly with Wilkes, Home, and others. This connexion with the opposition brought him into trouble, at the same time imparting to him the honour of having his name handed down to posterity, as, so to speak, being accessory, or having a considerable share in conferring a most important and lasting benefit on his country.† About the year 1780, and during the military arrangements in Hyde park, and on Wharley common, Mr. Wheble being out of the book-selling business, held a situation in the commissariat. In consequence of the return of peace, he quitted the service, and had once more recourse to his original destination as a publisher. A few years after he commenced the *County Chronicle*, which made so many profitable tours *one hundred miles round London*. He next, in conjunction with Mr. Harris, the worthy bookseller, in St. Paul's church-yard, and one or two other individuals, projected the *Sporting Magazine*, which after a while met with very considerable success. A distinguishing feature of this very amusing work, and that which contributed in an essential degree to its success, was a steady adherence to a generous and just system of *sporting ethics*, marking the due discrimination between sport and cruelty; and advocating on all occasions the humane duty of justice and mercy to brute beasts. These, Mr. Wheble's last efforts, were deservedly crowned with success, and placed him towards the decline of his days in a state of

respectable independence. John Wheble might be pronounced to be a man thoroughly inclined to do his duty in that state of life in which it had pleased God to call him. One trait in his character deserves to be particularly noticed. He was always the encourager of meritorious youthful exertions, and to him several respectable individuals owe their first introduction to the road to prosperity. He was fond of society, and a frank open-heartedness for which he was distinguished, always rendered him a pleasing companion. His disposition was humane and charitable. He died at Bromley, in Kent, in his seventy-fifth year, leaving a widow and a long list of friends to lament his loss.

1820, Oct. 23. — DAVIDSON, a printer in West Smithfield, London, was sentenced, in the court of king's bench, to two years' imprisonment in Oakham jail, and afterwards to find security for his good behaviour, himself in £200, and two sureties in £20 each, for publishing No. 9, of the *Republican*, and No. 1, of the *Deist's Magazine*.

1820, Oct. 31. *Died*, WILLIAM RAWSON, printer and one of the proprietors of the *Hull Advertiser*, aged sixty-three years. He possessed a kind affectionate disposition, and was very much respected in his public and private life.

1820, Dec. 4. *Died*, SAMUEL ROUSSEAU, a learned printer, and nephew to the celebrated Jean Jacques Rousseau. He served his apprenticeship in the printing-office of Mr. John Nichols, by whom he was occasionally employed in collecting epitaphs, and other remains of antiquity for the *Gentleman's Magazine*. He was a singular instance of patient perseverance in the acquirements of the ancient languages. Whilst working as an apprentice and journeyman, he taught himself Latin, Greek, Hebrew, Syriac, Persian, and Arabic. To these acquirements he added a knowledge of the French, and some of the modern tongues. He was for a short time master of Joy's charity school, Blackfriars. A few years after the expiration of his apprenticeship, he commenced printing on his own account, in Leather-lane, Holborn, and afterwards removed to Wood-street, Clerkenwell, where he carried on business for some time, but with little advantage to himself and family, having from unforeseen circumstances and losses in trade been obliged to relinquish business. During the time he was a printer, he taught the Persian language, and compiled and published several oriental works. After he relinquished the printing business, he edited a variety of works for the booksellers; but as a creditable support for himself and his family was his aim, and not literary reputation, most of his works appeared under a fictitious name. They have, however, generally proved successful to the publishers, as their objects were useful; and nothing ever appeared in them contrary to good morals, or the established religion and government. About three years ago, he was seized with a paralytic stroke, which continued to increase, and joined to a cancerous affection in the face, rendered him incapable of holding a pen, or

\* The fine was not enforced.  
† See pages 734-35, ante.

indeed of feeding himself. In this accumulated distress, with two daughters, wholly dependent on him for support, a gleam of comfort was afforded him in the best moments of his existence, by a liberal benefaction from that excellent institution. The "Literary Fund," which also enabled his daughters to consign his remains to a decent grave in the church-yard of St. James's, Clerkenwell.

1820, Dec. 11. Mr. Wright, bookseller, editor of the *Parliamentary History*, &c. &c. obtained a verdict of £1,000 damages against William Cobbett for several libels published in the *Political Register*.

1820, Jan. 1. *The Durham Chronicle*; or, *General Northern Advertiser*, No. 1, printed and published by John Ambrose Williams,\* in the city of Durham. It is now (Sept. 1838,) published by John Hardinge Veitch.

1820. *The Beacon*, published at Edinburgh. This weekly newspaper was established by a few Tory gentlemen, and lawyers, by which the more violent of the radical prints should be met upon their even grounds. As the scurrilities of the *Beacon* inflicted much pain in very respectable quarters, it sank, after an existence of a few months, amidst the general execrations of the community. Sir Walter Scott, who was one of the association, and who partly furnished the means for its establishment, probably never contemplated, and perhaps was hardly aware of the guilt of the *Beacon*, was loudly blamed for his connection with it.

Another paper of the same stamp was started in London, called the *John Bull*, and the violence of its politics, and the scurrilities with which its pages were filled, caused the printers to be repeatedly fined and imprisoned.

1821, Feb. 3. JANE CARLILE was sentenced in the court of king's bench to two years' imprisonment in Dorchester jail; and at the expiration of that time to find two sureties for her good behaviour in £100 each, for publishing, in the *Republican*, a letter to a clergyman at Bristol. Her husband was confined in the same prison.

1821. A printing establishment was carried on at Sleswick, a large city of Denmark, by the pupils of a deaf and dumb school. Dr. Cotton observes "that it appears to be an excellent method of employing such afflicted individuals."

1821, Feb. 7. The Caxton printing-office, situate on Copperas-hill, Liverpool, the property of Henry Fisher, totally destroyed by fire. It was the largest periodical warehouse in the united kingdom; and contained sixteen printing presses: ten copper-plate presses; with apparatus for heating the plates; 16,000lbs. weight of types; 700 reams of paper; 400 original drawings; two patent hydraulic presses; 10,000 pages of stereotype plates; and 3,500,000 of folio, quarto, and octavo numbers. The whole was insured for £36,000. Mr. Fisher removed to London.

\* In July, 1822, Mr. Williams was found guilty of a libel on the clergy of the county and cathedral church of Durham, which appeared in his paper, August 18, 1821.

1821, Feb. 16. A duel between Mr. Scott,\* editor of the *London Magazine*, and Mr. Christie, editor of an *Edinburgh Magazine*, in which the former was mortally wounded. Mr. Christie and Mr. Trail were tried for the murder of Mr. Scott, but acquitted for want of evidence.

1821, Feb. 28. *Died*, JOHN RACKHAM, nearly forty-three years a printer and bookseller at Bury St. Edmunds, Suffolk, and one of the burgesses of the corporation. He had retired to bed in health as good as usual, and in a few minutes afterwards, without uttering a groan, was found to be a corpse. Aged sixty-four years.

1821, March 10. *Died*, WILLIAM MEYLER, proprietor of the *Bath Herald*, and one of the magistrates and senior common councilmen of the city of Bath, where he died, aged sixty-five years. Mr. Meyler was a clever writer of small pieces of poetry, and published, in 1806, a volume of *Poetical Amusements*.

1821, March 19. THOMAS FLINDELL, editor of the *Western Luminary*, found guilty of a libel on queen Caroline, and sentenced to be imprisoned eight months in Exeter gaol.

1821, April 6. *Died*, CHARLES BRIGHTLEY, printer and publisher, of Bungay, in Suffolk. Happening to be at Stamford in the course of a journey on business, he went from the Crown inn to secure a place by the coach for Leicester. He was remarked at the coach-office as a fine robust-looking man, about sixty years of age, and seemed to be in perfect health. He had paid his fare, and had just reached the gateway of the Crown inn, when he fell down and died instantly. He published *An account of the method of casting stereotype, as practised by the author*, 8vo. 1809.

1821, April. *Died*, WILLIAM TOWERS, for more than forty years editor to the *Sherborne Mercury*, aged sixty-five years. He was brother to Dr. Joseph Towers noticed at page 786, *ante*.

1821, May 11. *Died*, GEORGE HOWE, proprietor of the *Sydney Gazette*, and to whom we have already briefly alluded at page 814, *ante*. He was born at St. Kitts, where his father and brother were printers. While yet a young man Mr. Howe went to London, where for some time he worked as a printer, and was employed in the office of the *Times* newspaper. He arrived with his family in the colony of New South Wales, in the year 1800. Young as the settlement then was, and absorbed as were its inhabitants in pursuits far different from those of literature, the spirit of his art was still brisk within him, and to establish the press upon these

\* John Scott was a native of Aberdeen, at which city he received his education. He commenced the publication of a weekly paper called the *Censor*, and was afterwards engaged as editor of the *Staterman*, an evening paper, and successively editor of the *Champion* and *News*, published by Mr. Drakard, at Stamford, and at the time of his death of the *London Magazine*. A series of articles in the latter publication, on the conduct of *Blackwood's Magazine*, led to the unfortunate duel. Mr. Scott published a volume replete with valuable and sterling sense, entitled *A Visit to Paris in 1814, being a Review of the Moral, Political, Intellectual, and Social Condition of the French Capital*, 8vo. 1815.

antipodean shores was the object of his constant ambition. Fortunately for him and the colony, that shrewd and active man, governor King, then at the head of the executive, readily fell in with Mr. Howe's wishes, foreseeing the salutary effects which the press, wisely conducted, could not fail to exert upon the crude elements of which the population was composed. A small supply of materials was accordingly procured from London, and on the 5th of March, 1803, being only fifteen years after the establishment of the colony, appeared the first number of the *Sydney Gazette and New South Wales Advertiser*, a journal which has maintained its ground to the present day. At the outset, and for many years afterwards, the *Gazette* was chiefly occupied with the official orders and notifications of government. This circumstance at once stamped it with a degree of respectability, and secured for it as wide a circulation as the country could support. But, though thus patronised by authority, the ingenious publisher had to contend with many difficulties, and was often driven to straits from which nothing but his own determined activity and perseverance could have extricated him. In those early times, the intercourse between Sydney and London was extremely tardy and precarious. Arrivals like angel-visits, were "few and far between." A ship or two, per annum, was the only link which connected the mother country and her distant daughter; and then the passage was tedious beyond endurance, generally occupying the better part, not unfrequently the whole, of the twelvemonth. Nor was there any thing like a regularly established trade or commerce. Now and then some solitary adventurer would bless the inhabitants with an "investment"—i. e., a *mélange* of ill-sorted goods banished from the lumber-rooms of London, for the express accommodation of the good folk at "Botany Bay,"—for whom, in sooth, "any thing was good enough!" To none was this poverty-stricken market a cause of greater embarrassment than to our worthy father of types. His press—his letters—his ink—his paper—and all the appurtenances thereunto belonging, were ever and anon in woful need of being recruited. But he had nothing but chance, and his own dexterous contrivances to trust to. Many an anecdote have we heard from his son and successor, of the predicaments and hair-breadth escapes that long checkered his career, and of the adroitness with which he made the best of such up-and-down circumstances. He struggled bravely with them—and he mastered them. For eighteen years he continued to tug at the oar, till the last enemy of our race dismissed him from his toils. But the evils and casualties here enumerated were not the only annoyances poor George Howe was exposed to. His paper, the idol of his heart, and the support of himself and family, was subjected to an absolute censorship; and the censors appointed by the governor seem to have exercised their authority with great rigour and harshness. Proofsheets were sent back so corrected that frequently

the editor could scarcely recognize his own sentences or detect a shadow of their original meaning. Paragraphs, essential to the proper understanding of the subjects he was treating, were mercilessly erased; and sometimes whole columns were annihilated at a blow. To the end of his life he used to speak with horror, and often with tears rolling down his cheeks, of the hardships he had endured in this way.

In the present *Gazette* office, there is a tablet of white marble, erected by filial affection, bearing the following inscription:—

In memory  
of  
GEORGE HOWE,  
A creole of St. Kitt's,  
Born 1760—Died May 11, 1831,  
Aged LII.  
He introduced into Australia  
The art of Printing;  
Instituted the *Sydney Gazette*;  
and was the  
First Government Printer;  
besides which  
His charity knew no bounds.

If we have read this man's history aright, he is entitled not merely to a tablet in a printing office, but to a public memorial in the best church in Sydney, or in any other place where the young colony may delight to honour its benefactors. He was succeeded by his son, who also is since dead. This young man did his work well. His first three years were comparatively calm. He had no competition to contend with, there being no press but his own in the colony. Politics did not run high, for there was but one newspaper, and that fettered with a censorship; free discussion was therefore unknown. The *Gazette* continued to be merely the vehicle of government orders, advertisements, extracts from English publications, and scraps of local intelligence. In 1823, however, sir Thomas Brisbane, who was then governor, informed Mr. Howe that the columns of the *Gazette* might be thrown open to public discussion of all matters of history concerning the colony and its government. Unused as the people had been to the exercise of this almost forgotten right, there were not wanting men of sense and spirit to embrace it. We look back to this stirring incident with delight, for it was, in truth, the first dawn of Australian freedom; and in little more than a year afterwards,—the censorship was no more. At the beginning of 1824,\* Mr. G. T. Howe published his journal in a much improved and

\* The year 1824 was truly an eventful year in Australia.—The star of liberty then rose over the press—never, we trust, to set or be obscured. In this year the legislative council was first incorporated;—the colony received his Majesty's new charter for the establishment of courts of justice;—courts of request were instituted;—the first court of quarter sessions was held;—the Australian agricultural company was formed;—the first chief justice—the first attorney-general—the first solicitor-general—the first sheriff—the first master in chancery—the first registrar of the supreme court—the first colonial treasurer, arrived; and, to crown the whole, the press received its freedom! This last triumph occurred in the month of October, when Mr. Howe published in the *Sydney Gazette* an official letter from the colonial secretary, announcing that the censorship had been abolished.

enlarged shape, which was indeed equal to the usual dimensions of the English newspapers. From the same year the *Sydney Gazette* was edited by the rev. Ralph Mansfield, then by the rev. H. Carmichael, and afterwards conducted by Edward O'Shaughnessy and a person named Watt, and published three times a-week. Mrs. Howe married Watt, and he was afterwards drowned at Port Macquarie about the year 1835.

1821. The art of printing introduced into the Sandwich Islands, at Honouoro, a large town or village of Oahu. On the first Monday in January, 1822, the press was put in operation, and the first sheet of a *Hawaiian spelling-book* was struck off. A knowledge of letters, with the art of writing and printing, were soon taught by the missionaries to such as were willing to learn it, and have so extensively diffused through the country the valuable acquisition, that almost all the chiefs, and great numbers of the common people, are now able to write readily, and even elegantly. Portions of the *Old and New Testaments* were translated into the Hawaiian language, and between the time when writing was introduced, and the close of the year 1834, twenty-seven publications were printed in the hitherto unknown tongue. All these works were of course the productions of Europeans, or of Americans of European descent, and were mostly translated from the English. That some of them at least were of considerable extent, and that large numbers were printed, may be judged from the fact that 36,640,920 pages were published in that interval. In the course of the year 1835, twelve publications were produced, chiefly educational; among these were *Primary Lessons for Children*, *Colburn's Intellectual Arithmetic*, the complete *New Testament*, and a *Vocabulary* of the language, which last is an interesting work, as helping to lay the foundation of a literature which will no doubt spring up among a numerous and intelligent people who have shewn themselves so eager to participate in the advantages of civilization. A newspaper of eight 4to. pages was established at Owhyhee, illustrated with wood cuts of animals, in 1835.

The following is an extract from the first English newspaper established in the Sandwich islands. Permission having been asked of the king previous to its commencement, the following is the curious but sensible reply of his Sandwich majesty:—

TO STEPHEN D. MACKINTOSH.

*Hololulu, Oahu.*

I assent to the letter which you have sent me. It affords me pleasure to see the works of other lands and things that are new. If I was there, I should very much like to see. I have said to Kinan, make printing-presses. My thought is ended. Love to you and Reynolds.

By king KAUERAGOOLO.

1821, March. Mock Constitutional Association established in London; for suppressing the liberty of the press, but crippled in its operations by the public indignation. When taxation had done its utmost to cramp the energies of the newspaper press; and when the different restric-

tive laws which we have noticed had been enforced, with the intention of driving democratical, seditious, and blasphemous writers from the field, all of which, even at their birth, gave proof of inefficiency, a new defence of political and religious orthodoxy was erected, called the "Constitutional Association," or better known by the name of the "Bridge-street gang," and a more inquisitorial institution was never planned in the most despotic times. This association undertook the suppression of every spark of free discussion in this country; they undertook to do what the attorney-general never would have attempted, and put money into the hands of lawyers that would have been much better employed in educating the lower classes, and the effects would have been equally salutary, in a national point of view, had it all been honestly and conscientiously expended in the dissemination of harmless religious tracts, or in warming the lazy eloquence of some loyal orthodox writer. Whether they accomplished what they undertook with all the vast outlay of money, and the ruin of many families, what would have been cured with the healing hand of time, or a removal of the grievances under which the press laboured, is a question the public can now decide. It is not a little remarkable that while the society directed its legal thunder against the poorer fry of book-retailers—against the pamphlet-hawker, and the cheap-book itinerant,—they never offered battle to any of the more powerful but not less orthodox and dangerous champions of the press.\*

1821, May 13. Died, WILLIAM STEVENSON, F.S.A., upwards of thirty-five years proprietor of the *Norfolk Chronicle*. He was the eldest son of the rev. Seth Ellis Stevenson, of East Retford, Nottinghamshire, and rector of Tresswell, in that county. Mr. Stevenson served the office of sheriff of Norwich in 1799: he was an able and industrious antiquary, and at all times desirous of promoting the objects of that society which had done him the honour of electing him one of its members. He was ever happy to befriend indigent merit; and it was through his patronage that Mrs. Elizabeth Bentley, an extraordinary self-educated poetess in the city of Norwich, was first known to the public. Mr. Stevenson was a valuable correspondent of Mr. Nichols, whilst compiling his *Literary Anecdotes*. In the ninth volume of that work is a very interesting letter from Mr. Stevenson, communicating anecdotes of his friend Ignatius Sancho, which cannot fail of being perused with peculiar satisfaction. He was also a valuable correspondent to the *Gentleman's Magazine*, and edited *A Supplement to Bentham's History and Antiquities of the Cathedral of Ely*, 4to.

\* In July, 1821, the London jury found a true bill against the committee of this association, for acts of oppression and extortion, but after a trial on the 15th of April, 1822, they were acquitted. On the 14th of December, 1821, they prosecuted several printers and booksellers, but they failed in their nefarious attempt to convict them, in consequence of one of the sheriffs, who returned the jury, being a member. It was strongly suspected that some of the jury, and even the judges, belonged to "the gang."

1821, May 28. JOHN HUNT, editor of the *Examiner*, sentenced to two years' imprisonment and securities, for an alleged libel on the house of commons.

1821, June 1. J. T. WOOLLER, editor of the *Black Dwarf*, sentenced by the court of king's bench to fifteen months' imprisonment for attending a reform meeting at Birmingham, and to find sureties for his good behaviour, himself in £400, and two sureties in £200 each.

1821, June 16. Died, JOHN BALLANTYNE, a celebrated printer and bookseller, of Edinburgh. He was the son of a merchant at Kelso, where he was born and educated. In his youth he displayed an extraordinary quickness of mind as betokened the general ability by which he was to be distinguished in after life. While still a young man his mind was turned to literary concerns, by the establishment of a provincial newspaper, the *Kelso Mail*, which was begun by his elder brother James. The distinction acquired by his brother in consequence of some improvements in printing, by which there issued from a Scottish provincial press a series of books rivaling in elegance and accurate taste the productions of a Baskerville or a Bensley, caused the removal of both to Edinburgh about the beginning of the present century; but the active intellect of John Ballantyne was not to be confined to the dusky shades of the printing-house. He embarked largely in the bookselling trade, and subsequently in the profession of an auctioneer of works of art, libraries, &c. The connection which he and his brother had established at Kelso with sir Walter Scott, whose *Minstrelsy of the Scottish Border*,\* 1800, was printed by them, continued in the more extensive scene, and, accordingly, during the earlier and more interesting years of the career of the author of *Waverley*, John Ballantyne acted as the confidant of that mysterious writer, and managed all the business of the communication of his works to the public. Some of these works were published by John Ballantyne, who also issued two different periodical works written chiefly by sir Walter Scott, entitled respectively the *Visionary†* and the *Salé Room‡*, of which the latter had a

reference to Mr. Ballantyne's trade. It is also worthy of notice, that the large edition of the works of Beaumont and Fletcher, which appeared under the name of Walter Scott as editor, and which we may presume to say, reflects no inconsiderable credit upon the Scottish press, was an enterprise undertaken at the suggestion and risk of this spirited publisher. Mr. Ballantyne himself made one excursion into the field of letters; he was the author of a tolerably sprightly novel, in two thin duodecimos, styled the *Widow's Lodgings*, which reached a second edition,—and by which, he used to boast in a jocular manner—he made no less a sum than *thirty pounds*. It was not, however, as an author that Mr. Ballantyne chiefly shone—his forte was story-telling. As a 'conteur', he was allowed to be unrivalled by any known cotemporary, possessing an infinite fund of ludicrous and characteristic anecdote, which he could set off with a humour endless in the variety of its shades and tones; he was entirely one of those beings who seemed to have been designed by nature for the task, now abrogated, of enlivening the formalities and alleviating the cares of a court; he was Yorick revived. After pursuing a laborious and successful business for several years, declining health obliged him to travel on the continent, and finally to retire to a seat in the neighbourhood of Melrose. He had been married, at an early age, to Miss Parker, a beautiful young lady, a relative of Dr. Rutherford, author of the *View of Ancient History*, and other esteemed works. This union was not blessed with any children. In his Melrose rustication, he started the publication of a large and beautiful edition of the *British Novelists*,\* as an easy occupation to divert the languor of illness, and fill up those vacancies in time which were apt to contrast with the former habits of busy life. The works of the various novelists were here amassed into large volumes, to which sir Walter Scott furnished biographical prefaces. But the trial was brief. While flattering himself with the hope that his frame was invigorated by change of air and exercise, death stepped in and reft the world of as joyous a spirit as ever brightened its sphere, at about the age of forty-five years; and it may be with truth affirmed, that of all the remarkable men, by whom this name in its various orthographical appearances has been borne, not the least worthy of notice is John Ballantyne, the printer, of Edinburgh.

1821, June 22. The *Observer*, Sunday newspaper, sold 61,500 double papers, containing an account of the coronation of George IV \* consuming 133,000 fourpenny stamps, and producing to the revenue upwards of £2,000.

1821, Nov. 24. THOMAS ROBERT WEAVER, printer, and THOMAS ARROWSMITH and WILLIAM SHACKLE, alleged proprietors of the *John Bull*, sentenced by the court of king's bench—

\* Completed by sir Walter Scott.

† George IV. was crowned in Westminster abbey, July 19, 1821, the expenses of which were £235,000, the king's dress alone cost £24,000.

\* It is generally allowed that a disposition to depart from the polished and formal style of versification owed its rise, in no small measure, to the several collections which appeared during the eighteenth century. A panegyrical criticism on the ballad of *Cherry Chase*, which Addison published in the *Spectator*, is allowed to have been the first instance of any specimen of that kind of poetry being noticed with commendation by a scholarly writer. The *Reliques* of Dr. Percy, and the large collections of Mr. Evans the bookseller, published in 1777, with the *Minstrelsy* of Scott, had a very marked effect upon the forms and styles of poetry, being chiefly observable in the compositions of Coleridge, Southey, and Wordsworth. But before that time there had appeared several eminent poets, whose compositions betrayed that a breaking up of the old style had already commenced.

† In this paper, inserted in the *Edinburgh Weekly Journal*, sir Walter Scott endeavoured to prove the absurdity of the popular excitement in favour of a more extended kind of parliamentary representation. However well intended, these papers were not by any means happy specimens of political disquisition.

‡ A periodical after the manner of the *Spectator*, but was soon dropped for want of encouragement.

Weaver to pay a fine of £100 to the king; Shackle and Arrowsmith £500 each, and all to be imprisoned nine months; to give security for five years, themselves in £500, and two sureties of £250 each, for a libel upon the memory of lady Caroline Wrottesley.\*

1821, Dec. 6. Died, WILLIAM PERRY, the celebrated proprietor and editor of the *Morning Chronicle*, which, for the period of thirty years, he conducted with great ability and independence of spirit—wrote his paper into celebrity, and himself into affluence, and died an honest man in the cause he had advocated. He was born in Aberdeen, Oct. 30, 1756, and received his education at the high school, and in 1771, he entered Marischal college, in the university of Aberdeen. He was intended for the profession of the law, but his father's misfortune in trade, who was a house-builder, induced young Perry, in 1774, to proceed to Edinburgh, with the hope of procuring employment as a clerk in some writer's chambers. Failing in his application in that city, he came to the resolution of trying his fortune in England. So, like his native aurora borealis, constantly shooting southwards, he proceeded to Manchester, where he succeeded in obtaining a situation in the counting-house of a Mr. Dinwiddie, a respectable manufacturer, in which he remained for two years. During his stay in Manchester, Mr. Perry, who was yet only in the nineteenth year of his age, attracted the notice, and procured the friendship of several principal gentlemen in the town, by the singular talents he displayed in a debating society, which they had established for the discussion of moral and philosophical subjects. Mr. Perry also produced several literary essays of great merit. Encouraged by this success, Mr. Perry determined to seek a wider field for the exercise of his talents; and with this view set out for London, in the beginning of 1777, carrying with him a number of letters of introduction and recommendation from his friends in Manchester to influential individuals in the metropolis. For some time, however, these were unavailing. But the following circumstance, at length procured him the employment which he sought, and placed him in the path to that eminence which he afterwards attained. While waiting in London for some situation presenting itself, he amused himself in writing fugitive verses and short essays, which he put into the letter box of the *General Advertiser*, as the casual contributions of an anonymous correspondent, and they were of such merit as to procure immediate insertion. It happened that one of the parties to whom he had a letter of introduction, namely, Messrs. Richardson and Urquhart, were part proprietors of the *Advertiser*, and on these gentlemen Mr. Perry was in the habit of calling daily, to inquire if any situation had yet offered for him. On entering their shop one day to make the usual inquiry, Mr. Perry found Mr. Urquhart earnestly en-

gaged in reading an article in the *Advertiser*, and evidently with great satisfaction. When he had finished, the former put the now almost hopeless question, whether any situation had yet presented itself? and it was answered in the negative; "but," added Mr. Urquhart, "if you could write such articles as this," pointing to that which he had just been reading, "you would find immediate employment." Mr. Perry glanced at the article, discovered that it was one of his own, and convinced his friend, Mr. Urquhart, by showing another article in manuscript, which he had intended to put into the box as usual, before returning home. Pleased with the discovery, Mr. Urquhart immediately said that he would propose him as a stipendiary writer for the paper, at a meeting of the proprietors, which was to take place that very evening. The result was, that on the next day he was employed at the rate of a guinea a-week, with an additional half guinea for assistance to the *London Evening Post*, printed by the same person. On receiving these appointments Mr. Perry devoted himself with great assiduity to the discharge of their duties, and made efforts before unknown in the newspaper establishments of London.

In 1782, Mr. Perry commenced the *European Magazine*, upon a plan then new, and from the ability with which it was conducted, added very much to the reputation and popularity of its editor. Having conducted this journal for twelve months, he was chosen by the proprietors of the *Gazetteer* to be the editor, at a salary of four guineas per week; but under an express condition, made by himself, that he should be in no way constrained in his political opinions and sentiments, which were those of Charles James Fox, of whom he was a devoted admirer. He effected a great improvement in the reporting department, by employing a series of reporters who should relieve each other by turns, and thus supply a constant and uninterrupted succession of matter. By this means he was enabled to give in the morning all the debates which had taken place on the preceding night, a point which his predecessor in the editorship of the *Gazetteer* had been in arrears for months.\* One of Mr. Perry's favourite recreations was that of attending and taking part in the discussions of debating

\* With respect to reporting, not only in London, but from every part of the empire, the daily press of the metropolis has, within the last few years, shown almost incredible exertion. Most of the persons so engaged are gentlemen of education, and so active and able are most of them, that it is not an unfrequent thing for one reporter to supply from the notes of three quarters of an hour, to the paper upon which he is engaged, from two to three columns of closely printed matter. A great number of the reporters are law students, and to give a list of those who have descended to this useful but laborious occupation, would be astonishing. The late James Styphen, esq., master in chancery, while studying for the law, and his circumstances being narrow, became editor and reporter of the *Morning Chronicle* till his appointment to a situation in the West Indies. He returned to England with a handsome fortune, and obtained a seat in parliament, where he greatly distinguished himself in resisting the motion of the benchers of Lincoln's inn, to prevent barristers being employed on newspapers. In opposing that motion Mr. Stephen very candidly stated the fact that he had honestly

\* See page 815 ante, for anecdote of the *John Bull*, and for 1803 read 1821.

societies. By his singular fluency and force of speaking, he obtained the notice of Mr. Pitt, who, then a very young man, was in the practice of frequenting a society in which Mr. Perry was a frequent speaker, and is said to have been so impressed with his abilities as an orator, as to have had an offer of a seat in parliament conveyed to him, after he had himself attained the dignity of chancellor of the exchequer. A similar offer was afterwards made by lord Shelburne; but his political principles, from which no temptation could divert him, prevented his accepting either of these flattering propositions. For many years he edited Debreit's *Parliamentary Debates*, and afterwards, in conjunction with a Mr. Gray, bought the *Morning Chronicle* from William Woodfall, which he continued to conduct till his death, which took place at Brighton, after a long and painful illness, in the sixty-fifth year of his age. The principles of the *Morning Chronicle* were always those of Mr. Fox,\* friendly to liberty, order, and right government. The sound discretion and fair judgment with which Mr. Perry had always exercised his almost absolute power, called forth from sir James Mackintosh† in the house of commons, December 23, 1819, the most splendid panegyric which literary integrity ever received. It was in a committee upon the abominable libel bill, Mr. Canning,

earned a livelihood by that very practice, and therefore he could not in conscience forbear expressing his decided disapprobation of such an interdict which would go very much to cramp the intellectual energies of young men of genius, but of contracted circumstances. This speech gave great satisfaction to the house, and the benches prudently rescinded their resolution.

As a body, the reporters are gentlemen, and we never heard that they were corrupted, except by affection or aversion, or by civilities in a gentlemanly way. Old Mr. Jolliffe, for example, used to go into the reporters' room, merely as a lounge, and say, "Are there any gentlemen of the press who want franks," and a reporter was sure to have as many as he chose to accept. Soon after, when the civility was forgotten, he would go again, and remonstrate in a lachrymose tone, saying, "Now, my good fellows, give us a decent speech, don't cut it short by saying only that Mr. Jolliffe supported the motion. Remember I am a county member, and people think what I say of consequence, and you know I am a friend of the press."

\* When the whigs came into power in the year 1806, they gave Mr. Perry a situation of the value of £4,000 a-year, which he only held during their short-lived reign. He, however, procured situations of considerable value for two or three of his sons in India, which were permanent. The principal editor at that time under Mr. Perry, was the present Mr. serjeant Spankie. This gentleman was sent out by the whigs, as Recorder in some court in India, but he returned in a few years and was made a serjeant-at-law.

A magnificent *Mazarine Bible*, in Mr. Perry's library, sold for one hundred and sixty guineas.

† Sir James Mackintosh, bart., was born 1766, in the parish of Dore, in the county of Inverness, and received his education at the school of Tortrose, and at king's college, Aberdeen, where his studies were directed to the profession of the healing art, and in 1787 he took his doctor's degree in that faculty. He afterwards turned to the law; became a student at Lincoln's Inn, and soon displayed such uncommon powers of eloquence, as had a considerable influence in the appointment of the advocate to the recorder of Bombay, where his oratorical talents frequently called forth the admiration of the Europeans and natives. On his return to England sir James was elected into parliament, where he ably supported the popular party. He died May 30, 1832. As an historian he has unfolded and judged the social and political improvement of the English nation, with the acuteness of a philosopher, and the wisdom of a practical statesman.

then a cabinet minister, admitted the title of Mr. Perry to the praises so eloquently bestowed.

Mr. Clements, proprietor of the *Observer* and the *Englishman*, purchased the copyright of the *Chronicle*, for which he gave a very great sum.

1821, May 5. *The Manchester Guardian*, No. 1, printed and published by John Edward Taylor, Market-street, Manchester. Saturday.

1821. *The Glasgow Free Press*, published on Wednesdays and Saturdays.

1821. Nov. 24. *The Catholic*, edited by the rev. Mr. Gilbert, of Antigua. This work was continued until 1822, when the name was changed into the *Catholic Phoenix*, edited by Mr. Grimes, surgeon, and printed by J. Pratt, Manchester.

1821, Dec. 1. *The Northern Express*, and *Lancashire Daily Post* No. 1. This was the second attempt to establish a daily newspaper out of London; the proprietor was Henry Burgess, who established a swift conveyance between London, Manchester, and Liverpool, by which two horses ran eight miles stages, at the rate of twelve miles an hour. The paper was printed in London and Stockport, and published in Manchester every Saturday, price sevenpence. It continued for about three months.

1822, Jan. 21. *Died*, BENJAMIN WRIGHT, printer, of Little Queen-street, Lincoln's Inn-fields, London. He served his apprenticeship with Mr. Norbury, printer, of Brentford, but passed the prime of his life as an assistant in the printing-office of his friend, Mr. John Nichols. In the year, 1802, he formed a connexion in business with Mr. Thomas Burton, and afterwards entered into partnership with him, and was his successor. Having obtained a very moderate competence, he retired wholly from business in 1819; but the death of an affectionate wife, and his own declining health, prevented his looking for enjoyment. For the most scrupulous integrity, amiable singleness of heart, and unremitting industry, Mr. Wright had few equals, and he died at Kilburn, aged sixty-eight, regretted by all his friends.

1822. Parliament agreed to print the ancient histories of the kingdom.

1822, March 9. *Died*, EDWARD DANIEL CLARKE, LL.D. professor of mineralogy in the university of Cambridge. This celebrated traveller belongs to a literary family, his father, grandfather, and brother (the rev. James Stanier Clarke) having each attained considerable reputation by their publications. He was educated at Cambridge, and became a fellow of Jesus' college. In 1799 he set out on an extensive tour through Denmark, Norway, Sweden, Lapland, Finland, Russia, Tartary, Asia Minor, Syria, Palestine, Egypt, Greece, and Turkey, and returned from Constantinople in 1802, through Hungary, Germany, and France. In the course of his travels he collected a magnificent cabinet of minerals, together with a valuable assortment of manuscripts and ancient marbles, the latter of which, including the famous Eleusinian Ceres, he deposited in the public library at Cambridge. He was also an

agent in obtaining for this country the celebrated Alexandrian sarcophagus, and the trilingual inscription, known by the name of "the Rosetta Stone." Dr. Clarke was eminently qualified for a traveller, by great acquired knowledge, unshrinking courage and power of enduring fatigue, and the ability to narrate what he observed in a lively, graphic, and agreeable manner. Not long after his return to England, he married Angelica, daughter of sir William Beaumaris Rosh, and being already in holy orders, was instituted to the rectory of Harlton, Cambridgeshire. Dr. Clarke was the author of a periodical work entitled *Le Reveur; or the Wakings of an Absent Man*: the first number appeared Sept. 6, 1798, and the last March 6, 1797, in twenty-nine numbers. The whole were afterwards printed in one volume, some time in the latter year; and from the account to be found in his *Life*, it would seem that there is not more than one complete copy in existence.

1822. *Practical Hints on Decorative Printing*. By William Savage, London. This work produces some beautiful imitations of coloured drawings produced at the letter-press, and the elaborate manner in which the imitations are executed, must excite the most delightful feeling in every lover of the typographic art. The work was published at £5 5s. large paper, in folio, £11 11s. Mr. Branstons,\* the celebrated wood engraver, rendered his valuable services.†

1822, Jan. 29. *The Scrap Book*; a literary publication, printed and published by Joseph Pratt, Manchester, price twopence.

1822, Feb. 2. *The Manchester Iris*, No. 1. a literary publication, price threepence halfpenny, printed and published by Henry Smith,‡ the proprietor, St. Ann's square, Manchester. It ended Saturday, December 27, 1823.

1822. *The Press; or, Literary Chit Chat*, a satire, 12mo, pp. 132.

\* Robert Branstons, sen. of the firm of Whitting and Branstons, engravers and printers, Beaufort-house, in the Strand, London, died Feb. 12, 1827.

† Sir William Congreve, whose active and inventive genius never slept, obtained a patent, December 22, 1823, for improvements in printing in one, two, or three colours by machinery, and which is chiefly used in printing country bankers notes and labels for paper for the excise; at the same time it is but justice to say, (if the invention of printing be ceded to sir William Congreve) the machinery was invented and brought to perfection by Mr. Wilks, a partner in the house of Donken and Co., Bermondsey. The worthy baronet introduced the process into some of the government offices, as well as permitted Messrs. Whitting and Branstons to avail themselves of his ingenuity, and the invention considerably increased in public favour after its first introduction into Beaufort house, Strand, many very highly finished specimens of the compound-plate process have been issued from that establishment. It ought also to be said, that sir William Congreve found an able assistant in Mr. Branstons, as many of the productions were certainly executed by that inimitable engraver's own hand. Sir William Congreve was born May 29, 1772, and died May 16, 1828.

Messrs. K. and B. Cowper have invented a cylinder card-printing machine, which executes the sheet of court cards, with the five colours in register at one impression.

In 1814, Mr. S. Marshall, of Streatham, in Surrey, obtained a medal from the society of arts, for the invention of printing in colours on calico.

‡ Henry Smith served his apprenticeship with William Cowdroy, Jun.; he carried on a very respectable business for about nineteen years, and died July 11, 1828, aged 41.

1822, March 10. *Died*, WILLIAM COWDROY, proprietor and printer of the *Manchester Gazette*, aged forty-seven years. To those who had the pleasure of being acquainted with him, he was known to be the possessor of many sterling qualities, among which, sincerity, strict probity, and firm friendship, were peculiarly pre-eminent. He died as he had lived, an example that virtue can exalt the character even beyond praise, and above the power of death.

1822, April 22. ALDERMAN WAITHMAN obtained a verdict of £500 against the proprietors of the *John Bull*, for a libel.

1822, April 26. SIR ALEXANDER BOSWELL, bart. killed in a duel by James Stuart, esq. for a concealed libel, of which sir Alexander Boswell was the author, inserted in a newspaper called the *Glasgow Sentinel*, of the same stamp as the *Edinburgh Beacon* and the *London John Bull*, conducted by Messrs. Alexander and Borthwick, of which sir Walter Scott and others were the proprietors.

1822, May 19. *Died*, JEREMIAH JOLLIE, proprietor and printer of the *Carlisle Journal*, aged thirty-five years. He was the eldest son of Francis Jollie, whom he succeeded in the business. Mr. Francis Jollie republished several valuable works, and compiled *Sketch of Cumberland Manners and Customs*, 8vo. 1811. *The Cumberland Guide and Directory*, 8vo. 1811.

1822, May 20. *Died*, WILLIAM HAYES, book-binder, of Oxford, in the sixty-sixth year of his age. As a steady, upright, and attentive tradesman, Mr. Hayes had long enjoyed very general credit and respect. The merits of his private character was best appreciated by his friends and family; but in his loss the public of Oxford will long regret one of its most zealous, active, and indefatigable servants. A few years before his death he received from his fellow-citizens a most gratifying testimony of their regard, and high opinion of his services in discharging the important office of governor of the house of industry.

1822, May 25. *Died*, WILLIAM HEADLEY, proprietor of the *Leeds Independent* newspaper, aged thirty-four, lamented by his family and friends. He received some severe injuries from a mob, on the day of the coronation of George IV.

1822, May 28. T. ARROWSMITH, J. WEAVER, and W. SHACKELL, the alleged proprietor and printers of the *John Bull* newspaper were brought

\* On January 7, 1822, Mr. Stuart obtained an action against Alexander and Borthwick, for damages for a libel inserted in the *Glasgow Sentinel*. Mr. Borthwick was then lying in Glasgow Jail for a small debt, when his agent, it appears, expressed to Mr. Stuart his great desire to have the action settled, and asked if he, Mr. Stuart, was willing to do so, Mr. Stuart replied that it would depend on the communication which Borthwick would make to him. Borthwick being liberated from prison by the payment of his debt, brought Mr. Stuart the papers and manuscripts, which led him to fix on Sir Alexander Boswell as the author of the articles which had offended him, and which led to the unfortunate duel. Borthwick absconded, but on the 6th of April was apprehended on a Justiciary warrant, at Dundee, and carried to Edinburgh, charging him with theft, by breaking open lock-fast places in the *Sentinel* newspaper office, and abstracting several confidential letters and other manuscripts therefrom.

up to receive judgment for several libels inserted in that paper on queen Caroline,\* when the following sentence was passed upon them: Arrow-smith, to pay a fine of £300; W. Shackell and J. Weaver, to be imprisoned three months and to pay a fine of £100.

1822, June 4. *Died*, W. HALL, who had held the situation of overseer in the office of the *Lancaster Gazette* since its commencement, in 1801, in which he discharged his duty with the strictest honesty, industry, and integrity. He was aged fifty-three years.

1822, July 29. WILLIAM BLACKWOOD, editor and proprietor of *Blackwood's Magazine*, fined £100 for a libel on professor Leslie.

1822, Oct. 22. MESSRS. DOLBY, CLARKE, and WADDINGTON, convicted of publishing alleged libels.†

1822, Oct. *Died*, FRANCIS RIVINGTON, the senior partner in the highly respectable firm of the Rivingtons, of St. Paul's church-yard, and of Waterloo-place, London, the immediate descendants of a long line of booksellers, who may be ranked among the most eminent in this useful profession. Mr. Francis Rivington moved in an extensive circle of friends; and few men have been more generally or more justly esteemed. His probity, his sincere and unaffected piety, and his natural hilarity of disposition, endeared him to all who knew him. He died at Islington in his seventy-eighth year.

1822, Nov. 15. *Died*, JOHN DESBRET, formerly an eminent bookseller in Piccadilly, in the shop occupied by Mr. Almon. He was the editor of the following works:—*New Foundling Hospital for Wit*, 6 v. 12mo. 1784. *Asylum for Fugitive Pieces in Prose and Verse*, 4 v. 12mo. *Parliamentary Papers*, 3 v. 8vo. 1797. *The Peerage of Great Britain and Ireland*, 2 v. 18mo. 9th ed. 1813. *New Baronetage of England*, 2 v. 18mo. 1808.

1822. *Asiatic Researches; or, Transactions of the Society for inquiring into the History and Antiquities, Arts, Sciences, and Literature of Asia*, plates. 15 vols. 4to. London, 1799. Calcutta, 1822.

1822, Nov. *Died*, HENRY FENWICK, printer to the corporation of the city of London, an office which he filled for more than half a cen-

tury, having been appointed to it in April, 1772. He had been a liveryman of the company of stationers more than sixty years, and died aged eighty-two. He was succeeded in the office of city printer by Mr. Arthur Taylor.

1822, Dec. 9. DUNCAN STEVENSON, printer of the *Beacon* Edinburgh newspaper, was fined £500 for a libel.\*

1822. The premises of Mr. Bagster, bookseller, in Paternoster-row, London, entirely consumed by fire, amongst other valuable property in books, was a great number of copies of a *Polyglot Bible*,† printed with stereotype plates.

1822. It is stated in the *Revue Encyclopedique*, that Ali Pacha, the spirited and enterprising viceroy of Egypt, among other projects for the instruction and general improvement of his subjects, erected in Bulak, in Upper Egypt, a college in which a considerable number of students were boarded and educated at his expense, and also a royal printing establishment; one work from which, an *Italian and Arabic Dictionary*, in two parts, is mentioned, bearing for imprint, *Bolacco, della Stamperia reale*, 1822, 4to.

1822. The commencement of this year deserves to be noticed for the appearance of a number of illustrated publications, in London, which were sold so low as twopence each. The only one remaining is the *Mirror*, commenced by John Limbird, and as it was the first so it is also the best—it still continues improving under the direction of its original proprietor, in the Strand, London.

1822. Loudon's *Encyclopedia of Gardening*.

1822. *The New Monthly Magazine*.

1822. *The Hellenic Trumpet*, a political newspaper in modern Greek, was printed at Corinth, a celebrated city of the Morea.

1823. Mechanics' Institute formed in London and Glasgow on an extensive scale, and with great success.

\* On August 22nd, Mr. Abercrombie, the present speaker of the house of commons, made a motion in the house of commons for the appointment of a committee to inquire into the conduct of the lord advocate, and other law officers of Scotland, as connected with the public press of that country—the motion was negatived by a majority of twenty-five—the numbers being 120 to 95.

† The *Polyglott*, published by Mr. Bagster, in 1833, in folio, by professor Saml. Lee is deserving of every praise as a splendid triumph of the British press. The editor of this splendid work was born at the village of Longnor, in the county of Salop, and from the education of a village school, and the trade of a carpenter and joiner, this extraordinary man made such rapid advances in the acquirement of languages, that he made himself acquainted, including his native tongue, with eighteen in number, which are as follows:—English, Latin, Greek, Hebrew, Chaldee, Syriac, Samaritan, Arabic, Persian, Hindostanee, French, German, Italian, Ethiopic, Coptic, Malay, Sanscrit, and Bengalee. Happily for the honour of the British nation, these talents were not suffered to remain either in obscurity, or to languish under that adversity where they had their birth. At a Congregation, held on the 10th of March, 1819, the rev. Samuel Lee, of Queen's college, was admitted master of arts by royal mandate, and was afterwards elected professor of Arabic, on the resignation of the rev. John Palmer, B.D. of St. John's college. Such are the honours which Mr. Lee has attained, through the exercise of his extraordinary talents in the cause of virtue and religion. Of his personal character, an amiable picture has been drawn by his first venerable friend and patron, archdeacon Corbet, who extended to him the hand of benevolence and friendship through life.

\* On the 11th of October, 1830, the printers of London went in grand procession to Brandenburg's house, the residence of the queen, at Hammersmith, and presented to her majesty an address, printed on white satin, the workmanship of which was a most splendid piece of typographical skill. She died August 7, 1831, and her remains were interred in the family vault at Brunswick.

† When the vendors of seditious libels, treasonable tracts, and blasphemous and obscene publications, could find no other way of evading the law, they had recourse to various expedients; amongst many was the following, by little Waddington, at his shop, in the Strand, London. Within the shop were posted up the names of several books, with their prices, and opposite each book was a hook, to which a short rope was attached, extending up to the first floor, which was occupied by Waddington; there was also a ring which the purchaser put on the book opposite the book he wanted, and thus signified to the person above stairs what book it was he desired to have, the rope was then pulled up, and a box was let down through a hole, into which the purchaser put the price, the box was then pulled up, and the book immediately let down.

1823, Feb. The Bannantyne club established at Edinburgh, through the exertions of sir Walter Scott, the first president, and also of Thomas Thomson, esq. the successor of sir Walter in that office. The object of the institution is to print works illustrative of the history, antiquities, and literature of Scotland, either at the expense of the club, or as contributors from individual members. It consisted originally of thirty-one members. The number of copies printed is limited to one hundred and thirty-six; a smaller number, however, has been printed of the earlier publications. The club derives its name from George Bannantyne, from whose active life, during his youth, is owing that rich collection of Scottish poetry which bears his name. He was born Feb. 22, 1545, and was living in 1606, but the period of his death is not precisely known.

1823, Feb. 18. Died, THOMAS DEIGHTON, bookseller and stationer, at York, aged forty-nine years.

1823, Feb. 22, Died, JAMES HARROP,\* proprietor and printer of the *Manchester Mercury* and *British Volunteer*. He was also postmaster of Manchester for several years, but when the whigs came into power in 1806, they deprived Mr. Harrop of that situation. His conduct as a public character, and the proprietor of a newspaper, was distinguished for loyalty to the king, and an unshaken attachment to the constitution; and he had, universally, the merit of consistency, and the credit of political integrity. He died at Broughton priory, near Manchester, in the sixtieth year of his age, and was succeeded in his business by his eldest son James Harrop.

1823, March 7. Died, the rev. WILLIAM WARD, a missionary at Serampore in the East Indies, under the direction of Dr. Carey.† Mr. Ward was a native of Derby, where he was born October 20, 1769, and served an apprenticeship to the printing business to Mr. Drewry, proprietor of the *Derby Mercury*; he afterwards devoted himself to the ministry, and died at Serampore, aged fifty-three. It is gratifying to learn that the printing establishment at Serampore, so diligently and perseveringly carried on, continues to flourish at the present day; and according to the *Eighth and Ninth Memoirs*, we learn that at the close of 1822, they had printed the *New Testament* in twenty languages besides the Chinese: also that they had finished the entire *Chinese Bible*, with moveable metallic types, printed on paper forwarded from China to Calcutta. In 1823, notice occurs of the press erected at Fort Marlborough, near Bencoolen; in 1824, it is mentioned that a lithographic press had been forwarded to Bencoolen, for the purpose of printing the scriptures in Javanese; and in 1826, notice occurs of a lithographic

press having been sent some years ago to Batavia, in the isle of Java.

1823, March 10. Died, PHILLIP ADDISON, printer and stationer, at Preston, in Lancashire, aged fifty-one. He was much respected as a tradesman for punctuality and integrity in the discharge of his engagements; and the inoffensive urbanity of his manners procured him many friends.

1823, May 18. Died, JOHN HEARD, printer and publisher of the *West Briton*, published at Truro, where he died, highly respected for punctuality in all his dealings.

1823, June 17. The royal society of literature now first assembles.

1823, Aug. 6. Died, Mr. MEYLER, proprietor of the *Bath Herald*, in his forty-second year. He was a member of the common council of the corporation of Bath. He left a widow and five young children.

1823, Sept. 5. Died, HENRY RICHARDSON, proprietor and printer of the *Berwick Advertiser*.

1823, Sept. 16. THOMAS BEEMAN, warehouseman to Mr. Bensley, printer, in Bolt-court, was sentenced at the Old Bailey to seven years' transportation, for stealing one hundred and six copies of Lingard's *History of England*, printed by Mr. Bensley for Mr. Mawman. Thomas Cahuse, a bookseller, residing in High-street, Borough, was sentenced to fourteen years' transportation for receiving the same, knowing them to be stolen.

1823, Sept. 24. Dr. T. F. Dibdin, in the *Library Companion*, says, there appeared the most marvellous phenomenon ever witnessed in the annals of *Bibliopolism*. The *Times Newspaper* had four of the five columns of its last page occupied by an advertisement of Mr. Thorpe, containing the third part of his catalogue for that year. On a moderate computation, this advertisement comprised eleven hundred and twenty lines.

1823, *Methodical Cyclopædia*, edited by Mr. Mitchell.

1823, Oct. 7. Died, JAMES SMITH, proprietor of the *Liverpool Mercantile Advertiser*, aged forty-two. Mr. Smith was a man of superior attainments, and greatly excelled in mechanical pursuits. He was the compiler of two works that were found extremely useful, namely, the *Panorama of Science and Art*, and the *Mechanic; or, Compendium of Practical Inventions*. He was a native of Kendal, and in fellowship with the society of friends.

1823, Oct. 22. Died, ROWLAND HURST, bookseller, proprietor, and publisher of the *Wakefield and Halifax Journal*, aged forty-seven.

1823. *Mechanics' and Apprentices' Library* established at Lancaster.

1823. A delegation of printers and booksellers, from Philadelphia, in America, attended the four hundredth grand anniversary of the invention of the art of printing, held at Haarlem, in Holland, in honour of Lawrence Coster.

1823. A machine was invented for rolling books, instead of beating them with a hammer, by which process as many books may be beaten

\* John Beaton proprietor of the *Isle of Man Gazette*, was brother-in-law to Mr. Harrop.

† William Carey, D.D. was born of poor parents, at Palsbury, Northamptonshire, August 17, 1761. He became one of the most eminent missionaries that ever laboured for the salvation of the heathen, in the east, and died June 9, 1834. His *Life* was written by his nephew, the rev. Eustace Carey.

in one day as would occupy two bookbinders a week in the ordinary way, besides degrading a very pretty art to a most toilsome task of heavy labour and little skill in one of its processes.

1823. *The Singapore Chronicle*, established on the island of Singapore, at the extremity of the peninsula of Malacca. At first it was issued at irregular periods, then once a fortnight; and in 1833 it was enlarged and issued weekly, in which state it continues. In 1823, the Anglo-Chinese college was removed from Malacca to Singapore, and a printing establishment was brought from Calcutta, where the missionaries commenced their labours by working off a Siamese version of the *Book of Genesis*.

1823. JAMES SILK BUCKINGHAM, proprietor and editor of the *Oriental Herald*, published at Calcutta, was banished from India, unprepared and without trial, because he chose to say "that a clergyman of the church of Scotland was not the fittest person to be made a clerk of stationery." With regard to the Indian press, it may be observed, that the first adventurers into that region, solely intent on the means of amassing enormous wealth, had little appetite for any literary or intellectual gratifications. As, however, emigrants multiplied and their stay in India assumed more of a permanent character, the example of some illustrious individuals kindled a spirit of enquiry, not surpassed at home, and scarcely equalled unless among the most active intellectual circles. The human mind once roused to exertion, soon betters itself in every direction from philological and historical research, our countrymen sought to proceed to political enquiry, particularly into the constitution and administration of that singular and anomalous system under which they were governed. A free press, however, in a society composed on one side of a mere army, and in the other of a people subjected to immemorial despotism, and into whose mind such an idea never entered, was certainly a very critical measure. The marquis of Hastings, however, attempted it, he proclaimed the freedom of publication without previous censorship, as accompanied, however, with a series of warnings as to the limits within which this permission was to be exercised. Mr. Buckingham, a bold and clever adventurer immediately availed himself of this permission, and began a journal, which so addressed itself to the newly awakened curiosity of the Indian public, that in a short time it yielded a revenue of £8,000 a-year. As it was always found to be the more acceptable and profitable in proportion as the strictures upon the mighty of the land were more decided and piquant, the paper, in spite of repeated warnings from the government house, assumed always a character more and more offensive to the ruling powers. This state of things came to a crisis when the marquis left India, and the administration devolved upon Mr. Adam in the interval, previous to the arrival of a new governor-general. Mr. Buckingham having then committed an offence, supposed to exceed the atrocity of his

former misdeeds, was banished from India on the ground of an old law, which empowered the government to take this step.\* Mr. Arnott, in whose hands he left the journal, and who conducted it in the same spirit, soon experienced a similar treatment; and the whole concern was entirely broken up.

1823, January 20. Advice was received of the establishment of a Bengalee newspaper, under the title of *Sunband Cowmuddy*; or the *Moon of Intelligence*, edited by a learned Hindoo, and the first articles relate to the liberty of the press, and trial by jury.

1823, July. *Examiner & Political Economist*. 1823, Oct. 9. *Local Observer*.

1824, Feb. 25. Died, LUKE WHITE, esq., M.P. for the county of Leitrim. He rose by slow degrees, from being the poorest to the richest man in Ireland. He commenced business as an itinerant bookseller, at Belfast, and was in the practice of selling by auction his pamphlets and imperfect volumes, in the public streets of Belfast. The knowledge he thus acquired of public sales, procured him the situation of clerk to an auctioneer in Dublin. There he opened a small bookshop, became eminent in that line, and sold lottery tickets, and by his speculations in the funds, and contracting for government loans, he acquired his enormous wealth. His property amounted to £30,000 a-year real estate, and £160,000 in money and securities. This, which remained after the enormous sum of £200,000, expended upon elections, he bequeathed by will amongst his children, five sons and three daughters. His son, Samuel White, esq. succeeded him in the representation of the county of Leitrim.—It was said that his eldest son offended him by refusing to offer himself a candidate for Dublin, with a promise to support the catholic cause. He died in Park-street, Grosvenor-square, London.

1824, March 8. Died, MATTHEW FAULKNER, formerly proprietor of the *Manchester Herald* newspaper, and a very respectable bookseller in the market-place of that town. We have, at page 775, given the manner by which Mr. Faulkner lost an independent property, acquired by previous habits of severe industry, and the closest attention to business, for the expression of

\* In August, 1835, Mr. Buckingham, being then M. P. for Sheffield, obtained a committee of the house of commons to investigate into his claims and to enable him to recover compensation from the East India Company, for the loss and damages sustained by him in the suppression of his paper at Calcutta. The preamble recited, "that by an expenditure of £20,000, he, with great exertions, succeeded in establishing at Calcutta a journal which yielded £8,000 annually, and that he possessed thirty-three shares of this journal. He was banished, his paper suppressed, and property to the amount of £40,000 was destroyed. All this was done without trial or conviction." The committee declared "that as by the ordinary course of law there was no remedy, compensation should be awarded by the authority of parliament." When the measure came before the house it was thrown out. From some motive, of which we are not aware, Mr. Buckingham retired from parliament, and is now in America.

On August 3, 1835, the press of India was freed of its restrictions by the voluntary act of the governor general in council.

those political opinions which time has proved to be paramount; and, whatever might have been the inducement of the "constitutional society," to destroy his property, and force him to become an exile for many years from his native land, reflects but little credit on those who, while they defended "church and state," were fomenting riots in the lower orders to burn and destroy the property of those who dared to speak the truth. Mr. Faulkner died at Burnley, in Lancashire, in the eighty-sixth year of his age.

1824, April 19. Died, GEORGE GORDON BYRON, lord Byron, whose name is imperishably connected with the literature of our native land. He was the grandson of admiral John Byron,\* and was born in London, January 22, 1788. His father† died three years afterwards, leaving Mrs. Byron in embarrassed circumstances. They retired to Aberdeen, where he received the first rudiments of his education, and braced his limbs upon the mountains of the neighbourhood. William, the fifth lord Byron, died at Newstead abbey, Nottinghamshire, May 17, 1796, and as the descent both of the titles and estates was to heirs male, he was succeeded by his great nephew, and thus the state and prospects of the heir were completely changed, when he was little more than ten years old. Upon the change in his fortune, lord Byron was placed as a ward under the guardianship of his relation, the earl of Carlisle, and the tuition of Dr. Drury,‡ at Harrow, and from thence, at the age of sixteen, to Trinity college, Cambridge, where he remained only three years. In the year 1807, while at Newstead abbey, lord Byron arranged, and caused to be printed at Newark, a small collection of his poems, under the whimsical title of *Hours of Idleness*. By George Gordon, lord Byron, a minor. The Edinburgh reviewers thought proper to comment, in very harsh and unbecoming language, upon these early effusions of the young lord. Their critique elicited from his lordship's pen one of the bitterest and most powerful satires ever published. His pen, however, was not entirely dipped in gall; on the contrary, there are many very beautiful lines, eulogizing the productions of Gifford, Henry Kirke White, Sotheby,§ Macneil,|| Crabbe, Shee, Rogers, and Campbell. Up to the time of his majority, the noble lord continued to follow his fancies, and unhappily his life was one of riot and dissipation, the miserable consequences of which were soon apparent. At length, in July, 1809, in company with John Cam Hobhouse, he

embarked at Falmouth for Lisbon, and after visiting Seville and Cadiz, he sailed for the Morea. After an absence of nearly three years, lord Byron revisited his native shores, and exhibited the advantages of travelling in his *Childe Harold*, which is full of splendid descriptions and noble meditations, and the supposed identity of the hero with the poet, excited at once admiration and curiosity. This poem is constructed on the Spenserian stanza, which suits admirably well with the sombre and contemplative character of the poem. Thus as all admired the *Pilgrimage of Childe Harold*, all were prepared to greet the author with that fame which is the poet's best reward, and which is due to one who strikes out a new and original line of composition. The keen and scrutinizing glance which the poet had cast on eastern characters and customs soon manifested itself in the production of other poems, all of which were produced with a celerity which was rivalled only by their successes.

On Jan. 3, 1815, lord Byron married, at Seham, in the county of Durham, the only daughter of sir Ralph Milbank Noel, bart., and in the same year she brought him a daughter.\*

Ada, sole daughter of my house and heart!

Within a few weeks, however, after that event, a separation took place, for which various causes have been stated, none of which appears very creditable to the noble poet. This difference excited a great sensation at the time, and was the last stroke to the domestic happiness of his lordship. He left England for France, passed through Belgium to the Rhine, as far as Basle; then to Switzerland, and at length took up his abode at Venice, where he completed his *Childe Harold*. At Venice he avoided, as much as possible, any intercourse with his countrymen. In 1819, he formed his acquaintance with the countess Guiccioli, a young and beautiful Romagnese, who was married but a short time before lord Byron first met with her to an old and wealthy widower. Our limits compel us to be brief; and as the events of his lordship's life are well known, we must pass on to the period when he was induced to leave Italy, and join the Greeks struggling for emancipation. It was in Greece that his high poetical faculties had been first fully developed. Greece, a land of the most venerable and illustrious history, of peculiarly grand and beautiful scenery, inhabited by various races of the most wild and picturesque manners, was to him the land of excitement. It was necessarily the chosen and favourite spot of a man of powerful and original intellect, of quick and sensible feelings, of a restless and untamable spirit, of various information, and who, above all, was satiated with common enjoyments, and disgusted with what appeared to him

\* Born at Newstead, Nov. 8, 1723; died April 10, 1796.

† Captain John Byron was born Feb. 7, 1736, and died at Valenciennes, August 2, 1791.

‡ Rev. Joseph Drury, D.D., late head master of Harrow, was born in London, Feb. 11, 1740; died Jan. 9, 1834.

§ William Sotheby, esq., F.R.S., F.A.S., &c. was born in London, Nov. 9, 1757. He was a gentleman of considerable fortune, and of liberal education. He was the translator of *Oberon*, a poem from the German of Wieland, and of the *Georgics* of Virgil; and author of *Saul*, an epic poem, besides other works. He died Dec. 30, 1833.

|| Hector Macneil, one of the most deservedly popular poets of Scotland, and author of *Scotland's Scenery*, and the *Wars of War*, of which 10,000 copies were sold in one month. He died at Edinburgh, March 15, 1818.

\* Augusta Ada Byron was born in London, Dec. 9, 1815, married to the right hon. lord King (now viscount Lovelace) July 8, 1835, and gave birth to a son and heir May 19, 1836.

to be the formality, hypocrisy, and sameness of daily life. Dwelling upon that country, as it is clear from all lord Byron's writings he did, with the fondest solicitude, and being, as he was well known to be, an ardent though perhaps not a very systematic lover of freedom, he could be no unconcerned spectator of its recent revolution; and, as soon as it seemed to him that his presence might be useful, he prepared to visit once more the shores of Greece. He embarked from the port of Leghorn, and arrived in Cephalonia in the early part of August, 1823, attended by a suite of six or seven friends, in an English vessel, which he had hired for the express purpose of taking him to Greece. The dissensions among the Greek chiefs evidently gave great pain to lord Byron, whose sensibility was keenly affected by the slightest circumstance which he considered would retard the deliverance of Greece. "For my part," he observes, in one of his letters, "I will stick by the cause while a plank remains which can be honourably clung to; if I quit it, it will be the Greeks' conduct, and not the holy allies, or the holier musmuslans." The last moments of Byron have been carefully chronicled by his servant Fletcher, and they furnish an interesting picture of the man when divested of the tinsel and glare of worldly selfishness. It was generally expected that he would have been buried in Westminster abbey, and that poets' corner would have possessed another bright memento of the literature of our native land. It was, however, determined by the hon. Augusta Leigh (lord Byron's sister) that the ashes of the poet should repose with those of his ancestors, and his body was ultimately transferred to the church of Hucknall Torkard, near Newstead. The funeral took place July 16, 1824, and was attended by the corporation of Nottingham. His genius as a poet must ever place him first in the list of England's literary worthies; but the biographer who attempts to trace his moral career, finds but little to repay him for his labour but a deep sense of the moral degradation which the selfish follower of worldly pleasure may carve out for himself. His character has been thus summed up. "He was an extraordinary mixture of benevolence and misanthropy, and of aspirations after excellence, with a particular enslavement to degrading vices. He wrote under the influence of morbid excitement, or availed himself of the resources of egotism. He drew from out the burning well of his own stormy passions." Yet, in all his poetry, according to William Wordsworth, we find "a perpetual stream of quick-coming fancies, an eternal spring of fresh blown images, which seemed called into existence by the sudden flash of those glowing thoughts and overwhelming emotions, that struggle for expression through the whole flow of his poetry, and impart to a diction that is often abrupt and irregular, a force and a charm which seem frequently to realize all that is said of inspiration."

The following list will show the years of publication of his principal poems, and the amount

of remuneration received by the noble poet as the price of his literary labours, from Mr. John Murray,\* the eminent publisher of Albemarle-street, who acted with a degree of liberality previously unknown in the history of literature:

1807— <i>Hours of Idleness.</i>	
1809— <i>English Bards and Scotch Reviewers.</i> †	
1810— <i>Childe Harold</i> ; cantos I. and II.†	£500
1810— <i>The Glencoe</i>	825
1810— <i>The Bride of Abydos</i>	125
1814— <i>The Corsair</i>	825
1814— <i>Lara</i>	525
1815— <i>Hebrew Melodies.</i> ‡	
1815— <i>Stage of Corinth</i>	700
1815— <i>Parisina</i>	125
1815— <i>Childe Harold</i> ; canto III.	1875
1815— <i>Prisoner of Chillon</i>	525
1817— <i>Manfred</i> , a dramatic poem	315
1817— <i>Lament of Tasso</i>	315
1818— <i>Beppo</i> ; a comic tale of modern Italian life	525
1818— <i>Childe Harold</i> ; canto IV.	2100
1819— <i>Maroon</i>	525
1819— <i>Don Juan</i> ; cantos I. and II.	1525
1820— <i>Don Juan</i> ; cantos III. IV. and V.	1525
1820— <i>Marino Faliero</i>	
1820— <i>Doge of Venice</i>	1050
1821— <i>Sardanapalus</i> , a tragedy; <i>Cain</i> , a mystery; and <i>The Two Foscari</i>	1100
1821— <i>Letter on the Poetical Character of Pope.</i>	
1821— <i>Vision of Judgment.</i> ¶	
1822— <i>Werner</i> , a tragedy; <i>Deformed Transformed</i> ; <i>House of Earth</i> . To which were added, <i>Hours of Idleness</i> ; <i>English Bards</i> , &c. <i>Hints from Horace</i> , &c.	3665
<i>Sundries</i>	450
<i>Life</i> , by Thomas Moore	4200
1822— <i>Don Juan</i> ; cantos VI. VII. VIII. IX. X. and XI.	
1823— <i>Age of Bronze.</i>	
1823— <i>The Island</i> ; and more cantos of <i>Don Juan.</i>	

£22,540

1824, May 10. Died, JOHN GUTHRIE, of the firm of Guthrie and Tait, booksellers, Nicolson-street, Edinburgh. Mr. Guthrie generally

\* Mr. Murray has conferred a great benefit on the literary world by publishing the works of lord Byron, complete, in two volumes, 8vo. with notes by the most eminent men of the day. London, 1837.—s.

† For the liberty to republish this satire, lord Byron refused four hundred guineas.

‡ The copyright of the first and second cantos of *Childe Harold*, and of the *Corsair*, he presented to Mr. Dallas.

§ "What do the reviewers mean by 'elaborate.' *Lara* I wrote while undressing; after coming home from balls and masquerades, in the year of revelry, 1814."—*Byron's Letters*, 1822.

¶ Written at the request of the hon. Douglas Kinnaird, for a selection of Hebrew melodies, and published by Mr. Power, with music, arranged by Mr. Graham and Mr. Nathan. James Power, music-seller, died Aug. 26, 1836.

The hon. Douglas James William Kinnaird was born Feb. 26th, 1788, and died March 12th, 1830.

¶ Written at Geneva, and published in London, by John Hunt. Its authenticity was much doubted at the time. June 12, 1824, Mr. Hunt was sentenced to pay a fine of £100, and find securities, himself in £1000 and two in £500 each, for publishing the *Vision of Judgment*. This piece first saw the light in 1822, and after ineffectual negotiations with various publishers in London, at length appeared in the pages of the unfortunate *Liberator*.

Lord Byron's acquaintance with Leigh Hunt originated in his grateful feeling for the manner in which Mr. Hunt stood forward in his justification in the *Examiner*, (edited by John and Leigh Hunt), at a time when the current of public opinion ran strongly against him. This feeling induced him to invite Mr. Hunt to Venice, where, upon his arrival, a periodical publication was projected, under the title of the *Liberator*, of which Mr. Hunt was to be the editor, and to which lord Byron and Percy Bysshe Shelley were to contribute. Three numbers of the *Liberator* were published, when in consequence of the unhappy fate of Mr. Shelley losing his life, by the upsetting of a boat, in the Mediterranean, August 8, 1822, at the age of thirty, and other causes, the publication ceased.

paid as he bought, and like his Leith cotemporary, William Coke, brought home his own purchases, for which he was called amongst the trade, "ready-money John," in allusion to which he is represented in Kay's *Edinburgh Portraits*, with a purse seemingly full of money, in his hand. Mr. Guthrie was a native of the parish of Botolphine, Aberdeenshire, and was born about the year 1748. Having lost his parents when very young, he was left to the protection of an uncle, who before he had attained his twelfth year, abandoned him to his own resources. In this forlorn situation he scraped together as many pence as procured a small stock of needles, pins, &c. with which he commenced travelling as a pedlar. His boyish years were passed in this manner, his pack gradually extending as his capital increased. After giving up the laborious occupation of a *travelling merchant*, he settled in Edinburgh, and commenced a book-stall, at the Linen Hall, Canongate, which became the resort of many of the book collectors of that time. Unlike our modern *open-air merchants*, who pace the length of their stalls from morning till night, making idle time doubly tedious, he was constantly engaged in some useful employment—knitting stockings, working onion nets, or in some way or other having his hands busy, to keep, as he used to say "the devil out of his heart." He next opened a shop at the Nether Bow. Here he continued until he removed to the shop in Nicolson-street, at present occupied by his successor, Mr. Tait, with whom he entered into partnership, and who still carries on business under the firm of Guthrie and Tait. Mr. Guthrie was a very inoffensive, worthy person. Few men were more universally benevolent. Never forgetting the hardships and struggles of early life, his hand was open to the truly necessitous; and, as far as his circumstances would permit, he promoted, both by advice and assistance, the endeavours of the industrious poor to earn an honest livelihood. He was also a con-

stant, and frequently a liberal, contributor to the religious and philanthropic institutions of the city. Mr. Guthrie was an episcopalian when that form of worship was at a low ebb, but lived long enough to witness its gradual revival and increase. His primitive mode of transacting business was the effect of early habit, and could not easily be laid aside by change of circumstances. Mr. Guthrie died at Edinburgh. He was married, but had no children.

1824, May 12. *Died*, ROBERT DAVIDSON, printer, aged sixty-seven years. He had been forty-five years a liveryman of the stationers' company, of which, during the last year, he had been the worthy master.

1824. *Egypt*, a descriptive poem, with notes. By a traveller. Alexandria: printed for the author, by Alexander Draghi, at the European press, 1824. 8vo. pp. 55. This poem was printed with a view to divert the author's attention, whilst suffering under severe affliction, as well as to give encouragement to a very worthy man, the printer. It is the first English work carried through in Alexandria; and as the compositor was entirely ignorant of the language in which it was written, the difficulties that existed in correcting the proof sheets may be easily imagined. By Henry Salt, esq. Fifty copies were printed. Mr. Salt was the companion of lord Valentia, during his travels in India; subsequently consul-general in Egypt, where he died, leaving behind him a well earned reputation in oriental literature.

1824, June 9. *Died*, WILLIAM OXBERRY, printer, but better known as a comedian. He was

A person such as comedy would choose,  
When she would show an image of the times,  
And sport with human follies—not with crimes.

He made his first appearance on the stage of existence, December 18, 1784, in Moorfields. His father was an antioneer, and often knocked down our hero amongst his other lots; he gave his son a good education, and at the age of fourteen, placed him with an artist of eminence, but young Oxberry's mind was not bent on colours; he was then transferred to a bookseller's shop, but he declined becoming *bound* there; and he was ultimately apprenticed to Mr. Seale, a printer, in Tottenham-court-road. As Matthews says, "he made but a *sorry* apprentice; indeed, he was *very sorry* that he was an apprentice;" but, fortunately for our hero's wishes, his master was as theatrical as himself. The printing-office became a theatre—in one corner sat master Oxberry studying *Douglas*; in another, his master, rehearsing *Glenalvon*: they mutually neglected their proofs, till their printing became a proof of their neglect. At a stable near Queen Ann-street, and next to Berwick-street, did young Oxberry enact divers characters, for which he had to pay instead of being paid. There is a point we are informed, beyond which "forbearance ceases to be a virtue," so thought Mr. Oxberry, in the year 1802. He had forborne following his favourite pursuit for three years, and, as

\* John Kay, caricaturist, engraver, and miniature painter, was born April, 1742, at Dalkeith, in Scotland, where his father was a mason, and at a very early age gave strong proofs of an uncommon genius for drawing, by sketching men, horses, cattle, houses, &c. with chalk, charcoal, or pieces of burnt wood, for want of pencils and crayons. He was bound apprentice to one George Heriot, a barber, in Dalkeith, and when out of his apprenticeship he went to Edinburgh, where he wrought seven years as a journeyman. In 1771, he purchased his freedom from the society of surgeon barbers, for which he paid £40, and commencing business on his own account, obtained the patronage of many respectable families in Edinburgh and its neighbourhood. When he was twenty years of age he married Miss Lilly Steven, who bore him ten children, all of whom died young, except his eldest son. Mrs. Kay died in March, 1788, and in 1787 he married Miss Margaret Scott. In 1785, he left off business as a barber, and from that period till about 1817, continued to exercise his talents in engraving. For a period of nearly half a century, few persons of any notoriety who figured in the Scottish capital, have escaped his notice, and he has occasionally indulged himself in caricaturing such local incidents as might amuse the public; and we concur with Mr. Chambers in thinking it may safely be affirmed that so city in the empire can boast of so curious a chronicle. He had a small print-shop in Parliament-square, in which he sold his productions, and used to be a great attraction to the idlers of the time. He died at his house, No. 227, High-street, Edinburgh, Feb. 21, 1826, in his 84th year.

his master had offered him his indentures, he fled from his former shackles, on the wings of hope, to Watford, where he obtained an engagement from Mr. Jerrold, and sustained those parts designated by the name of the heavy line. At the close of the season, an accident threw the part of *Dan* in his way, which he played with the greatest success; but, notwithstanding this success in comedy, either from necessity or choice, he continued to woo *Melpomene*. He left Mr. Jerrold and joined Mr. Trotter, manager of the Worthing and Hythe theatres, and went to his circuit as a low comedian. As he played all the principal low comedy, some parts in tragedy, occasionally sang between, and printed the bills, it may easily be imagined that he had his hands full; yet the heart of an itinerant comedian is vulnerable, and Oxberry "snatched a moment" to gaze upon Miss Catharine Elizabeth Hewitt, then little better than sixteen years of age; a lady of most respectable connexions, and under the protection of Mr. Trotter's family; he, however, pleaded his cause in such a manner as to render refusal impossible, and in 1806 she became his wife, by whom he had three children. Whilst at Worthing, in 1807, Mr. Oxberry attracted the attention of Mr. Siddons, the husband of the celebrated actress, through whose recommendation he obtained an engagement at Covent-garden theatre, and on Nov. 7, made his *debut* in *Robin Roughhead*; and although he only played occasionally, he managed to obtain friends and attract notice. At the end of the season he removed to Glasgow and Aberdeen, in both of which places he was a decided favourite. On the 22nd of July, 1809, he returned to the Lyceum, and immediately was ranked amongst the stock favourites of the London theatres, obtaining very advantageous engagements at the English opera house, and Drury-lane. He had resumed the trade of a printer; and in December, 1821, our hero determined to show the versatility of his pursuits, as well as of his genius, by taking the Craven's-head chop-house, in Drury-lane, which instantly became the resort of a great deal of the dramatic and literary talent of the town; as the good-humoured host used to tell his visitors—"We vocalize on a Friday, *conversationize* on a Sunday, and *chopize* every day." Oxberry was always a free liver; and the allurements of company led him into excesses, which, perhaps, shortened his existence. He expired in an apoplectic fit.\* The day before his death he had been to Camberwell to inspect the operations of his printing-office.

As an actor he stood alone in parts like *Slender* and *Abel Day*; and was, perhaps, second

only to Emery,\* in *Tyke*, *John Lump*, *Robin Roughhead*, &c. He fell below Liston in *Lubin Log* and *Neddy Bray*, but soared far above him in *Mawworm* and *Master Stephen*, and in his Shaksperian assumptions. He bestowed too little study on his profession, or he must have held a much higher place than Liston, who has acquired by conduct what Oxberry lost by neglect. A short time before his death, he had concluded an engagement for three years at Drury-lane for £12 per week.

In literature Mr. Oxberry was for ever commencing something, and scarcely ever finished anything. He edited a miscellaneous work, called the *Flowers of Literature*, got up a collection of tales, &c. called the *Theatrical Banquet*; or, the *Actor's Budget*, two vols. 18mo. 1809. The *Encyclopædia of Anecdote*, 1812. *The History of Pugilism*, 1814. Commenced *A Dictionary of Idiomatic Phrases*, &c. At one period he edited the *Monthly Mirror* (afterwards called the *Theatrical Inquirer*.) He was the author of the petite piece of the *Actress of All-Work*,† performed with success at the Olympic. Altered Pilon's *He Would be a Soldier*, into the *High Road to Marriage*, produced at the Olympic theatre with great success: and a melodrama from his pen, called the *Bandit's Bride*, from a novel of that name, was in the hands of the Drury-lane management, when death put an end alike to his labours and his cares. He was in treaty with sir Richard Phillips for a work of a dramatic nature, in June, 1824. Mr. Oxberry was five feet nine inches and a half in height, and was latterly very corpulent; of a dark complexion, with a blue eye, that, though small, was peculiarly expressive. The engraving prefixed to his memoir, in Oxberry's *Dramatic Biography*, is a most excellent likeness. He was buried in the church of St. Clement Danes, Strand.

1824, June. At the sale of the second portion of sir Mark Sykes's‡ splendid library, the celebrated edition of *Living*, printed by Sweynheym and Pannartz, upon vellum, in 1469, sold for 450 guineas. Erasmus's far-famed Greek *Testament*, on vellum, printed at Basil, 1519, in which edition Erasmus omitted the celebrated verse in St. John's epistles, respecting the three heavenly witnesses, was purchased by the archbishop of Canterbury for £140. There is but one copy of it known to exist upon vellum, and that is in the cathedral at York, for which copy sir Mark Sykes once offered 1000 guineas, but was refused.

\* The widow of Mr. Oxberry was married, in 1824, to Mr. Leman Thomas Tertius Rede, well known as an actor, and also as an author of the *Memoirs of Canning, Road to the Stage*, Oxberry's *Dramatic Biography*, &c. He possessed considerable literary talent, and died Dec. 12, 1833. William Henry Oxberry, the only son, was born in London, April 21, 1806, and educated at Merchant-tailors' school. He was intended for an artist, but his inclinations led him to follow the steps of his father, and he made his public debut at the Olympic, March 17, 1823. Like his father he is unequalled in a certain line of characters in low comedy.

\* John Emery was born at Sunderland, Dec. 23, 1777, where both his parents, who enjoyed some degree of regard as provincial performers, were then engaged in the exercise of their public duty. Before he had attained his twenty-first year, John Emery was settled in the capital, and sustained a branch of business, remarkable for its labour, variety, and importance, and he reposed during the rest of his life in the sunshine of public favour. In May, 1802, he married Miss Ann Thompson, daughter of a tradesman in the borough, by whom he left four sons to lament his loss. He died July 23, 1823.

† It was written after Matthew's *Mit* in the *Actor of All-Work*.

‡ Sir Mark Masterman Sykes, bart. was a bibliomane of the first class, and a member of the Roxburghe club. He was born August 20, 1771, and died Feb. 16, 1823.

1824, July 11. Died, THOMAS FLINDELL, proprietor and printer of the *Western Luminary*, a weekly newspaper, established in the city of Exeter, in the year 1813. Mr. Flindell was, we believe, a native of Helford, in Cornwall, and served an apprenticeship at Falmouth, where, however, he made so little proficiency, that on removing to Edinburgh, where he was engaged as a journeyman, his earnings were at first scarcely sufficient for his subsistence.\* In some of the first houses in London, Mr. Flindell subsequently made great improvement; and about the year 1790, was engaged to conduct the *Doncaster Gazette*. He has been heard to relate, that when the trial of Hardy, Horne Took, and others was pending, and the public mind waited the result in breathless expectation, he ventured in grave terms to state their acquittal, though at the moment it was no more than a strong probability. The assertion, however, being luckily in accordance with fact, the paper obtained great celebrity for early intelligence! On commencing business at Helston, in his native county, with a press and types in good condition, he executed *Zion's Pilgrim*, in 8vo. for the rev. Dr. Hawker,† of Plymouth, in handsome style, together with Pope's *Essay on Man*, and some smaller pieces. Besides printing several thin volumes of Polwhele's *History of Cornwall*, in post 4to. his great work was a *Family Bible*, in royal 4to. in English, with notes in small pica, inserted between portions of the text. The authorship, or compilation of the notes, "under the direction of a clergyman of the church of England," is supposed to point to the rev. R. Polwhele‡ but though notes were furnished by that gentleman, (see his *Traditions*, &c. p. 371,) we believe they were collected more or less by the editor himself. The introduction, a dissertation on the prophecy of Daniel, and we believe some other parts, were from the pen of the rev. John Whitaker,§ the historian of Manchester. This

\* Mr. Flindell used to relate the following story of his landlady, with whom he lodged, at Edinburgh. "The quantity of vegetables usually dished up with the meat of himself and fellow lodger, was so abundant, that they entreated her to obtain a leg of mutton, and serve it up when boiled as it was. The worthy hostess simply complied with their request, and actually set the pot containing the mutton on the table."

† Robert Hawker, D.D., was fifty years vicar of the parish of Charles, Plymouth, where he died April 1, 1837. In 1814, Dr. Hawker published an edition of the holy scriptures, in penny numbers, for the use of the poor.

‡ Rev. Richard Polwhele, vicar of Manaccan and of Anthony in Cornwall, in which county he was born in the year 1760.

§ John Whitaker, the historian of Manchester, was born in that town about 1739, and went early to Oxford, where he was elected fellow of Corpus Christi college, and where he discovered, in a very short time, those fine originalities, those peculiarities of mind, which afterwards so strongly marked him as an author and as a man. He took the degree of M.A., 1759, and B.D. 1767. In 1771, Mr. Whitaker published the first volume of the *History of Manchester*, &c. a work which for acuteness of research, bold imagination, independent sentiment, and correct information, has scarcely its parallel in the literature of this country. His *Genuine History of the Britons asserted*, an 8vo. volume, published in 1779, may be accepted as the sequel to *Manchester*. About the year 1778, he succeeded as fellow of Corpus Christi college, to the rectory of Roan-Longborne, one of the most valuable livings in the gift of that college, and went into Cornwall to reside upon his

work is very handsomely printed; but, we regret to say, was carried no further than about the middle of the evangelists. After spending some years in Helston, Mr. Flindell removed to Falmouth, where he united with three other partners in the publication of a weekly paper of four pages, consisting each of four columns, (afterwards enlarged,) and denominated the *Cornwall Gazette and Falmouth Packet*. His partners failing in business, he was incapable of sustaining the pressure, and a stop was put to the newspaper as well as the publication of the *Family Bible*, in numbers. Justly reckoned, however, by the gentlemen and merchants of Cornwall as a highly suitable person to conduct a country paper, a subscription was entered into when he was in Bodmin prison, which in 1803 enabled him to start the *Royal Cornwall Gazette*, at Truro, under circumstances highly auspicious. This was for some years the only public journal in Cornwall. Its editorial tone was spirited, and free from party bias, till circumstances induced the publisher to take his stand on the tory side. He seems to have tired of the political warfare in which he was incessantly engaged with a rival editor, and having disposed of the *Gazette*, he removed to Exeter in 1813, where he established the *Western Luminary*, on the principles more recently advocated by himself, and met with ample encouragement. At length some intemperate language relative to queen Caroline occasioned a crown prosecution against him; and being convicted of a libel on the unfortunate royal consort, he underwent an imprisonment fatal to his health and comfort. His death took place about eighteen months after his enlargement.—He united great energy and decision of character with manners adapted to the best society. His conversation was animated and improving; and his compositions, though sometimes severe, were vivid and manly.

1824, Aug. The printing-offices of Mr. James Moyes and Mr. Wilson, of Greville-street, Hatton-garden, London, destroyed by fire, and much valuable property lost.

1824, Sept. 2. Died, Rev. JOHN SIM, B.A., late of St. Alban's hall, Oxford. He was born October 8, 1746, in the parish of Bancharry Fernan, about 18 miles west of Aberdeen. He was educated at the public school in Aberdeen; but it is uncertain whether he was at college there. Whether he was apprenticed to any business, is also uncertain; but if so, it was doubtless the printing business. One of his brothers, two years older than himself, who died about 1816, served his apprenticeship to this business in Aberdeen, and was for many years employed in the office of Mr. Strahan, London. In 1772, Mr. John Sim succeeded his friend, Mickle, the poet, as corrector of the Clarendon press, at Oxford. He obtained the friendship of William Lowndes, esq., of Cheshunt, Bucks, and was very intimate with lords William and

Fectory, where he died, Oct. 30, 1806, leaving a widow and two daughters to lament the loss of a faithful husband and affectionate parent.

Charles Bentinok, and other branches of the Portland family; also of the late sir William Jones. He was first settled at Chenies, Bucks, from whence he went as curate to Yarmouth, in the Isle of Wight, where he continued four or five years; thence he removed to the neighbourhood of Stokenchurch, Oxon; but finding his voice fail, and feeling his strength unequal to what he considered the due performance of his clerical duties required, he from this time, being then about sixty years of age, declined all further service to the church. He was a sincere Christian, as the tenor of his life, and the manner of his death bore testimony. He was a true friend, a most pleasant companion, and a good scholar; and having his mind well stored with every variety of literary and convivial anecdotes, his company was eagerly sought by his friends. He died, aged seventy-eight years.

1824, Sept. 8. Died, JOHN WILLIAM GALABIN, formerly a respectable printer in Ingram-court, Fenchurch-street, London; at first in partnership with the very learned Mr. William Baker, and after the death of that worthy man, in 1785, on his own account. He was also for some years an active representative in the common council for the ward of Langtown; but long after he had passed the meridian of life, having given a good education to a numerous family, meeting with some heavy and unforeseen losses, he was greatly reduced in circumstances. Possessing good health and sound animal spirits, he accepted the office of corrector of the press and superintendent of the printing office of an old and intimate friend, where he continued happy and comfortable till 1796, when he succeeded in obtaining the office of bridgmaster to the city of London. The office of bridgmaster is of considerable importance, and of some emolument. It is the gift of the livery at large, and has from time immemorial been bestowed on some worthy brother, who having seen better days, has sunk into comparative distress from unavoidable events. For many years, Mr. Galabin was the regular editor of the *Court Calendar*, commonly called the *Red Book*; and also edited several editions of *Paterson's Roads*. He had survived his eight sons,\* who died of consumption; and, melancholy to add, had outlived himself, having for nearly a-year past entirely lost his recollection; inasmuch that, on the death of his wife, aged eighty-five, which happened on the 28th of July, 1824, he was scarcely conscious of the loss, and was with difficulty convinced that he had ever been married. He died at his official residence, Bridge-street, Southwark, aged eighty-seven.

1824, Oct. 26. Died, NATHAN MILLS, printer, a native of Boston, North America, who at the evacuation of that town by the British troops, accompanied the army as editor and printer of a newspaper, under the title of the *Massachusetts Gazette*, against which a severe edict was issued

prohibiting its being brought into the state by the American government. At the close of the war, Mr. Mills came to England, and settled at Edinburgh, where he died, aged seventy-five.

1824. THEODORE EDWARD HOOK, author of many novels and theatrical pieces, sold the copyright of his *Sayings and Doings* for £800. In 1813 he obtained the lucrative offices of accountant-general and treasurer of the island of Mauritius.

1824, Oct. Died, DAVID CAREY, well known in the literary world by his *Pleasures of Nature*, and other poems; also, of *Lochiel*, and other novels. In 1803 Mr. Carey\* edited the *Poetical Magazine*, and was for many years editor of the *Statesman*, London newspaper.

1824, Jan. The *Westminster Review*, No. 1. London: Baldwin, Cradock, and Joy.

When the *Edinburgh* and *Quarterly Reviews* addressed themselves to the two chief parties of the nation, a want was at length felt for a similar organ to give expression to the sentiments of a third party—the radicals or ultra liberals—who had gradually been rising into importance since the conclusion of the French revolutionary war. Accordingly the *Westminster Review* was commenced by a small body of literary men of this denomination of politics, of whose writings it may be sufficient to say, that with less polish and dexterity than those of their rivals, they have frequently manifested much vivacity, force, and acuteness.—*Chambers*.

1824, Jan. 3. *Glasgow Mechanics' Magazine*.

1824. The *Scots Times*, published at Glasgow.

1824. The *Evening Post*, published at Glasgow, afterwards joined with the *Chronicle*, and issued from the same office every Saturday.

1824, Jan. 7. The *South African Commercial Advertiser*, No. 1, conducted by Mr. Greig. This was the first newspaper established in the Cape of Good Hope. It was suppressed the May following, recommenced in the August of 1825, again summarily suppressed in March, 1827, and resumed in October, 1828. In April, 1829, the freedom of the press was established, and several newspapers are now published.

1824, Jan. 31. *Anti-Slavery Magazine and Recorder*. No. 1. Price threepence.

1824. *Johnson's Selector*, edited by Mr. W. Ainsworth,† printed by John Leigh, Manchester.

1824. The *Australian*, conducted by Ralph Wardell, LL.D. being the second newspaper commenced at Sydney, New South Wales. The principles of the *Australian* were different to those of the *Gazette*, and people imagined that the latter paper would soon cease, but the literary powers of Mr. Howe rose with the competition, which instead of destroying, improved his paper.

\* George Saville Carey (son of Henry Carey, a dramatist and musician, and falsely said to be the author of *God save the King*.) was bred a printer, but declined business; and was an actor for one season at Covent-garden, and the author of many theatrical pieces of considerable merit. What relationship, if any, existed between these two persons, we are not aware.

† William Ainsworth, esq. author of the novels of *Rookwood*, *Crichton*, *Jack Shepherd*, &c.

\* Septimus Barry Galabin, stationer and bookbinder, was the last of eight sons of Mr. Galabin, and died Sept. 19, 1812, in the thirty-first year of his age.

1824. *The Advocate*, published by William Lyon Mackenzie,\* at Toronto, in Upper Canada. This paper continued for ten years, when it was incorporated with the *Correspondent*, and in 1836, Mr. Mackenzie started a paper called the *Constitution*, which in its turn absorbed the *Correspondent*, just before the rising in Upper Canada, at the latter end of 1837.

1825, Jan. 26. Died, ALEXANDER TILLOCH, LL.D. &c. editor of the *Philosophical Magazine*, and late part proprietor and editor of the *Star*, London daily newspaper. He was born at Glasgow, Feb. 28, 1759, where his father was a tobaccoist, and for many years filled the office of magistrate. In 1781, Mr. Tilloch conceived the idea of stereotype printing, without having any knowledge of either Vander Mey or Ged, and in the following year he entered into partnership with the Messrs. Foulis, of Glasgow, in order to carry on the business of stereotype printing. See page 747, ante. Mr. Tilloch went to London, and the business of stereotyping was suspended; on his return to Glasgow he entered into partnership with his brother and brother-in-law, as tobaccoists, but that not answering, Mr. Tilloch turned his attention to printing, and either singly or in partnership, carried on that profession for some time in his native city. In 1787 he went again to London, where he spent the remainder of his life in literary and scientific pursuits. In 1789, in connexion with others, he purchased the *Star*, and became the editor. The last work which he engaged in was to superintend the *Mechanic's Oracle*, published in numbers by Henry Fisher, at the Caxton press.

\* William Lyon Mackenzie, for whose apprehension Sir F. Head, the governor of Upper Canada, offered a reward of £1,000, is by parentage a Highlander, and is connected with some of the most respectable families in the Highlands. He was apprenticed to an ironmonger at Dundee, and was afterwards clerk to a timber merchant. After failing in business in his native village, he removed to Upper Canada, where he established himself as a printer, and commenced the *Advocate*, of principles keenly opposed to the government, which caused him to have many enemies, and his office to be burnt down. He, however, got heavy damages against the party. He now became leader of the opposition, and so exposed the evil doings of the dominant faction, which exposed the hard working editor, in the highest degree obnoxious to that party. This bitter animosity soon had an opportunity of gratifying itself. Mackenzie was chosen to represent the county of York in the assembly. In Upper Canada it is necessary to explain that the official party have considerable sinister influence by means of small boroughs, the credit system of disposing of lands, and the vast number of petty offices in the gift of the executive; hence the assembly has seldom represented the people. The consequence of this, as applied to Mackenzie's case, was, that the obnoxious patriot was made the John Wilkes of Upper Canada. He was expelled—re-elected—again expelled—re-elected once more, and expelled a third time. This aroused the people. They petitioned for a redress of their grievances, and Mr. Mackenzie was deputed to this country to support their complaints, which were attested by 27,000 signatures. In 1833 Mr. Mackenzie returned to Upper Canada. In the following year a general election took place, and returned a considerable radical majority, of which Mackenzie was one. He was also chosen first mayor of the city of Toronto, under their new incorporation act. Just before the elections, Mr. Mackenzie published a political almanack, under the name of *Patrick Swift*. This almanack contained a laborious expose of the system of corruption in the province. He also published the *Black List*, being, for the most part, another form of the materials contained in *Patrick Swift*. These works had considerable influence on the elections.

His name will be long remembered in the scientific world, and his writings will erect to his memory an imperishable monument.

1825, March 10. Died, JOHN PINKERTON, a voluminous historian, critic, and writer for the booksellers. In 1786 he published, in two vols. 8vo. *Ancient Scottish poems, never before in print, but now published from the manuscript collection of Sir Richard Maitland, of Lethington, knight, Lord Privy Seal of Scotland, with large notes and a glossary*. Pinkerton maintained that he had found the manuscript in the Pepysian library at Cambridge, and among his correspondence he sometimes alludes to the circumstance, with very admirable coolness. The forgery was one of the most audacious recorded in the annals of transcribing. He was born at Edinburgh, Feb. 17, 1758, and died at Paris in indigent circumstances, at the age of sixty-seven.

England has been profuse of literary forgeries, but what have they effected for their fabricators—detection and shame! George Psalmanazar's was eminent for learning; Lander's interpolations of Milton, had attractions for a well informed party; poor Chatterton's\* were fictions for never dying song; among Pinkerton's character, that of literary impostor was of the most degraded order; and the Shakespeare forgeries of Ireland have nothing but their boldness and artifice of their conception and momentary success—the power of badly copying ancient penmanship and stringing of plagiarisms. We have had authors who sold their names to be prefixed to works they never read; on the contrary, have prefixed the names of others to their own writings, and others who committed the most audacious literary piracies—"The craft of authorship," says D'Israeli, "has many mysteries." Upon the first appearance of *Akenside's Pleasures of Imagination*—the author's name not being prefixed—a Mr. Rolt, author of a *Dictionary of Trade and Commerce*, had the impudence to go over to Dublin, publish an edition, and put his name to it. Upon the fame of this he lived several months, being entertained at the

\* The reader is referred to Tyrwhitt's *Vindication of his Appendix to Cowley's or Chatterton's Poems*, pp. 146, for some curious observations, and some facts of literary imposture.—See also D'Israeli's *Curiosities of Literature*, vol. I. pp. 193–202. vol. VI. pp. 84–102.

† Sir John Hill once contracted to translate Swammerdam's work on insects for fifty guineas. After the agreement with the bookseller, he recollected that he did not understand a word of the Dutch language! Nor did there exist a French translation. The work, however, was not the less done for this small obstacle. Sir John bargained with another translator for twenty-five guineas. The second translator was precisely in the same situation as the first; as ignorant, though not so well paid as the knight. He bargained with a third, who perfectly understood his original, for twelve guineas! So that the translator, who could not translate, feasted on venison and turtle, while the modest drudge, whose name never appeared to the world, broke in patience his daily bread!

‡ Mark Akenside was born Nov. 9, 1721, at Newcastle-upon-Tyne, where his father was a butcher. When he was only twenty-three years of age, he published the *Pleasures of Imagination*, a poem full of fine imagery, expressed in rich, copious, and musical language. He first practised physic at Northampton, and afterwards in London, where he died June 25, 1770, and was buried in the church of St. James's, Westminster.

best tables as the "ingenious Mr. Rolt." Aken-side at length detected the fraud, and vindicated his right, by publishing the poem with the real author's name. Dr. Campbell, of St. Andrew's, wrote a treatise on the *Authenticity of the Gospel History*, and sent the manuscript to his friend and countryman, Mr. Innes, a clergyman in England. The latter published it with his own name, and, before the imposition was discovered, obtained considerable promotion as a reward of merit. Dr. Hugh Blair, and Mr. Ballantine, a friend of his, when students of divinity, wrote a poem, entitled *Redemption*, copies of which in MS. were handed about. They were at length surprised to see a pompous edition, in folio, dedicated to the queen, by a Mr. Dangler, as his own.

1825, April. Died, JOHN ARLISS, of Gutter-lane, Cheapside, London, celebrated as one of the most elegant printers of his time. Mr. Arliss likewise possessed a considerable taste in embellishing juvenile works with wood engravings, and in conjunction with Mr. Whittingham, may be said to have largely contributed to the revival of the beautiful in the art of printing. When residing in Newgate-street, Mr. Arliss established the *Pocket Magazine*, which attained a very extensive circulation. Besides his concern in Newgate-street, he had previously been engaged in business with Messrs. Whittingham, Huntsman, Knevet, &c.; but like Didot, of Paris, the profits of Mr. Arliss's speculations did not keep pace with the approbation of the public. For some years, he had been in ill health; and through this, with other circumstances, he left a family of five young children totally unprovided for.

1825, May 2. Died, WILLIAM HALL, proprietor of the *Oxford Journal*, aged seventy-five. And two days after, aged eighty-two, Joseph Mayow, many years bookkeeper on that paper.

1825, Aug. 3. Died, THOMAS NEWTON, newspaper agent, of Warwick-square, London. He was a native of Hereford, and died at Clapham. William Tayler had commenced the business of newspaper agency about 1785, and with whom Mr. Newton had been in partnership.

1825, Aug. 5. Mr. — JUDGE, editor of the *Cheltenham Chronicle*, obtained a verdict and £500 damages, at the Hereford assizes, against colonel Fitzharding Berkeley, now lord Segrave, for a most brutal and dastardly attack on that gentleman in his own house, concerning a paragraph which had appeared in the *Chronicle*.

1825. A law was passed rendering the name of a member of parliament unnecessary on the cover of newspapers, and thus their transmission by post became entirely open to the public, upon the condition that they "shall be sent without covers, or in covers open at the sides, and shall not contain any other paper or thing whatsoever;" also, "that there shall be no writing other than the superscription upon such printed paper, or upon the cover thereof;" and in the event of these restrictions not being duly complied with, the whole of such packet is "to be charged with treble the duty of postage."

1825. An act to allow newspapers to be printed on any sized paper, and to reduce the stamp duty on newspapers. The size of newspapers by the former act was twenty-two inches long, and seventeen and one-eighth inches wide.

1825. Among the proposals in this year, so prolific of projects, there was one for a joint stock company, or *society for the encouragement of literature*. There was not one word about the *encouragement of literature* beyond the title.

1825, Sept. 19. Died, JAMES EATON, a compositor in the printing-office of Messrs. Nichols and Son, to whom he had served a faithful and dutiful apprenticeship, and so ingratiated himself into their good opinion, as to be looked upon more in the light of a son than a dependent. He was early left an orphan, but, by the kindness of an uncle, was placed in Christ's hospital, where he imbibed those precepts which had an evident good effect on his life and conduct; and from the Christian patience and resignation evinced by him in a long illness, we may humbly hope, that though he died young, he had lived long enough to secure his eternal happiness. He died at Islip, Northamptonshire, aged twenty-five years, sincerely lamented by his friends.

1825, Oct. 26. Died, JOHN M'ARTHUR, esq., aged sixty-six years. This gentleman was for more than thirty years the principal conductor of the business of the king's printing-office,\* and with very few exceptions attended at the parliament office, Westminster, daily, during that period, for the purpose of comparing with the originals all acts of parliaments, and such public records of the house of lords as were ordered to be printed. He possessed great urbanity of manners, the kindest and most friendly disposition, and a warm benevolence of heart, which rendered him the patron of the distressed wherever he found them. Of him it may be truly said, that he "did good by stealth, and blush'd to find it fame." The remembrance of his virtues will be coeval with the existence of all who knew his worth.

1825, Nov. 1. Died, GEORGE NICHOLSON, printer and bookseller, at Stourport, in Worcestershire, aged sixty-three years. He was a native of Bradford, in Yorkshire. We cannot forbear some brief record of a man whose talents entitle him to notice; whose name we hesitate not to place with the names of Dodsley and Baskerville. Possessing like them, an ardent thirst for literature and science, like them he has also enriched our libraries with many valuable works. The *Literary Miscellany, or Elegant Selections from the most Popular Authors in prose and verse*, 20 vols. 18mo. is a beautiful specimen of his ingenuity in the art of printing,

\* On Jan. 9, 1818, died Old JOHN, who during a period of eighty years filled the humble, though not unimportant station of an errand carrier, or as he styled himself, "the king's messenger" at his majesty's printing-office; and who yielded to none of his majesty's ministers in the conception of the dignity of his office, when entrusted with the king's speeches, addresses, and other papers of state. He had acted with fidelity in this way from the days of sir Robert Walpole to the days of lord Liverpool, the most important in the annals of the English press.

and of his taste and judgment as an editor. The *Cambrian Traveller's Guide* is remarkable for its accuracy, and evinces much patient investigation. In a treatise *On the Conduct of Man to Inferior Animals*, (which went through four editions,) we have evidence of his humanity of disposition; and numerous tracts, calculated to improve the morals, and add to the comforts of the poorer classes, are proofs of the same desire of doing good. In short, he possessed in an eminent degree, strength of intellect, with universal benevolence and undeviating uprightness of conduct. Mr. Nicholson was also the author, translator, or compiler of the following works: *Stenography, or a new System of Short Hand*, 8vo. *The Mental Friend and Rational Companion, consisting of maxims and reflexions, relating to the conduct of life*, 12mo. *The Advocate and Friend of Woman*, 12mo. *Directions for the Improvement of the Mind*, 12mo.

1825, Nov. 4. JAMES MONTGOMERY, editor of the *Sheffield Iris*, and who is no less distinguished as a poet of no ordinary powers, than for his consistent political virtue and principle, was on this day invited to a dinner at Sheffield, (lord Milton in the chair) upon his relinquishing the editorship of that paper, which he had conducted for thirty-one years.\* With respect to his principles, as a public writer, Mr. Montgomery addressed the meeting in a speech which was a masterpiece of eloquence. He entered into many parts of his own history, for the purpose of stating the difficulties which he had to encounter, and the ground which he took from the first, which was "a plain determination, come wind or sun, come fire or flood, to do what was right."

1825, Nov. An action was brought by a printer, in the court of common pleas, London, to recover £94 from Mr. Stockdale, the publisher of *Harriette Wilson's Memoirs*, for work and labour done. The claim was proved, but the counsel for the defendant maintained that the work "was so immoral, so licentious, so much calculated in every way to injure the true interests of society, that no man engaged in assisting to bring it before the public could maintain an action for compensation for the labour he had employed to such a shameful purpose." The lord chief justice fully entered into and admitted the objection. The plaintiff was nonsuited.

1825, Dec. 16. JAMES WATT, the original publisher of the *Montrose, Arbroath, and Brechin Review*, while on his passage from Scotland to London, fell overboard in Yarmouth roads, and was drowned.—See page 844, ante.

\* When sir Robert Peel retired from the premiership, in April, 1835, one of his last acts as a minister, was to grant Mr. Montgomery a pension of £150 a year.

James Montgomery was born in the year 1771:—the most important of his works are entitled *Prison Amusements*, 1797; the *Wanderers of Switzerland*, and other poems, 1806; the *West Indies*, and other poems, 1810; the *World before the Flood*, and other pieces, 1813; *Greenland*, and other poems, 1819; *Songs of Zion*, 1829; and the *Pelican Island*, 1827; all of which are characterised by purity and elevation of thought, harmonious versification, and a fine strain of devotional feeling. He still continues to reside at Sheffield.

1825, Jan. 1. *The Manchester Courier*, No. 1, printed and published by Thomas Sowler.

1825, July 2. *The Manchester Advertiser*, No. 1, conducted by Stephen Whalley, and printed by Joseph Pratt. This publication was upon the principle of gratuitous circulation. It continued in existence only a few months.

1825. *The Nottingham Herald*, printed and published by E. B. Robinson.

1825, Sept. *The Nottingham and Newark Mercury*, printed and published by Jonathan Dunn, for the proprietors. This paper has been for nearly the whole of its existence under the editorship of Mr. M. H. Barker, well known in the literary world as the "Old Sailor."

1825, Dec. *The Liverpool Albion*, printed and published by the proprietor, Thomas Bean.

1825. *The London Magazine*.

1825. *The Mechanic's Magazine*.

1825. *The Sydney Monitor*, conducted by Mr. E. S. Hall, being the third paper in New South Wales.

1825. *The Tasmanian*, conducted by Mr. G. T. Howe, late proprietor of the *Sydney Gazette*.

The first review of a book in New South Wales, was James Busby, *On the Cultivation of the Vine*, 1825, 8vo. pp. 270. printed at Sydney, and for which review a premium had been given. This book has been supposed, though erroneously, to have been the first printed work in Australia.\*

1826, Feb. 12. DIED, DEODATUS BYE, formerly an eminent printer in St. John's square, Clerkenwell. He was, with only one exception, the oldest member of the company of stationers, of which he had been a liveryman sixty years. Though possessing no inconsiderable talents, he was one of the most unassuming of human beings, but at the same time one of the most kind hearted. Content with a very moderate income, he retired, many years before his death, to a tranquil retreat, where he calmly breathed his last. Whilst in business, his principal employment was the printing of the religious tracts of the society for promoting christian knowledge. He was editor of an edition of Cruden's *Concordance*, in which he carefully examined every text by the original in the bible. He also printed the *Diversions of Purley*, for Mr. Horne Tooke, with whom he was deservedly a great favourite, and who permitted him to substitute *blanks* for many names which the timid printer thought it prudent to suppress. Mr. Bye compiled the copious index to the octavo edition of Swift's works, published in 1803. That he was also a versifier, may be seen by a few lines signed "D. B." in the *Gentleman's Magazine*, vol. 87, p. 445. With his habitual placidity of mind, after he had totally lost the use of his right hand, he soon acquired

\* Australia, in modern geography the fifth great division of the globe, including New Holland, Van Diemen's Land, and all those numerous islands situate to the south-west of Asia. So strongly was felt the importance of a newspaper, by the new colonists at Swan River, on the western coast of Australia, that until the material of a printing establishment could be obtained from England, a *written newspaper* was issued from the seat of government, and copies of it nailed to trees at particular stations in the settlement.

the habit of writing very neatly with his left. Though more than eight of his latter years were embittered by repeated attacks of paralysis, which deprived him of the use of his right side, and confined him wholly to his bedchamber, he bore his sufferings with that manly fortitude, and that patient resignation to the Divine will, which his constant study of the holy scriptures had enabled him to sustain. He died at Peckham, aged nearly eighty-two years.

1826, Feb. 15. *Died*, GEORGE THOMPSON, many years a printer and publisher of ballads and cheap pictures, in Long-lane, West Smithfield, by which he accumulated £70,000. He died at Islington, aged sixty-eight years.

1827, April 2. COLONEL FITZHARDING BEAKELY, (now lord Segrave) obtained a verdict, with £50 damages, against colonel W. Blennerhasset Fairman, proprietor of the *Palladium* London newspaper, for a libel which had appeared in that paper in July, 1826.\* The lord chief justice remarked on the trial, "that in the present state of the press, we were living in the greatest state of tyranny under the sun."

1826. There are no books in existence by which it can be ascertained what number of works were entered at stationers' hall before 1709, in which year there were eighty-seven. In the next three years the number was about one hundred; but from that period down to 1766, the average yearly number was not fifty. The number went slowly increasing, and at the commencement of the present century the amount was three hundred yearly; in 1814, the amount was five hundred and forty-one; in 1815, the number was one thousand two hundred and forty-four. From that period to 1826, the average number was about one thousand. The lowest number ever entered was about seventeen, (in 1732 and 1734) and the highest in 1822.†

1826, June 13. *Died*, the rev. WILLIAM DAVY, curate of Lustleigh, Devonshire, who received the first rudiments of his education at Exeter free grammar school, and on returning from Balliol college, Oxford, obtained priest's orders. In his examination for this sacred office, he corrected one of the highest dignitaries of the church on some theological point, and received great encomiums for his biblical knowledge. This gentleman was the editor, printer, and publisher of a compilation, intitled: *A System of Divinity, in a Course of Sermons on the First Institutions of Religion—on some of the most important Articles of the Christian Religion in connexion—and on the several Virtues and Vices of Mankind; with occasional discourses*. Being a compilation from the best sentiments of the polite writers and eminent sound divines, both ancient and modern, on the same subjects, properly connected, with improvements; par-

ticularly adapted for the use of chiefs of families and students in divinity, for churches, and for the benefit of mankind in general, 26 vols. 8vo. 1795-1807. The history of this voluminous work affords an example of perseverance that can scarcely be paralleled in the annals of literature, though so fertile in curiosities. Mr. Davy having completed his collection, at first issued proposals for publishing it by subscription; but as he was poor, his income during his curacy at Lustleigh being only £30 a-year, his theological labours obtained no patronage, and he resolved to print it himself, that is, with his own hands. With a press, which he made for himself, and as many worn and cast-off types, purchased from a country printing-office, as sufficed to set up two pages, he fell to work in 1795, performing, with the assistance of his female domestic, every operation, and working off page by page, he struck off forty copies of the first three hundred pages; twenty-six of which he distributed among the universities, the bishops, the royal society, and the reviews, hoping, no doubt, to receive from some of those quarters, that encouragement to which he thought himself entitled. Disappointed in this expectation, he resolved to spare himself the expense of paper in future; and as he had reserved only fourteen copies of the forty with which he commenced, three of which he mentions as being imperfect, he continued to print that number, and at the end of twelve years of unremitting toil, finished the whole twenty-six volumes. Disdaining any assistance, he then put them in boards with his own hands, and made a journey to London for the express purpose of depositing a copy in each of the most eminent public libraries in the metropolis, and in the university libraries at Oxford and Cambridge, in the library of the cathedral church, Exeter, &c. &c.

With all the literary and typographical labours of Mr. Davy, little else but praise was gained; but a mind so organized for action as his, could not rest in inactivity; and though well up to his eightieth year, his vigour of intellect remained unimpaired; and conceiving more might yet be culled to add to the latter volume, in 1825 he had increased it so considerably, that on his determination to send it forth to the world, he found it sufficient to fill two octavo volumes. Being then in his eighty-second year, he resigned his task of printing into other hands, and a best edition was printed, which procured for the author the living of Winkleigh. But this reward, though highly gratifying to his feelings, came too late to add to his comforts. After saying so much of his literary labours, it would scarcely be supposed that any other pursuit had ever occupied his attention. He excelled in gardening, and constructed some clocks, and various other pieces of mechanism; his parsonage contained many specimens of mechanical genius; and his garden, formed among the rocks, was extremely curious. He made a handsome present of communion plate to the church of Lustleigh, a flagon and two patens,

\* Certainly it is an ungenerous thing to publish that to all which we dare not own to any. It is a serpent, that bites a man by the heel, and then glides into a hole. A libel is *Alius populi*; having no certain father, it is not to inherit belief.—Owen Feltham.

† Music forms an item for some years in this amount.

with the following inscription: "The Gift of William Davy, (aged seventy-eight,) thirty-six years curate of Lustleigh, to that parish, for the use of the sacrament for ever: 1822."

1826, June 23. *Died*, WILLIAM BIRDBALL, bookseller, Northampton, aged seventy-six years, deeply lamented by his family and friends. He had twice served the office of mayor, and for the last five years he had been elected one of the magistrates.

1826, July 25. *Died*, ROBERT BELL, editor and proprietor of *Bell's Weekly Dispatch*, London Sunday newspaper, from its commencement in 1801. In 1804, Mr. Bell published *A description of the condition and manners of the peasantry of Ireland*, 8vo. He died at North Brixton, aged sixty years.

1826, Sept. 23. At the royal Coburg theatre, London, a play was performed for the benefit of the unemployed journeymen printers of the metropolis, under the immediate patronage of his royal highness the duke of Sussex. A poetical address, written by Joseph Blakesley,\* a compositor, was spoken on the occasion.

1826, Oct. 26. *Died*, CHRISTOPHER MAGNEY, an eminent wholesale stationer on College hill, and alderman of Vintry ward, London. He was a liveryman of the worshipful company of stationers in 1807; alderman on Feb. 20, 1810, and in the same year one of the court of assistants of the stationers' company, of which he served master in 1816; sheriff of London and Middlesex in 1813; and in 1821 he filled the high and important office of lord mayor, with strict attention to the interests of the city, and humanity to those who came under his power. In trade he was respected for his honourable dealings, and the house of Magney and Son was long considered the head of that line of business. Alderman Magney died at Wandsworth, in the fifty-ninth year of his age.

1826, Nov. 1. *Died*, FRANCIS JOLLIE, printer and proprietor of the *Carlisle Journal*, aged thirty-five years.

1826, Nov. 17. *Died*, CHARLES SAMBROKE ORDOYNO, printer at Nottingham, and formerly printer and publisher of the *Derby Herald*, (see page 773, *ante*.) Mr. Ordoyno came to his death by the following singular accident. It appeared that about ten o'clock at night he went out of his house with a paper cap on his head, two jugs in his hand, and also some money, for the purpose of fetching some ale, and when he had got within nine yards of the door, Edward Wilford, a butcher, who came out of the public-house in haste, ran against him in the dark, their foreheads met, and the deceased was knocked down. A surgeon was called, but the deceased was insensible, and he died about half-past nine the following evening. On examination it was found that a blood vessel within the brain was ruptured, and a recent wound was found on each instep.

1826, Nov. 26. *Died*, JOHN NICHOLS, F. S. A. printer, and editor of the *Gentleman's Magazine*,\* who was distinguished alike for superior talents, indefatigable industry, and undeviating integrity, and of whom the profession of the art of typography may feel justly proud, as an example so worthy to be emulated. John Nichols was born at Islington, February 2, 1744-5, and received his education at an academy kept by Mr. John Shield, a man of considerable learning. In 1754 he was placed apprentice to Mr. William Bowyer, who appears to have quickly discovered in his pupil that amiable and honourable disposition which distinguished him all his life. From the moment he became Mr. Bowyer's apprentice, he was intent on the acquisition of solid knowledge. Mr. Bowyer appears to have been not only the instructive master, but the kind and indulgent friend to his apprentice, and was often anxious to amuse him by encouraging a taste for poetry; and from 1761 to 1766 he became a constant votary of the muses, his productions making no inconsiderable figure in the periodical journals. During his minority he produced some prose essays on the manners of the age, such as they appeared to one who had been no inattentive observer. These were merely his amusements, and indicative of an ambition which at his early age was surely pardonable. His more serious hours were devoted to the business of the press. His leading object was to please his master in the superintendence of the learned works printed by him, and in this he succeeded so well, that the relative situations of master and servant soon merged into a friendship, the compound of affection on one side, and of reverence on the other. So amply had he fulfilled his master's expectations, as to prudence and judgment, that before his apprenticeship expired, he sent him on a business of very great importance, to the university of Cambridge; and another proof of the value he placed on Mr. Nichols's services, when the period of them had expired, by returning to his father half of his apprentice fee;† and considering his assistance was of great importance in his printing establishment, he took him into partnership in the year 1766. This union, one of the most cordial that ever was formed, lasted until the death of Mr. Bowyer, in 1777. In 1778 Mr. Nichols obtained a share in the *Gentleman's Magazine*, of which he became the editor, and it had not been long under his care before it obtained a consequence which it had never before reached. In 1781 he was elected an honorary member of the society of antiquaries at Edinburgh; and, in 1785, of that

\* The *Gentleman's Magazine* has been styled the "Old Parr of periodicals," and still "liveth in monthly immortality." There is one circumstance which ought not to be overlooked: it was commenced by a journeyman printer, and in the course of ninety-six years was conducted only by three editors, who had all been journeymen printers, and we trust the present editor will not think it any disparagement to place him in the list.

† "When I was bound to him my father received from Mr. Bowyer a promissory note to return half the apprentice-fee at the expiration of the seven years, on condition that I behaved suitably to his expectation. This sum he very honourably paid me in February, 1766." J. N.

\* *Rhyming Trifles; or, Amusements of Leisure*. By Joseph Blakesley, compositor. London, 1827.

ductors and authors, as discreet and respectful as it was manly and liberal.\* Some years after the first appearance of this celebrated journal, he became proprietor of another national work, the *Encyclopædia Britannica*, 1812, for which he paid a price that excited the surprise of some of the most timid of his brethren. During the progress of these works, his house was still further aggrandized by the publication and writings of Dugald Stewart† and sir Walter Scott. His intercourse with the latter was more intimate, varied, and extensive, and in many respects more remarkable than was ever before exemplified between author and publisher.

In 1804 Mr. Constable had assumed as partner Alexander Gibson Hunter, of Blackness, and from that time the business was carried on under the designation of Archibald Constable and Company. In 1808, a bookselling firm was established in London, under the firm of Constable, Hunter, Park, and Hunter, but not answering the expectations which were formed, it was given up in 1811. In the same year Mr. A. G. Hunter retired from the Edinburgh house, when Mr. Robert Cathcart, a writer to the signet, and Mr. Robert Cadell, then a clerk in the house, became Mr. Constable's partners, under the designation of Constable and Co. Mr. Cathcart dying, in Nov. 1812, Mr. Cadell remained the sole partner. How it happened that with all the splendid success, so beneficial and honourable to our literature, which attended Mr. Constable's undertakings, his publishing career should have closed so disastrously, we are not able to divine. He had just completed the plan of the *Miscellany*, which bears his name, and was busied with well-founded hopes, in sanguine calculations of the returns which it would bring to his house. Its publication did not take place till after the failure of that establishment; and it is pleasing to reflect, that its subsequent success furnished some solace for his misfortunes, as well as some alleviation of his bodily sufferings; his final undertaking, thus proving to be his last and only means of support. A man joining such professional abilities to such liberal and extensive views; so capable of appreciating literary merit, and so anxious to find for it employment and

reward; as largely endowed with the discernment, tact, and manners, necessary to maintain a useful, honourable, and harmonious intercourse with literary men, is not a common character, even among the improved race of modern biblioplists.

It is painful to reflect on the change which adversity brought over the mutual sentiments of Mr. Constable and sir Walter Scott; but as these events have been chronicled by abler hands,\* it is sufficient to observe that they were in some degree intoxicated by the extraordinary success they had met with in their respective careers. They launched, without rudder or compass, into an ocean of bank credit, in which they were destined eventually to perish.

Mr. Constable had, in early life, entertained literary aspirations, only less ambitious than those by which he distinguished himself in commercial life. In 1823, he was included in a list of new justices of the peace for the city of Edinburgh. In 1825, he had projected a *Miscellany of Original and Selected Works, in Literature, Art, and Science*, which he designed to publish in parts at one shilling each, every three constituting a volume. Unfortunately the commercial distresses which marked the close of 1825, operated unfavourably upon a London firm with which Archibald Constable and Company were intimately connected; and in Jan. 1826, both were compelled to stop payment.† The debts of the latter house were understood to be about a quarter of a million; for a consider

\* See Lockhart's *Life of Sir Walter Scott*, 7 vols. 8vo. 1838; and Chambers's *Lives of eminent Scotsmen*, vol. iv.

† Among the sufferers by the failure of the house of Constable and Co. was the family of Robert Watt, M.D. author of the *Bibliotheca Britannica*, for which the sum of £3000 had been given in bills, but before any of them were honoured the house failed. Robert Watt, the son of a small farmer, in the county of Ayr, was born in May, 1774. He was a ploughboy until his seventeenth year; but a thirst for knowledge, and a desire to excel, soon manifested itself. In 1793, he matriculated at Glasgow, where he remained till 1797, eventually turned his attention to the study of medicine, settled at Paisley, and was the author of many medical treatises, and other works. He died upon the 12th of March, 1819, aged only forty-five, and was interred in the Glasgow High Church burying-ground. The whole plan of the *Bibliotheca* is new; and few compilations, of similar magnitude and variety, ever presented, in a first edition, a more complete design and execution. It is divided into two parts; the first part containing an alphabetical list of authors, to the amount of above forty thousand, and each a chronological list of his works, their various editions, price, &c., and also of the papers he may have contributed to the more celebrated journals of art and science. This division differs little in its construction from that of a common catalogue, only that it is universal in its character, and gives short biographical notices of the author, and critical opinions of his works. It also gives most ample lists of the various editions of the Greek and Roman classics, and, under the names of the early printers, lists of the various books which they printed. In the second part, all the titles of works recorded in the first part, and also anonymous works, are arranged alphabetically under their principal subjects. At his death, the publication of the *Bibliotheca* devolved upon his two eldest sons, who devoted themselves to its completion with nil enthusiasm. They were both young men of the most promising abilities; and it is to be feared that their lives were shortened by the assiduity with which they applied themselves to the important charge that was so prematurely laid upon them. The printing of the *Bibliotheca* was completed in 1824, in four large quarto volumes. The first division or portion of it was printed in Glasgow, and the second in Edinburgh.

\* Edited by Francis Jeffrey, afterwards a Scottish judge, under the title of lord Jeffrey, whose pitiless severity towards writers of questionable ability, and the mastery and original character of the essays which appeared in the work, instantaneously fixed the attention of the public. See page 813 ante. The honour of publishing this work remained with Mr. Constable, until the year 1826.

† Dugald Stewart, F. R. S. professor of moral philosophy in the university of Edinburgh, and author of many philosophical and other works, was the son of Dr. M. Stewart, born at Edinburgh, Nov. 29, 1768, and died June 11, 1828. As an instructor of youth, his eloquence, his enthusiastic love of knowledge, and the extensive range of his information, made an extraordinary impression on the minds of the young, an impression which was felt in their studies, and clearly indicated in the station which many of them attained in the ranks of worth and talent. As a man he was respected and beloved by every one who had the happiness of his acquaintance. In 1808, Mr. Fox created a sinecure office, that of gazette-writer for Scotland, for the express purpose of rewarding Mr. Stewart, who enjoyed with it a salary of £600 a-year, and which, after his decease, was continued to his family.

1826. Jan. *The Liverpool Chronicle*. Messrs. David Ross and William Nightingale are now (1837) proprietors and printers of this paper.

1826. *The Aberdeen Observer*, established by Messrs. John Davidson and Co. printers, and other gentlemen. This paper was started on conservative principles, in order to oppose the *Aberdeen Herald*, which had been commenced in 1823, on strong reforming principles.

1827. Jan. 26. *Died*, R. LONERGHAN, proprietor of the *Dublin Morning Post*, aged forty-five years. Mr. Lonerghan died at Dublin.

1827. Jan. Mr. SAMS, bookseller, St. James's-street, London, paid a fine of £5 for neglecting to pay to the stamp office the amount of duty on a pamphlet, entitled *A narrative of the last illness of the duke of York*, by sir Herbert Taylor.

1827. *Constable's Miscellany*, published by Archibald Constable, Edinburgh. The aim of Mr. Constable was to produce books at the old rate of cheapness, without any diminution of excellence. The example was followed by Messrs. Longman and John Murray, of London; Messrs. Oliver and Boyd, in Scotland; and others who found it to their advantage in reducing the price of books, and gratifying large numbers of the purchasers that had crowded in the new mart of literature. In this year also commenced the *Library of Useful Knowledge*, by the society for the diffusion of useful knowledge, a society well deserving its name, which also had the "honour of leading the way in that fearful inroad upon dearth of the good old times of publishing, which first developed itself in the wicked birth of what the literary exclusives called the *sixpenny sciences*.\*"

1827. *The Criticist and Scribblers of the Day*. By a Scribbler. London.

1827. The number of new publications issued from 1800 to this year, including reprints altered in size and price, but excluding pamphlets, was, according to the *London Catalogue*, 19,860. Deducting one-fifth for the reprints, we have 15,888 new books in twenty-seven years; shewing an average of 588 new hooks per year, being an increase of 216 per year over the last eleven years of the eighteenth century.

\* This society consists of the most eminent literary characters of the day, headed by lord Brougham as chairman, and several other noblemen and friends of the diffusion of knowledge among the great mass of the people. See the *Quarterly Journal of Education*, issued by the society. This society employed men of adequate abilities to write a body of treatises on sciences, which treatises should be published at sixpence each. A great publishing house in London undertook the *Library of Useful Knowledge*, but declined to proceed with it before the appearance of the first number. Mr. Baldwin became the publisher, and was succeeded by Mr. Charles Knight.

† Lord Shaftesbury makes the following observation on Critics:—"I take upon me absolutely to condemn the fashionable and prevailing custom of inveighing against critics as the common enemies, the pests and incendiaries of the commonwealth of wit and letters. I assert, on the contrary, that they are the *props and pillars* of the building; and that without the encouragement and propagation of such a race, we should remain as *Gothic architects* as ever."

"From the consideration of ancient as well as modern time, it appears that the cause of the critics is the same with that of wit, learning, and good sense."

1827 July 21. *Died*, ARCHIBALD CONSTABLE, who, if not the most fortunate, was by far the most eminent, publisher that ever adorned the Scottish capital. He was born Feb. 24, 1776, at Kellie, in the county of Fife, where he received a plain education at the parish school, and in 1788 was bound apprentice to Peter Hill, bookseller, in Edinburgh, the friend and correspondent of Burns. About the time of the expiration of his apprenticeship, he married the daughter of David Willison, printer, who though averse to the match, was of some service in enabling him to set up for himself. This latter step he took in the year 1795, at a shop near the cross, in the High-street. Mr. Constable soon began to attract the notice of the learned of Edinburgh, by his knowledge of rare books, particularly those connected with the early literature of Scotland; and several years before his name had become known to the world as a considerable publisher, he had succeeded as well by his amenity of manners, as by his professional intelligence and activity, in rendering his shop the favourite resort of all the more curious and aspiring spirits of the place, including Mr. I. G. Dalzell, Mr. Richard Heber, Mr. Alexander Campbell, Mr. (afterwards Dr.) Alexander Murray,\* Dr. John Leyden,† Mr. Walter Scott, Mr. Thomas Thomson, and other admirers of Scottish literature. In 1801, Mr. Constable acquired the property of the *Scots Magazine*, upon which he employed the talents of Leyden, Murray, Macneil, and other eminent men in succession. He had always longed to become instrumental in adding something of importance to the stock of knowledge, and to enrol his name in the list of the more liberal and enterprising publishers of the day. His fame as a publisher commenced with the appearance of the *Edinburgh Review*, 1802, which he had the honour of ushering into the world, and he long ministered to its success and its glory by a deportment towards its con-

\* Alexander Murray, who from the lowly condition of a shepherd boy, raised himself to the situation of professor of oriental languages in the university of Edinburgh, was a minister of the Scottish church, and born Oct. 22, 1775, at a place called Dunkilerrick, in Galloway, in the south of Scotland, where his father was a shepherd, and reared a large family in humble comfort and respectability. In the *Literary History of Galloway*, Mr. Murray has written a narrative of himself, to which the reader is referred, as affording an instance of the utmost perseverance in the pursuit of knowledge under difficulties; nor should it be forgot, that, to James Kinneir, a journeyman printer of Edinburgh, Dr. Murray always acknowledged himself under the greatest obligations, even before and after he was introduced to Dr. Baird, his faithful friend and patron through life. Dr. Murray died deeply lamented, April 18, 1813.

† John Leyden, a poet, an antiquary, and orientalist, will long be distinguished among those whom the elasticity and ardour of genius have raised to distinction from an obscure and humble origin. He was the son of a day labourer, and born at the village of Denholm, in Roxburghshire, Sept. 8, 1778, and bred to such country labour as suited his strength. In 1790, he attended the college of Edinburgh, where he obtained the friendship of many eminent literary characters. In April, 1803, he left Scotland for the East Indies, and died on the island of Java, August 29, 1811. His poetical remains were collected and given to the public in 1831, and in some instances exhibit a power of numbers which, for the mere melody of sound, has seldom been excelled in English poetry.

1827, *Sept. The Retrospective Review and Historical and Antiquarian Magazine*, (new series) published every alternate month.

1827, *Dec. 8. The London Medical Gazette*, No. 1. London: Longman, Rees, Orme, and Co.  
1827. *The Edinburgh New Philosophical Journal*, conducted by Robert Jameson, F. R. S., regius professor of natural history and keeper of the museum at Edinburgh, lecturer in mineralogy, and president of the Wernerian society.

1827. *The Christian Examiner and Church of Ireland Magazine*. Dublin: W. Curry, jun.

1827. *The Foreign Review and Continental Miscellany*, No. 1. 6s. London, 8vo.

1827. *The Hobart Town Courier*, edited by James Ross, LL.D. Dr. Ross died at Hobart Town, Van Dieman's Land, in August, 1832.

1828, *Jan. 3. Died, JOHN HURST*, many years a bookseller at Wakefield.

1828, *Jan. 7. Died, JAMES SCATCERD*, bookseller, Ave Maria-lane, London, aged seventy-three years. Mr. Scatcerd was a native of Yorkshire, and served his apprenticeship to a bookseller in the city of York. At the expiration of his time he went to London, and lived with Mr. John Walter, a well known bookseller at Charing-cross; and, after living in that gentleman's service for several years, he succeeded (in conjunction with Mr. Whitaker) to the business of Mr. Edward Johnson, then the father of the trade. Mr. Whitaker dying a few years afterwards, Mr. Scatcerd entered into partnership with Mr. Letterman, a man of upright conduct and indefatigable industry, whom also he survived. A great part of his success in trade may be attributed to his engagement with Mr. John Reeve,\* to print his bibles and common prayer books. Mr. Scatcerd was a member of the common council for the ward of Farringdon within for several years. His fortune, which was considerable, he left, with the exception of a few legacies, to his widow.

1828, *Jan.* In the court of exchequer, judgment was pronounced on an important literary question. The British museum v. Payne and Foss, booksellers and publishers. The trustees of the British museum claimed one copy of a number of a splendid publication entitled *Flora Græca*, got up entirely by subscription, and no more copies were printed than those subscribed for. The claim was resisted on the ground that a publication for private circulation did not come under the operation of the act giving a copy of every work to the library of that national establishment. The court pronounced unanimously against the claims of the trustees, on the ground of its being only a portion of the work, and not a complete volume.

1828, *Feb. 15. Died, JOSEPH GLEAVE*, printer, bookseller, and publisher, of Manchester, aged fifty-five years. His zealous and active exertions

in promoting the interests of Sunday schools will ever endear his memory in lasting remembrance. Such was the uprightness of all his dealings that the trading world will long regret his loss. As a master he was affable, kind, and liberal; and as a friend he was warm-hearted and faithful. Mr. Gleave was a native of Tabley, in Cheshire, and left a family of two sons and four daughters. Robert, the eldest son, a printer, died August 8, 1830, and the business is now carried on by Joseph Gleave, the youngest son.

1828, *Feb. 28.* Among the unfortunate sufferers who lost their lives by the falling in of the Brunswick theatre, Wellclose-square, London, on this day, the printing profession had to lament the loss of J. D. MAURICE, an eminent printer, of Fenchurch-street, London, who was the principal proprietor of the establishment, and JOHN EVANS, formerly a printer at Bristol, and author of the *Chronological Outlines of the History of Bristol*. He was well known to a great portion of the inhabitants of that city, and there are not a few who can testify to the active kindness which he constantly manifested, whenever any efforts of his could help to mitigate the calamities of others. Mr. Evans had, at different periods of his life, been concerned in editing more than one newspaper in Bristol, and had recently left it for the purpose of entering into some engagement in the printing business in London, with Mr. Maurice. Mr. Evans was in his fifty-fifth year. He became a widower only a few weeks before his death, and left behind him three orphan children.

1828, *March 31. The Maitland Club* was instituted upon this day, by a few gentlemen of Glasgow, for the purposes very similar to those of the Bannatyne club of Edinburgh; and although this club is the last formed of those devoted to literary objects, it bids fair, by the number and importance of its publications, to rival either of the predecessors. The number of members was originally limited to fifty, but now contains seventy names, of gentlemen of literary acquirements.

1828. It appears from the researches of M. Adrian Balbi, that upwards of three thousand one hundred and sixty-eight periodicals are published in the world. Of these two thousand one hundred and forty two are published in Europe, nine hundred and seventy-eight in America, twenty-seven in Asia, twelve in Africa, and nine in Oceania. The United States of America, with a population of eleven millions, has eight hundred journals, whilst the British monarchy, with a population of one hundred and forty-two millions, has no more than five hundred and eighty-eight periodicals. The commercial value of literary works published in Great Britain, during the year 1828, amounted to £334,450, exclusive of newspapers, reviews, and magazines.

1828. The total cost of printing the fac-simile of that ancient codex of the bible, called the *Alexandrian Manuscripts*, including the various sums paid to the printer, engraver, editor, transcriber, and bookbinder, was £9,286.

\* John Reeve, founder of the association for protecting liberty and property against republicans and levelers, (formed in London, Nov. 20, 1793,) was born Nov. 20, 1755, and died Aug. 29, 1829. See page 811, *ante*.

1828, Oct. 22. The greatest curiosity at this time in the art of printing, and though slight in itself, establishes a memorable epoch in the history of mankind, is the establishment of a newspaper among the nation of the Cherokee Indians (Arkansais.) It is called the *Cherokee Phoenix*, edited by Elias Bondinott, and published "for the Cherokee nation," at New Echota. The *Phoenix* is printed in both languages, but at a less price to the Cherokees than the English. The paper is about nineteen inches long and twelve inches wide, in five columns. No. 34 is dated as above. See *Introduction*, page 12, *ante*.

1828, Oct. 29. Died, LUKE HANSARD, a very eminent printer and excellent man, whose character presents in all its points of public and private life, an example worthy of imitation. Luke Hansard was born in the parish of St. Mary, Norwich, July 5, 1752. His father, Thomas Hansard, was a respectable manufacturer in that city, but in his latter days became unsuccessful in business. The early and pious instructions which he received from his mother, appear to have formed the basis of that honourable character which distinguished her son throughout the course of his long life. He received his education at the grammar-school of Boston, in Lincolnshire, and was afterwards apprenticed to Mr. Stephen White, printer, in Cockey-lane, in the parish of St. Clement, Norwich. Here soon appeared the vast advantages of early training to habits of industry and moral feeling. His master was given to convivial indulgence, and was easily and frequently seduced from his business; but having discerned the value of his steady apprenticeship, had the sense to entrust him with the principal part of the management of his concerns. Immediately after the close of his apprenticeship, he went to London, with a solitary guinea in his pocket; and to his honour it ought to be recorded, that the first guinea he earned, beyond his immediate necessities, he transmitted to Norwich, to pay an unsatisfied demand upon his father. Mr. Hansard first obtained a situation as a compositor at the printing-office of Mr. Hughes,\* of Great Turnstile, Lincoln's Inn-fields, who was printer to the house of commons, and carried on that branch, when it was of small extent, compared with what it had arrived at in the year 1799, when Mr. Hughes admitted Mr. Hansard into partnership. The business of Mr. Hughes had been for many years under the management of Mr. William Day, a very worthy man, of exemplary diligence

and attention. The increase of parliamentary printing rendering more assistance necessary, the active attention to business of Mr. Luke Hansard, pointed him out as the most capable of the arduous office of manager of the operative department. Mr. Day attending chiefly to the reading department. After the death of Mr. Day, the whole management devolved upon Mr. Hansard, who, after some years' exertion, as great, perhaps, as ever was witnessed, certainly never exceeded by any one, making the interests of his employer the first and sole object, became, in 1799, a partner in the concern; and by a subsequent arrangement in 1801, he succeeded as the entire proprietor of a business which he rendered the first in the world for that promptitude and despatch so essential to the interests of the legislature and the nation. As a man of industry few such instances can be mentioned. He knew little of relaxation or pleasure. He was throughout life an early riser, and sketched in his mind the plan and business of the day before others were awake to execute it. From the beginning of his official life, Mr. Hansard established this rule for his conduct, to spare no cost or personal labour in attempting to perform the important duty entrusted to him, *better and cheaper, and more expeditiously* than any other printing concern in London. He worked for others, not for himself. There was nothing in his mode of life showy and ostentatious. A benevolent spirit, however, reigned through the whole. His contributions to public charities were truly liberal. Among others, his benefactions to the worshipful company of stationers, as a provision for decayed printers, will make his name remembered with gratitude many a distant year. In the discharge of his parochial duties, he was not only a judicious guardian of the public purse, but a kind friend to the numerous poor in his extensive neighbourhood. If it be true, as asserted by more than one eminent writer, that all morals and all integrity, to be permanent, and of practical effect, must be bottomed upon religion; this was precisely the case with Mr. Hansard. He departed this life in the seventy-seventh year of his age, and his remains were interred in the church of St. Giles's in the Field. Mr. Hansard left a widow, nearly his own age, and three sons and two daughters. His eldest son, Thomas Curson, died May, 1833, and his other sons, who had long been in partnership with him, continued the establishment.

Luke Hansard was a liberal benefactor to the stationers' company: July 11, 1818, transferred £1,000, four per cent annuities, the interest to be given, in two annuities of £10 a-year each, to such objects above sixty-five years of age, free of the company, and letter-press printers (compositors or pressmen,) as the court shall think proper.\* The other £20 to be given yearly to four freemen of the company, printers, booksellers, stationers, warehousemen, or bookbinders, above sixty years of age, at £5 a-year each, as

\* When Mr. Hansard went a stranger to London, he had an introduction to Mr. Hughes, and looking about Lincoln's Inn-fields for the printing-office, he accidentally met with Mr. Hughes, and not knowing that gentleman, inquired of him the way to the office. Mr. Hughes asked him what business he had there, and finding him a stranger, and desirous of obtaining employment, appointed the following day for his going to work; this laid the foundation of that prosperity, the almost sure reward of industry.

In a manuscript note which Mr. Hansard had seen, and which apparently was intended to form some account of his life, the writer said that he came to London without a patron and without a friend. Underneath this, Mr. Hansard wrote, "Not so, for God was my friend and my patron."

\* Mr. Hansard nominated the two first annuitants.

the court shall think proper objects of this donation. September 18, 1818, transferred to the company £1,500 three per cent consolidated annuities; in trust to give to every youth bound at their hall, a neatly-bound church of England prayer-book, as printed by his majesty's printer in London, bound up with the new version of psalms. The number of prayer-books thus to be disposed of, are taken at two hundred, which, at a presumed price of 2s. 7d. each, will cost £25 16s. 8d. Then to give yearly to two of his warehousemen (named) £6 6s. each. Also to "such warehouseman, or binder, or stationer, or other person in the class to whom the court has been accustomed to give such annuities, above sixty years of age," £6 6s. The residue of 5s. 4d. and whatever residue may be left from the two hundred prayer-books not being wanted, or from the cost being less, to be applicable for such purposes as the court shall think proper.

1828, Oct. 30. *Died*, JAMES LYNCH, book-seller and stationer, Duke-street, Liverpool, aged seventy years.

1828, Nov. 8. *Died*, THOMAS BEWICK, the celebrated engraver on wood, to whom the lovers of science and literature lie under deep obligation, as the re-inventor of the xylographic art. Thomas Bewick, was born on the 12th August, 1753, at Cherry Burn, in the parish of Ovingham, and county of Northumberland. The choice of a profession for him was determined by the skill in drawing which he very early evinced. Like most boys whose bias of mind towards any pursuit is peculiarly strong, he early indicated the bent of his genius by sketching figures with chalk on the walls and doors of almost every house in Cherry Burn. At the age of fourteen he was bound apprentice to Mr. Ralph Beilby, of Newcastle, a respectable engraver, and one who took delight in instructing his pupils and encouraging their rising talents. Whether young Bewick would at an after period of life, and without the suggestion of others, have directed his attention to wood-cutting, it is difficult to say, but at all events an accidental circumstance determined his future career in the arts. The celebrated Dr. Hutton,\* at that time a schoolmaster in Newcastle, was preparing in 1770 his great work on mensuration, and having applied to Mr. Beilby to supply copper plates of the mathematical figures, he was advised to employ wood-cuts instead. The great mathematician acceded to this proposal, and Mr. Beilby entrusted the execution of them to his apprentice. With such beauty and accuracy were they finished, that the young engraver was advised by his master to turn his chief attention to this long-neglected art, and the consequence

was a succession of mathematical works illustrated with very beautiful diagrams engraved on wood. After his apprenticeship had expired, Bewick spent a short time in the metropolis, and also paid a visit to Scotland, after which he returned to Newcastle, and became a partner in his master's business. His brother John† became their joint apprentice. The publication of an edition of *Gay's Fables* afforded an opportunity for the Bewicks displaying their talents in the higher branches of wood-engraving, by the illustrations which they furnished for the work. One of these, the old hound, obtained the premium offered by the society of arts for the best specimen of wood-engraving, in 1775. An impression of this may be seen in the memoir which is prefixed to *Select Fables*,‡ printed for Emerson Charnley, Newcastle, 1820, and sold in London by Baldwin and Cradock. The *Fables* of Gay were published in 1779, and in 1784, the appearance of a new edition of *Select Fables*, with an entire new set of cuts by the Bewicks, spread far and wide their reputation, and placed them above competition in the art. The publication of the *History of Quadrupeds*, which, after being carefully prepared, made its appearance in 1760. The prospectus of this great work was the means of introducing him to a gentleman who possessed a museum, remarkable for the number and variety of its specimens of winged and quadruped animals, living and dead, and of these Mr. Bewick was invited to take drawings, which tended greatly to enrich all his subsequent publications. The pictorial embellishments exhibit every excellence which engravings ought to possess—boldness of design, variety and exactness of attitude, correctness of drawing, and discrimination of general character. A spirit of life and animation pervaded every figure, and thus a lively idea of each different animal is conveyed. Short descriptions accompanied the engravings, chiefly drawn up by Mr. Bewick's condutors, Messrs. Hodgson and Beilby, but subject, it is highly probable, to his corrections and additions. A great and unexpected charm belonged to the *History of Quadrupeds*—this was the profusion of vignettes and tail-pieces with which the whole volume was adorned. These exhibited remarkable inventive genius, and a skill in catching the very lineaments in which the specific expression of the species resides, never before equalled. Under the auspices of their friend and fellow-townsmen, William Bulmer, of the Shakspeare press, London, the Bewicks embellished the *Deserted Village* of Goldsmith, the *Hermit* of Parnell, and the *Chase* of Somerville;‡ all of which met with success. In 1797 appeared the first volume of the *History of British Birds*, comprising the *Land Birds*, the letter-press being furnished by Mr. Beilby. Before the publication of the second volume on *British Water Birds*, a separation of interests

\* Charles Hutton, LL.D. F. R. S. &c. late professor of mathematics in the royal military academy at Woolwich, was born at Newcastle, Aug. 14, 1737, and died at Charlton, Jan. 27, 1823. For the very eminent services which Dr. Hutton had rendered to the board of ordnance, he was rewarded with a liberal pension from government, on his resigning, through ill health, in 1807, from his duties at Woolwich. He enriched the *Philosophical Transactions* with many valuable papers: and conferred some liberal benefactions to his native town.

\* Of whom see a notice at page 799, ante.

† Thomas Saint, printer of the *Newcastle Courant*, in 1776, printed an edition of *Select Fables*.

‡ See page 912, post.

took place, so that its compilation and completion devolved on Mr. Bewick alone, with the assistance of a literary friend. In 1818, Mr. Bewick published the *Fables of Æsop*, and two or three years afterwards, a volume of *Select Fables*, the wood-cuts being a selection from the earlier works of the Bewicks. The public were thus enabled to study the gradual advancement towards excellence which had been made by the revivers of this elegant and useful art. The number of blocks engraved by the Bewicks is almost inconceivable, and it is impossible to particularise the various works which were embellished by Thomas Bewick and his pupils, of whom he had a continued succession. Some of these have done him great honour, and contributed to carry the art of xylography to a state of perfection at which he himself confessed he never supposed it was capable of arriving. It is almost unnecessary to mention the names of Nesbitt, and above all of William Harvey.\*

In a *Memoir* it is stated, that "Mr. Bewick's personal appearance was rustic. He was tall and powerfully formed, a quality he was fond of displaying in his prime. His manners were somewhat rustic too, but he was shrewd, and disdained to ape the gentleman. His countenance was open and expressive, with a capacious forehead, strongly indicating intellect—his dark eyes beamed with the fire of genius. He was a man of strong passions—strong in his affections, and strong in his dislikes. The latter sometimes exposed him to the charge of illiberality, but the former and kinder feelings predominated.—Strongly honourable was he in all his dealings; and to his friends there never was a more sincere or a kinder hearted man than Thomas Bewick." He was succeeded in the business by his son, Mr. R. E. Bewick.†

1828, Nov. 28. *Died*, MILLER RITCHIE, who was justly considered the father of English fine printing, aged seventy-seven years. Baskerville succeeded in producing a type of superior elegance, and an ink which gave peculiar lustre to impressions from his type. The novel and unusual excellence which his works presented gave a stimulus to the exertions, and drew forth the emulation of many of our countrymen. The first who started in this novel course was Mr. Miller Ritchie, a native of Scotland. About 1785 he carried on business in Albion-buildings, Bartholomew Close. An edition of the classics in royal octavo, consisting of the works of Sallust, Pliny, Tacitus, Q. Curtius, Cæsar, and Livy, was the work upon which this leading

attempt of superior printing was made, at the expense of the rev. Mr. Homer, senior fellow of Magdalen college, Cambridge, who subsequently disposed of the whole impression (excepting those reserved for presents) to the bookseller, Mr. Thomas Payne. The next work was a quarto *Bible* in two volumes, 1796, and two unique copies upon India paper, printed on one side only. Another work, executed by Mr. Ritchie, with uncommon splendour and expense, was *Memoirs of the Count de Grammont*, a small page upon quarto, one thousand five hundred copies on small paper, five hundred on Whatman's wove, royal, one copy on vellum, and three copies having the diminutive quarto page worked in the centre of a whole sheet of royal.

On his first diverging from the beaten track Mr. Ritchie encountered considerable difficulties. The paper-maker, Mr. Whatman, and the ink-maker, Mr. Blackwell, contributed most successfully, all their skill to this laudable design, but the want of journeymen to enter into the spirit of the undertaking with that extraordinary exertion of care and ingenuity which was indispensably required, was a difficulty the most discouraging, which he had long to contend with, and never wholly conquered; men could get who by bodily strength would pull down the press, and give the impression, but the giving the colour required skill and patience far exceeding what pressmen had any idea of in this country, so that Mr. Ritchie found himself obliged to manage the balls and beat every sheet with his own hands. With all his perseverance and skill in printing, he had not the art of getting independent by his labours; he failed in business, and was succeeded in his efforts by Mr. Bulmer; Mr. Bensley and Mr. McCreery followed, and from the presses of those gentlemen have issued some of the finest specimens of typography which this or any other country has produced. Emulation is a powerful principle in our nature, and the success which has attended their exertions, contributed in a great degree to give a new tone and character to the profession.

There is a likeness of Mr. Ritchie in Hansard's *Typographia*, by whom he was employed as warehouseman, after his failure.

1828, Dec. 20. *Died*, STEPHEN JONES, well known as the compiler and author of many useful works. He was the son of Mr. Giles Jones, secretary to the York building society, was born in London in 1763, educated at St. Paul's school, and apprenticed to a printer in Fetterlane. On the expiration of his time he was engaged as a corrector of the press in the office of Mr. Strahan, but at the end of four years he removed to that of Thomas Wright, in Peterborough-court, where he remained till the death of the principal, in March, 1797, an event which terminated Mr. Jones's immediate connexion with the profession of a printer; and he became the editor of the *Whitehall Evening Post*; but on the decline of that paper he undertook the management of the *General Evening Post*. He was a member of the society of freemasons, and

\* As a specimen of the extraordinary skill of this artist, the reader is referred to a most splendid engraving on wood, executed by Mr. Harvey, of the *Assassination of L. S. Desolatus*, from a celebrated painting by B. R. Haydon. Some years since, Mr. Harvey declined engraving on wood, having determined to step into the upper walks of art.

† His family, who still reside at Newcastle, are in possession of an autograph *Memoir* of this singular man, written with great naïveté, and full of anecdote.

Matthew Bewick, his nephew, died at Oringham, July 4, 1832. He was a young man of great promise, and was likely, had he lived, to have attained an equal degree of eminence in the profession with his uncle.

editor of the *Freemason's Magazine*. One of his principal undertakings was a new edition of the *Biographia Dramatica*, four vols. 8vo. also a small *Biographical Dictionary*; and on the death of Isaac Reed, he became the editor of the *European Magazine*. From 1799, for very many years, he selected an amusing annual volume from the newspapers, &c. under the title of the *Spirit of the Journals*. He was the author or editor of about twenty other works.

1828. *The British Almanack*, commenced by the society for the diffusion of useful knowledge.

1828, Jan. 1. *The London Encyclopedia*, part 1, sixth edition. London: Thomas Tegg.

1828, Jan. 1. *The Harmonist*; a new series of the *Flutist's Magazine*, and *Pianist's Review*.

1828, Jan. 2. *The Athenæum*, a literary gazette and weekly critical review, conducted by James Silk Buckingham, editor of the *Oriental Herald* and the *Sphinx*.

1828, Jan. 25. *The Chesterfield Gazette*, No. 1, printed and published by John Roberts. About 1830, the title was changed to the *Derbyshire Courier*, and *Chesterfield Gazette*, and still continues in the hands of the original proprietor. This paper was for a long time edited by the late Mr. Inglis,\* the intelligent writer on Ireland.

1828, Oct. 17. *The Manchester Times*, No. 1, edited, printed, and published by Archibald Prentice; and now conducted by Messrs. Prentice and Catherall, Ducie-place, Manchester.

1828, Nov. 15. *The Manchester and Salford Advertiser*, No. 1, printed by Jonathan Crowther, for the proprietors.† Now conducted by Mrs. Laresche and George Condy, a barrister-at-law, Market-street, Manchester.

1828. *The Canton Register*. This is the first paper established in the celestial empire, and still continues to be published weekly. It is somewhat anti-Chinese in its politics, and communicates much occasional information on Chinese manners, ceremonies, and festivals.

1828, *Colonial Advocate*, instituted by Mr. A. Bent, Hobart Town, Australia.

1829, Jan. 12. Died, GEORGE RILEY, many years a printer and bookseller, formerly of York. He died at Greenwich, aged eighty-six years, and was nearly the oldest proprietor of a newspaper in the kingdom.

1829. According to returns, the king's printers in England alone, sold 51,500 bibles, and 75,891 testaments. On the crown privilege of printing bibles, see *Gents. Mag.* for Feb. 1819, and *Companion to the Newspapers*, No. 2.

\* Henry David Inglis was a native of Scotland, and first became known in the literary world under the name of "Derwent Coweray." He was the editor of a newspaper on the island of Guernsey; then of the *Leeds Independent*; and also of a monthly publication in that town; and his final connexion with the periodical press, was at Chesterfield. He was the author of the *Modern Gil Blas*, and of works referring to Norway, Spain, Switzerland, the Channel Islands, and Ireland, all of which are characterised by powers of lively description; the last of these became an authority on all subjects connected with the sister kingdom. Mr. Inglis died at London, March 20, aged forty years, deeply regretted by the literary world.

† The licensed victuallers of Manchester and Salford.

1829, Jan. 19. It was considered that printing, both for execution and facility, had reached its zenith, at least, the printing profession was not prepared at all for the "striking magnificence of appearance" of the *Times*, London newspaper, of this day, which surpassed every thing that ever preceded out of a mechanical press, or was taken off from a revolving cylinder. It was a double paper, says the editor of that journal, consisting of eight pages and forty-eight columns, instead of four pages, and was the largest sheet till then manufactured.

1829, Feb. 17. Died, BENJAMIN FLOWER, the original proprietor and editor of the *Cambridge Intelligencer*, which he established in the year 1793, and whose imprisonment in the cause of the liberty of the press we have already noticed at page 779 ante. The name of Benjamin Flower will be revered by every one who had the pleasure of his friendship, and not less by those who wish for the improvement and happiness of mankind, will his memory be ever held in respect for the magnanimous activity and self-devotion which he showed in the cause of civil and religious liberty. The imprisonment of Mr. Flower, in 1797, led to the happiest event of his life. It is not common to find a woman (capable as they are when properly developed) of that high and sensitive appreciation of moral and intellectual worth, which can enable her to enter minutely into the feelings of any one who is suffering from the consequences of their noblest exercises. An amiable and accomplished lady, with whom he was previously acquainted, visited Mr. Flower, whilst deprived of his liberty, and shortly afterwards became his wife. This was indeed "the marriage of true minds," for she greatly assisted him in all his subsequent literary labours. Of the depth of his feelings for her, some idea may be formed from his own words on her death: "When such friends part, 'tis the survivor dies." They speak more than volumes. It was he who felt the earthiness of the grave, while she ascended. During his latter years, though his zeal in the cause of liberty and truth remained in all its pristine sincerity, he seemed to entertain the conviction that "Providence had committed their defence to other and younger hands." His private character was that of manly virtue and intelligence—the result of sustained feeling: his public character was the illustration of it. He died at Darlington, aged seventy-four years.

1829, March 1. Died, ALEXANDER MACKAY, jun. proprietor and printer of the *Belfast News Letter*, where he died.

1829, April—. Died, the right hon. and rev. FRANCIS EGERTON, earl of Bridgewater. He left to the president of the royal society the sum of £8,000, to be applied by him to appoint some persons to write, print, publish, and expose to sale one thousand copies of a work, *On the Power, Wisdom, and Goodness of God, as manifested in the Creation*. Agreeable to this bequest, Mr. Gilbert Davies, then president of the royal society, relieved himself of the respon-

ability, by applying to the archbishop of Canterbury, the bishop of London, and the earl's executors, who directed the sum to be divided among the authors of the following works. They are denominated the *Bridgewater Treatises* :

I. *On the Power, Wisdom, and Goodness of God, as manifested in the adaptation of external Nature to the moral and intellectual Constitution of Man.* By the rev. Thomas Chalmers, professor of divinity in the university of Edinburgh.

II. *The adaptation of external Nature to the physical Condition of Man.* By John Kidd, M.D., F.R.S., regius professor of medicine in the university of Oxford.

III. *Astronomy and General Physics, considered with reference to Natural Theology.* By the rev. William Whewell, M.A. F.R.S., fellow of Trinity college, Cambridge.

IV. *The Hand: its Mechanism and vital Endowments as evidence of Design.* By sir Charles Bell, K.H., F.R.S.

V. *Animal and Vegetable Physiology.* By Peter Mark Roget, M.D., fellow of and secretary to the royal society.

VI. *Geology and Mineralogy.* By the rev. William Buckland, D.D., F.R.S., canon of Christ church, and professor of Geology in the university of Oxford.

VII. *The History, Habits, and Instincts of Animals.* By the rev. William Kirby, M.A., F.R.S.

VIII. *Chemistry, Meteorology, and the Function of Digestion.* By William Prout, M.D., F.R.S.

1829, April. Died, WILLIAM REID, printer, one of the establishments of the *Glasgow Courier*, and for a long time its editor. Mr. Reid was aged seventy-one years at the time of his decease.

1829, April 23. The Catholic charter of privileges, which passed into a law, by the consent of the three estates of the realm, on the 13th of April, came first into operation on this propitious day. Messrs. Whiting and Branston, printers and publishers of the *Atlas* London weekly newspaper, issued a double number containing all the debates which had taken place in both houses of parliament upon this important question, and which for size of paper and quantity of type, surpassed every preceding effort of the press.

1829, June 3. At the theatre royal, Covent garden, a benefit was given in behalf of the Printers' Pension Society. The performances were the *Castle of Andalusia*, a *Musical Melange*, and the comedy of *Charles II.* Keeley, in the character of a printer's devil, delivered the following address, written for the occasion, by W. T. Moncrief, esq.

(Speaks behind the Scenes.)

What! I go on and thank the gentlefolks!  
Go on the stage! A plague upon your jokes—  
I cannot do it—I should die with shame!  
Well, if I must—mind, you shall bear the blame.

(Enters, cleaning a Printer's Ball.)

Ladies and Gentlemen—I beg your pardon  
For thus appearing here in Covent-Garden;  
'Tis not my fault—I'd rather be at home,  
But I was by the Printers press'd to come.  
Having got all they can from you—'tis civil—  
For thanks they coolly leave you to the Devil!  
Start not—the Printer's Devil! that is me,  
No blacker than I'm painted, as you see,  
The Devil—that with Faust the first of Printers  
(Called Doctor Faustus) had such odd adventures.  
Every thing's thrown on me, but you shall hear—  
Master, you know, commands the overseer,  
The overseer he lords it o'er the men,  
The men they flag the 'prentices, and then  
The 'prentices blow me up—that's not civil—  
So good or bad, all's laid upon the Devil!  
For every thing they want the pressmen call me,  
And if I do not answer they black ball me.  
Nay, with abuse the very Authors cram me,  
And when I go for copy, curse and damn me!

Still I must speak a good word for the knaves,  
Although they use us worse than Turks do slaves.  
For if the Devil does not have pity, they  
Will rarely stew—there'll be the denice to pay.  
Gentlemen of the Press, I ask your aid  
To aid those who aid you—you're all one trade—  
Excuse my freedom—but you must agree  
The British Press in all parts should be free;  
And where, I'll ask you, would be your reports,  
If the Compositors were out of sorts;  
The poudrous words from many a learned head,  
Take you that down, they put in kindred lead;  
Olive your notes value—measure out your rhymes,  
And yield "its form and pressure to the Times."  
The Press, great engine of all human good,  
The widest spread, the easiest understood—  
Which knowledge circulates from pole to pole,  
Corrects the heart, improves and charms the soul!  
To which unnumbered blessings owe their birth,  
Which yields an immortality on earth!  
Oh! of its members pardon each transgression,  
And let their merits make a good impression;  
Nor your kind patronage to those refuse,  
Who're galley slaves to furnish you the News.  
When press'd by poverty, and chas'd by care,  
Laid-up, and off their metal!—in despair!  
In worn-out case and burdened helpless elves,  
Too oft with types in minion of themselves;  
What aid shall sooth their wants and charm their grief!  
Our *Printer's Fund*, which yields to all relief;  
Which *Pensions* age, gives to desert its due,  
But which still owes its best support to you.  
Will you support it still and grant our suit—  
Bestow your aid, and your applause to boot!—  
Yes, from your presence here, a proof I pull.  
We *Printers* like to see our *bosses* full.  
'Tis all correct, no chance can now defeat us,  
So without bodkin, I'll make my quiefs

1829, Aug. Died, GEORGE WOOD, for some years proprietor, editor, and publisher of the *Kent Herald*, at Canterbury. Mr. Wood was a native of that city, where he died at the early age of thirty-nine. He first entered upon the newspaper business by starting the *Man of Kent*, a weekly journal, in which he undertook to point out all the abuses of the county, but which had not a very long career. Shortly after its close he purchased the *Kent Herald*, then limited in its circulation, but which he raised into high esteem with the liberal party. He was a man of extensive observation, of considerable reading, and energetic spirit in what he undertook, or engaged others to undertake. He was fond of literature; and took an active part in the establishment of a museum at Canterbury. In private life Mr. Wood had many estimable qualities,—his charities were extensive without ostentation—his friendship was sincere—his hostility open and manly. In his death the poor man lost a friend. That he was not free from faults must be admitted; but they were errors that his relatives may regret, yet not feel ashamed of "*De mortuis nil nisi bonum.*" Be it not forgotten, that his life was eminently useful to his native place, and advantageous to the general cause of mankind. There was reason to fear that his decease was hastened by the embarrassed state of his affairs, but he had long been a martyr to the gout. Alas!

"He was but born to try  
The lot of man—to suffer and to die!"

1729, Dec. 27, Died, R. EDWARDS, printer, of Crane-court, Fleet-street, London. He was confidently employed by Spencer Percival to print the book containing the *Delicate Investi-*

gation against the princess of Wales, in 1826. Mr. Edwards died in the city of Bristol, where he had carried on the printing business, prior to his settling in the metropolis.

1829, Dec. Died, W. M. WILLETT, the well known editor of the *Statesman* newspaper, during the O. P. row at Covent-garden theatre, in 1809;\* subsequently of the *British Traveller* newspaper, and other periodicals. Mr. Willett died at Finsbury, aged sixty-three years.

1829. *The Oxford Literary Gazette*† was projected by William Gray, esq. six numbers only appeared.

1829. *Launceston Advertiser*, (Australia) by Mr. John P. Fawcner.

1829. *Cornwall Press*, (Australia) instituted by Mr. S. Dowsett.

1830, Jan. The patent of king's printer for England renewed for thirty years.

1830. Feb. 10. In the court of king's bench, Messrs. Alexander, Marsden, and Isaacson, received the following sentences for a series of libels in the *Morning Journal*; that upon each of the three indiotments Mr. Alexander be imprisoned in Newgate for four calendar months, pay a fine of £300, and give security for his good behaviour for three years. Mr. Isaacson to pay a fine of £100. Mr. Marsden to give security for his good behaviour for three years, himself in £100, and two sureties in £50 each. Mr. Gutch had been previously discharged on his recognizances.‡

1830, Feb. Died, Mr. PHENEY, upwards of fifty years law bookseller in Inner Temple-lane, Fleet-street, London, aged eighty years.

1830, March 2. An action was tried in the court of king's bench, against Mr. Heath,§ engraver, brought by Mr. John Murray, bookseller, for the purpose of deciding the question as to whether an engraver had the right of keeping twelve copies of such engravings as he himself executed according to the orders of any one who employs him. The case had been formerly tried, and a verdict found for the defendant. After many eminent engravers had been examined as to the custom of the trade, the plaintiff obtained a new trial, which came on this day, when the jury found for the plaintiff, thus destroying the assumed right of engravers to keep such copies.

1830, March. A bill passed the legislature for the protection of dramatic copyright, which states

"That the author of any dramatic writing shall have the sole right of representing it. That he shall preserve that right in any such production which shall be so printed and published, or his assignees, for twenty-eight years; or should the author survive that period, for the residue of his natural life. Persons offending against these provisions to pay £10 for each representation, with costs of suit."

1830. Recognizances and bonds to be given for securing the payment of fines upon convictions of libel, by the printers of newspapers, &c. extended: £400 are required for the recognizances from the principal, and the like sum for the sureties; and £300 for the bond from the principal, and the like sum from the sureties. The punishment of banishment for a second conviction for libel was repealed.

1830, May 1. Died, GEORGE NICHOLSON, of the firm of G. and E. Nicholson, printers and booksellers, at Bradford, in Yorkshire. He was born at Keighley, near that town, Jan. 21, 1796, and after his commencing business rose to considerable eminence in the profession; and it may truly be said, that in George Nicholson the printing art possessed a valuable workman, and the inhabitants of Bradford a worthy and respected tradesman. He was addicted to the muses, and many of his lucubrations appeared in the periodicals of the day. After a painful illness, death put an end to his earthly career, leaving a widow and one son to lament the loss of a good husband and affectionate father.

1830, July 15. Died, JOSEPH DOWNES, aged seventy-seven years, printer, of Temple Bar. He was printer to his majesty's police, and editor and printer of the *Hue and Cry Police Gazette*.\* Mr. Downes published *Observations on the Speech of the right hon. John Foster, in the House of Commons, in Ireland, April 11, 1799.*

1830, July 25. CHARLES X., king of France, issued the following ordinances:—That the liberty of the periodical press is suspended; that no journal or periodical shall appear, either in Paris or in the departments, except by virtue of an authority first obtained from us respectively, by the authors and the printer, to be renewed every three months, which may also be revoked; that the authority shall be provisionally granted and withdrawn, by the prefects, from periodicals published in the departments; and that writings published in contravention of the second article shall be immediately seized, and the presses and types sealed up, or rendered unfit for use. The second ordinance decrees that the chamber of deputies shall consist only of deputies of departments, and reforms the operations of election in

\* Covent-garden theatre, which had been burnt down Sept. 30, 1808, was rebuilt and opened Sept. 17, 1809; when a riot commenced on account of the increase of prices, which continued until Dec. 10, when John Philip Kemble, the manager, gave up the contest in favour of the public.

† In Jan. 1807, Messrs. Slater and Munday, booksellers, Oxford, issued the first number of the *Oxford Review*.

‡ From a return of all prosecutions for libel, during the reigns of George III. and George IV., whether by *ex-officio* information or indictment, under the direction of the attorney or solicitor-general, for libels or other misdemeanours, against individuals as members of his majesty's government, or against other persons acting in their official capacity, conducted in the department for the affairs of his majesty's treasury; it appears that the number of persons so prosecuted was upwards of forty—mostly the printers or editors of newspapers.

§ Son of James Heath, the eminent engraver, who died Nov. 18, 1834.

\* The cost of printing the *Police Gazette* was, in 1834, £1,712 for 111,300 copies; in addition, the editor has a salary of £100 per annum. The *Police Gazette* is sent to the mayors and principal officers of every city and town in the kingdom; to the justices of the peace in petty sessions assembled, or their clerks; the keepers of jails and houses of correction, the metropolitan police, the war office, horse patrol, police offices, commanding officers of each regiment, and the several military depots in Great Britain.

the colleges, according to the principles of the constitutional charter. The gendarmes proceeded to destroy the presses of the Parisian newspapers the next day; and on the 27th the deputies assembled, who having protested against the royal ordinances as illegal and criminal, declared their meeting permanent.——Resolve that Charles Philippe Capet, heretofore called count d'Artois, having placed himself above the law, had ceased to reign, and that Louis Philippe, duke of Orleans, should be invited to execute the duties imposed upon him, and to concur in the establishment of a constitutional government. During this glorious struggle of three days there were from two to three thousand persons lost their lives, when the people were left masters of the capital. By the stoppage of the liberal journals property to the amount of more than £190,000 was either destroyed, or placed in danger of destruction; and upwards of three hundred literary persons and compositors were thrown out of bread. In 1830 the whole periodical press of France consisted of:—Constitutional, or liberal journals, 217; subscribers, 283,000; readers, 2,900,000; income, 1,805,000 francs. Monarchical journals, 27; subscribers, 34,000; readers, 442,000; income, 751,000 francs. Making a total of 244 journals; 317,000 subscribers; 8,342,000 readers; and an income of 2,556,000 francs. In Sept. 1830, a weekly publication, under the title of *La Gazette Littéraire*, was published in Paris, on the plan of the *London Literary Gazette*.

1830, Aug. 28. *Died*, THOMAS HOWELL, printer and bookseller, at Shrewsbury, aged thirty-six. In 1816, Mr. Howell published *The Stranger in Shrewsbury; or, an Historical and Descriptive View of Shrewsbury and its Environs*; with a plan of the town, and other engravings, which he dedicated to lord Hill. Of this work he published a second edition in 1825.

1830, Sept. A splendid building, which had been erected in the north-west quarter of the city of Oxford, for the purpose of a university printing-office, was opened in this month; and the first sheet worked off at the new press was 2 r. bishop Lloyd's\* *Greek Testament*, 12mo. The first publication finished, and bearing the imprint, at the university press, was Barrow's *theological works*, eight vols. 8vo. 1830.

1830, Sept. 9. *Died*, WILLIAM BULMER, printer, whose name is associated with all that is correct and beautiful in typography. By him the art was matured, and brought to its present high state of perfection. This celebrated typographer was a native of Newcastle-upon-Tyne, where he was apprenticed to Mr. Thompson, in the Burnt House-entry, St. Nicholas's Church-yard, from whom he received the first rudiments of his art. During his apprenticeship he formed a friendship with Thomas Bewick, the celebrated engraver on wood, which lasted with great cordiality throughout life. It was their practice, whilst youths, to visit together every morning, a

farm-house at Elswick, a small village about two miles from Newcastle, and indulge in Goody Coxen's hot rye-cake and buttermilk, who used to prepare these dainties for such of the Newcastle youths who were inclined to enjoy an early morning walk before the business of the day commenced. During the period of the joint apprenticeships of these young aspirants for fame, Bulmer invariably took off the first impressions of Bewick's blocks, at his master's printing-office, at Newcastle, where Bulmer printed the engraving of the Huntsman and Old Hound, which obtained for Bewick the premium from the society of arts, in London. Mr. Bulmer afterwards suggested to his friend Bewick an improvement, of which he availed himself, of lowering the surfaces of the blocks where the distance or lighter parts of the engraving were to be shown to perfection. When Mr. Bulmer first went to London, his services were engaged by Mr. John Bell, who was then publishing his beautiful miniature editions of the poets, Shakespeare, &c. About 1787, an accidental circumstance introduced Mr. Bulmer to the late George Nicol, esq.\* bookseller to king George III. who was then considering the best method of carrying into effect the projected magnificent national edition of Shakespeare, which he had suggested to Messrs. Boydell, ornamented with designs by the first artists of this country. Mr. Nicol had previously engaged the skilful talents of Mr. William Martin,† of Birmingham, in cutting sets of types, after approved models, in imitation of the sharp and fine letter used by the French and Italian printers; which Mr. Nicol for a length of time caused to be carried on in his own house. Premises were then engaged in Cleveland-row, St. James's, and the "Shakespeare press" was established under the firm of "W. Bulmer and Co." This establishment soon evinced how judicious a choice Mr. Nicol had made in Mr. Bulmer to raise the reputation of his favourite project. "This magnificent edition

\* George Nicol was many years bookseller to George III., and one who may be justly designated, as Dr. Campbell said of Thomas Davies, "not a bookseller, but a gentleman dealing in books." He was at first placed under his uncle, David Wilson, of the Strand; and was by him taken into partnership in 1778. Mr. Wilson dying at an advanced age in 1777, Mr. Nicol removed his business to Pall Mall. On Sept. 8, 1787, Mr. Nicol married the accomplished niece of the first alderman Boydell. It was suspected that he was a sleeping partner in the "Shakespeare Press," and to which his son, Mr. William Nicol, succeeded, as the sole proprietor, on Mr. Bulmer's retiring, in 1819. Mr. Nicol was, in 1797, one of the executors of Mr. James Doddsley, the bookseller, of Pall Mall, who left him a legacy of £1,000. Mr. Nicol was a most agreeable companion; and, perhaps, no man ever enjoyed the pleasure of convivial society more than he did. He was a member of many of the literary clubs of his day; was the publisher of many valuable works; and enjoyed the friendly confidence of the duke of Roxburghe, duke of Grafton, and other eminent bibliopasts. He died at his house in Pall Mall, London, June 23, 1820, at the age of 88 years.

† William Martin was brother of Robert Martin, the apprentice of Baskerville. He afterwards set up a foundry in Duke-street, St. James's. His Roman and Italic types were decided imitations of Baskerville's; but his Greek and Oriental forms the most valuable part of his collection. His foundry, in 1817, was united to the Caslon. This ingenious letter-founder died in the summer of 1818, and was buried in St. James's church, Westminster.

\* Bishop William Lloyd died Aug. 30, 1717.

(says Dr. Dibdin) which is worthy of the unrivalled compositions of our great dramatic bard, will remain as long as those compositions shall be admired, an honourable testimony of the taste and skill of the individuals who planned and conducted it to its completion.\* The text was revised by G. Steevens and Isaac Reed. Mr. Bulmer possessed the proof sheets of the whole work, on which are many curious remarks by Steevens, not always of the most courteous description; also some original sonnets, a scene for a burlesque tragedy, some graphic sketches, &c." "The establishment of the Shakspeare press (continues Dr. Dibdin,) was unquestionably an honour both to the founders in particular, and to the public at large. Our greatest poet, our greatest painter, and two of our most respectable publishers and printers, were all embarked in one common white-hot crucible; from which issued so pure and brilliant a flame or fusion that it gladdened all eyes and hearts, and threw a new and revivifying lustre on the three-fold arts of painting, engraving, and printing. The nation appeared to be not less struck than astonished; and our venerable monarch George III. felt anxious not only to give such a magnificent establishment every degree of royal support, but, infected with the matrix and puncheon mania, he had even contemplated the creation of a royal printing-office within the walls of his own palace!" "One of his majesty's principal hopes and wishes was, for his own country to rival the celebrity of Parma in the productions of Bodoni; and Dr. Dibdin pleasantly alludes to what he calls the Bodoni Hum,—"of his majesty being completely and joyfully taken in, by bestowing upon the efforts of Mr. Bulmer's press, that eulogy which he had supposed was due exclusively to Bodoni's." The first number of the *Shakspeare* appeared in January, 1794; and at once established Mr. Bulmer's fame as the first practical printer of the day. Dr. Dibdin has given (*Bibliographical Decameron*, ii. 384—395,) a curious and copious list of the "books printed at the Shakspeare press," with judicious remarks, to which we must refer our readers, noticing only such as are the most eminent in execution. Next to the *Shakspeare*, perhaps the edition of the *Poetical Works of John Milton*, in 3 vols. folio, 1793—1797, is the finest production of Mr. Bulmer's press. Dr. Dibdin seems to prefer this work even to the *Shakspeare* itself. In 1795, Mr. Bulmer printed a beautiful edition in 4to. of the *Poems of Goldsmith and Parnell*, one copy on white satin, and

three on vellum. The volume is dedicated to the founders of the Shakspeare printing-office, Messrs. Boydells and Nicol. "The present volume," says Mr. Bulmer, in his advertisement, "in addition to the *Shakspeare*, the *Milton*, and many other valuable works of elegance, which have already been given to the world through the medium of the Shakspeare press, are [is] particularly meant to combine the various beauties of printing, type-founding, engraving, and paper making; as well with a view to ascertain the near approach to perfection which those arts have attained to this country, as to invite a fair competition with the best typographical productions of other nations. How far the different artists who have contributed their exertions to this great object, have succeeded in the attempt, the public will now be fully able to judge. Much pains have been bestowed on the present publication to render it a complete specimen of the arts of type and block-printing. The ornaments are all engraved on blocks of wood, by my earliest acquaintances, Messrs. Bewicks, of Newcastle-upon-Tyne and London, after designs from the most interesting passages of the poems they embellish. They have been executed with great care, and I may venture to say, without being supposed to be influenced by ancient friendship, that they form the most extraordinary effort of the art of engraving upon wood, that ever was produced in any age, or any country. Indeed, it seems almost impossible that such delicate effects could be obtained from blocks of wood.\* 'Of the paper it is only necessary to say, that it comes from the manufactory of Mr. Whatman.' Besides the wood-cuts, the work was embellished with eight very superior vignettes.—The biographical sketches of Goldsmith and Parnell, prefixed to the work, were by Isaac Reed.—This volume was highly appreciated by the public; two editions of it, in 4to. were sold, and they produced a profit to the ingenious printer, after payment of all expenses, of £1,500. Stimulated by the great success of the work, Mr. Bulmer, in 1796, was induced to prepare an embellished quarto edition of *Somerville's Chase*. Three copies were printed on vellum. It is thus dedicated,

"To the Patrons of fine Printing:"

"When the exertions of an individual to improve his profession are crowned with success, it is certainly the highest gratification his feelings can experience. The very distinguished approbation that attended the publication of Goldsmith's *Traveller*, *Deserted Village*, and Parnell's *Hermit*, which was last year offered to the public, as a specimen of the improved state of typography in this country, demands my warmest acknowledgments; and is no less satisfactory to the different artists who contributed their efforts towards the completion of the work. The *Chase*, by Somerville, is now given as a com-

\* Mr. Nicol's connexion with the Messrs. Boydell was productive of one of the largest literary speculations ever embarked in in this country. The well known Boydell edition of our immortal bard originated with Mr. Nicol, in a conversation that took place in the year 1797, as appears by a paper, written and printed by Mr. Nicol, giving an account of what he had done for the improvement of printing in this country. The fate of that national undertaking, the "Shakspeare Gallery," in Pall Mall, was unfortunate; it cost the proprietors above £100,000. It was adjoining to Mr. Nicol's house, and intended for the exhibition of the original paintings. The great object of the undertaking was to establish an English school of historical painting.

\* It is said that George III. entertained so great a doubt on the subject, that he ordered his bookseller, Mr. Nicol, to procure the blocks from Mr. Bulmer for his inspection, that he might convince himself of the fact.

panion to *Goldsmith*; and it is almost superfluous to observe, that the subjects which ornament the present volume, being entirely composed of landscape scenery, and animals, are adapted, above all others, to display the beauties of wood-engraving." In 1804, the above two works were reprinted in one octavo volume, by Mr. Bulmer, with the same embellishments, for Messrs. Cadell and Davies, who had purchased the blocks. *Museum Worsleyanum*, 1798—1803, 2 vols. folio, English and Italian. Sir Richard Worsley\* expended £27,000 on this work, which was never published.† *Portraits of the Sovereigns of the Turkish Empire*, with biographical sketches in French and English; large folio. By John Young, esq. This work was printed at the expense of the sultan Selim, and the whole impression was sent to the Ottoman court. *The Antiquities of the Arabs in Spain*, by Cavanaugh Murphy, 1816, large folio. This herculean folio rivals Denon's‡ *Egypt*, in nobleness of design, splendour of execution, and richness of material. *The History of the Arabs in Spain*, &c. 4to. 1816. This volume is a companion to the above. *The Typographical Antiquities of Great Britain*, by T. F. Dibdin. Vols. ii. iii. and iv. The union of the red and black inks, the proportioned spaces, and the boldness and singularity of the cuts, render these books very beautiful of their kind. *Bibliotheca Spenceriana*, 4 vols.§ This work, considering the bulk of the volumes, and the quantity of matter introduced, is perhaps the most brilliant bibliographical production in existence, on the score of mere typographical excellence. Only fifty-five copies were struck off upon large paper, in royal 4to., eight of which were reserved by earl Spencer for presents. Upon the completion of this work, carried on without intermission for nearly four years, the printer presented Dr. Dibdin with a richly-wrought silver cup, of an antique form.|| Of all the works executed at the Shakespeare press, the *Bibliographical Decameron*, three vols. 8vo. by T. F. Dibdin, is acknowledged to be the most eminently successful in the development of the

skill and beauty attached to the art of printing. Never was such a variety of ornament—in the way of wood-cuts and red and black ink—exhibited.\* The quantity of matter, by way of note, is perhaps no where exceeded, in a performance which unites splendour of execution with curiosity of detail. The paper is also of the finest quality. We have not space to enumerate the private reprints of Mr. Bulmer for the Roxburghe club, the history of which will be found in Dibdin's *Bibliographical Decameron*, vol. iii. pp. 69—74. One of the chief difficulties Mr. Bulmer had to contend with, was the providing of good black printing ink. That formerly used by printers was execrable. Baskerville had made his own ink, as well as type, about 1760, which enabled him to produce such fine work; and Mr. Robert Martin,† his apprentice, was still living when Mr. Bulmer began business. He first supplied Mr. Bulmer with fine lamp-black, for his experiments in fine printing; but the difficulty of obtaining an adequate supply, induced Mr. Bulmer to erect an apparatus for the purpose of making his own ink, and he succeeded to the extent of his wishes in producing a very superior black. In the *Shakespeare*, which was nine years in hand, the same harmony of tint and richness of colour prevail, as if the ink had been all made at one time, and the last sheet inked by the same hand in the same hour as the first: this single work probably contains more pages than Bodoni ever printed. Much must have been owing to the aid of good and congenial quality in the paper, and insured in effect by the experience and skill which Mr. Bulmer was so competent to impart to his workmen;‡ and that

\* If we are not dazzled by the exquisite typography, the paper, and the engravings of Dr. Dibdin's productions, we cannot be blind to the superficial acquirements of the author.—*Partington*. See the preface to the *Catalogue of Books and Tracts printed at the private press of George Allan*, esq. By John Trotter Brockett.

† It has already been noticed, under the life of Baskerville (see page 733 ante), that he was weary of printing; and it appears, that after the publication of the folio bible, 1765, he at least declined to carry it on except through the medium of a confidential agent. This agent was Robert Martin, as appears by the following announcement:—"Robert Martin has agreed with Mr. Baskerville for the use of his whole printing apparatus, with whom he has wrought as a journeyman for ten years past. He therefore offers his services to print at Birmingham, for gentlemen or booksellers, on the most moderate terms, who may depend on all possible care and elegance in the execution. Samples, if necessary, may be seen, on sending a line to John Baskerville or Robert Martin."

‡ One of the pressmen of this establishment was a well known and highly respected journeyman printer, named Daniel Grimshaw, a native of Lancashire; born in the year 1738, and in 1773, apprenticed to the late Mr. Ayres, printer and bookseller, at Warrington; an artist who was long considered the head of his profession in the north of England. At the expiration of his time, Mr. Grimshaw went to London, and found employment in the house of Mr. Bulmer, where the advantages he had derived in the country proved of such essential service as to render him competent to undertake the best works executed in that office, and often to receive from his employer marks of his respect for attention to his duty; so much so, that at one time Mr. Bulmer offered him an official situation, which he modestly declined. After several years' residence in London, Mr. Grimshaw returned to Manchester, where he was equally respected as a sober, industrious, and attentive workman, and looked upon as an honour to his profession. During the last twenty years of his life he enjoyed but a very indifferent state of health; and to the honour of the

\* Sir Richard Worsley, bart. died in the Isle of Wight, August 9, 1805, in the fifty-fourth year of his age.

† £400 has been given for a copy at a book-sale.

‡ Baron Denon, a celebrated traveller, died at Paris, April 28, 1825.

§ *Bibliotheca Spenceriana*; or a descriptive catalogue of the books printed in the fifteenth century, and of many valuable first editions, in the library of George John earl Spencer. By the rev. T. F. Dibdin, 3 vols. imp. 8vo. 1814.

|| The right hon. George John Spencer, earl Spencer, viscount Althorpe, K. G., F. R. S., F. S. A., &c. &c. was born Sept. 1, 1738, and in 1783 succeeded his father in his titles and princely fortune. It was the delight of this eminent nobleman to collect around him the most learned literary and scientific men of the age, and wherever his patronage could be of use in promoting and extending literary and scientific knowledge it was liberally and munificently given. In bibliographical acquirements earl Spencer was considered equal to any man of his time, and the noble library which he collected at Althorpe, Northamptonshire, ranks amongst the most perfect and valuable of its kind in Europe. Throughout his life he was the able defender of an enlightened and liberal policy—the friend and condutor of Fox and Grey. In private life lord Spencer was no less distinguished for private worth, than for public principle in the high and important offices which he had held in the state. He died at Althorpe, Nov. 10, 1834.

¶ See *Bibliographical Decameron*, vol. ii. page 394.

a great deal must have depended on, and been effected by, the two last-named requisites, is very apparent, from his being able to produce the same effect in ink of another colour, namely red." After continuing in business with the highest credit for about thirty years, Mr. Bulmer retired in 1819, with a well-earned fortune, to a genteel residence at Clapham Rise, and was succeeded at the Shakspeare press by his partner, Mr. William Nicol, the only son of his friend. Mr. Nicol, in his *Octoglot folio* edition of *Virgil*, edited by W. Sotheby, esq. has proved himself a most diligent and able successor. But whilst we have justly placed Mr. Bulmer in the first rank of his profession, let us not forget that he had equal claims to distinction among those whose memory is revered for their many private and domestic virtues. We may then truly say, that his art was deprived of its brightest ornament, and his friends had to lament the loss of one not easily surpassed in every moral excellence.

Mr. Bulmer was one of the oldest members of the honourable band of gentlemen pensioners, and of which William Gifford\* was paymaster. It was the practice of Mr. Gifford, whenever an exchequer warrant was issued for the payment of the quarterly salaries of the gentlemen of the band, to inform its members, by a circular letter, that their salaries were in a course of payment; but on many of these occasions he was wont to depart from his usual routine, and indulge himself in a poetical notice to Mr. Bulmer. From a variety of these momentary effusions of the satirist, we select the following:†

*An Admonitory Epistle to the Right Worthy Gentleman,  
W. Bulmer, Gentleman Pensioner.*

"O thou who safely claim'st the right to stand  
Before thy king, with dreaded axe in hand,  
My trustiest Bulmer! know upon my board  
A mighty heap of cash (O golden word!)  
Now lies for service done, the bounteous meed,  
Haste then, in Wisdom's name, and hither speed:  
For if the truth old poets sing or say,  
*Riches straight make them wings and fly away!*"

Journeyman printers of Manchester be it said, that during the greater portion of that period, he was almost supported by their praiseworthy benevolence. About eight years before his decease, his mental faculties became so much impaired that he was rendered wholly incapable of working. He died 17th March, 1838, at Warrington.

\* William Gifford, author of the *Bariad* and *Mariad*, translator of *Juvenal* and *Persius*, editor of the plays of *Masinger*, *Jonson*, and *Shirley*, also editor of the *Anti-Jacobin* and *Quarterly Review*, was born at Ashburton, in Devonshire, in 1757, (and from the low origin of a country shoe mender, by perseverance in the pursuit of knowledge and fortunate circumstances, became the first writer and satirist of the age. To his translation of *Juvenal* is prefixed a truly interesting account of himself. But while all must applaud the extraordinary talents with which he was endowed, it is a lamentable fact, that William Gifford, with determined hostility and persevering dislike, opposed the interests and hopes of the portion of society to which he himself originally belonged. He seems to have felt the necessity of vindicating his new position by contempt for his former associates; to have proved the sincerity of his apostasy from plebeianism by tenfold hostility to all but the aristocracy; and to have made use of his elevation only to trample upon those with whom he was formerly on a level. He died at London, Dec. 31, in his 71st year.—In 1835, John Gibson Lockhart succeeded to the editorship of the *Quarterly Review*, under whom the work has advanced to a higher reputation than it ever before possessed, both as a political and literary journal.

† See *Nichols's Illustrations*, vol. vi. pages, 27-29.

*To William Bulmer, esq. brother to Sir Fenwick Bulmer, knight.\**

SEPT. 1821.

Dread Sir, whose blood, to knighthood dear,  
Is sixpence now an ounce more dear  
Than when my summons lauded last;  
With cap in hand, I beg to say,  
That I have money to defray  
The service of the quarter past."

Mr. Bulmer died at Clapham Rise, on the 8th of September, in his 74th year, and his remains were interred on the 16th, at St. Clement Danes, Strand, (in which parish his brother had long resided,) attended to the grave by a numerous and respectable company of mourning friends. He left a widow; but had no children. The portrait which we present of Bulmer, is from one faithfully executed in lithography, in 1827, painted and drawn on stone by James Ramsay.

1830, Nov. 1. A trial took place in the court of king's bench, at the suit of William Berry, compiler of the *County Genealogies*, against the editor of the *Gentleman's Magazine*, to recover damages for a presumed libel inserted in the magazine for August, 1829. The editor of the *Literary Gazette*, alluding to this discreditable proceeding, observed, that "the author had recourse to the wretched law of libel, in the hope of catching a farthing or a shilling damages, and thus punishing his critic with the usual ruinous expense, by which justice is defeated, and the reverse done." The *Gentleman's Magazine* had been in existence for the period of a century, and this was the first time that it had been brought before the public under an imputation of its having published any thing of a slanderous character.

1830. Died, JOHN CROWDER, alderman of the ward of Farringdon-within, and late lord mayor of London. Alderman Crowder was a native of Buckinghamshire, and served his apprenticeship to a printer, and at the expiration of his time went to London, and obtained a situation in his majesty's printing office, then under the control of William Strahan. About 1780, he obtained an engagement in the printing office of Francis Blyth, printer and part proprietor of the *Public Ledger*, a daily morning paper, and the *London Packet*, an evening paper, published three times a week. Both these papers had been for some years supported by the productions of Goldsmith, Kelly, and other literary gentlemen. This engagement, in which Mr. Crowder took a very active part, continued until the year 1787, the time of Mr. Blyth's death, when Mr. Crowder, who the year before had married Mr. Blyth's niece, (Mary Ann James) succeeded to the management of the whole concern. This he carried on for upwards of thirty years, with the greatest impartiality, diligence, and integrity; and, during this period, was frequently employed in printing valuable works for the booksellers, by whom he was equally

\* Mr. Bulmer's elder brother, as the senior member of the band of gentlemen pensioners, was knighted on occasion of the coronation of George IV. He resided in the Strand, and died May 7, 1824, aged seventy-nine years.

esteemed for punctuality, intelligence, and accuracy. He finally quitted the printing business in the year 1820, when he had obtained an estimable character in public life, and had amassed a considerable fortune by some successful speculations, which were conducted on such liberal principles as added not more to his wealth than to the esteem in which he was held by all who knew him. Residing, as he had, during almost the whole of his life, in the ward of Farringdon-within, and becoming gradually, by his amiable and generous temper, more intimately known to the inhabitants of the ward, he was, in 1800, elected one of their representatives in the common council, afterwards became one of their deputies, (for this ward has two) and on the death of Thomas Smith, esq. was elected alderman, May 1, 1823. In the election of him for sheriff, in 1825, by the livery at large, the same indications of unanimous esteem were evinced which had attended him on his former elections. On his retirement from the shrievalty he continued to perform the duties of alderman, in conjunction with his brethren, and with an assiduity and energy which more and more endeared him to his constituents. On Nov. 9, 1829, he entered on his mayorality with the happiest auspices, and, when health permitted, received the visits of his fellow magistrates and fellow citizens with an hospitality which has rarely been equalled, and perhaps never excelled. In the middle of September his health became slowly but seriously affected, and it was supposed that the rapid decline of his health was occasioned by the well known events which took place just before the close of his mayorality, but this was a mistake. Of these events he knew little, or thought less. On Tuesday, Nov. 9, he was removed in a very feeble state to his house at Hamersmith, where he lingered till Dec. 2, when he quietly departed this life, aged seventy-four years, and his remains were interred in the parish church of Christchurch, Newgate-street, with the honour due to his rank and character.

Mr. alderman Crowder's character was one of those which we have often heard recommended as a pattern to young men of business; it may be comprised in two words, *industry* and *integrity*. Both distinguished him while in trade, and both he carried with him into public life. To the poor indeed he had in all stations in life been a generous benefactor; and it is stated, upon the best authority, that during his mayorality he did not expend less than £1000 in charitable purposes. Mrs. Crowder died in Nov. 1823.\*

1830. At the custom house, London, there was duty levied of £2,200 on rags; † £1,400 on a superior paper necessary to artists; £1,600 on prints and drawings; £11,000 upon books; and £701,000 upon paper.

\* James Peshier Crowder, esq. died at his house at Stockwell common, two days before his brother.

† The rags of England do not furnish a fifth part of what we consume in the manufacture of paper. France, Holland, and Belgium prohibit, under severe penalties, the exportation of rags, because they require them for their own long established manufactories. Spain and Portugal also

1830. JAMES DONALDSON, printer and proprietor of the *Edinburgh Advertiser*, left to six trustees the sum of £240,000, for the purpose of endowing an hospital for boys, to be called "Donaldson's Hospital."\*—Henderson.

1830. The number of newspapers transmitted through the general post-office was 12,962,000.

1830. *The Tewkesbury Yearly Register and Magazine*, 8vo. edited by Mr. Bennett, bookseller, at Tewkesbury, in Worcestershire, which appears to have been the first yearly magazine ever published.

1830. *Aug. The Sunderland Herald*, printed at Sunderland, in the county of Durham.

1830. *The Independent*, (Australia) instituted by Mr. S. Dowsett.

1831, Jan. 1. Died, CHARLES HEATH, printer and bookseller, at Monmouth, aged sixty-nine years. He twice served the office of mayor of that corporation. In 1793, Mr. Heath published a *Descriptive Account of Piercefield and Chepstow*; in 1814, a *History of Monmouth*; and in 1806, an *Account of Tintern Abbey, and Ragland Castle*.

1831, Jan. 31. A meeting was held at the city of London literary and scientific institution, to take measures for the removal of the restrictions of the press. Dr. Birkbeck presided. It was stated, that in America, where there is no tax upon newspapers, 1,456,416 advertisements were inserted in eight newspapers published in New York; whilst in four hundred newspapers, published in England and Ireland, the number within the same period, was only 100,000. In the twelve daily newspapers at New York, there were more advertisements than in all the newspapers of England and Ireland. Joseph Hume, esq. stated that, in Great Britain, in a single year, £1,000,000 was raised by taxes upon the materials of books and publications. The duty on stamps amounted to £666,000; of which was levied £840,000 upon newspapers; £30,000 upon almanacs; £1,000 upon pamphlets; and £153,000 upon advertisements.

prohibit their exportation. Italy and Germany furnish the principal supplies of linen rags, both to Great Britain and the United States. Many experiments have been made upon substances proposed as substitutes for rags in the manufacture of paper. The bark of the willow, the beech, the aspen, the hawthorn, and the lime have been made into tolerable paper: the tendrils of the vine, and the stalks of the nettle, the mallow, and the thistle, have been used for a similar purpose; the bind of our own hops, it is affirmed, will produce paper enough for the use of England, and several patents have been granted for making paper of straw.

\* Dr. Dibdin, in his *Northern Tour*, 2 vols. 8vo. 1833, in a very vague and unsatisfactory manner says, "Donaldson's hospital, about to be erected in Edinburgh, and £45,000 was to be devoted to the erection, It is stated for the support of this hospital, is supposed to amount to £300,000. The founder was a printer and publisher, where, or rather when," is all that Dr. Dibdin informs us, though upon the spot, for the very purpose, we should suppose, to have obtained every particular of the *where* and the *when* of this praiseworthy typhographer, who left such a vast sum for the education of the poor. We lament, very sincerely, that we cannot ourselves give more information upon the subject, than that James Donaldson, esq. died at Broughton-hall, near Edinburgh, October 19th, 1830, though we have searched every book likely to afford us any account of the life of Mr. Donaldson. Kay, in his *Edinburgh Portraits*, slightly alludes to him.

1831, Feb. 7. A work was presented to their majesties, (William IV.\* and his consort) at Brighton, which may be regarded as a typographical wonder.—The *New Testament*, printed in gold, on porcelain paper,† and for the first time successfully executed on both sides. Two years had been employed in perfecting the work, the gold in which is valued at five guineas. Only one hundred copies were printed.

1831, Feb. 12. Died, ALEXANDER LAURIE, printer of the *Gazette* for Scotland.

1831, Feb. 28. Died, THOMAS CROPP, editor and proprietor of the *Bolton Chronicle*, aged thirty-five years. Mr. Cropp fell a victim to a coach accident in the preceding June.

1831, Feb. 26. Died, JOHN BELL, formerly of the Strand, bookseller. Few men have contributed more, by their industry and good taste, to the improvement of the graphic and typographic arts than Mr. Bell; witness his beautiful editions of the *British Poets* and *Shakespeare*. He was one of the original proprietors of the *Fashionable World*, the *Oracle*, and the *Morning Post*, and projector of that well-established Sunday newspaper, *Bell's Weekly Messenger*.‡ Another of his successful projects was the elegant monthly publication *La Belle Assemblée*. Mr. Bell, in publishing his *British Theatre*, first set the fashion, which soon became general, of discarding the long f, about 1795. He died at Fulham, in the eighty-sixth year of his age. He was one of the most marked men of his day; he possessed a masculine understanding, which a long course of observation, and a particular quickness and facility in observing, had very highly cultivated—so as to have given him a judgment as just and exact as his powers of conception were vigorous and acute. He had an instinctive perception of what was beautiful in every possible combination of the arts.

1831, March 15. A meeting of the founders, patrons, and members of a projected association for the encouragement of literature. It was proposed to raise a fund of £10,000, for the purpose of publishing works of merit, where authors and publishers could not agree,—to advance money in some cases to the authors in the progress of their labours,—and to allow them a handsome per-centage on the profits.

\* William IV. ascended the throne of Great Britain and Hanover, on the death of his elder brother George IV. June 26, 1830, aged sixty-eight years.

† 'Just as the professors of the typographic art were in despair that British skill would ever accomplish the long wished for desideratum as printing in gold or silver, Messrs. De La Rue, Cornish, and Rock, of London, to the astonishment and delight of the literary world, sent forth their novel preparation of porcelain paper and card, the enamelled surface of which is at once chaste and elegant, and as reflective and clear as a mirror; its immediate use formed another and very important era in the art of letterpress printing, particularly from wood engravings, borders, &c. The works which have been executed in gold, silver, and bronze, on porcelain paper and card, leave nothing more to wish in this beautiful invention.

‡ Francis Ludlow Holt, a barrister, married a niece of Mr. Bell's, and was for a long time connected with him in the management of the *Dispatch*, for which he generally wrote the leading articles. He was the author of the *Land we Live in*, com. 1844; the *Law of Libel*, 1815, &c

1831, March 15. Died, THOMAS PAYNE, of the firm of Payne and Foss, booksellers, in Pall-mall, London. Mr. Payne was the eldest son of Thomas Payne, who died in 1799; was born in London, Oct. 10, 1752, and was educated at M. Metayer's, a classical school of reputation, in Charterhouse-square. His father was anxious that he should be instructed in every branch of education necessary to an intimate acquaintance with the contents and reputation of books in foreign languages. This initiation into the history of books, Mr. Payne augmented even to a high degree of critical knowledge, by frequent tours on the continent, and particularly by an amicable intercourse with the eminent scholars and collectors, whose conversation for many years formed the attraction of his well-frequented premises. Confidence was uniformly placed in his judgment and opinion, by the most eminent and curious bibliographers of the day, that perhaps it would be difficult to mention a gentleman of his profession, whose loss was more deeply regretted. He inherited the character as well as the name of his excellent father; the epithet of *honest*, it has been observed, was so entirely hereditary, as to be allowed, not by common, but by universal consent, to descend, without any bar, from father to son; and in addition he had acquired the appellation of the "father of the booksellers." After carrying on business at the Mewsgate, almost from his infancy, Mr. Payne removed, in 1806, to Pall-mall, where his learned friends had a place of assembling more commodious than any in London. In 1813, he took into partnership Mr. Henry Foss, who had been his apprentice. Mr. Payne died in London, at the advanced age of seventy-nine years, and his remains were interred in the parish church of St. Martin in the Fields.

1831, March 20. The rev. Duncan McNair, an ordained minister of the church of Scotland, examined at the police court, Edinburgh, on the charge of purloining a *Bible* from the shop of a bookseller in that city. The library of the rev. gentleman being searched, several stolen books were found. He heard the charge very composedly, and begged he might be bailed, in order to give him an opportunity of preparing his sermon for the ensuing day! He was fully committed for trial, and on June 6, was sentenced to fourteen years' transportation.

1831, March 25. Died, JOHN BARKER, formerly a printer in the Old Bailey, but for many years a respected member of the court of assistants of the stationers' company. He died at Kentish town, aged eighty-two years.

1831, April 5. Died, the rev. JOHN WALKER, B.L.C., aged sixty-one years. He was one of the original proprietors of the *Oxford Herald*, and for some time the editor.

1831, April 11. Died, ALEXANDER ACKMAN, jun. printer to his majesty, and the hon. house of assembly, in the island of Jamaica, and proprietor of the *Royal Jamaica Gazette*. He left a widow and eight children; and his father, whom he succeeded in business, survived him.

1831, April 20. JOHN LAWSON, printer of the *Times* London newspaper, was reprimanded by the lord chancellor Brougham, at the bar of the house of lords, and discharged on the payment of his fees, for a breach of privilege, for animadverting on a speech of the earl of Limerick.

1831. From a report drawn up, by order of the house of commons, it appears that from 1821, 105,045 volumes of journals have been printed for the house of commons, at an expense of £5000 per volume; of these, only 52,024 have been delivered to members and others, and there remain in store 63,021. It is a singular fact, that the manuscript journals preserved in the house of commons for reference, as legal authority, are copies made by the clerks during the recess, from those already printed in the course of the preceding session. The printed journals now amount to 120 folio volumes, and each member is entitled to a perfect set after he has taken his seat for fourteen days, without petition against his return. The average profits of the king's printer are stated at £10 per day during the sitting of parliament. The following items, taken from parliamentary returns, will show the annual expenditure for some years, for printing, stationery, &c. for the two houses of parliament:

1805, Printing, &c. for both houses	£29,000
1806, Reprinting journals of the house of commons	10,000
Printing and stationery for the two houses	20,300
Printing votes, bills, reports, and other papers of the commons, for the present session	30,000
Printing, by order of the commissioners of public records	3,596
Printing under the act for procuring returns of the poor	593
Printing, stationery, &c. for the chief and under-secretaries' offices, &c. in Ireland	21,880
Printing and binding acts of 46 Geo. III.	1,305
Proclamations & advertisements in <i>Dublin Gas.</i>	10,500
Deficiency of grant for printing and stationery for the houses of parliament for 1805	2,380
1807, Printing & binding 250 copies of acts 47 Geo. III.	1,200
Proclamations & advertisements in <i>Dublin Gas.</i>	10,600
Printing and stationery for the two houses	29,600
Printing & delivering votes, printing bills, &c.	30,000
Reprinting journals, &c.	10,000
To defray the charge that may be incurred for printing the 39 vols. of journals for 1807	10,000
To make good deficiency of grant of last session, for printing & stationery for both houses	9,789
Ditto for printing and delivering the votes, &c.	14,881
Ditto for printing the 88 vols. of journals	459
1808, Printing journals of the house of commons, printing and delivering votes, printing votes, bills, &c. 1806	18,391
Printing 1750 of the 88 vols. of journals, 1806	4,000
Printing & stationery for both houses, for 1806-7	30,032
Printing by order of the commissioners of public records	3,596
Printing returns relative to the expense and maintenance of the poor	393
Deficiency of printing, &c. for the two houses	9,789
Printing and delivering votes of the house of commons, printing bills, reports, &c. 1807	11,166
Deficiency of the grant for ditto of 1806	14,881
Deficiency of the grant of 1806, for printing 1750 copies of the journals of the house of commons, 1807	459
Printing articles of impeachment, minutes of evidence, and copies of the trial of lord viscount Melville, 1807	2,046
Printing and stationery for the two houses	31,700
Deficiency of grants, for printing the votes, &c.	1,641
Deficiency of grant for printing & stationery	5,423
Printing votes, &c. of the house of commons	22,400
Printing vol. 61 of the journals	4,000
Reprinting journals	10,000
Stationery for the court of exchequer	3,184
Printing vols. 36 and 37 of lords' journals	2,057

1810, Printing & stationery granted in the supplies	£26,800
Ditto ditto deficiency for 1809	13,626
Printing by order of commissioners of public records	2,163
To T. Brodie for index to journals of the house of lords, for 1809	433
Printing vols. 38 and 39 of the journals of the house of peers	2,617
Printing the calendar of the journals of ditto	1,564
1830, Paid to Messrs. Hanard for printing alone, for the three past years	125,772
1830—1, Paid to printers of parliamentary papers	96,217
Paid to the king's printer in Scotland, for stationery, printing, and binding	10,500
Paid to sir A. B. King,* the king's stationer in Ireland, for stationery, printing & binding	22,363
1832, Printing various reports of the committee of East India inquiry	10,000
1833, Paid to the printers of parliamentary papers	62,797

1831. The receipts of the *London Gazette* office, arising from advertisements, &c. amounted to £15,083 17s. 8d; and the expense of the office amounted to £7,807 12s. 1d. leaving a surplus revenue of £7,276 7s. 7d.

1831. A select committee of the house of commons appointed "to inquire into the nature and extent of the king's printers' patents in England, Scotland, and Ireland, the authority under which they have acted and now act, and how far they have been beneficial to the government or to the country, and whether proper to be continued." The evidence and appendix was ordered to be printed, and formed a volume of three hundred and sixty-four pages.

1831, May 26. *Died*, CHARLES RIVINGTON, the senior member of the respectable firm of Messrs. Rivington's, booksellers, of St. Paul's church-yard, and Waterloo-place, London. He was one of the sons of John Rivington, who carried on considerable business as a bookseller, in St. Paul's church-yard, for more than half a century, where he died, Jan. 16, 1792. He was succeeded in business by his sons, Messrs. Francis and Charles Rivington. Mr. Francis Rivington died October 18, 1822, aged 77, leaving his son, Mr. John Rivington, as his representative in the firm. The various members of the house of Rivington have now, we believe, for upwards of a century, continued booksellers

\* In 1834, a paper was drawn up by Mr. Church, comptroller of the stationary office, and laid before parliament, showing that for the three years immediately previous to 1830, the average amount paid to sir A. B. King, for stationery, printing, and binding, was £22,363; and since that period it has not exceeded £7,448, making a saving to the public of £14,773 a-year; that the amount paid to the printers of parliamentary papers for the sessions 1830 and 1831, was £96,217; and for the sessions 1832 and 1833, was £38,797, making a saving of £38,527, or £16,298 a-year; that the saving to the public by the reduction of the prices paid to the king's printer for acts of parliament, amounts to considerably more than £6,000 a-year, and that in consequence of a negotiation entered into with the king's printer in Scotland, the expenses for stationery, &c. in that country, have been reduced from £10,500 to £4,500 a-year, making an annual saving on the £43,000 a-year.

Before a select committee of the house of commons, held on July 30, 1832, on stationery and printing, it was proved that in the office of one parliamentary printer, at the end of the session, there were left standing and unworked, upwards of three hundred sheets of reports, orders, &c. Also of one report, which had twenty thousand pounds weight of type locked fast at one time; and on a calculation of the total amount of type required in that office, appropriated to parliamentary works, to the enormous extent of two million twenty-five thousand pounds weight of type.

to the society for promoting Christian knowledge; and been uniformly patronized by the episcopal bench, and the higher order of the clergy. The family of Mr. Charles Rivington have always been much connected with the company of stationers. At one time his father, two uncles, and their brothers were, with himself, liverymen of the company. His youngest brother, Henry Rivington, died clerk of the company, June 9, 1829. He left a nephew and four sons, liverymen of the company, and four daughters. The character of Mr. Rivington, through life, left the warmest sentiments of regret among his numerous friends and connexions. He was distinguished for mildness of temper, and his conversation was enlivened by the recital of literary history and anecdote. His death was sudden, having died, it is supposed, whilst dressing himself, in his seventy-seventh year.

1831, *July 17. Died, JOHN PRICE*, for many years proprietor, editor, and printer of the *Leicester Journal*, in the old tory school of politics. Mr. Price died at Leicester, respected by a large circle of acquaintance, aged seventy years.

1831, *Aug. 11. Died, MR. LEIGH*, bookseller, in the Strand, London. He put an end to his existence by cutting his throat.

1831, *Aug. 25. Died, ANDREW STRAHAN*, printer to his majesty. This estimable character was the third son of William Strahan, esq. many years his majesty's printer, who died July 9, 1785. It is acknowledged by all who knew him, that he inherited his father's professional eminence, his political attachments, his consistency of public conduct, and his private virtues, and by these secured a reputation which will not soon be forgotten. Like his father, too, he acquired great literary property and influence in the learned world, by purchasing the copyrights of the most celebrated authors of his time; frequently in connexion with his friend, Mr. alderman Cadell. By his generous encouragement of genius, Mr. Andrew Strahan soon attained the very highest rank of his profession, and became equally eminent for the correctness of his typography, and the liberality of his dealings. Benevolence was a striking feature in his character. In 1822, he presented £1000, three per cents. to the literary fund; and by his will he bequeathed £1000 each to six other charitable institutions. During Mr. Strahan's long and active life he filled various offices and situations, and in all his conduct was exemplary. In 1797 he was elected representative for Newport, in Hampshire, in 1802 and 1806 for Wareham, in 1807 for Carlisle, in 1812 for Aldeborough, and sat in parliament until 1818, when he retired from public life in consequence of his advanced age (71). In 1804, he was elected on the court of assistants of the stationers' company, but declined the honourable degrees of office. In 1815, he transferred to the company £1225 four per cents. for the benefit of printers. From the age to which he had arrived, and the company to which he had been accustomed, joined to the happiest powers of memory and recollection, his conversation was replete

with literary anecdote, which he related in a manner that had all the charms of good humour, and all the security of the strictest veracity. In all his intercourse with his friends and professional brethren, he evinced an uncommon vigour of mind, which he retained to the last. His faithful friend and active partner, William Preston,\* died before him. He died at his house, in New-street, near Fleet-street, London, in the eighty-third year of his age, and was interred at Healdy, in Surry, on Friday, Sept. 2. He left property to the amount of more than a million of money, and was succeeded in the office of king's printer by his nephews, Andrew & Robert Spottiswoode.† The company of stationers placed a portrait of Mr. Strahan,‡ by the late William Owen, R.A., at their expense, about the time he became a benefactor.

1831, *Sept. 1. Died, GEORGE FULTON*, author of an improved system of education, one of the four teachers of English appointed by the town council, under the patronage of the city corporation of Edinburgh, and for more than twenty years eminent as a teacher of youth. He was born Feb. 3, 1752, served his apprenticeship to a printer at Glasgow, and afterwards worked as a journeyman with Mr. Willison of Edinburgh. He also practised his profession at Dumfries. During the long course of his professional life he was indefatigable in his endeavours to improve the method which he had invented, and simplify his notation; and the result of his studies was embodied in a *Pronouncing Dictionary*, which has been introduced into almost all the schools in the kingdom. Mr. Fulton was an eminent instance of the union of talent with frugal and virtuous habits. Having realized a considerable fortune by teaching, he resigned his school to his nephew, Mr. Andrew Knight, and for the last twenty years of his life, enjoyed *otium cum dignitate*, at a pleasant villa called Summerfield, near Newhaven, which he purchased in 1806. He was twice married, but had no children. He died in the eightieth year of his age.

\* William Preston was born at Edinburgh, July 25, 1746, and received his education at the university of that city. He served an apprenticeship to the printing business under Walter Raddiman, after which, in 1760, he proceeded to London, and obtained a situation as a compositor in the office of Mr. William Strahan; he was soon promoted to the reader's desk, then to the superintendence of that vast concern, and finally as a partner with Andrew Strahan, whose confidence and friendship he maintained during life. Mr. Preston very early became a member of the fraternity of freemasons, instituted the *Freemason's Calendar*, and at one time acted as the editor. He published *A catalogue of Thomas Raddiman's books, &c. Illustrations of Masonry*, 12mo. 1773, of which twelve editions were published. Mr. Preston died April 7, 1818, and was buried in St. Paul's.

† Robert Spottiswoode, esq., died at Carlisle, Sept. 3, 1833, aged forty-one. He was the youngest son of John Spottiswoode, esq. of Spottiswoode, by the youngest daughter of William Strahan, esq. king's printer. From respect to his private worth and public qualifications, he had been recently elected by his brother liverymen one of the stock keepers of the stationers' company; and from his abilities and activity, his death was a great loss to that most extensive establishment, the king's printing house.

‡ The rev. George Strahan, D.D., elder brother of Andrew, prebendary of Rochester, and for upwards of fifty years vicar of St. Mary's, Islington, died May 18, 1834, aged eighty-one years.

1831, Sept. 16. T. and E. WAKEMAN and J. HILL were indicted at Guildhall, London, for stealing 1800 lbs. of printed paper, valued at from £2,000 to £3,000, the property of Joseph Butterworth, law stationer, Chancery-lane.

1831, Sept. 28. HENRY HETHERINGTON, a bookseller, of London, having been fined £40 for selling unstamped publications, which he refused to pay, was taken into custody, and committed to the house of correction for 12 months.

1831, Oct. 30. *Died*, JOHN JONES, librarian of the Athenæum of Liverpool, and formerly an eminent bookbinder in that town, aged sixty. He was a man of strong and active mind, which he devoted with unwearied ardour to the duties of his situation.

1831, Dec. 25. *Died*, JOHN MITFORD, perhaps the most eccentric character of his day. He was originally in the navy, and fought under Hood and Nelson; he was born at Mitford castle, Northumberland, and the authors of *Rienzi*, and *Our Village*, and the author of the *History of Greece*, were his cousins; he was also nearly related to lord Redesdale. His name will long be remembered in connexion with lady Percival, in the Blackheath affair, for his share in which he was tried and acquitted. For several years helived by chance, and slept three nights in the week in the open air, when his finances did not admit of his paying threepence for a den in St. Giles's. Though formerly a nautical fop, for the last fourteen years he was ragged and loathsome; he never thought but of the necessities of the moment. Having had a handsome pair of Wellington boots given him, he sold them for one shilling. The fellow who bought them went and pawned them for fifteen shillings, and came back in triumph with the money. "Ah," said Jack, "but you went out in the cold for it!" He was author of *Johnny Newcome in the Navy*, the publisher of which gave him a shilling a-day until he finished it. Incredible as it may appear, he lived the whole of his time in Bayswater fields, making a bed at night of grass and nettles; two-pennyworth of bread and cheese, and an onion, were his daily food; the rest of the shilling he expended in gin. He thus passed forty-three days, washing his shirt and stockings himself in a pond, when he required clean linen. He formerly edited the *Scourge* and *Bon Ton Magazine*.—He was latterly employed by publishers of a certain description. A hundred efforts have been made to reclaim him, but without avail. Mr. Elliott, a printer and publisher, took him into his house, and endeavoured to render him decent. For a few days he was sober; and a relative having sent him some clothes, he made a respectable appearance; but he soon degenerated into his former habits; and whilst editing the *Bon Ton Gazette*, Mr. Elliott was obliged to keep him in a place half kitchen, half-cellar, with a loose grate tolerably well filled, a candle, and a bottle of gin, where he passed his days, and, with the covering of an old carpet, his nights, never issuing from his lair but when the bottle was empty. Sometimes he got furious

with drink, and his shoes were taken from him to prevent his migrating; he would then run out without them, and has taken his coat off in winter and sold it for half a pint of gin. At the time of his death he was editing a penny publication called the *Quizzical Gazette*. He wrote the popular song the *King is a true British Sailor*, and sold it to seven different publishers. Notwithstanding his habits, he was employed by several religious publishers. This miserable man was buried by Mr. Green, of Will's coffee-house, Lincoln's inn Fields, who had formerly been his shipmate. He left a wife and family, but they were provided for by lord Redesdale. John Mitford was a respectable classic, and of varied attainments; yet for fourteen years "he had not where to lay his head;" and he has been heard to say, "if his soul was placed on one table, and a bottle of gin on another, he would sell the former to taste the latter."

1831, Dec. 28. *Died*, THOMAS DAVISON, the well known printer of White Friars, London, aged sixty-five years. He was born in the city of Durham, of humble parents, and apprenticed early to the profession, in which he was afterwards so successful and eminent. Shortly after he was out of his time he went to London, where he worked as a journeyman, and about 1790 commenced business with indefatigable perseverance; and the singular beauty and correctness of his works, soon brought around him a connexion of the most respectable publishers of the day. By improvements which he made in printing ink, (a secret which he had for a long time the exclusive possession) and other merits, he acquired great celebrity; and few indeed of his competitors, could approach the characters of what issued from his press. Among the evidences of this, we may notice Whitaker's\* *History of Richmondshire*, the new edition of Dugdale's *Monasticon*, the various editions of Byron's works, Rogers's *Italy*, and several of the *Annals*. To the enjoyments of private life, Mr. Davison was powerfully recommended by his social qualities. To his fellows he was kind and generous; no man in his station ever performed more liberal actions; and not only brother printers, but many booksellers and authors were indebted to his prompt liberality for effectual assistance, at times when a friend was most needed. In company, the musical sweetness of a voice rarely equalled for compass and expression, imparted a charm to his companionship, and made him everywhere welcome. He left a widow and family of five sons and three daughters.

\* Thomas Dunham Whitaker, LL.D., F. S. A., vicar of Blackburn, in Lancashire, was born at Rainham, in the county of Norfolk, where his father was curate. He was descended from the learned professor and polemic Dr. Whitaker of Cambridge, in the reign of Elizabeth, and he inherited the estate belonging to that family, at Holme, in Lancashire, the birth-place of Dr. Nowell, dean of St. Paul's. As a literary man, Dr. Whitaker was distinguished not less for industry and acuteness in research, accuracy of reasoning, and extent of knowledge, than warmth of imagination and vigour of style. He died at Blackburn, December 18, 1831, aged sixty-three years, deeply and sincerely regretted by his parishioners.

ters; and if he did not enrich them by the accumulation of very great wealth, he no doubt, from his large concerns, realized a comfortable independency, and for the rest, bequeathed them a good name, and the respect of all.

1831, Jan. 1. *The Voice of the People*, No. 1, printed by John Hampson, Manchester, for the proprietors.

1831, Jan. 29. *The Sunderland and Durham General Shipping Gazette and Mercantile Advertiser*, No. 1, printed and published by William Gracie. It was discontinued after a few months.

1831, May 28. *The Sunderland Herald, Shields and Stockton Observer, and General Advertiser*, No. 1. printed and published by Thomas Marwood, and Co. at Sunderland.

1831, Aug. 16. *The Northumberland Advertiser, and Agricultural, Shipping, and Commercial Journal*, No. 1, printed and published by William Fordyce, Newcastle. It was discontinued after a few months.

1831. *The Metropolitan Magazine*.

1831. *Sydney Herald*, (Australia) conducted by Messrs. Ward, Stephens, and F. R. Stokes.

1832, Feb. 4. *Chambers's Edinburgh Journal*, No. 1, price three-halfpence, conducted by William and Robert Chambers. Whatever honours may be thought due to the discoverer of a mode of circulating useful knowledge on so vast a scale, must fall indisputably to the originators of the above journal. In the twentieth number, June 16, the proprietors informed their readers that the sale of their *Journal* amounted to 50,000 copies weekly. It subsequently reached a higher circulation, and still, after seven years' labour, holds on its way undiminished in public favour.

1832, Feb. 24. Died, JAMES ROBINSON, printer, aged sixty years. This worthy man was apprenticed as a compositor to Mr. Nichols, of Red-lion-court, Fleet-street, London in whose office, and that of his son and successor, he worked, much respected and beloved by his employers and fellow-workmen, for the long period of forty-nine years. He was nominated by Mr. Nichols for one of the annuities for compositors, founded by himself, in the gift of the stationers' company.

1832, April 1. *The Penny Magazine* commenced under the superintendence of the society for the diffusion of useful knowledge, printed by William Clowes, and published by Charles Knight, London. In the first article it is stated that, "We consider it the duty of every man to make himself acquainted with the events that are passing in the world;—with the progress of legislation, and the administration of the laws; for every man is deeply interested in all the great questions of government!" From No. 1 to 106, there were sold of this periodical, twenty million copies, consuming more than one hundred and sixty double reams of paper per month, with a tax of threepence per pound upon five thousand six hundred pounds, amounting to £70 per month, and selling about two hundred thousand copies, either in single numbers or in

parts, monthly. Edmund Burke, about 1780, presumed that there were in England eighty thousand readers. It may be fairly calculated, that the readers of the *Penny Magazine* alone, amounted to one million. To shew the effect of machinery and stereotype plates, in producing cheap literature, it may be stated, that from two sets of plates, by machines made by Applegath and Cowper, the same quantity of press work may be performed in ten days, as would take two men, by the old mode, producing one thousand perfect copies each day, one hundred and sixty days; or more than five calendar months. The average number printed by the machine, from two sets of plates, is sixteen thousand, on both sides.\*

1832, April 7. Died, JOHN M'CREEERY, printer, of Tooke's-court, Fleet-street, London. He was a native of Ireland, and first commenced business in Liverpool, where he published the following work. *The Press*, a poem. Published as a specimen of typography. Liverpool: printed by J. M'Creeery, Houghton-street; and sold by Cadell and Davis, Strand, London. 1803. Demy 4to. Mr. John M'Creeery obtained the patronage of some of the most eminent literati of the day—and, on his removal to London, was considered one of the first practical printers of the metropolis. He there published *The Press*, a poem. Part the second. By John M'Creeery. London: printed by J. M'Creeery, published by T. Cadell, in the Strand; and W. Simpkin and T. Marshall, Stationers' hall-court. 1827. Demy 4to. Preface dated "London, Dec. 31, 1825." *The Press* is written in the heroic couplet, and is characterized by considerable taste, a smoothness and sweetness of versification, a general chasteness of language, and a glowing love of freedom. "The liberty of the press" says this eminent typographer, "is so intimately connected with the permanent repose and happiness of society, that its preservation becomes our first duty; it is the anchor which can alone save the ark of our liberties, when the political horizon is overcast, when the hurricane assails us, and the thunders roar around." He died of the cholera, at Paris, aged 64 years.†

\* To give some idea of the extent of printing performed in the office of William Clowes, in Duke-street, Lambeth, at this time, it may be stated that there were,—type-founders employed, 30; stereotype founders, 6; men employed damping paper, 7; compositors, 160. The principal case-room, where the types are set, is 370 feet long, and is filled from end to end with a double row of frames. Two steam engines are employed in driving the printing-machines, of which there are 18, that can throw off from 700 to 1,000 impressions each per hour. There are 18 common printing presses, for performing the finest work, and 5 hydraulic presses, of 100 tons power each, for pressing paper. There are in the establishment about 1,000 works, in stereotype, of which about 75 are bibles. The first cost of the plates for these would amount to £400,000; the weight is about 3,000 tons; and, if melted and sold as old metal, they would be worth £70,000. The average quantity of paper printed amounts, weekly, to the astonishing quantity of about 2,000 reams. When the paper-makers and other tradesmen are taken into account, the men for whom this establishment gives employment must amount to several thousands.

† The father of Mr. M'Creeery died at London, August 9, 1811, aged sixty-six years.

Previous to the publication of the second part of the poem of the *Press*, Mr. McCreery sent a copy to one of the reviews; but the editor not noticing the work, Mr. McCreery sent the following letter to that gentleman:

"Sir,

*Tooke's Court, 1827.*

"Before it was fairly published, I sent you a copy of my poem of the *Press*, of which you have not taken any notice. As it appears that you intend to neglect it altogether, perhaps you would think it right to return it to

"Your obt. Servant,

1832, April 10. Died, WILLIAM LAING, bookseller, Edinburgh, who may be ranked amongst those who have reflected honour and credit upon their native place. He was born in that city, July 20, 1764, and after receiving a good education at a grammar-school there, fixed on the profession of a printer, and served an apprenticeship for six years, but abandoned this trade, as his eyesight was somewhat delicate. In 1785 he commenced the business of a bookseller on his own account. The members of the trade, at that time, in Edinburgh, were highly respectable gentlemen; and the names of John Balfour, John Bell, William Creech, Charles Elliot, and others, then engaged in it, would have added reputation to any profession. Modest and unassuming in his manners, and well versed in ancient authors, the exertions which he used for the promotion of Greek learning in Edinburgh, will be long remembered on account of the elegant, accurate, and commodious editions which he published; and many classical works which had never been attempted, except by the Foulis's, of Glasgow. For the long period of nearly fifty years, Mr. Laing followed this useful and honourable profession, and at the time of his death, was the oldest bookseller in Edinburgh, engaged in actual business. He died at Lauriston, near Edinburgh, leaving a widow and nine surviving children, one of whom, since 1821, was in partnership with him in business.

1832, May 29. Died, W. R. HENDERSON, the younger, of Warriston and Eildon hall, Scotland, who had executed a deed of settlement, by which he conveyed to certain trustees, such funds as he should be possessed of, for the purpose of printing and publishing one or more editions of an *Essay on the Constitution of Man, considered in relation to external objects*, by George Combe, in a cheap form, so as to be easily purchased by the more intelligent of the labouring classes.

1832, May 30. Mr. Paas, a printer's and bookbinder's ornamental brass rule manufacturer, of Holborn, London, murdered at Leicester, by Thomas Cook, a bookbinder, in his shop, for which crime he was hanged and gibbeted.

1832, May. The magistrates of the city of

Augsburg, in Germany, signified to Dr. Kurz, the responsible editor of the journal called *Die Zeit*, a resolution by which he was to suffer eight days' imprisonment, and be banished the city, for having published an invitation to form a society for the freedom of the press.

1832, May 30. Died, JOHN TAYLOR, who had been for more than forty years connected with the public press of the metropolis, and much with the theatrical world. He was the grandson of the famous chevalier John Taylor, oculist to the principal sovereigns of Europe, and son to John Taylor, many years oculist to George III. and born at Highgate. He attached himself very early in life to the periodical press, and about 1770, was connected with the *Morning Herald*, when under the management of the rev. Bate Dudley.\* Some years afterwards he became part-proprietor and editor of the *Sun*, a daily evening paper, but was deprived of his property in that paper by the misconduct of a deceased partner. He was at one time invested with the editorship of the *Morning Post*, under rather curious circumstances.† He was the author of the *Stage, Sonnets, Odes, Prologues, Epilogues, Episodes, Tales, Elegies, and Epitaphs*.

The following lines, which are at once happy in themselves, and characterized by that prosopoeia in which the departed reminiscent and poet himself so freely indulged:

#### IMPROMPTU,

BY GEORGE COLMAN THE YOUNGER:—

Nine tailors (as the proverb goes)  
Make but one man, though many clothes;  
But thou art not, we know, like those,

My Taylor!

No—thou can'st make, on Candour's plan,  
Two of thyself (how few that can!)  
The critic and the gentleman.

My Taylor!

Mr. Taylor was by nature a ready man, of bright parts, but perhaps too volatile for profound study. Conversation was therefore his library in a great degree;—He had a vein of poetical ore,

\* Rev. sir Henry Bate Dudley, LL.D. chancellor and prebendary of Ferns, Ireland, and rector of Willingham, in Suffolk. He was born at Penny Compton, Aug. 25, 1745, and educated at Oxford. He first became acquainted with the *Morning Post* newspaper about 1775, which he afterwards quitted, and in Nov. 1786, established the *Morning Herald*. His original name was Bate, to which, in 1784, he added that of Dudley. Notwithstanding his cloth, he was in early life engaged in two duels, and after he was created a baronet, and preferred to a deanery, he fought a third. He was a magistrate for seven counties in England, and four in Ireland. He was the author of several dramatic pieces, and other works. He died Feb. 1, 1824.

† Mr. Taylor, in the *Records of My Life*, has cleared up one of the mysteries of Carlton-house, very satisfactorily. The illustration, in fact, belongs to history.—See also the trial of Mr. Benjafield, formerly editor of the *Morning Post*, against Mr. Whible, printer and publisher of the *County Chronicle*, in the court of king's bench, Dec. 22, 1812.

‡ George Colman was the son of George Colman, distinguished as the translator of *Terence*, see page 590, ante. He was born in 1767, and educated at Westminster school, Oxford, and Aberdeen. On his return to London he was entered of the Temple, but soon abandoned the dry and unpleasant study of the law, for the more congenial bower of the muses. Few men have been more successful in the dramatic world of literature than George Colman the younger; and many of his latter years were passed in the office of licenser and examiner of plays. He died October 6, 1830, aged seventy-four years.

not of the greatest possible value, but current enough, and he used it liberally on all occasions. If with Dryden he kept a shop of *condolence and congratulation*, he did not sell his commodities—he sent out his hasty tributes among his friends like his namesake in Prior's poems, as the signs of benevolence.

His jug was to the ringers carried  
Whoever either died or married.

1832, June 7. On this day the English reform bill received the royal assent, when the people of England, as with one heart and voice, gave utterance to those grateful emotions which the consummation of their ardent wishes so justly inspired. Among the foremost on this occasion, stood forth the *press*, the harbinger of the freedom of the world; and, not the least, by the splendour of their processions in all the great towns in the kingdom, did the members of the typographic art acknowledge the blessings which the reform bill was likely to accomplish, by the speedy removal of all those imposts which had so long retarded the progress of literature.†

1832, July 26. Mr. SMITH, a bookbinder at the navy office, Somerset house, London, went to the top of the building, for the purpose of enjoying the prospect, when he was precipitated on the terrace and killed. It was supposed he missed his footing whilst looking through his glass.

1832, Aug. 10. Died, Mr. THORPE, bookseller, at Oxford, of cholera, aged thirty years. He was the nephew of the celebrated London bookseller of that name, and son of Mr. Thorpe, who for many years was a bookseller at Cambridge. His death was very sudden.

1832, Aug. 23. Died, WILLIAM M'GAVIN,† editor of the *Protestant*, a periodical, the first six numbers of which appeared in the *Glasgow Chronicle*, then issued in weekly numbers.

\* During the discussion on the reform bill, in the house of lords, the ex-lord chancellor, Lyndhurst, alluding to the conductors of the newspaper press, as favourers of the measure, made the following rather curious observation: "A formidable and active body, to wit, the periodical press, the greater portion of which support this measure for reasons that are sufficiently apparent. They prosper in agitation, and they think that the carrying the bill will perpetuate agitation. Besides looking to what has occurred in France and Belgium, these conductors of the press see a new road opened to their personal ambition. They believe that they will be enabled to take a station in society, and to assume a power which, five or six years ago, never entered their minds." This was the opinion of a lawyer, once a radical, until he was made a judge, when from his new elevation he took that commanding view of things which enabled him to see that every thing was placed exactly where it ought to be. Among the conductors of the periodical press, who have obtained seats in the legislature since the reform bill, are John Walter, proprietor of the *London Times*, for the county of Berks. William Bird Brodie, proprietor of the *Salisbury Journal*, for the city of Salisbury. Edward Baines, proprietor of the *Leeds Mercury*, for Leeds. J. S. Buckingham, proprietor of the *Athenæum*, for Sheffield. William Cobbett, for Oldham.

† The real sources of the injury which literature has sustained in this country, and of the impediments in the diffusion of knowledge, are to be found in the various restrictions which government have imposed upon the press, and in the destructive influence of unsparring taxation.—John M'Creery.

‡ In the cemetery at Glasgow there is a very handsome monument, consisting of a pillar, with a statue, of Mr. M'Gavin, and long inscriptions on the four sides of the pedestal.

1832, Sept. 3. Died, EDWARD JEFFREY, for fifty years a bookseller in Pall-mall, London, where he died of apoplexy, in his seventieth year.

1832, Sept. 3. Died, DAVID BLACKIE, proprietor of the *Edinburgh Evening Post*, *Edinburgh Weekly Chronicle*, and the *Edinburgh Literary Gazette*, of whom it is but justice to state that he gave an impetus to the periodical press of Scotland productive of the greatest benefit to the public. Mr. Blackie died of cholera, at Bayswater, near London. His widow having been removed to Grove house, Brompton, the residence of Mr. Jerdan, editor of the *London Literary Gazette*, was delivered of a daughter, at one o'clock on Friday the 7th, within twelve hours of her husband's funeral.

1832, Sept. 10. Died, WILLIAM MEOOT, bookseller and printer, at Chelmsford, in Essex, aged seventy years. He was for upwards of forty years part proprietor of the *Chelmsford Chronicle*.

1832, Sept. 21. Died, Sir WALTER SCOTT, bart., a distinguished poet and novelist. He was born at Edinburgh, August 16, 1771, and was a younger son of Walter Scott, writer to the signet, by Anne, daughter of Dr. John Rutherford,\* professor of medicine in the university of Edinburgh. The first school he attended was at Kelso, where he had for his schoolfellows James and John Ballantyne, who subsequently became intimately connected with him in public life. From Kelso he was removed to the high school of Edinburgh, in 1779. He then served an apprenticeship to the legal business in his father's office, which was completed in 1792, by his entering at the Scottish bar. On the 24th of December, 1797, he married Miss Carpenter, a young Frenchwoman, of good parentage, whom he accidentally met at Gillingham, in Cumberland, and who possessed a small annuity. It is also worthy of notice, that, in 1799, he was appointed sheriff of Selkirkshire, a respectable situation, to which an income of £300 was attached. The literary character of Scott is to be traced to the traditional lore which he imbibed in the country, and his miscellaneous reading during a long illness. He read, by his own confession, all the old romances, old plays, and epic poems, contained in the extensive library of Mr. Sibbald, in Edinburgh. The earlier years of his life, as an advocate, were devoted rather to the study of the German poets than to business; and the result was, a translation of Burger's *Lenore*, and *Der Wilde Jäger*, which he published in small 4to. in 1796. It was not till the year 1805, when Scott had reached the age of thirty-four, and had a family rising around him, that he attracted decided attention as an original poet; but it was not till 1806, when he received the appointment of a principal clerk of session, that he considered himself at perfect liberty to pursue a literary career. Shortly after the publication of the *Lay of the Last Minstrel*, Walter Scott entered into a secret partnership with James Ballantyne;

† Dr. Rutherford died in 1779, in his eighty-fourth year.

it being decided that every bookseller must employ Ballantyne to print any thing that Scott wrote. What such conduct in common trade would be called, we do not stop to inquire; but will quote Mr. Lockhart's\* observations on the transaction. "It is an old saying, that wherever there is a secret, there must be something wrong; and dearly did Scott pay the penalty for the mystery in which he had chosen to involve this transaction. It was his rule, from the beginning, that whatever he wrote or edited must be printed at that press; and had he catered for it only as author and sole editor, all had been well; but had the booksellers known his direct pecuniary interest in keeping up and extending the occupation of those types, they would have taken into account his lively imagination and sanguine temperament, as well as his taste and judgment, and considered, far more deliberately than they too often did, his multifarious recommendations of new literary schemes, coupled though these were with some dim understanding that, if the Ballantyne press were employed, his own literary skill would be at his friend's disposal for the general superintendence of the undertaking. On the other hand, Scott's suggestions were in many cases, perhaps in the majority of them, conveyed through Ballantyne, whose habitual deference to his opinion induced him to advocate them with enthusiastic zeal; and the printer, who had thus pledged his personal authority for the merits of the proposed scheme, must have felt himself committed to the bookseller, and could hardly refuse with decency to take a certain share of the pecuniary risk, by allowing the time and method of his own payment to be regulated according to the employer's convenience. Hence, by degrees, was woven a web of entanglement from which neither Ballantyne nor his adviser had any means of escape, except only in that indomitable spirit, the mainspring of personal industry altogether unparalleled, to which, thus set in motion, the world owes its most gigantic monument of literary genius.†

In 1808, Mr. Scott published his second poem of magnitude, *Marmion*, which displayed his metrical genius to greater perfection than the *Lay of the Last Minstrel*, and greatly increased his reputation. In 1809, he became a contributor to the *Edinburgh Annual Register*, started by Mr. Southey. *The Lady of the Lake*, in which his poetical genius seems to have reached the acme of its powers, was published in 1810. After the publication of some other poems up to 1814, he seems to have concluded that poetry was no longer a line in which he ought to exercise his talents. Although the novel of *Waverley* had been commenced in 1805, it did not make

its appearance till 1814, without the name of the author, and was left to win its way in the world without any of the usual recommendations. Its progress was for some time slow; but after the first two or three months, its popularity had increased in a degree which must have satisfied the expectations of the author, had these been far more sanguine than he ever entertained. Great anxiety was expressed to learn the name of the author, but on this point no authentic information could be obtained. It was read and admired universally throughout Great Britain, so that in a very short time 12,000 copies were disposed of. He employed a part of his literary gains in purchasing a farm within three miles of Melrose, which he gradually enlarged, as his emoluments permitted, till it eventually became a Gothic castellated mansion of considerable size. The desire of becoming an extensive land proprietor, was a passion which glowed more warmly in his bosom than any appetite which he ever entertained for literary fame. The whole cast of his mind, from the very beginning, was essentially aristocratic; and it is probable that he looked with more reverence upon an old title to a good estate, than upon the most ennobled title-page in the whole catalogue of contemporary genius. It was unquestionably owing to this principle that he kept the *Waverley* secret with such pertinacious closeness, being unwilling to be considered as an author writing for fortune, which he must have thought degrading to the baronet of Abbotsford. It was now the principal spring of his actions to add as much as possible to the little realm of Abbotsford, in order that he might take his place—not among the great literary names which posterity is to revere; but among the country gentlemen of Roxburghshire.\* Under the influence of this passion, for such it must be considered, he produced a rapid succession of novels, which were as eagerly purchased.

Among the eminent persons to whom he had been recommended by his genius, and its productions, George IV. was one who was pleased, in March, 1820, to create him a baronet of the United Kingdom, being the first to whom he extended that honour after his accession to the crown; and in August, 1822, when his majesty visited Scotland, sir Walter found the duty imposed upon him, as in some measure the most prominent man in the country.

Sir Walter Scott had now apparently attained a degree of human greatness, such as rarely falls to the lot of literary men; and he was generally considered as having, by prudence, fairly negated the evils to which the whole class are almost proverbially subject. It was now to appear, that, though he had exceeded his brethren in many points of wisdom, and really earned an unusually large sum of money, he had not altogether secured himself against calamity. It is difficult to arrive at exact information

\* John Gibson Lockhart, editor of the *Quarterly Review*, married Miss Sophia Scott, April 29, 1839.

† For a full account of the partnership with James Ballantyne and their literary projects, see vol. ii. pp. 37-46 of Lockhart's *Life of Sir Walter Scott*. As a refutation of the statements made by Mr. John Gibson Lockhart, read *Refutation of the Mistrusts and Calumnies contained in Mr. Lockhart's Life of Sir Walter Scott, Bart. respecting the Messrs. Ballantyne*. By the Trustees and Son of the late Mr. James Ballantyne. 1838.

\* Let these speculations may appear somewhat paradoxical, Mr. Robert Chambers says that they were pronounced, by the late Mr. James Ballantyne, in writing, to be "admirably true."—*Eminent Scotsmen*, vol. iv. p. 309.

respecting the connexion of the author with his publisher, or to assign to each the exact degree of blame incidental to him, for the production of their common ruin.\* It appears, however, to be ascertained, that sir Walter Scott, in his eagerness for the purchase of land, and at the same time to maintain the style of a considerable country gentleman, incurred obligations to Messrs. Constable and Company, for money or acceptances, upon the prospect of works in the course of being written, or which the author only designed to write, and was thus led, by a principle of gratitude, to grant counter-acceptances to the bookselling house, to aid in its relief from those embarrassments, of which he was himself partly the cause. It is impossible otherwise to account for sir Walter Scott having incurred liabilities to the creditors of that house, to the amount of £72,000, while of its profits he had not the prospect of a single farthing. On the failure of Messrs. Constable and Company, in 1826, Messrs. Ballantyne and Company, printers, of which sir Walter Scott was a partner, became insolvent, with debts to the amount of £102,000, for the whole of which sir Walter was, of course, liable, in addition to his liabilities for the bookselling house. It thus appeared that the most splendid literary revenue that ever man made for himself, had been compromised by a connexion, partly for profit, and partly otherwise, with the two mechanical individuals concerned in the mere bringing of his writings before the world. A per-centage was all that these individuals were fairly entitled to for their trouble in putting the works of sir Walter into a shape. The blow was endured with a magnanimity worthy of the greatest writer of the age. The principal assets which he could present against the large claims now made upon him, were the mansion and grounds of Abbotsford, which he had entailed upon his son, at the marriage of that young gentleman to Miss Jobson, of Lochore, but in a manner now found invalid, and which were burdened by a bond for £10,000. He had also his house in Edinburgh, and the furniture of both mansions. His creditors proposed a composition; but his honourable nature, and perhaps a sense of reputation, prevented him from listening to any such scheme. Sir Walter had made no avowal to the public of his being the author of that long series of prose fictions, which had for some years engaged so much of public attention. It being no longer possible to preserve his incognito, he permitted himself at a dinner for the benefit of the Edinburgh theatrical fund, Feb. 23, 1827, to be drawn into a disclosure of the secret. On his health being proposed by lord Meadowbank, as the "Great unknown," now unknown no longer, he acknowledged the compliment in suitable terms, and declared himself, unequivocally, to be the sole author of what were called

the Waverley novels. The following list of the principal productions of sir Walter Scott, will give some idea of the rapidity in which they were given to the public. Throughout the whole of his career, both as a poet and a novelist, he was in the habit of turning aside occasionally to less important avocations of a literary character.

- 1796, A translation from the German of *Burger's Lenz*, and *Der Wilde Jäger*.  
 1796, A translation of Goethe's *Goets of Berlichingen*.  
 1802, *Minstrelsy of the Scottish Border*.  
 1804, *Sir Tristram*.  
 1805, *Lay of the Last Minstrel*.  
 1806, *Ballads and Lyrical Pieces*.  
 1806, *Marmion*.  
 — *Bryson's Works*, with Notes and Memoir, 12 vols.  
 1809, *State Papers*, and Letters of sir Ralph Sadler.  
 — *Somer's Collection of Tracts*, completed in 1812.  
 1810, *Lady of the Lake*; Miss Seward's Life and Works.  
 1811, *Vision of Don Roderick*.  
 1812, *Rokeby*.  
 1813, *Bridal of Triermain*.  
 1814, *Life and Works of Jonathan Swift*, D. D. 10 vols.\*\*  
 — *Waverley*, 8 vols. 12mo.††  
 1815, *Lord of the Isles*; and *Guy Mannering*.  
 1816, *Paul's Letters to his Kinsfolk*; *Antiquary*; and the *Tales of my Landlord*;: first series, containing *Black Dwarf* (†) and *Old Mortality*.  
 1817, *Harold the Dantless*; and *Rob Roy*. (‡)  
 1818, *Tales of my Landlord*, second series, containing the *Heart of Mid-Lothian*.

\* The profits of this poem were £766 7s.

† Mr. Constable, the bookseller, was looked upon as a bold man when, in 1807, he paid one thousand guineas for the poem of *Marmion*. Previously to 1825, no fewer than 36,000 copies of this poem were sold.

‡ This was the bold speculation of William Miller, of Albemarle-street, London; and the editor's fee, at forty guineas the volume, was £756.

§ Fifty thousand copies were sold from the time of publication to the month of July, 1836.

|| Anna Seward was the daughter of the rev. Thomas Seward, rector of Eyam, Derbyshire, and prebendary of Lichfield, where he died March 4, 1790. Miss Seward early discovered a taste for poetry, and was distinguished for her talents in various works of literature. She died March 25, 1809, aged sixty-six years, and was buried at Lichfield.

¶ Ten thousand copies were sold in three months.

\*\* A successful speculation of Mr. Constable.

†† For the copyright of *Waverley* Mr. Constable offered £700, which was refused; Scott would have taken £1000.

— One thousand copies were sold in five weeks; up to 1820, not less than forty thousand copies were disposed of.

‡‡ It is to be observed, that the series, called *Tales of my Landlord*, were professedly by a different author from him of *Waverley*; an expedient which the real author had thought conducive to the maintenance of the public interest.

§§ The tale of the *Black Dwarf* had been submitted to William Blackwood, who was eager to become the purchaser, in partnership with John Murray, of London. Mr. Blackwood was plain and blunt, to a degree which sir Walter Scott might look upon as "ungracious;" for upon reading what seemed to him the lame and impotent conclusion of a well-begun story, he did not search about for any glossy periphrase, but at once wrote to beg that James Ballantyne would inform the unknown author that such was his opinion, and ventured to suggest a better upwinding of the plot of the *Black Dwarf*, and coincided his epistle, which he desired to be forwarded to the nameless novelist, with announcing his willingness in case the proposed alterations were agreed to, that the whole expense of cancelling and reprinting a certain number of sheets should be charged to his own personal account with "James Ballantyne and Co." Sir Walter Scott, on being made acquainted with Blackwood's terms, wrote the following letter:—

"Dear James,

"I have received Blackwood's impudent letter. G—d— his soul! Tell him and his condutor that I belong to the Black Hussars of Literature, who neither give nor receive criticism. I'll be cursed but this is the most impudent proposal that ever was made.—W. S."

|| The first edition was 10,000 which was disposed of in a fortnight; a second of 3,000 was called for; and the subsequent sale considerably exceeded 40,000 more.

\* The great success of the earlier novels of sir Walter Scott induced his publishers, Messrs. Constable and Co. to give large sums for those works: and previous to 1824, it was understood that the author had expended £100,000 thus acquired, upon the house and estate at Abbotsford.

- 1819, *Tales of my Landlord*, third series, containing the *Bride of Lammermore*, and *Legend of Montrose Ivanhoe*.  
 1820, *Monastery*; and the *Abbot*.  
 1821, *Kenilworth*; and the *Pirate*.  
 1822, *Fortunes of Nigel*;—Halidon Hill, a dramatic poem.\*  
 1823, *Peveril of the Peak*; *Quentin Durward*; and *St. Ronan's Well*.  
 1824, *Red Gauntlet*.  
 1825, *Tales of the Crusaders*.  
 1826, *Woodstock*.  
 1827, *Life of Napoleon Bonaparte*, 9 vols. 8vo.†  
 1828, *Chronicles of the Canongate*, first series.  
 1828, ————— second series.  
 1829, *Anne of Geirretein*; and *Tales of a Grandfather*.‡  
 1830, *History of Scotland*, 8 vols. for *Lardner's Cabinet Cyclopædia*.  
 1831, *Tales of my Landlord*, fourth series.  
 ——— *Letters on Demonology and Witchcraft*.

Of sir Walter Scott's profits on his works, Mr. Lockhart gives the following statement: "Before sir Walter went to London, in November, 1821, he concluded another negotiation of importance with the house of Constable and Co. They agreed to give, for the remaining copyright of the four novels published between December, 1819, and January, 1821—to wit, *Ivanhoe*, the *Monastery*, the *Abbot*, and *Kenilworth*,—the sum of five thousand guineas. The stipulation about not revealing the author's name, under a penalty of £2,000 was repeated. By these four novels, the fruits of scarcely more than twelve months' labour, he had already cleared at least £10,000 before this bargain was completed. They, like their predecessors, were now issued in a collective shape, under the title of *Historical Romances*, by the author of *Waverley*. I cannot pretend to guess what the actual state of Scott's pecuniary affairs was at the time when John Ballantyne's death relieved them from one great source of complication and difficulty. But I have said enough to satisfy every reader, that, when he began the second, and far the larger division of his building at Abbotsford, he must have contemplated the utmost sum it could cost him as a mere trifle in relation to the resources at his command. He must have reckoned on clearing £30,000 at least in the course of two years, by the novels written within such a period. The publisher of his *Tales*, who best knew how they were produced, and what they brought of gross profit, and who must have had the strongest interest in keeping the author's name untarnished by any risk or reputation of failure, would willingly, as we have seen, have given him £6,000 more, within a space of two years, for works of a less serious sort, likely to be despatched at leisure hours, without at all interfering with the main manufacture. But, alas! even this was not all. Messrs. Constable had such faith in the prospective fertility of his imagination, that they

were by this time quite ready to sign bargains and grant bills for novels and romances to be produced hereafter, but of which the subjects and the names were alike unknown to them, and to the man from whose pen they were to proceed. A forgotten satirist well says—

The active principle within  
 Works on some brains the effect of gin;

but in his case, every external influence combined to stir the flame, and swell the intoxication, of restless, exuberant energy. His allies knew indeed, what he did not, that the sale of his novels was rather less than it had been in the days of *Ivanhoe*; and hints had sometimes been dropped to him, that it might be well to try the effect of a pause. But he always thought—and James Ballantyne had decidedly the same opinion, that his best things were those which he threw off the most easily and swiftly; and it was no wonder that his booksellers, seeing how immeasurably even his worst excelled in popularity, as in merit, any other person's best, should have shrunk from the experiment of a decisive damper. On the contrary, they might be excused for from time to time flattering themselves, that if the books sold at a less rate, this might be counterpoised by still greater rapidity of production. They could not make up their minds to cast the peerless vessel adrift; and, in short, after every little whisper of prudential misgiving, echoed the unfailing burthen of Ballantyne's song—to push on, hoisting more and more sail as the wind lulled. He was as eager to do as they could be to suggest; and this I well knew at the time. I had, however, no notion, until all his correspondence lay before me, of the extent to which he had permitted himself thus early to build on the chances of life, health, and continued popularity. Before the *Fortunes of Nigel* issued from the press, Scott had exchanged instruments, and received his bookseller's bills, for no less than "four works of fiction"—not one of them otherwise described in the deeds of agreement—to be produced in unbroken succession, each of them to fill at least three volumes, but with proper saving clauses as to increase of copy-money, in case any of them should run to four. And within two years all this anticipation had been wiped off by *Peveril of the Peak*, *Quentin Durward*, *St. Ronan's Well*, and *Redgauntlet*; and the new castle was at that time complete, and overflowing with all its splendour; but by that time the end also was approaching!"

About the same time, the copyright of all his past novels was brought to the hammer, as part of the bankrupt stock of Messrs. Constable and Company. It was bought by Mr. Robert Cadell, of the late firm of Archibald Constable and Company, and who was now once more engaged in the bookselling business, at £8,400, for the purpose of republishing the whole of these delightful works in a cheap uniform series of volumes, illustrated by notes and prefaces, and amended in many parts by the finishing touches of the author. Sir Walter or his creditors were

\* Constable and Co. gave £1000 for the copyright.

† The *Life of Napoleon* appears to be too hastily written to bear the test of rigid criticism; it was understood to produce to its author a sum little short of £12,000.

‡ These tales were addressed to his grandchild, John Hugh Lockhart, whom he typified under the appellation of Hugh Littlejohn, esq. In 1829, appeared the second, and in 1830, the third and concluding series of this charming book, which fairly fulfilled a half-sportive expression that had escaped him many years before, in the company of his children, that "he would make the history of Scotland as familiar in the nurseries of England as lullaby rhymes."

to have half the profits, in consideration of his literary aid. This was a most fortunate design. The new edition began to appear in June, 1829; and such was its adaptation to the public convenience, and the eagerness of all ranks of people to contribute in a way convenient to themselves towards the reconstruction of the author's fortunes, that the sale soon reached an average of twenty-three thousand copies.

The profits of the various publications, but especially his share of the profits of the new edition of his novels, enabled him, towards the end of the year 1830, to pay a dividend of three shillings in the pound, which, but for accumulation of interest, would have reduced his debts to nearly one-half. Of £54,000 which had now been paid, all except six or seven thousand had been produced by his own literary labours; a fact which fixes the revenue of his intellect for the last four or five years at nearly £10,000 a-year. Besides this sum, sir Walter had also paid up the premium of the policy upon his life, which, as already mentioned, secured a *post obit* interest of £22,000 to his creditors. On this occasion, it was suggested by one of these gentlemen, (sir James Gibson Craig,) and immediately assented to, that they should present to sir Walter personally, the library, manuscripts, curiosities and plate, which had once been his own, as an acknowledgement of the sense they entertained of his honourable conduct. In November, 1830, he retired from his office of principal clerk of session, with the superannuation allowance usually given after twenty-three years' service.

It happened very unfortunately, that the severe task which he imposed upon himself, for the pur-

pose of discharging his obligations, came at a period of life when he was least able to accomplish it. His retirement from official duty might have been expected to relieve, in some measure, the pains of intense mental application. It was now too late, however, to redeem the health that had fled. His physicians recommended a residence in Italy as a means of delaying the approaches of illness. By the kind offices of captain Basil Hall, liberty was obtained for him to sail in his majesty's ship the *Barham*, which was then fitting out for Malta. He sailed from Portsmouth, October 27, 1831, and on December 27th, landed at Naples, where he was received by the king and his court with a feeling approaching to homage. In April, he proceeded to Rome, where he was received in the same manner. Feeling that his strength was rapidly decaying, he determined on returning with all possible speed to his native country, in order that his bones might not be laid (to use the language of his own favourite minstrelsy)—“far from the Tweed.” He hastened home as rapidly as possible, and on his arrival in London was attended by sir Henry Hallford and Dr. Holland. He left London July 7, and arrived at Abbotsford on the 11th. The intense love of home and of country, which had urged his return from the continent, here seemed to dispel for a moment the clouds of the mental atmosphere; but he soon arrived at that melancholy state when the friends and relations can form no more affectionate wish than that death may step in to claim his own, which melancholy event at length took place on Sept. 21, 1832, and on the 26th the illustrious deceased was buried in an aisle in Dryburgh abbey, which had been given to him by the late earl of Buchan.\* Sir Walter Scott was in stature above six feet, but having been lame from an early period of life in the right leg, he sunk a little on that side in walking. Of his features it is needless to speak, as they are familiar to every person. It is by far the greatest glory of sir Walter Scott, that he shone equally as a good and virtuous man, as he did in his capacity of the first fictitious writer of the age; and it may with great truth be repeated in the lines of a modern poet:

The vision & the voice are o'er, their influence waned away,  
Like music o'er a summer lake at the golden close of day:  
The vision and the voice are o'er! but when will be forgot  
The buried genius of Romance—the imperishable Scott?†

1832, Oct. 3. Died, ADAM WILLIAMSON, a worthy and well known journeyman printer in the city of Edinburgh, aged seventy-two years; where he had worked during the greater portion of his long life, and gained the approbation of

\* The original manuscripts of most of the published writings of sir Walter Scott are still in existence, though unfortunately not in one place, or as the property of one person. The interest which he excited by the publication of his first poem, the *Lay of the Last Minstrel*, caused Mr. Bellantyne, the printer, to preserve what is called the *press-copy* of those which followed. They thus became the property of Mr. Constable, who bound them up, prefixed explanatory notices to them, and kept them with great care till his death, since which time they have become the property of others. A few of the novels, some of them imperfect, were brought to the hammer, in London, about a-year, or rather more, before the death of their distinguished author, and brought the aggregate sum of £317. A considerable number of them have since then become the property of sir Walter's last Edinburgh publisher, Mr. Cadell, who has been able to increase their number by the addition of a few of which he individually acted as publisher, and which were presented to him by the author. Of sir Walter's poetical works, Mr. Cadell possesses eight volumes. Another portion of the collection consists of five volumes of original letters, written by sir Walter Scott between 1796 and 1832, but chiefly from 1821 downwards, the earliest being addressed to the late Mr. R. Miller, bookseller, in reference to the advertisement of his first poetical publication, and the last from Naples, in the April before his death, respecting some of his very latest compositions. In addition to these twenty-seven volumes, the same cabinet contains an interwoven set of the whole series of the *Waverley Novels*, in thirty-two volumes, containing the new prefaces and annotations by the author, being the *press-copy* of the recent popular edition of those extraordinary fictions. In opening the volumes which contain the poems and novels, the first features of peculiarity which strike the eye are the singular rareness of blottings and interlineations. It was never the practice of sir Walter Scott to transcribe for revision even his most elaborate compositions, and there is accordingly every reason to believe that these are the first and last copies of the respective works to which they refer.

† In July, 1836, the Abbotsford club was established and so called in honour of the late sir Walter Scott, bart. It is limited to fifty members. Its object is “the printing of miscellaneous pieces, illustrative of *History, Literature, and Antiquities*.” B. D. D. Turnbull, esq. has the honour of being the founder of this tribute to the memory of the Shakespeare of prose.

† *Dryburgh Abbey*; a poem on the death of Sir Walter Scott. By Charles Swain. 8vo. 1832.

his employers, and the respect of his fellow-workmen. From his general knowledge and urbanity, few men in his class of life were more acceptable as a companion, than the *learned pig*.\*

Sacred to the memory of  
ADAM WILLIAMSON,  
pressman printer, in Edinburgh,  
who died October 3, 1832,  
aged 73 years.

All my stays are loosed;  
my cap is thrown off; my head is worn out;  
my box is broken;  
my spindle and bar have lost their power;  
my till is laid aside;  
both legs of my crane are turned out of their path;  
my platen can make no impression;  
my winter hath no spring;  
my rounce will neither roll out nor in;  
stone, coffin, and carriage, have all failed;  
the hinges of my typcase, and frames, are immovable;  
my long and short ribs are rusted;  
my cheeks are much worm-eaten, and mouldering away;  
my press is totally down!

The volume of my life is finished!  
not without many errors;  
most of them have arisen from bad composition, and are  
to be attributed more to the case than to the press;  
there are also a great number of my own;  
misses, scuffs, blotches, blurs, and bad register;  
but the true and faithful Superintendent has undertaken  
to correct the whole.

When the machine is again set up,  
(incapable of decay,)  
a new and perfect edition of my life will appear,  
elegantly bound for duration, and every way fitted for  
the grand library of the Great Author.

1832, Oct. 3. *Died*, WILLIAM FORD, an eminent bookseller, at Manchester, aged sixty-one years. Mr. Ford was on his outset in life engaged in what was then called the Manchester trade; and, at the time he was thus occupied, he indulged, at his leisure, in the pursuit of literature and the arts. Having a most extensive memory, he amassed stores of information on those subjects which few men possessed. He was at length advised by his friends to become a bookseller, in which he acquiesced, and taking his private collection for his stock in trade, he published, in 1805, a most valuable catalogue, in which he displayed a profound knowledge of bibliography and curious literature. Several publications of the same kind, of subsequent dates, are replete with valuable information, the results of continued and zealous research, and which gained for Mr. Ford the correspondence and friendship of many curious collectors, particularly sir Walter Scott, Dr. Dibdin, and Mr. Heber. Mr. Ford's knowledge of the works of both ancient and modern engravers was most extensive, and his judgment accurate. In his latter years he experienced the vicissitudes of fortune, often the attendant upon talent; but he stores of his information were always accessible to his friends, and many opulent possessors of rare and choice productions of art and literature acknowledged the advantages they derived from Mr. Ford's superior information.

1832, Oct. 10. *Died*, JOHN HAMPSON, of the firm of Hampson and Hadfield,† Manchester,

aged forty years. Mr. Hampson was a native of Manchester, where he served his apprenticeship to Mr. Haydock. He was well skilled in botany and entomology, and highly respected in the printing trade. His death was very sudden, while he was at work in the printing-office.

1832, Oct. 25. *Died*, JOHN BUMPUS, bookseller, Skinner-street, London. He was extensively known throughout Great Britain by his sales of books by auction. Mr. Bumpus unfortunately drowned himself in the Surry canal, having shewn symptoms of insanity some days before. He left a widow and six children.

1832, Nov. 31. *Died*, JAMES CONWAY, who was distinguished for his literary powers, and for a singular zeal and assiduity during a twenty years' connexion with the metropolitan press. For eighteen months preceeding his death, Mr. Conway was the Parisian correspondent of the *London Times*, where he died. He was a native of Cork, where his connexions were respectable.

1832, Jan. 17. *The Scottish Guardian*, published at Glasgow.

1832. *The Dumfries Times*.

1832. *The Ayr Observer*.

1832, Feb. *The Endeavourer*, No. 1. A series of periodical papers, which appeared in the pages of the *Gentleman's Magazine*.

1832, March 31. *Tait's Edinburgh Magazine*, No. 1, printed for and published by William Tait, Edinburgh. The political doctrines of this journal are the same as the *Westminster Review*, and has met with an unprecedented success.

1832, May 12. *The Newcastle Journal*, No. 1, printed and published by the proprietor, Messrs. Hernaman and Perring, Newcastle-upon-Tyne.

1832, July 7. *The Saturday Magazine*.

1832, July 20. *The Newcastle Press*, No. 1, published at Newcastle-upon-Tyne. Discontinued October 4, 1834.

1832, Aug. 21. *The Northumberland Advertiser*, No. 1. published at Shields. Discontinued March 25, 1834.

1832, Oct. 1. *The Wreath; or, Nottingham Literary Miscellany of Prose and Poetry*, No. 1, printed and published by Thomas Kirk.

1832. *The Colonist*, (Hobart Town, Australia.) This paper was commenced by a joint-stock company, and conducted by three patriotic gentlemen, Messrs. Meredith, Gregson, and Robertson, as the *People's Journal*.

1832. *The Chinese Repository*, printed and published monthly at Canton, in China. This periodical contains forty-eight pages, circulates above seven hundred, and would be considered good even in England. Among the places to which it is sent, we find some spots where we should hardly expect that many readers would be found; such as Honolulu, on the Sandwich Islands. More than a third of all the numbers printed go to the United States, and about fifty reach England. Besides extracts from Chinese gazettes, and details of occurrences, it contains much information relating to China, translations of historical documents, correspondence with the government, and frequently original articles.

\* A technical term for a pressman.

† Erazey Hadfield unfortunately put an end to his existence, by hanging, in his printing-office, August, 1833.

1833, Jan. 17. *Died*, JAMES BALLANTYNE, an extensive printer in the city of Edinburgh, and whose name is so intimately connected with the literary productions of sir Walter Scott. James Ballantyne was born at Kelso, and though not bred to the business of a printer, he opened a printing-office in his native town, where, besides editing the *Kelso Mail*\* newspaper, he printed various works, which rendered his name generally known, and paved the way for his establishment soon after in Edinburgh, where he ever after continued. The English press boasts, and very justly, of the names of Bulmer, Bensley, Davison, and McCreery, for their exertions in correct and beautiful typography; and, to the Ballantynes, of Edinburgh, will the epithet of fine printers ever be awarded. By the excellent taste of James Ballantyne in the execution of works entrusted to his care, he gained the patronage and friendship of numerous men of letters, and the first publishing houses in London and Edinburgh. The works of his friend and partner, sir Walter Scott,† were printed by him, and to his taste the public is indebted for many emendations in the works of that illustrious minstrel and novelist, whose own inattention to not unimportant minutiae, rendered such assistance highly necessary. For a number of years Mr. Ballantyne conducted the *Edinburgh Weekly Journal*, with a degree of good feeling and taste which the public did not fail to appreciate. His theatrical criticisms, in particular, which appeared in that newspaper, were long admired as the very best of the day. He married Miss Hogarth,‡ the daughter of a wealthy farmer in Berwickshire, by whom he had a large family. His residence was in John-street, Canongate, at no great distance from the printing-office. Shortly before his death Mr. Ballantyne published an affecting statement, in which he only prayed that he might be restored to that degree of health which would enable him to do some justice to all that he felt and knew regarding the great and good man who had gone before him. But this was denied. They who had been so long united in their lives were not in death long divided.

\* After the removal of James Ballantyne to Edinburgh, the conducting of the *Kelso Mail* devolved upon Alexander Ballantyne, a younger brother.

† Sir Walter Scott was often much oppressed by the interruptions from idle strangers, which from the first to the last, imposed a heavy tax on his celebrity. Among his hasty notes to the Ballantynes, we select the following:—

"Sept. 3, 1813.

"My temper is really worn to a hair's-breadth. The intruder of yesterday hang on me till twelve to day. When I had just taken my pen, he was relieved, like a sentry leaving guard, by two other lounging visitors; and their posts has now been supplied by some people on real business."

Again.

"Monday Evening.

"Oh James—oh James—two Irish dames  
Oppress me very sore;  
I groaning send one sheet I've penn'd,  
For hang them, there's no more."

‡ George Hogarth, esq. W. S. brother of Mrs. James Ballantyne, is now well known in the literary world; especially by a *History of Music*, which is highly spoken of.

1833, March 29. *Died*, SAMUEL DREW, M. A. a very distinguished metaphysical writer, and for fourteen years the editor of the *Imperial Magazine*, published by Mr. Henry Fisher, London. He also superintended all the works issued from the Caxton press; and the proprietors of that establishment bear honourable testimony to his abilities, his industry, and his moral worth. Mr. Drew is a strong instance of the acquirement of knowledge under difficulties. He was born in the year 1765, in the parish of St. Austell, Cornwall, of poor parents, and at the age of ten years was apprenticed to a shoemaker of that town. He afterwards conducted that trade for a man who carried on in one shop the business of a saddler and bookbinder, together with the manufacturing of shoes. In this situation Mr. Drew had an opportunity of indulging a natural desire of knowledge, till he engaged in business for himself. All his leisure he devoted to metaphysical studies, and was the author of several works on that subject. In 1806 Mr. Drew entered into an engagement with the late Dr. Thomas Coke,\* which totally detached him from the pursuits of trade. Hitherto literature had been the employment of his leisure hours. From this time it became his occupation. He died at Helston, Cornwall, aged sixty-eight.

1833, May 7. MR. CLEMENTS, proprietor of the *Morning Chronicle and Observer*, London papers, was fined £100 in the court of king's bench, for a libel on the duchess of Richmond, taken from the *Court Journal*. The defendant had merely copied it, and tendered an apology.

1833, May 14. *Died*, THOMAS CURSON HANSARD, printer, of Paternoster-row, London. He was the eldest son of the late Luke Hansard, esq., printer to the house of commons, and having been brought up in the same business, was for many years in partnership with his father. In 1805, he migrated to Peterborough-court, Fleet-street, where he succeeded to the business of Mr. Rickaby, and on the expiration of his lease, in 1823, he removed his establishment to the more central part of the city, and having purchased a house in Paternoster-row, he fitted it up for business, and named it the *Paternoster-row Press*. Mr. T. C. Hansard was a very ingenious practical printer, and was thoroughly versed in every branch of the art, as evinced by his publication of the *Typographia*, 1824. He was at one period one of the common council of the city of London. Mr. Hansard gives the following opinion of the liberty of the press:—  
"I am conscientiously persuaded that a perfectly free press is as essential to our existence and welfare, as a free and independent state, as the freedom of the air we breathe is to the life and vigour of the organs of our frame, a right which all good men have ever held sacred, and which has always been esteemed the life-blood of British liberty."

\* Thomas Coke, LL. D. a Methodist preacher, who, in conjunction with Mr. Henry More, published the *Life of the rev. John Wesley*, 8vo. 1791. John Wesley, the founder of Methodism, was born June 17, 1703,—died March 2, 1791.

1833, July 5. By the 3 and 4 William IV. c. xxiii. the duty on advertisements in newspapers was reduced from three shillings and sixpence to one shilling and sixpence in England, and to one shilling in Ireland. The duty paid for advertisements by the whole of the provincial newspapers in England, from Jan. 5, 1832, to Jan. 4, 1833, was £70,965. The number of newspapers published in the United Kingdom: ENGLAND; London, thirteen daily; six two or three times a-week; thirty-six once a-week; and one hundred and eighty provincial:—SCOTLAND; fifteen twice or three times a-week; thirty-one weekly:—IRELAND; in Dublin, five daily; seven three times a-week; and fifty-seven provincial: BARRIAR ISLANDS; Guernsey, Jersey, and Man, two twice a-week, and eleven weekly—total, 369. The total number of newspapers which passed through all the post-offices in the United Kingdom and Ireland, in 1833, was 41,600,000.\*

1833. The commercial value of literary works published in England amounted to £415,300; and adding to this the amount of daily and weekly papers, reviews and magazines, the general sale of English literature may be estimated at £2,420,900 sterling. There were published two hundred and thirty-six monthly periodical works, a single copy of each cost £17 12s. 6d.†

1833. A committee of the booksellers of London made the following regulation: "that no person should be entitled to the privileges of the trade unless having a shop."

1833, Nov. 4. Died, JOHN MEESON, beadle of the leathersellers' company, and treasurer of the well known convivial society, the Honourable Lumber Troop. He served his apprenticeship to his father, who was for many years a compositor in the printing-office of Mr. John Nichols, and was himself connected with that establishment for half a century; for, though long since removed from the necessity of working at his original business, he was always delighted at being considered as belonging to the printing-office of his old masters and firm friends. He accordingly acted as *father of the chapel*; and was the true, constant, warm, and active friend to all his younger brethren. With what delight would he exhibit a valuable snuff-box, presented to him by his fellow-workmen, with a handsome

inscription expressive of their affection and esteem! This worthy individual was known to a very extensive circle; and no man could be more generally beloved. He died at the age of sixty-two, leaving a widow to mourn the loss of an indulgent husband; but had no children. His remains were interred in St. Helen's church-yard.

1833, Nov. 12. Died, JOSEPH STRUTT, keeper of the records to his grace the duke of Northumberland. He was the eldest son of the ingenious author and artist, Joseph Strutt, who died Oct. 16, 1802.\* The late Mr. Strutt was born May 28, 1775, and was educated at Christ's hospital, where he was well imbued with the Latin tongue, and afterwards served his apprenticeship in the printing-office of the late John Nichols. His health, however, was never strong, and he soon relinquished his business to follow the more honourable but less certain occupation of his pen. We are not aware whether Mr. Strutt published any works with his name, but believe the public have been benefited by his labours in various ways. He made the index to the first volume of Mr. Nichols's *History of Leicestershire*, but did it so superfluously well, that had he proceeded with the other volumes with the same precision, the index itself would have formed much too bulky a volume. This extent in quantity, and consequently great loss of time, compelled Mr. Nichols to place the index to the second, third, and fourth volumes of his history in the hands of Mr. Malcolm, author of *Londinum Redivivum*. Fortunately for Mr. Strutt, he was many years ago recommended by John Caley, esq. F.S.A. to his grace the late duke of Northumberland to arrange his archives, which from damp and neglect were in a deplorable state of decay. To this employment Mr. Strutt was well adapted; and the neatness and accuracy with which he repaired, preserved, and transcribed the valuable documents committed to his charge, were truly admirable. Sheltered by the kind patronage of the late and present dukes of Northumberland, Mr. Strutt thus passed the remainder of his days. He died at Gleworth, and left a widow and a numerous family. Mr. Strutt had a strong sense of piety, which he inherited from his family, and devoted a considerable portion of his time to the diligent study of the sacred scriptures.

1833, Nov. JOHN LEWIS BRIGSTOCK, printer of the *Welshman* newspaper, published in the town of Carmarthen, was sentenced to be imprisoned in the county jail of Carmarthen five calendar months, and at the expiration of that time to find sureties to keep the peace for three years, himself in £100, and two sureties in £50 each, for a libel on the magistrates of Carmarthen. Mr. Parmer, the editor, who handed the libel to the printer, was not brought to trial.

1833, Nov. 16. MR. COHEN, proprietor and editor of the *Brighton Guardian*, was sentenced in the court of king's bench to six months' imprisonment, to pay a fine of £50, and find sure-

\* Entire produce of the newspaper duties was £533,000. Number of newspaper stamps issued was 44,500,000.—There were six hundred paper mills in Great Britain making 2,500,000 reams of paper, paying the following duties:—England, upon 56,933,000lbs, £622,933; Scotland, upon 9,077,000lbs, £102,530; Ireland, upon 696,000lbs, £36,765.

† There were at this time between thirty and forty penny and twopenny publications sold in London, many of them were scurrilous, blasphemous, and frivolous; to show that the great mass of the people supported those publications which afforded them instructive and useful information, it may be stated, that in the year 1833, the *Penny Magazine* consumed 14,000 reams of paper, and the cost of the wood-cuts was £2,000. The publications of Messrs. W. and R. Chambers, of Edinburgh, in 1833, was, of the *Edinburgh Journal* 55,000 copies weekly; *Information for the People*, 15,000 every fortnight; *Historical Newspaper*, 28,000 monthly. *Saturday Magazine*, including the *Supplement*, had a weekly circulation of between 80,000 and 90,000 copies. *Pinnock's Guide to Knowledge* had a great sale, and *Limbird's Mirror*, price twopenny, after eleven years' circulation, had increased in public estimation.

\* See *Literary Anecdotes*, vol. v. p. 666-668.

ties for good behaviour for three years, for the publication in his paper of a libel, having the tendency "to set the lower orders against the higher, to incite the people to acts of incendiarism, and to bring the magistrates of Sussex into contempt."

1833, Nov. 23. *Died*, ANDREW PICKIN, author of the *Dominie's Legacy*, the *Club Book*, the *Black Watch*, and other novels. He was born at Paisley, in Scotland, and intended for a mercantile life, but his love of literature was too deeply rooted, and after a short sojourn in the West Indies, he commenced the business of a bookseller at Liverpool, but unfortunately failed; he then proceeded to London, and, besides his novels, became a regular contributor to the leading magazines and reviews. His literary labours closed at the early age of forty-five. He was the Dominic of his own tales, simple, affectionate, retiring; dwelling apart from the world, and bleeding in all his views of it the gentle and tender feelings reflected from his own mind. Mr. Pickin left a widow and six children.

1833, Dec. 2. PATRICK GRANT, the proprietor, JOHN AGER, the printer, and — BELL, the publisher of the *True Sun* London daily paper, were tried for a libel on Henry Hunt.

1833, Dec. 4. A numerous meeting of the newsvenders\* of London was held at the Lyceum tavern, Strand, for the purpose of taking into consideration the hardships to which that respectable class of tradesmen are subjected by the law of libel as it stands, or, at least, is supposed to stand, as regards them. The nature of the case will be better understood by the following short statement put forth by the newsvenders themselves: "In September, 1832, a paragraph appeared in the *Satirist* newspaper reflecting on the character of an attorney named Dica,† of London, who brought an action against the proprietors of that paper, and recovered £300 damages and costs. In June, 1833, the same individual brought another action for the same libel against a newsvender of the name of Warne, who sold a copy of the same paper in the usual course of trade. The plaintiff obtained a verdict of £10 damages; but the costs, which were added, amounted to no less than £85!! The same plaintiff brought another action against another newsvender named Godwin, for precisely the same thing, which action was tried at the assizes at Croydon, when the plaintiff recovered a second verdict, with £5 damages and £85 costs. He served notices of trial on several other newsvenders, and it was stated that he had no less than eighty-four actions in preparation." Mr. Onwhyn, a newsvender, on being served with a notice of trial for selling a paper containing the same libel, expressed a determination to resist

the action, and the consequence was, that Dica countermanded his notice of trial. Several resolutions were adopted by the meeting, condemning the law of libel, which could send a man to jail, and allow him to be robbed of his money, for the mere nominal offence of selling a newspaper, over the contents of which they had no control.

"To call a rogue a rogue is a piece of defamation, [Use. Since it hurts him in his own and his neighbour's esteem. So the rogue may bring his action, and get plaster for his sore, sir, For a false cut a broad lump; more for truth, for truth hurts more, sir."

1833, Dec. 7. *Died*, GEORGE STRETTON, bookseller and printer, and for nearly forty years publisher of the *Nottingham Journal*, twenty-five of which he was the sole proprietor. Mr. Stretton served his apprenticeship with George Burbage, the former proprietor, whose daughter Mary,\* he married, and succeeded him in his business. Mr. Stretton died at Nottingham, aged sixty-two years, sincerely lamented.

1833. The following newspapers were commenced in Australia, in this year, but were only for a season in existence: *Trumpeter General*, by J. C. Stracy. *Austral-Asiatic Review*, by R. L. Murray. *Horn Boy*, by G. Robertson. *Morning Star*, by N. Olding. *Currency Lad*, by H. Wills. The *Trumpeter*, by G. Robertson, is still in the course of publication.

1833, Feb. 15. The *Glasgow Argus*, No. 1. This paper is edited by Mr. Weir, advocate, a gentleman well known in the literary world.

1833, July 13. The *Newcastle Press*, No. 1, printed and published by Emas Mackenzie, at Newcastle-upon-Tyne. It died Oct. 4, 1834.

1833. The *Fifehire Journal*, printed and published at Kirkcaldy, under the management of Mr. Murray, formerly of the *Courant* office, Edinburgh. This was the second newspaper started in the county of Fife, in Scotland. The first was the *Fife Herald*, which had been instituted some years before by the late Robert Tullis, bookseller, in Cupar, and printer to the university of St. Andrews, one of the most enterprising of Scottish bibliopoles. The *Herald* being somewhat too "liberal," the *Journal* was commenced on tory principles.

1834, Jan. 23. *Died*, GEORGE W. TODD, an eminent bookseller of Stonegate, York. He was the younger son of Mr. John Todd, noticed at page 841 *ante*; and from the extensive collection of books which were from time to time purchased by his father, he acquired not only a knowledge of the general value of books, but a taste for antiquarian literature. Several years ago, Mr. G. W. Todd compiled and published *A Description of York; containing some account of its antiquities, public buildings, and particularly the cathedral*. This little work went through several editions, the last of which was in 1830. He was also the author of *Castellum Huttonicum*, 1824. Mr. Todd was an active supporter

\* Mr. Hughes, a newsvender, of Portman market, London, was killed by lightning in Lisson-grove, in 1833.

† John Dica was the name of this worthy attorney, whose whole course of practice appears to have been one regular system of fraud and chicanery. He suffered an imprisonment of two years in Lancaster castle, and was well known in Manchester, where he was in business. He died sometime in 1835.

\* Mrs. Stretton died October 27, 1835.

of the York philosophical society, and had a considerable taste in the fine arts. He was of retired habits, but by all who knew him was greatly esteemed and respected. His health had been for some time gradually declining, and he never seemed perfectly well after his laborious and fatiguing exertions towards extinguishing the destructive fire in York cathedral, Feb. 2, 1829.\*

1834, Jan. 24. *Died*, EDWARD UPHAM, F.S.A. bookseller of Exeter, and for many years one of the most eminent men in that city. He became a member of the corporation, and served the office of mayor in 1809. It has been related of him, that when officiating in his mayoralty on the bench, with the learned judges on the circuit, he displayed in conversation so much erudition as to excite their astonishment, which was not abated on finding that he was a bookseller. Having acquired what he esteemed a sufficient competence, he retired from business, and devoted the remainder of his life to his favourite literary pursuits. In 1824, he published anonymously, *Rameses*, an Egyptian tale, in 3 vols. In 1827, he published *Karmath*, an Arabian tale. In 1825, he engaged in the laborious task of completing the *Index to the Rolls of Parliament*, which had been left unfinished by the rev. John Pridden,† after that gentleman had been employed upon it for thirty years. Mr. Upham completed it in 1832. He was the author of several works of esteemed merit. Possessed of high moral rectitude, a genuine philanthropy, and a truly Christian piety, he was respected while living, and his death was much regretted.—He died at Bath, where his brother, Mr. John Upham, was a bookseller.

1834, Feb. 13. HENRY COLBURN, proprietor of the *Court Journal*, obtained a verdict, with £193 damages in the court of exchequer, against Mr. Patmore, editor of that periodical, for inserting a libel on the duchess of Richmond, in which Mr. Colburn had been cast, at the suit of the duke of Richmond. The question was, whether the plaintiff or defendant should be responsible for the insertion of the paragraph? The jury returned a verdict for the plaintiff.

\* Dr. Dibdin, in his *Northern Tour*, says, "It was told me that the defunct Mr. Todd owed his demise to the constant fret, sorrow, and grief of heart, following the fire of the minister." To which he adds, "The wretch lives who fired it. The life of the perpetrator, from a most mistaken, and, I will add, mischievous view of the moral bearing of the question, was spared; and he, whose hand deliberately laid the train, and who systematically at a distance waited the explosion, is now moping within the walls of a mad-house. If similar attempts at combustion take place, at least we must not be surprised."—Vol. I. p. 177.

Dr. Dibdin, as a vicar in the church of England, and a chaplain in the royal chapel, may be in the advanced guard of Christian preachers, but I am afraid that his Christianity is somewhat in the rear. There can be no human being who does not lament the destruction which befel York minister by the hand of an unfortunate lunatic; and though his life was mercifully spared, no other compassion in any of our cathedrals has yet taken place. Jonathan Martin died in Bethlehem hospital, June 5, 1838.

† John Pridden, F.A.S., was the eldest son of the bookseller of the same name, noticed at page 827 ante. He was born Jan. 3, 1758, and educated at St. Paul's school, London, and at Oxford. He obtained considerable preferments in the church, and was twice married, his first wife being Anne, daughter of John Nichols, printer. He died April 5, 1835.—See *Gent's Mag.* vol. xcv. page 467.

1834, March 30. *Died*, RUDOLPH ACKERMAN, book and printseller of the Strand, London. He was born at Stottberg, near Schneeberg, in the kingdom of Saxony, in 1764, and bred to the trade of a coach-builder. He came early in life to England, shortly before the French revolution, and for some time pursued in London the occupation of a carriage draftsman, which led to an acquaintance with artists, and so to his settlement in business as a printseller in the Strand. Here, by indefatigable industry, intelligence, and enterprise, combined with inviolable honour and integrity in all his transactions, he created that flourishing establishment which has made his name perhaps more extensively known, both at home and abroad, than that of any other tradesman in the British metropolis.

To him the country is certainly indebted for the original introduction of the lithographic art,\* to which he directed the public attention not only by a translation of the work of Senefelder, its inventor, but also by the specimens which

\* We give the singularly curious account of the actual invention of the art of Lithography, in M. Senefelder's own words:—"Alois Senefelder was the son of one of the performers of the theatre royal, at Munich. In early life he devoted himself to the study of jurisprudence at the university of Ingolstadt, but the death of his father compelled him to quit the university, and having long had a strong inclination for the stage, he embraced that profession, two years' experience of the misery attending upon which, cured his enthusiasm, and he resolved to try his fortune as a dramatic author. In that occupation, although his first piece was favourably received by the public, he also proved ultimately unsuccessful. During the publication of some of his works, however, he availed himself of an opportunity of becoming acquainted with the particulars of the process of printing. A new direction having thus been given to his talents, M. Senefelder, by several ingenious methods endeavoured to find substitutes for types; among those methods was that of writing with a steel pen on a copper-plate, previously covered with etching ground, and biting them in with aquafortis. This required much practice, and to correct the mistakes of his novitiate, M. Senefelder, ignorant of the usual varnish for what is technically termed 'stopping out,' composed one for himself of wax, soap, and lamp black. Finding copper-plates expensive for these rude essays, he had recourse to Killbuck stone—the surface of which was easily susceptible of being ground and polished. "I had just succeeded in my little laboratory in polishing a stone plate, which I intended to cover with etching ground, in order to continue my exercises in writing backwards, when my mother entered the room, and desired me to write her a bill for the washerwoman, who was waiting for the linen. I happened not to have the smallest slip of paper at hand; nor was there even a drop of ink in the inkstand. As the matter would not admit of delay, and we had nobody in the house to send for a supply of the deficient materials, I resolved to write the list with my ink, prepared with wax, soap, and lamp black, on the stone which I had just polished, and from which I could copy it at leisure. Some time after this I was just going to wipe this writing from the stone, when the idea all at once struck me to try what would be the effect of such a writing with my prepared ink, if I were to bite in the stone with aquafortis, and whether, perhaps, it might not be possible to apply printing ink to it in the same way as to wood engravings, and so take impressions from it. I hastened to put this idea in execution, surrounded the stone with a border of wax, and covered the surface of the stone to the height of two inches, with a mixture of one part of aquafortis and ten parts of water, which I left standing five minutes on it; and on examining the effect of this experiment, I found the writing elevated about the tenth part of a line, or a hundred and twentieth part of an inch. Some of the finer and not sufficiently distinct lines had suffered in some measure; but the greater part of the letters had not been damaged at all in their breadth, considering their elevation, so that I confidently hoped to obtain very clear impressions, chiefly from printed characters, in which there are not many fine strokes. I now proceeded to apply

he produced from his own presses. As a publisher, his illustrated topographical works, especially the *Histories of Westminster Abbey*, the *Universities of Oxford and Cambridge*, and the *Public Schools*, are monuments of his spirit and taste. Mr. Ackerman was the father and originator in England of those elegant *bijouteries* of the festive season, the *Annuaire*, which was a spirited attempt to rival the numerous publications issued in France and Germany. It is well

the printing ink to the stone, for which purpose I first used a common printers' ball; after some unsuccessful trials, I found that a thin piece of board covered with fine cloth, answered the purpose perfectly, and communicated the ink in a more equal manner than any other material I had before used. My further trials of this method greatly encouraged my perseverance." In order to exercise this newly invented art, a capital was necessary to construct a press and purchase stones, paper, and other materials. M. Senefelder tried many expedients for that purpose, among which was even offering to enlist as a private in the artillery; but failing in all, he sunk in the deepest despondency. However, the sight of a page of wretchedly printed music suggested to him the idea that his new method would be particularly applicable to music printing; he formed a connection with M. Gleissner, musician of the elector's band, and by means of a common copper-plate press, printed several musical compositions, which were sold with some profit. This encouraged, he and his partner constructed a new press, by which they hoped greatly to facilitate their objects. In this, however, for reasons minutely described in the narrative, they were deceived, and the disappointment induced M. Senefelder to turn his attention to the best form of a lithographic press. After many failures, he induced M. Falier, a music seller, at Munich, to furnish him with means of making a large press with cylinders and a cross, the construction of which M. Senefelder always conceived to be the best adapted for lithographic printing, provided the stones were of sufficient thickness, and despatch not a consideration. The account of his next invention, which was one of great importance, we again give in M. Senefelder's own words. "Being employed to write a prayer book on stone, which was to be done in the common correct hand, I found great difficulty in producing the letters reversed upon the stone. My ordinary method of writing music on stone, was first to trace the whole page with black lead pencil on paper, wet it, place it on the stone, and pass it through a strong press: in this way I got the whole page traced, and reversed on the stone. But this being extremely tender, and easily wiped off, I should have preferred an ink to the pencil. After having tried some experiments with red chalk, and gum water and common writing ink, which did not satisfy me, I prepared a composition of linseed oil, soap, and lamp black, diluted with water, and with this ink I traced the music or letters on paper, and transferred it to the stone, and thus obtained a perfect reversed copy on the latter. This led me to the idea whether it would not be possible to compose an ink possessing the property of transferring itself to the stone, so that the drawing might be made at once complete, and to prepare the paper in such a manner that, under certain circumstances, it might discharge the ink with which writing or drawing was executed on its surface upon the stone plate, and not retain any part of it."

The effort to accomplish this purpose cost M. Senefelder several thousand different experiments; some of which he describes. At length he was successful. "I observed that every liquid, especially a viscous liquid, such as a solution of gum, prevented the ink from attaching itself to the stone. I drew some lines with soap on a newly polished stone, moistened the surface with gum water, and then touched it with oil colour, which adhered only to the places covered with soap. In trying to write music on the stone, with a view to print in this way, I found that the ink ran on the polished surface: this I obviated by washing the stone with soap water or linseed oil, before I began to write; but in order to remove again this cover of grease, which extended over the whole surface, (so that the whole stone would have been black on the application of the colour,) after I had written or drawn on the stone, it was necessary to apply aquafortis, which took it entirely away, and left the characters or drawings untouched. My whole process was therefore as follows:—To wash the polished stone with soap water, to dry it well, to write or draw upon it with the composition ink of soap and wax, then to

etch it with aquafortis, and lastly to prepare it for printing with an infusion of gum water. I had hoped to be able to dispense with the gum water, but was soon convinced that it really enters into chemical affinity with the stone, and stops its pores still more effectually against the fat, and opens them to the water. In less than three days after my first idea, I produced as perfect and clear impressions as any that have since been obtained. Thus this new art had in its very origin arrived at the highest degree of perfection as to the principle, and good and experienced artists were only wanting to show it in all the varieties of application." This new invention, together with that of a lever press, enabled M. Senefelder to carry on his business more extensively. Proceeding with his experiments, he says,—"I discovered that my chemical printing process was not limited to stone only; that other substances, as wood, metal, paper—even fat substances, as wax, shellac, and rosin, might be used instead of it, in some cases, and under certain circumstances." Having obtained an exclusive privilege for exercising his art in Bavaria, he did not consider it any longer necessary to keep the process a secret, and it soon spread over the greater portion of Germany; but his experience enabled him for several years to outstrip all his competitors in so far as the execution of his work was concerned, although, in every other respect, he seemed to be almost the only one in whose hands the art did not give ample returns both for money and labour. In no other way can this uniform want of success be accounted for, than by supposing, that, while the others were making the most of what he had already discovered, he was devoting much of his time to the experimental part of the business. This in fact was the case. About the year 1806, Senefelder came to London for the purpose of establishing himself as a lithographer, but a few months sufficed to convince him that he had little chance of succeeding in his undertaking; and he returned to his own country, where, on his arrival, he found that many attempts had been made in his absence to deprive him of the benefit of his privilege. Amongst the most forward in this scheme besides M. Schmidt, professor of the royal college, were two of his brothers, to whom he had communicated all the secrets of the art, and it took some time to counteract the bad effects of their ungenerous conduct. Finding that, in his native place (Munich), others were reaping many of the advantages which by right should have been the reward of his own industry, he was induced to go to Vienna, for the purpose of superintending a calico-printing establishment, the operations of which were to be conducted on the principles of the new art; and here, for the space of several years, his talents were entirely devoted to this new undertaking; but, at the end of which time, from a variety of causes over which he had no control, he was again thrown upon the world, destitute of every thing save the resources of his own genius. It was not till about the year 1809 that Senefelder was extricated from the difficulties of his situation, by being appointed inspector of the royal lithographic establishment at Munich, which at once placed him above the necessity of exercising his profession as a means for gaining his daily subsistence, and enabled him to devote a portion of his time to the improvement of such branches of the art, as, in his former circumstances, he had never found it possible to effect. He died at Munich, February 26, 1834, in the sixty-third year of his age.

\* *Forget Me Not; a Christmas and New Year's Present for 1823.* Crown 12mo. pp. 400. Published in November, 1822. The example of Mr. Ackerman was followed by two powerful rivals: the first of which was, in 1825, *The Literary Souvenir; or Cabinet of Poetry and Romance*, edited by Alric A. Watts. pp. 400. London: Hurst, Robinson and Co. Mr. Watts is himself a poet of no mean fame, and of very superior taste in the arts. To him is certainly due the honour of being the first to give to these elegant publications a permanent footing in England. *Friendship's Offering; or the Annual Remembrancer: a Christmas Present and New Year's Gift for 1823.*

for his spirit, activity, intelligence, and honour as a tradesman, that his surviving friends will venerate the character of Mr. Ackerman, so much as for that genuine kindness of heart, that cordial hospitality, that warm beneficence, and that active philanthropy in which it abounded. In the summer of 1830, Mr. Ackerman transferred to his three younger sons and to Mr. Walton, his principal assistant, the establishment which he had founded, and which, by the unremitting labour of forty years, he had brought to its prosperous condition; the eldest son being already established in Regent-street. He terminated his useful and honourable life on the 30th of March, 1834, aged seventy years.

At the close of the *Forget Me Not*, for 1834, are some tributary verses to the memory of Mr. Ackerman: the following are the closing lines:—

Taste and genius round thee cast  
Living radiance to the last—  
Till like evening's silent breath,  
Calm the gentlest touch of Death!  
Now in calm equality  
With the great thy relics be.  
Many a widow's heavenward prayer—  
Many a daughter of despair—  
Many a Muse's pale-checked son—  
Tell us how thy course was run.  
Friend of every noble art,  
Still thou liv'st in many a heart;  
Shall they o'er thy relics weep?  
Let the mortal remnants sleep!  
Earth to earth, and dust to dust—  
Thou'rt already with the just.  
What can claim the spirit's plume?  
Thou'rt already past the tomb.

The above, though anonymous, is believed to be the production of Mr. Frederick Shoberl, the editor of the volume, than whom none could be more capable of appreciating and recording the virtues of the deceased.

1834, April 30. The *Pitt Press*, at Cambridge, opened with great ceremony by the marquis of Camden, who printed from a press erected in the hall, a small sheet in Latin, a description of the building, and a eulogy on the statesmen whose name it bears. The building presents a handsome and highly ornamented gothic edifice; the centre is occupied by a tower, which is supported by two wings. Over the entrance, in the centre, is a lofty and elegant room, for the use of the syndics of the press. The wings furnish store rooms, &c.

1834, April. *The Bibliographer's Manual*; being an account of rare, curious, and useful books, published in or relating to Great Britain and Ireland, from the invention of printing; with bibliographical and critical notices, collations of the rarer articles, and the prices at which they have sold in the present century. By Wm. Thomas Lowndes. Part I. Completed in four vols. 8vo. This work is a useful, if not an indispensable addition to the libraries of historians, antiquaries, and bibliographers, and of all who are interested in the literature of their country.\*

\* Lowndes' *British Librarian*; or book collector's guide to the formation of a library in all branches of literature, science and art, arranged in classes, with prices, critical notes, references, and an index of authors and subjects. Part I. Feb. 1839. London: Whittaker and Co.

1834, May 21. *Died*, Mr. NEWCOMBE, for forty-eight years one of the proprietors of the *Stamford Mercury*, and alderman of that borough, aged seventy-three years.

1834, May 26. *Died*, THOMAS EDWARDS, formerly a considerable bookseller at Halifax, in Yorkshire. He was the youngest son of Mr. William Edwards, noticed at page 832 *ante*. In 1784, Mr. Edwards, senior, when sixty-four years of age, set up his eldest son, James, with a younger brother, John, in business, in Pall-mall, in London, under the firm of Edwards and Sons. Mr. John Edwards died in early life, and the business was conducted for some years by Mr. James Edwards, with great reputation. By success in trade, in about twenty years, he acquired a considerable fortune, and retiring from business, was succeeded by Mr. R. H. Evans, the celebrated book auctioneer. Mr. James Edwards died Jan. 2, 1816, at Harrow-on-the-Hill, to the regret of his numerous friends. Mr. Richard Edwards, another brother, was some time a bookseller in Bond-street, London; but retiring from trade, he obtained an appointment under government, in Minorca. Mr. Thomas Edwards, after his father's death, continued as a bookseller, at Halifax, with high reputation for many years, but lately retired from business to Southport, where he died. He left a widow and family to lament the loss of a most worthy man.

1834, May. A law was enacted at the Man-ritas, that required a license previous to the publication of any newspaper or public journal.

1834, June 7. Two splendid tea services of silver plate were presented to the proprietor and editor of the *Carlisle Journal*, by the reformers of East Cumberland. Each of the services consist of a tea-pot, sugar basin, cream ewer, and sugar tongs; bearing the following inscription:

Presented,  
By the Reformers of East Cumberland,  
to  
MARGARET JOLLIE,  
One of the Proprietors of the *Carlisle Journal*;  
The unflinching supporter of  
The cause of the People.  
June 7, 1834.

Presented,  
By the Reformers of East Cumberland,  
to  
JAMES STEEL,  
Editor and Proprietor of the *Carlisle Journal*,  
As a token of their approbation of his exertions  
in the cause of the People.  
June 7, 1834.

1834, June. THOMAS BUCKLES, a native of Coventry, a journeyman printer, drowned whilst bathing at Evesham, leaving a wife and three children.

1834, July 7. *Died*, WILLIAM TELPHORD, for many years a worthy and respected journeyman printer, on the *Gloucester Journal*. He died suddenly, aged seventy-nine years.

1834, July 11. *Died*, BENJAMIN CROMPTON, printer and bookseller, at Bury, in Lancashire, in the fifty-eighth year of his age. Mr. Crompt-

ton had been for forty years a highly respectable local preacher in the Wesleyan methodist connexion. He was an affectionate father, a kind master, and a humble and sincere Christian.

1834, July 27. The duty on almanacks repealed to the amount of £25,000.

1834. The number of advertisements published in Great Britain, was 1,110,000 at one shilling and sixpence each.

1834, Aug. 4. HENRY HETHERINGTON, printer, in the Strand, London, convicted in his absence, he having neglected to obey the magistrate's summons, in two penalties of £20 each, for vending two numbers of the *Twopenny Weekly Despatch*, an unstamped newspaper.

1834, Aug. 27. *Died*, GEORGE CLYMER, inventor and manufacturer of the Columbian printing press. He was descended from a Swiss family, who left Geneva, and settled in Pennsylvania, in North America, long before the revolution of 1776, and in that struggle for liberty they took an active part, for a Clymer appears among the signatures to the declaration of independence. Mr. Clymer's father was an extensive farmer, settled in Bucks county, state of Pennsylvania, and brought up the subject of this memoir till about the sixteenth year of his age, who, even at that very early period, showed very superior mechanical skill in the construction of a plough, on a new and greatly improved principle, so infinitely superior to those then in use, as to attract the attention of the most scientific men of the day. After many years spent at carpenter work and cabinet making, he turned his attention to the study of hydraulics, in which he soon excelled most of his predecessors in the construction of a pump, the superiority of which was proved in clearing the coffer-dams of the first permanent bridge erected across the Schuylkill, at Philadelphia. This pump was capable of discharging five hundred gallons of water per minute, together with sand, gravel, stones, &c. Such was its amazing power, that eighteen and twenty-four pound shot have often been pumped up and discharged by one individual. For this invention he obtained a patent at Washington, and subsequently one in England. The crude and defective condition of the printing press was the next object which took his attention; and in 1797, Mr. Clymer commenced his improvements first upon the old wooden presses, and afterwards of metal, till by great attention and anxiety he produced the *Columbian*, which he introduced into England in the year 1817. Without wishing to detract from the merits of one or two other presses, now generally used, it must be acknowledged, and that upon the authority of many experienced journeymen printers, that there is not a press by which the workman can do a day's labour with less exertion to himself than the *Columbian*. Its beauty, simplicity of construction, durability, and power, must ever rank this press as the most perfect ever invented. Mr. Clymer, for his invention, had the honour of receiving a gold medal of the value of one hundred golden

ducats from the king of the Netherlands.\* On one side is a correct likeness of his majesty, beautifully executed, surrounded with

WILLM. MASS. DELG. REZ. LUXEM. M. DUX;

and on the other side is the following inscription, surrounded with a wreath of exquisite workmanship—

GEORGIO  
CLYMERO  
VIRGO SOLERTISSIMO  
PRO ORLATO  
PERITO TYPOGRAPHICO  
SINGULARI ARTE  
CONFECTO  
REZ  
DEDIT  
MDCCCCIII.

Mr. Clymer married Margaret, daughter of the late judge Backhouse, of Durham iron works, Pennsylvania, by whom he had several children; but only three daughters survived him. The youngest daughter was married to Mr. Alexander Kenfrew Shaw, of Finsbury-street, London.† In person Mr. George Clymer was rather tall, with a manly and dignified countenance; the true index to a noble and generous mind. He was a good husband, a firm friend, and an indulgent parent. He died in London, at the advanced age of eighty years.

1834, Sept. 3. T. S. DUNCOMBE, esq., M.P., sent a challenge to Mr. Fraser, proprietor of *Fraser's Magazine*, for an article inserted therein, animadverting on that gentleman's public conduct. Mr. Fraser very justly had him bound over to keep the peace in a bond of £500.

1834, Sept. 16. *Died*, WILLIAM BLACKWOOD, an eminent bookseller and publisher, in the city of Edinburgh, and originator of the magazine which bears his name. He was born in Edinburgh, December 20, 1776, of parents who, though in humble circumstances, bore a respectable character, and were able to give him a superior elementary education; and his devotion to literature determined them in the choice of his calling. At the age of fourteen, he commenced an apprenticeship with the well-known house of Bell and Bradfute, booksellers, in Edinburgh, and before he quitted their roof, had largely stored his mind with reading of all sorts, but more especially Scottish History and Antiquities. Soon after the expiration of his apprenticeship, [1797] he was selected by Messrs. J. Mundell and Co. then carrying on an extensive publishing business in the Scottish capital, to take the charge of a branch of their concern, which they had resolved to establish in the city of Glasgow. Mr. Blackwood acted as the Glasgow agent of Mundell and Co. for a year, during which time he improved greatly as a man of business. At the end of the year, when the business he had

\* The medal weighs between eleven and twelve ounces, and was allowed by several scientific gentlemen to be the most elegant they had ever seen.

See Testimonials respecting the superiority, utility, and durability of the *Patent Columbian Printing Press*. 1826.

† Where the *Columbian* press continues to be manufactured. December 31, 1838.

conducted at Glasgow was given up, Mr. Blackwood returned to Messrs. Bell and Bradfute, with whom he continued about a year longer. He then [1800] entered into partnership with Mr. Robert Ross, a bookseller of some standing, who also acted as an auctioneer of books. Not long after, finding the line of business pursued by Mr. Ross uncongenial to his taste, he retired from the partnership, and proceeded to London, placed himself, for improvement in the antiquarian department of his trade, under Mr. Cuthill. Returning once more to Edinburgh in the year 1804, he established himself in business, where his accomplishments soon attracted the notice of persons whose good opinion was distinction. For many years he confined his attention almost exclusively to the classical and antiquarian branches of the trade, and was regarded as one of the best informed booksellers of that class in the kingdom; but on removing from the Old to the New Town of Edinburgh, in 1816, he disposed of his stock, and thenceforth applied himself, with characteristic ardour, to general literature, and the business of a popular publisher. In April, 1817, he put forth the first number of his journal—the most important feature of his professional career. He had long before contemplated the possibility of once more raising magazine literature to a rank not altogether unworthy of the great names which had been enlisted in its service in a preceding age: it was no sudden or fortuitous suggestion which prompted him to take up the enterprise, in which he was afterwards so pre-eminently successful as to command many honourable imitators. From an early period of its progress, his magazine engrossed a very large share of his time; and though he scarcely ever wrote for its pages himself, the general management and arrangement of it, with the very extensive literary correspondence which this involved, and the constant superintendence of the press, would have been more than enough to occupy entirely any man but one of first-rate energies.

No man ever conducted business of all sorts in a more direct and manly manner. His opinion was on all occasions distinctly expressed—his questions were ever explicit—his answers conclusive. His sincerity might sometimes be considered as rough, but no human being ever accused him either of flattering or of shuffling; and those men of letters who were in frequent communication with him, soon conceived a respect and confidence for him, which, save in a very few instances, ripened into cordial regard and friendship. The masculine steadiness, and imperturbable resolution of his character, were impressed on all his proceedings; and it will be allowed by those who watched him through his career, as the publisher of a literary and political miscellany, that these qualities were more than once very severely tested. He dealt by parties exactly as he did by individuals. Whether his principles were right or wrong, they were *his*, and he never compromised or complimented away one tittle of them. No changes, either of

men or of measures, ever dimmed his eye, or checked his courage. To youthful merit he was a ready and a generous friend, and in all respects a man of large and liberal heart and temper. During some of the best years of his life, he found time, in the midst of his own pressing business, to take rather a prominent part in the affairs of the city of Edinburgh, of which he was twice a magistrate. Notwithstanding the great claims which were made upon his time, Mr. Blackwood continued till his death to transact a large share of business as a general publisher. Not long before that event, he completed the *Edinburgh Encyclopedia*, in 18 vols. 4to. and, among his other more important publications, may be reckoned Kerr's\* *Collections of Voyages and Travels*, in 18 vols. 8vo. The chief distinct works of Messrs. Wilson, Lockhart, Hogg, Moir, Galt, and eminent persons connected with his magazine, and some of the writings of sir Walter Scott, were published by Mr. Blackwood. He also continued till the close of his career to carry on an extensive trade in retail bookselling. In the private relations, as in the public conduct of his life, William Blackwood may safely be recommended as a model to those who come after him. He died at his house, in Ainslie-place, Edinburgh, on Tuesday, Sept. 16, in the fifty-eighth year of his age, leaving a widow, and a large family, some of them very young; his two eldest sons succeeded to the business, in which, from boyhood they were associated with their father.

1834, Oct. 10. The newspaper postage act came into operation this day. All foreign newspapers coming from countries where British journals circulate free of postage, allowed free admission to all parts of the British islands and colonies.

1834, Oct. 25. THOMAS CHARLES WILSON MAYHEW, proprietor and projector of several cheap popular works, having been connected with the *Figaro*, *Lo Studio*, the *Diamond Shakespeare*, the *Popular Dictionary of Universal Information*, &c. &c. At the time of his decease he was occupied in four periodical publications, a *History of England*, a *Cyclopædia*, a *Translation of French Plays*, and the *National Library*. The application which such a variety of literary labours required, together with certain complicated pecuniary transactions connected with the last, led to his death. The verdict of the coroner's jury was, that he "destroyed himself with prussic acid and fumes of charcoal, being in an unsound state of mind." His death took place in Bernard's Inn, London.

1834, Nov. 26. DIED, L. B. SEELEY, bookseller, of Fleet-street, London. He died at Thames Ditton, aged sixty-eight years.

\* Robert Kerr, F. R. S. and F. S. A., of Edinburgh, author of the *Life of William Smeltie*, printer, 1811. A general collection of voyages and travels, 18 vols. 8vo., and many other works. In 1794 he commenced a paper manufactory, by which he lost a considerable property. His father was an eminent citizen and tradesman at Edinburgh, where Robert Kerr was born in 1756, and died October 17, 1815.

1834, Dec. 6. *Died*, RICHARD MILLIKEN, bookseller and publisher, in the city of Dublin, in his fifty-first year. A man more estimable in the relations of private life, or in his intercourse with his fellow-citizens—a man more beloved by those who shared in his friendship and acquaintance, and more sincerely regretted, never lived.

"Peace to the memory of a man of worth,  
A man of letters, and of manners too—  
Of manners sweet as virtue always wears  
When gay good nature dresses her in smiles."

1834, Dec. 10. *Died*, ALEXANDER CHALMERS,\* F.S.A., an eminent biographer, and for many years connected with the periodical press of London, in the *General Advertiser*, *St. James's Chronicle*, *Morning Chronicle*, and as editor of the *Morning Herald*. He was the youngest son of James Chalmers, the original proprietor of the *Aberdeen Journal*,† and born in that city, March 29, 1759: after receiving a classical and medical education, he left his native place about the year 1717, and, what is remarkable, never returned to it. He had obtained the situation of surgeon in the West Indies, and had arrived at Portsmouth to join his ship, when he suddenly altered his mind, and proceeded to the metropolis. He soon became connected with the periodical press, and was engaged in business with Mr. George Robinson, the celebrated publisher in Paternoster-row. The work on which Mr. Chalmers' fame as an author chiefly rests, is the *General Biographical Dictionary*, containing an historical and critical account of the most eminent men in every nation, particularly the British and the Irish, in 32 vols. 8vo. 1812-17. The total number of articles exceed 9000.

#### SONNET

To Alexander Chalmers, on his *Lives of English Poets*.

Chalmers, I read thy biographic lore  
With the fond pleasure of a friend sincere,  
Thy judgment sound and moral worth revere,  
And still, the more I read, admire the more  
The vast abundance of thy mental store.  
Thy comments are sagacious, just and clear;  
Candour and truth in every page appear,  
And canst thou each poet's due explore,  
Combine these proofs of literary pow'r,  
In which thy talents with such lustre shine,  
Then wilt thou nobly charm the studious hour,  
Enlarge our knowledge and our taste refine,  
For thou with Johnson's pious zeal canst tower,  
His pure devotion not surpassing thine.

JOHN TAYLOR.

Mr. Chalmers was most indefatigable and laborious in the cause of literature. No man conducted so many works for the booksellers of London; and his attention to accuracy of collation; his depth of research as to facts, and his discrimination as to the character of the authors, under his review, cannot be too highly praised. With most of the principal printers and booksellers he lived on terms of the greatest intimacy for fifty years, and has frequently recorded his esteem for them in the pages of the *Gentleman's*

*Magazine*. He was in the strictest sense of the word, an honest, honourable man, a warm and affectionate friend, and a delightful companion. In 1783, he married Elizabeth, the widow of Mr. John Gillett, printer; she died June, 1816. Mr. Chalmers died at London, aged seventy-five years. He left a very valuable library, principally relative to biography and literary history, which was disposed of by auction.

1834, Feb. 15. *The Printing Machine; a Review for the Many*, No. 1, with the following notice:—"What the printing press did for the instruction of the masses in the fifteenth century, the printing machine is doing in the nineteenth. Each represents an era in the diffusion of knowledge; and each may be taken as a symbol of the intellectual character of the age of its employment.—*Penny Magazine*." This was a monthly publication issued by the society for the diffusion of useful knowledge. Price fourpence.

1834. The following newspapers were published in Australia:—the *True Colonist*, by Mr. G. Robertson; *Cornwall Chronicle*, by Captain William Lushington Goodwin; and the *Sydney Times*, by Mr. N. Kentish. The last was soon discontinued.

1835, Jan. 2. *Died*, Rev. ROBERT HINDMARSH, the most distinguished as a minister amongst those who supported the opinions of the honourable Emanuel Swedenborg,\* known as the New Jerusalem church. He was born Nov. 8, 1759, at Alnwick, in Northumberland. His father was a man of literary attainments, one of the travelling preachers among the methodists, and for several years master of Kingswood school, near Bristol; but not, it is supposed, during the period, or the whole of the period, that his son Robert was there. Robert left Kingswood soon after he had attained the age of fourteen, having acquired great proficiency in both the Latin and the Greek languages, and in some branches of science. When he was removed from school, he was placed with a printer in London, which business he afterwards carried on for many years on his own account. In the year 1778, when he was about nineteen years of age, he became converted to those opinions which he strenuously advocated during the remainder of his life. Though Mr. Hindmarsh married early, set up in business, and was soon surrounded with the cares of a family, he did not neglect his studies; and as his business demanded most of his time in the day, he often borrowed many hours from the night. In December, 1783, he inserted an advertisement in the newspapers, requesting that the readers and admirers of the theological writing of the hon. Emanuel Swedenborg, would meet at the London Coffee-house, Ludgate-hill. Only five individuals assembled; yet these, it is supposed, were nearly the whole of the persons resident in London, who at that time had any knowledge of, or attachment to those writings.

\* His grandfather, the rev. James Chalmers, professor of divinity in the Marischal college, Aberdeen, died much regretted, Oct. 5, 1744, aged fifty-eight.

† The *Aberdeen Journal* is now carried on by David Chalmers, grandson of its first institutor, James Chalmers.

\* The hon. Emanuel Swedenborg was an eminent mathematical and philosophical writer. He was born at Stockholm, in Sweden, Jan. 2, 1689, and died at Rastcliff, near London, March 29, 1772.

About the same time a society had been formed at Manchester, under the auspices of the rev. John Clowes,\* rector of St. John's, in that town. In 1788, Mr. Hindmarsh and a few others engaged a chapel in Great Eastcheap, which was opened on January 27th; his father, the rev. James Hindmarsh, who had received the doctrines, through the instrumentality of the son, officiated in the pulpit, and the late Mr. Isaac Hawkins, who had also been in Mr. Wesley's connexion, as a local preacher, in the desk. In 1790, Mr. Hindmarsh commenced a periodical, bearing the title of the *New Magazine of Knowledge concerning Heaven and Hell*, which title he altered, after some time, to that of the *New Jerusalem Journal*. Having seen it advisable to withdraw altogether from secular business, he retired, in the year 1810, to Manchester, where some liberal admirers of his talents warmly solicited him to engage regularly in the ministerial office: he saw it his duty to comply. A large and neat chapel was built for him, in Salford, where he speedily attracted many admirers, and drew together a considerable congregation. For about sixteen years he continued in the active duties of his office, both as a most effective missionary and a stationary preacher. At length, about 1826, finding his strength of body and activity of spirits less adequate than formerly to his arduous duties, he finally withdrew into retirement, preaching only upon particular occasions, in London, and different parts of the country. After relinquishing the profession of printing, Mr. Hindmarsh for some time engaged in business as a stock-broker, during which period, by an artfully laid plot, he lost a considerable sum of money. For the protracted period of upwards of half a century, Mr. Hindmarsh cheerfully devoted his time, his learning, his talents, his influence, and what he

could secure from but scanty means of support, to his religious service. He maintained in all the relations of life, as a husband, a father, a minister, and a friend, that uncompromising integrity, that devotion to duty, that ardent attachment, which combining with true Christian piety and even child-like humility, commanded the universal affection and respect of all who had the privilege of his association. He died at Gravesend, in Kent. His published works were rather numerous; and the most admired of them, after his *Letters to Priestley*, is his *Vindication of the New Church*, in answer to Mr. Pike, a Baptist minister of Derby.

1835, Jan. 7. Died, JOHN FLETCHER, who for more than half a century was the proprietor and printer of the *Chester Chronicle*. He was born of humble, but reputable parents, at Halton, in the county of Chester; he was the architect of his own fortune, and rose, by the force of his genius and talent alone, to considerable eminence among scientific men, and to the distinguished honour of having twice filled the office of chief magistrate of that city. The history of his life is curious and instructive, and furnishes an important practical lesson of the value of temperance, prudence, persevering industry, unsullied probity, and uncompromising integrity, in all the relations of social life. It will suffice to say, that in him, his servants of every degree, and those who were in any way dependent upon him, lost a liberal and considerate master; his fellow-citizens, an upright and intelligent magistrate; the cause of public and private charity, a munificent benefactor; and the community among whom he lived, a kind-hearted and benevolent man. His frame, long attenuated by many years of severe bodily suffering, was gradually wasted away by his inability to take any nutritious aliment; but his mental faculties continued unimpaired until within a few moments of his dissolution. He departed this life in the eightieth year of his age.

1835, March 25. 5 Will. IV. c. 2. An Act to amend 39 Geo. III. c. 78,\* for preventing the mischiefs arising from the printing and publishing newspapers, and papers of a like nature, by persons not known, and for regulating the printing and publication of such papers in other respects; and to discontinue certain actions commenced under the provisions of the said act.

1835, March 26. MURDO YOUNG, proprietor of the *Sun*, London daily newspaper, received from the tradesmen of Sheffield a present, consisting of a morocco case, containing a beautiful specimen of Sheffield manufacture, for the manner in which he forwarded, by express, the parliamentary intelligence upon the division of the house of commons for the choice of speaker. Mr. Young likewise received a present from the liberal party of Manchester.

1835, March. HENRY WINTER, editor of the *Public Ledger*, published at St. John's, Newfoundland, was set upon by five or six ruffians,

\* The Rev. John Clowes was born in Manchester, Oct. 20, 1743, O. S. He was the fourth son of Joseph Clowes, esq., a barrister. He was educated at the Grammar School of Manchester, and at the age of 18, his father was persuaded to send him to Cambridge. He was entered a pensioner of Trinity college, where he pursued his academical studies with the perseverance and ability which distinguished all that he undertook in after life; for in the year 1766, when he took his degree, he was the eighth wrangler on the Tripos Paper, proving that he was no ordinary proficient in mathematical attainments; and that he was equally distinguished as a classical scholar, is shown by his gaining one of the two prizes given by the members of the university to the middle bachelors, for the best dissertations in Latin prose; and again, the following year, when he was senior bachelor, the first prize for a similar dissertation. About this time he was elected a fellow of his college, had many private pupils, and was highly respected. In the midst of this career of worldly distinction, the church of St. John, Manchester, then building, at the sole expense of the late Edward Syrom, esq., was offered him by the patron; which he accepted, and continued its rector, refusing more than one offer of high preferment in the church, for the long term of sixty-two years.—In the spring of the year 1773, he became acquainted with the theological works of the hon. Emanuel Swedenborg, and from that time he dedicated all the energies of his powerful mind to the publication of those doctrines, both in the pulpit and by the press. During the latter years of his life he resided wholly at Warwick; and there, blessing to the last moment of consciousness those around him, and blessed by all who came within the circle of his affections, he departed this life on the 26th May, 1831, in the eighty-eighth year of his age.

\* See page 960 ante.

with their faces blackened, and otherwise disfigured, who cut off his ears, part of one of his cheeks, and beat and kicked him in a most brutal manner. A reward of £200 was offered by the government for their apprehension.

1835, April 17. *Died*, WILLIAM HENRY IRELAND, some time editor of the *York Herald*, and whose name is rendered notorious by one of the boldest literary impostures recorded in English history. He was the son of Samuel Ireland,\* born in London, and educated at Soho school; after which he was articled to a conveyancer in New Inn, where having some leisure he began to exercise his ingenuity in the imitation of ancient writing. His success in these attempts set him upon the bold design of forging some papers, and passing them off as the genuine remains of Shakspeare. Having executed some of these on the blank leaves of old books, he communicated the treasure to his father, who, strange to say, made a parade of the discovery to the world, without secretly examining into the authenticity of the manuscripts, and the truth of the tale which he related concerning the manner of his obtaining them. For some time the public were greatly amused by these literary relics, and a few individuals, whose names stood high in the literary world, ought to have known better than to have lent themselves to the support of this gross imposition, and encourage, by subscription, a collection which was a disgrace to literature. A splendid volume made its appearance in 1796, and a play was performed at Drury-lane theatre with the title of *Vortigern*; but this last dissolved the spell, and the discernment of an English audience quickly detected the cheat, of which no doubt could be entertained after the ample exposure it experienced from Mr. Malone.

In 1796, Mr. Ireland published *An Authentic Account of the Shakspeare Manuscripts*, 8vo. in which he makes the following declaration:

"I solemnly declare first, that my father was perfectly unacquainted with the whole affair, believing the papers most firmly the productions of Shakspeare. Secondly, that I am myself both the author and writer, and had no aid from any soul living, and that I should never have gone so far, but that the world praised the papers so much, and thereby flattered my vanity. Thirdly, that any publication which may appear, tending to prove the manuscripts genuine, or to contradict what is here stated, is false; this being the true account. W. H. Ireland."

Besides the tragedy of *Vortigern*, Mr. Ireland produced an historical drama, entitled *Henry II.*, which he wished to impose upon the world as the genuine production of Shakspeare. He was also the author of several novels, romances, and poems.

\* Samuel Ireland, was originally a mechanic in Spitalfields, London, but having a turn for drawing and engraving, he sought to turn it to account by publishing travels, adorned with prints. With this view he published a *Picturesque Tour through Holland, Brabant, and part of France*, in 1790, which was followed in 1792, by *Picturesque Views on the River Thames*, 8vo.; and in 1793, *Picturesque Views on the River Medway*. In 1794, he published *Graphic Illustrations of Hogarth*. Mr. Ireland's last work was *Picturesque Views, with an Historical Account of the Inns of Court*. He died June 11, 1809.

1835, May 9. *Died*, DAVID HILTON, a respectable news-vender of London, and honorary secretary to the news-venders' society, the duties of which he discharged with exemplary assiduity and fidelity, under circumstances that imposed upon him no ordinary responsibility. He was particularly instrumental in procuring the abolition of the monopoly of the post-office clerks in regard to the sale of newspapers. This monopoly was an extreme hardship upon the independent tradesman. Mr. Hilton was descended from the Hiltons, of Hilton castle, in the county of Durham, a family once possessed of great wealth and high distinction, but which ultimately fell into decay. His remains were interred in the burial ground of St. James's, Clerkenwell.

1835, May 15. Mr. WINKS, printer, Leicester, convicted in the penalty of £5, for not having registered his printing-press according to law.

1835, May 15. A petition from the lord mayor, alderman, and common council of the city of London, was presented to the house of lords, praying for the abolition of the stamp duties on newspapers. In the course of the session, there were presented to the house of commons 142 petitions with 57,848 signatures, praying for the same. Two petitions, with thirty signatures, were presented against the repeal of duty.

1835, May 16. *Died*, RICHARD HARRIS, formerly printer of the *Sun* London daily paper, and for many years clerk and publisher of the *London Gazette*. Mr. Harris died at Kensington, aged seventy-two years.

1835, June 18. *Died*, WILLIAM COBBETT, M.P. for Oldham, a celebrated political writer, and for forty years connected with the periodical press of England. He is one of those *outré* animals that cannot be described. As a writer, his essays, sermons, and speeches; his dissertations upon English grammar\* and straw plait, his speculations upon currency† and Swedish turnips; set criticism at defiance, and completely bewilder the reader with the versatility of his genius—or, we should rather say, with the intermixed display of sound sense and insanity, with which all his productions abound. He was the third of four sons of a small farmer and publican, at Farnham, in Surrey, and bred to his father's occupation, till in 1783 he privately quitted his home, and repaired to London, where he became "an understapping quill driver," as he calls himself, to an attorney in Gray's Inn. This employment not suiting his restless disposition, he repaired, in 1784, to Chatham, and enlisted into a marching regiment, which he joined the

\* It is a curious fact, that whilst in England the government could scarcely resist the urgency of the applications made to abolish the duty on newspapers, the government of Calcutta was urged by the liberal press (the *Englishman* and *Hibernian*) to lay a stamp duty on newspapers, in order that they might circulate free in the provinces.

† He learned grammar, he says, when he was a soldier on sixpence per day.

‡ At the time that Cobbett was directing all his energies to write down the paper system, his numerous speculations were supported by accommodation paper to the amount of £60,000. This was stated by Mr. Scarlett, now lord Abinger, on his trial, in December, 1826.

year following, in Nova Scotia, North America. In 1791, his regiment was relieved and sent home, and Mr. Cobbett having, in a service of near eight years, attained the rank of serjeant-major, obtained his discharge. In 1792, he visited France, and from thence went to America.\* In 1801, he returned to England, and opened a bookseller's shop, with the sign of the Bible and Crown, in Pall-mall, London, where, after publishing the *Porcupine*,† a daily newspaper, he commenced his far-famed *Register*; and soon became, amongst the working classes, the most popular writer in England. He spoke their sentiments, and in some measure formed them, to his own taste and their entire satisfaction. His happy dexterity at illustration,—at reducing the most abstruse subject to the capacity of the most illiterate reader,—the bluntness and coarseness of his language, combined with its force and its perspicuity, made him with the multitude, the oracle of the day. The tradesman and mechanic devoured his predictions with avidity, as if they had been inspired; and however dependent was their situation at the time, or however liable they were to become poorer in their circumstances by any revolution or general bankruptcy, they seemed to enjoy him the better, the more firmly and confidently he dilated upon the "unavoidable and impending" ruin of the nation. His whole life is intimately connected with the freedom of the press. Against him and one or two writers of a similar cast, were most of those laws, that hung so long like so many millstones round the neck of the press, aimed. It might be said that they were enacted to put him down; and drive him, and such as he, from the theatre of politics; and by stamp duties and penalties, be the means of extirpating those insidious and dangerous opinions, to counteract the tendency of which no specific could then be found. But, as all the stamp duties and imposts which ever were enacted, could not answer the end intended, or prevent the circulation of newspapers inimical to the government, it has been thought proper to concede a portion of the duty, as a matter of state policy. Mr. Cobbett lived to witness the great change in the constitution; and, as far as his ambition was concerned, was returned a member of the first reformed house of commons, for the borough of Oldham, in Lancashire, which he represented at the time of his decease. As a party writer, the following masterly sketch was given by a cotemporary author:—"There is one great merit in Mr. Cobbett—and one only—which is perhaps peculiar to him among the party-writers of the day. There is not a page of his that has ever come under our notice, wherein there does not breathe throughout, amid his absurdities of violence and inconsistency, the strongest feeling for the welfare of the people. His feeling is in nine cases in ten totally misdirected; but there it is, a living and vigorous sympathy with the interests and hopes of the

mass of mankind. Many persons will be ready to maintain, because he has shown himself at various times as not very scrupulous for truth, that he has no real and sincere good quality whatsoever, and that he merely writes what is calculated to be popular. But we confess we are inclined to think, from the tone and spirit of his works, that he commonly persuades himself he believes what he is saying, and feels deeply at the moment what he expresses strongly. It is obvious to us that, while he puts forth against his opponents the most unmeasured malignity, there is a true and hearty kindliness in all that he writes about, or to, the people. He seems to us to speak of the poorer classes as if he still felt about him the atmosphere of the cottage,—not as if he were robed in ermine or lawn, or in the sable gown of a professor,—but in the smock frock of the peasant. And it would be useful, therefore, to peers and bishops, parliamentary orators and university dogmatists, if they would now and then read the books they always rail at. They would find in them a portrait thrilling with all the pulses of animation, with the thoughts and desires of a class, the largest and therefore the most important in society, among whom that which is universal and eternal in our nature displays itself under a totally different aspect from that which it wears among us. Mr. Cobbett's personal consciousness of all which is concealed from our eyes by gray jackets and clouted shoes, has kept alive his sympathy with the majority of mankind; and this is indeed a merit which can be attributed to but few political writers. And, far more than this, it is a merit which belongs to no one we remember but himself and Burns, among all the persons that have raised themselves from the lowest condition of life into eminence." Mr. Cobbett was, at the time of his decease, aged seventy-three years. He left a wife and seven children; the three eldest sons, William, John, and James, are all bred to the bar. He was buried in his native village, and his funeral was attended by a vast concourse of people, including many friends and members of parliament. Arrangements have been made for the erection of a monument to perpetuate his memory.

1835, July 1. The proprietors of the *John Bull*, London newspaper, brought an action in the court of common pleas, against Mr. Rosier, who, it was alleged, had induced the editor to publish a libellous paragraph on an individual, on his engagement to taking the responsibility. The person against whom the paragraph was directed having recovered damages from the newspaper proprietors, this action was brought to compel the author of the libel to defray the expenses. The jury returned a verdict for the plaintiffs.

1835, July 12. *Died*, WILLIAM PRESTON, of the firm of Preston and Heaton, printers, at Newcastle-upon-Tyne. Mr. Preston was a native of Lancashire, and went to Newcastle in the year 1784, where he for many years discharged the duty of overseer in the office of the *Chronicle*

See page 777, ante.

† See page 810, ante.

newspaper, and for some years that of editor, in which capacity he ably supported those liberal principles to which he was, through life, most ardently attached, in a very spirited and independent manner, at a time when the maintaining independent principles was a matter of considerable danger. Mr. Preston died, aged eighty.

During his long residence in Newcastle, he endeared himself to an extensive circle of acquaintance, by his uniformly kind, cheerful, and social temper, by his mild unassuming manners, and by his benevolent and guileless disposition. His memory will long be cherished by a numerous body of friends, to whom his death has proved a sincere source of regret, and it may, we are sure, with truth be asserted of him, that he left not an enemy behind.

All honour to him, who, with spirit unshaken,  
Midst dangers undaunted, still dares to be true;  
Whose pen could each echo of liberty waken,  
As they slumbered around in the hearts of the few.

All honour to him, who, with magical sallies,  
Shed rapture, like light, round the wit-hallowed board,  
Who banished alike envy, dulness, and malice,—  
In the true heart of manhood who struck every chord.

1835, July 17. *Died*, JOHN STANFIELD, bookseller and printer, at Bradford, Yorkshire, in the sixty-first year of his age.

1835. L'IMPRIMERIE ROYALE,\* or the government printing-office, Vieil. Rue du Temple, Paris, contained at this time fifty-six sets of oriental characters, 126,000 Chinese *groupes*, and comprised all the known alphabets of the Asiatic nations, ancient as well as modern, and sixteen sets of the alphabets of European countries, where the Latin characters are not used, as with us. The total weight of types is at least eighty-three tons English, being sufficient to print 7812 sheets octavo, at the same time making about 260 volumes, or 125,000 pages. There are one hundred common presses and six steam machines, which are allowed to strike off 278,000 sheets, or 556 reams of paper in a-day, which is equal to 9266 volumes octavo, of thirty sheets per volume. This immense stock enables the establishment to keep the presses set with 5000

formula of the public offices. The annual consumption of paper by the royal printing-presses is from eighty to one hundred thousand reams, or 261 to 326 reams per working day. The number of workmen usually employed is from 350 to 450.

1835, Aug. 14. The printing-office of Messrs. Dewick and Son, in Barbican, London, together with houses and property of considerable value, destroyed by fire.

1835, Aug. 20. *Died*, JOHN TYMMS, formerly proprietor of the *Worcester Journal*. He died at Worcester, aged eighty-four years.

1835, Aug. 25. *Died*, EVAN WILLIAMS, who had been for upwards of forty years a Cambrian bookseller in the Strand, London, and for thirty-five years a most active member of the Welsh charity school. Mr. Williams died at Pentonville, aged eighty-six years.

1835, Aug. 28. *Died*, MR. CHATER, of the firm of Grosvenor and Chater, stationers, Cornhill, London. Mr. Chater was giving evidence before the lord mayor, at the mansion house, in favour of his servant, when he was so affected that he burst a blood vessel internally, and immediately dropped in the arms of the marshal, and expired, aged seventy-two years.

1835, Sept. 4. The third centenary of the publication of the *first English Bible*, by Miles Coverdale. See page 260 ante.

1835, Sept. Upwards of twenty newspaper establishments destroyed in a calamitous fire at New York, in North America.

1835, Sept. 11. *Died*, THOMAS BENSLEY, an eminent printer, of London. He was the son of a printer, in the neighbourhood of the Strand, where Mr. Bensley was first established; but he afterwards removed to Bolt-court, Fleet-street, where he succeeded Mr. Edward Allen, the "dear friend" of Dr. Johnson. Mr. Bensley's skill as a practical printer, was not inferior to that of his great cotemporary, Mr. Bulmer.

"Pleased as we now the grateful strain pursue,  
Two sons of science pass before our view,  
Who to their work's perfection can impart,  
And snatch from barb'rous hands our sinking art;  
Their skill the sharp fine outline still supplies;  
From rellum leaves their graceful types arise;  
And whilst our breasts the rival hopes expand,  
Bulmer and Bensley well-earn'd praise demand."

\* Founded by Francis I. in the year 1563, see p. 284, ante.

A French periodical of 1836, contained the following interesting calculations concerning the longevity of Parisian printers, of that period:—In twenty-three printing-offices, in Paris, there were noticed in each, printers whose ages range from forty to seventy years. An aged master printer asserted that he had known more than fifty compositors or pressmen who had passed their sixtieth year. Among thirty-five persons engaged in one office, one-third ranged from forty-five to seventy years of age. A printer who worked in an office a few years ago, said there were, out of forty workmen, twenty-five whose ages ranged from fifty to seventy years. The office was very appropriately termed *imprimerie à cheveux blancs*, or "the printing-office of the grey beards." There are seventeen printers now working in Paris, of whom seven are seventy years of age, one eighty, and another eighty-two. A printer worked in the office of Didot, the younger, until his death, when he was eighty-six years of age; and another continued to work until the age of eighty-four. Among the deaths in Paris, in one year, there were twenty-five printers, whose ages varied from fifty-five to seventy-eight years; among the returns of the hospital for the aged, the deaths of four printers were announced, whose ages were respectively sixty-four, seventy-five, and seventy-eight.

Whilst Mr. Bulmer astonished the public with his magnificent edition of *Boydell's Shakespeare*, Mr. Bensley produced a rival production in *Macklin's Bible*. To use the words of Dr. Dibdin, "While the *Shakespeare* gallery and the *Shakespeare* press were laying such fast hold of the tongues and the purses of the public, a noble spirit of rivalry was evinced by the Macklin's of Fleet-street; Reynolds, West, Opie, Fuseli, Northcote, Hamilton, and others, were engaged to exercise their magic pencils in the decoration of what was called the *Poet's Gallery*, and among other specimens of the national splendour and patriotism came forth the edition of Thom-

\* M'Croery's poem of the *Press*, part 1.

son's *Seasons*, in 1797, in royal folio, from the press of Mr. Bensley; a volume quite worthy of the warmest eulogies."

Mr. Bensley continued a splendid career of typography for many years. On the 6th of Nov. 1807, his premises were much damaged by fire, supposed to have been occasioned by boys letting off fire works, by which some very valuable works were destroyed. To Mr. Bensley's exertions and his money, this country is indebted for the introduction of printing by machinery, as he was the chief person who assisted Mr. König, and witnessed the progress so far as to work off a sheet on both sides. But he had scarcely brought his exertions to a successful issue, before a second unfortunate and very rapid fire, June 26, 1819, again destroyed his warehouses and printing-office, with their valuable contents. The elaborate machinery for steam printing was not materially injured, and the printing-office was soon rebuilt. Soon after this event, Mr. Bensley retired from steam printing, and although he afterwards connected himself with a minor establishment in Crane-court, Fleet-street, resided chiefly at Clapham Rise, where he died.

1835, Sept. 9. By 5 and 6 William IV. c. 65, an act was passed for preventing the publication of lectures without consent.

1. Reciting that printers, publishers, and other persons have taken the liberty of printing and publishing lectures, without the consent of the authors or the persons delivering the same, to the great detriment of such authors and lecturers: allows the authors of lectures, or their assigns to whom they have sold or otherwise conveyed the copy thereof to deliver the same in any school, seminary, institution, or other place, or for any other purpose, the sole right and liberty of printing and publishing the same; penalty on other persons publishing, &c. lectures without leave, or selling the same, a forfeiture of such lectures, with one penny for every sheet found in his custody, either printed, lithographed, or copied, or printing, lithographing, or copying, published or exposed to sale, the one moiety thereof to his majesty, and the other to any person who shall sue for the same.

2. Printers or publishers of newspapers publishing lectures without leave, to be subject to such penalty.

3. Persons having leave to attend lectures, not on that account licensed to publish them.

4 and 5. Act not to prohibit the publishing of lectures after expiration of the time limited by the copyright act; nor to extend to lectures of the delivering of which notice in writing shall not have been given to two justices living within five miles from the place two days at least before their delivery, or to any lecture delivered in any university or public school or college, or on any public foundation, or by any individual in virtue of any gift, endowment, or foundation.

1835, Oct. 2. Died, JOHN MACKAY WILSON, for several years editor of the *Berwick Advertiser*, and the talented author of *Tales of the Border*.

1825, Nov. 1. Died, WILLIAM MOTHERWELL,

editor of the *Glasgow Courier*, and a poet of no common genius, spirit, and pathos. This pleasing poet and amiable man was born in the barony parish of Glasgow, and was educated at Paisley, where he remained till within a few years of his death. His first appearance in the literary world was in 1818, when he contributed to, and directed a poetical publication, entitled the *Harp of Renfreeshire*. In 1827, he published a valuable collection of ballads, under the title of *Minstrelsy, Ancient and Modern*, illustrated by an ably written historical introduction, and notes. In 1828, he became the editor of the *Paisley Magazine* and *Paisley Advertiser*. In 1830 he became the editor of the *Glasgow Courier*, and continued to direct it to the time of his death, which took place in the thirty-eighty year of his age.

1835, Nov. The commissioners of stamps decide that advertisements for the sale of every description of property belonging to estates of insolvent debtors, are liable to the duty.

1835, Nov. 13. Died, JOSEPH BONSOR, wholesale stationer, of Salisbury-square, Fleet-street, London, and of Polesden, Surrey, aged sixty-seven years. Mr. Bonsor was the architect of his own fortune. He was born at Retford, in Nottinghamshire, and served an apprenticeship to a printer and bookseller in that town. On the expiration of his time he went to London, with a strong recommendation to Mr. John Walter, proprietor of the *Times* newspaper. In 1796, Mr. Bonsor commenced business as a wholesale stationer, and by a continued attention to the concern, as well as by strictly upright, liberal, and honourable conduct, soon placed it amongst the first wholesale houses in the trade. For a number of years he supplied the paper on which the *Times* was printed. To his family and friends Mr. Bonsor's loss was irreparable. He was uniformly most kind and affectionate to the one, and always hospitable and attentive to the other. He left a widow, and two children.

1835, Nov. 24. Died, EDWARD EVANS, the well-known printseller, in Great Queen-street, Lincoln's Inn-fields, aged forty-six years. He was bred up a compositor, in the printing-office of Messrs. Nichols and Son; and at an early age was selected by them as an efficient reader, but having saved some money, he established himself as a printseller, in which business his industry had scope, and for some years he contributed to the pleasure of many literary persons fond of illustrating their collections with additional prints, as at his well-stored shop they were almost sure to find what they might want. Mr. Evans was a very amiable good-tempered man, and his memory will long be regarded with respect. He left a widow and family.

1835, Dec. 5. ALARIC A. WATTS, proprietor and editor of the *Literary Souvenir*, obtained a verdict with £150 damages against Mr. Fraser, the publisher, and Mr. Moyes, the printer of *Fraser's Magazine*, for an illiberal critique upon the *Literary Souvenir*, which had appeared in *Fraser's Magazine*.

1835, Dec. Died, Ma. ATTWOOD, proprietor and printer of the *Literary Times*, which he had established two months before in London. Mr. Attwood's death was caused by his taking an ounce of Prussic acid, sufficient to have caused the death of an elephant. Pecuniary embarrassment, it was said, led to the fatal catastrophe.

1835, Dec. 18. Died, ROBERT BICKERSTAFF, formerly a bookseller in the Strand, London. He was the youngest son of Mr. Edward Bickerstaff, who held a situation in the excise, and resided at Eastwick, in Hertfordshire. He was apprenticed to Mr. Macfarlane, bookbinder, in Shire-lane, London, and was afterwards assistant to Mr. W. Broome, bookseller, of the Strand, to whose business he succeeded, in April, 1797, and which he carried on for twenty years, with the highest credit and integrity. He retired from business in January, 1818, with a moderate fortune, acquired by his own industry, a portion of which he invested in a government life annuity. Since that time his principal occupation and amusement was to collect prints to illustrate a copy of the *Gentleman's Magazine*, from its commencement, in 1731 to 1830. By his will, after bequeathing legacies to the amount of about £2540 to several friends, he left the residue of his property, amounting to near £5,000 to the six benevolent institutions following, in equal proportions:—Literary Fund, National Society for educating the poor, Asylum for female orphans Lambeth, Philanthropic Society, Refuge for the destitute, and Society for the relief of Small Debtors. As Mr. Bickerstaff left no near relatives, we think he showed great judgment in heading his list of charities by the *Literary Fund*. As a bookseller he had obtained his fortune by the abilities of learned men; and at his death he returned a portion of his substance to a society which, with equal promptitude and delicacy administered to the necessities of the unfortunate scholar. Some of the brightest names in cotemporary literature have been beholden to the bounty of this praiseworthy institution, and in numerous instances its interference has shielded friendless merit from utter ruin. The same grateful feelings for authors in distress seem to have actuated the minds of three eminent printers recently deceased:—Andrew Strahan gave to the Literary Fund, during his life-time, the munificent donation of £1000 three per cents.; and at his death £1000 sterling, free of legacy duty. Mr. Bulmer bequeathed to the society £50, and Mr. alderman Crowder £37 5s. The company of stationers also, as a body, contribute £20 annually to the Literary Fund. Mr. Bickerstaff died at his lodgings, in Great Ormond-street, aged 77 years, and his body was conveyed for interment to the grave of his parents, at Eastwick, Hertfordshire.

1835, Dec. 22. Died, EDMUND FRY, M.D., the eminent type-founder, of London. This gentleman was one of the society of friends. He was originally bred to the medical profession; but was more generally known as an eminent, and perhaps the most learned type-founder of

his time. His foundry was in Type-street, Chiswell-street. The substructure of the establishment (as we learn from a circular issued by Dr. Fry, in 1828, on his making known his wish to retire from business,) was laid about 1760, commencing with improved imitations of Baskerville's founts, in all sizes; but they did not meet with encouragement from the printers, whose offices were generally stored with the Caslon founts, formed of the Dutch models. Dr. Fry, therefore, commenced his imitation of the Chiswell-street foundry, established by the celebrated William Caslon, which he completed at a vast expense, and with a very satisfactory encouragement. But at this period, what the doctor calls "a rude, pernicious, and most unclassical innovating system," was commenced by the introduction of various fanciful letters. His imitation of the Baskerville and Caslon types were, in consequence of this revolution, laid by for ever; but no instance occurred to the attentive observation of Dr. Fry, where any found book letter, on the present, have been found equal in service, or nearly so agreeable to the reader, as the true Caslon-shaped Elzevir types, and in this sentiment, (says the editor of the *Gentleman's Magazine*, from which this article is taken,) we coincide with Dr. Fry. When an eminent printer, the late William Bowyer, gave instruction to Joseph Jackson to cut his beautiful Pica Greek, he used to say, "Those in common use, were no more Greek than they were English. Were he now living, it is likely he would still have any reason to alter that opinion. The Great Primer script, which it must be acknowledged is the *me plus ultra* of every effort of the letter-founder in imitation of writing, was made for the proprietor by the celebrated Firmin Didot at Paris; the matrices are of steel, and the impressions from the punches sunk in *inlaid steel*. Dr. Fry retired from business with a very slender provision. He was an old member of the Stationers' company. In 1799, he published a work, in strict connexion with his profession, *Pantographia*, containing copies of all the best alphabets in the world, together with an *English explanation of the peculiar form of each letter to which are added, specimens of all the established oral languages, forming a complete Digest of Phonology*. 8vo. The work contains two hundred alphabets, amongst which are eighteen varieties of the Chaldee, and no less than thirty-two of the Greek.

1835, Jan. 1. *The Colonist*; or, *West-India Journal of politics, commerce, agriculture, literature, science, and religion, for the colony of New South Wales*, No. 1. This newspaper was established by John Dunmore Laing, B. senior minister of the Scots church, and principal of the Australian college, Sydney.

1835, Jan. 7. *The Watchman*, No. 1. London printed and published by William Gowers.

\* For a state of the press in that colony, the reader is referred to *An Historical and Statistical Account of New South Wales, both as a Penal Settlement, and as a Free Colony*, by Dr. Laing. Two vols. 12mo. London 1828.

161, Fleet-street, price sevenpence. This paper was projected to support the principles and usages of the Wesleyan methodist connexion.

1835, Jan. *The Educational Magazine*, No. 1.

1835. *The Analyst*, a quarterly literary and scientific journal, printed and published at Birmingham. Not the least recommendatory feature of this publication is its analysis of the proceedings of provincial societies, which well bespeak the active intelligence of Warwickshire and the adjoining counties.

1835. *May. The Original*. A series of periodical papers by Thomas Walker, esq. and comprises in the whole twenty-six numbers, the last of which appeared November 11. The subjects treated on are aristology, or the art of dining or giving dinners; the art of travelling, clubs, roasted apples, &c. &c. Mr. Walker was the son of Thomas Walker, esq.\* a merchant, and born at Manchester, in the year 1784. He was a barrister at law, and one of the magistrates of Lambeth-street police office, London. He died at Brussels, Jan. 20, 1836, and was buried in the cemetery of that city.

1835, July. *The Constitutional Magazine*.

1835, July. *British and Foreign Quarterly Review*, No. 1. London, Ridgway and Sons.

1835, Dec. *Fraser's Literary Chronicle*.

1836, Jan. 15. *Died*, CHARLES LEWIS, the most eminent bookbinder in Europe, and the binder of nearly all the splendid bound books in the libraries of the duke of Sussex, duke of Devonshire, earl Spencer, who died in 1834, baron Bolland, the right hon. Thomas Grenville, Richard Heber,† the late sir Mark Sykes, sir Francis Freeling,‡ and other eminent bibliographers. Charles Lewis was born in London, in 1786, being the fourth son of Mr. John Lewis, a native of Hanover. At the age of fourteen he became apprentice to Mr. Walther,§ under whose training and skill he acquired the rudiments and perfection of his art, and by whose example of unwearied diligence, much of his success in after life depended. After serving the full period of his apprenticeship, and working as a journey-

man in several shops in the metropolis, he commenced business on his own account, in Scotland-yard. At this place, and subsequently in Denmark-court, Strand, and Duke-street, Piccadilly, he displayed as much perseverance and attention in the management of his business, as skill and energy in the pursuit of the art, which he appears from his first introduction to it, at Mr. Walther's, to have been passionately devoted to. On the character of his binding, Dr. Dibdin has thus enlarged:—"The particular talent of Lewis consists in uniting the taste of Roger Payne with a freedom of forwarding and squareness of finishing, peculiarly his own. His books appear to move on silken hinges. His joints are beautifully squared, and wrought upon with studded gold; and in his inside decorations he stands without a compeer. Neither loaf-sugar paper, nor brown, nor pink, nor poppy-coloured paper are therein discovered: but a subdued orange, or buff, harmonizing with russet; a slate or French grey, harmonizing with morocco; or an antique or deep crimson tint, harmonizing with sprightly calf: these are the surfaces, or ground colours, to accord picturesquely, with which Charles Lewis brings his leather and tooling into play! To particularize would be endless; but I cannot help just noticing, that in his orange and Venetian moroccos, from the sturdy folio to the pliant duodecimo—to say nothing of his management of what he is pleased facetiously to call binding *à la mode Française*, he has struck out a line, or fashion, or style, not only exclusively his own, as an English artist, but modelled upon the ornaments of the Grolier and De Thou volumes, infinitely beyond what has yet been achieved in the same bibliopegist department. It is due to state, that in his book restorations he equals even the union of skill in Roger Payne and Mrs. Weir. We may say—

'And what was Roger once, is Lewis now.'"

He was succeeded in business by his eldest son.

John McCreery, in his poem of the *Press*, thus eulogises the art of bookbinding:

"Embodied thought enjoys a splendid rest  
On guardian shelves, in emblem costume dress;  
Like gems that sparkle in the parent mine,  
Through crystal mediums the rich coverings shine;  
Morocco flames in scarlet, blue, and green,  
Impress'd with burnish'd gold, of dazzling sheen;  
Arms deep emboss'd the owner's state declare,  
Test of their worth—their age—and his kind care;  
Emblem'd in russet stands a valued pile  
That time impairs not, nor vile worms defile;  
Russia, exhaling from its scented pores  
Its saving power to these thrice-valued stores,  
In order fair arranged in volumes stand,  
Gay with the skill of many a modern hand;  
At the expense of sinew and of house,  
The fine papyrus leaves are firm as stone:  
Here all is square as by masonic rule,  
And bright the impression of the burnish'd tool.  
On some the tawny calf a coat bestows,  
Where flowers and fillets beauteous forms compose:  
Others in pride the virgin vellum wear,  
Bedeck'd with gold—as breast of Venus fair;  
On either end the silken band bands twine,  
Wrought by some maid with skilful fingers fine—  
The yielding back falls loose, the hinges play,  
And the rich page lies open to the day.  
Where science traces the unerring line,  
In brilliant tints the forms of beauty shine;  
These, in our works, as in a casket laid,  
Increase the splendour by their powerful aid."

\* See page 775, ante.

† Richard Heber, esq. was born in Westminster, Jan. 5, 1773, and was educated at Oxford, which university he at one time represented in parliament. His collection of books in ancient English literature, for extent and richness, has never been equalled, and, perhaps, will never be surpassed. He was not a mere book collector—"he was a scholar, and a ripe and good one," and his books were contained in libraries at Hodnet, in Shropshire, London, Oxford, Paris, Ghent, and other places. Mr. Heber was never married, and died at Pimlico, Oct. 4, 1833. He was half brother to the late amiable Reginald Heber, bishop of Calcutta, where he died, April 8, 1836, aged 43 years.

In 1834 was published *Bibliotheca Heberiana, or Catalogue of Richard Heber's celebrated library*. 8vo. 1834—36, price 2l. 14s.

‡ Francis Freeling, secretary to the general post-office, London, a bibliomaniac, and a member of the Roxburghe club, died, July 18, 1836, in his seventy-third year.

§ D. Walther was a binder, bearing the character of executing his work in a "good, substantial, honest manner." He had no pretensions to any style peculiar to himself, but gained the character bestowed upon him from the excellent manner every part was performed. He deserves to be recorded as an example of industry; for fifty years he worked fourteen hours a day, with the greatest diligence, and closed a long and respectable life in his ninetyeth year.

1836, Feb. 5. In the court of exchequer, Mr. JOHN CLEAVE, the publisher of unstamped newspapers, was convicted in penalties of £500, in five numbers of the *Weekly Police Gazette*.—Many prosecutions took place in several parts of the country, against the venders of unstamped newspapers.

1836, March 14. *Died*, JOHN MAYNE, author of the *Siller Gun* and other poems, and editor and joint proprietor of the *Sun* London newspaper. A biographer has indeed a pleasing task to perform, when he can at the same time raise memorials both to genius and to virtue, and such a task is ours in the present instance, while penning this brief notice of the author of the *Siller Gun*. Mr. Mayne was born in Dumfries. He received his education at the grammar school of that town; and at a very early age he became a printer, and wrought on a weekly newspaper, called the *Dumfries Journal*, conducted by professor Jackson. Before long, however, he left Dumfries for Glasgow, accompanying his father's family, who took up their residence on a property they had acquired at Greathead, near that city. While a youth, "ere care was born," to cherish native Scottish feelings, or, in other words, to breathe the breath of poetry; for in Scotland these two are akin,—her grand and lovely scenery, her woods, her high hills, and lakes, together with the warm-heartedness of her lads and lasses, form a garden wherein poetry has been destined to take root and flourish. These "feelings" ripened with his years; nature was his study, if nature may be called a study. It was a happy choice. In 1777, the original of the *Siller Gun* was written; it consisted of only twelve stanzas, printed at Dumfries, on a small 4to. page, which were shortly after extended to two cantos, and reprinted. In 1808, it was again put forth with material alterations and additions, extending it to four cantos, with notes and glossary. Another elegant edition, enlarged to five cantos, was published by subscription, in 1836. For some time after the first publication of the *Siller Gun*, Mr. Mayne corresponded with *Ruddiman's Magazine*, a weekly miscellany, in which his *Hallowe'en* and other minor poems won him favour. While at Glasgow, Mr. Mayne passed through a regular time of service in the house of the Messrs. Foulis. This ended, and having to make his way in the world, he resolved on going to London, where he commenced an active and honourable career, which he did not relinquish till a comparatively late period in life. For many years, he was printer, editor, and joint proprietor of the *Star* evening paper, in which not a few of his most beautiful ballads first appeared. He also corresponded with the magazines. As a poet of Scotland, though Burns alone surpassed him, Mr. Mayne was modest and unambitious; he wrote little, but that little well. Perhaps where he most of all excelled was in his ballad effusions, such as his *Logan Braes*, which is a general favourite. Allan Cunningham, of kindred spirit, has told us of Mr. Mayne, that "a better or warm-hearted

man never existed." Another pleasing writer truly said of him, "he never wrote a line, the tendency of which was not to afford innocent amusement, or to improve and increase the happiness of mankind." Mr. Mayne attained a ripe old age, an age, indeed, few poets have numbered; and if there is a blessing on earth, John Mayne had it; his memory is blessed. He was kind to every one, and universally beloved. To him the words of Shakspeare may be well applied:—

His life was gentle, and the elements  
So mixed in him, that nature might stand up,  
And say to all the world, "This was a man."

1836, April 28. Mr. Buckingham obtained leave to bring in a bill for the repeal of so much of the copyright act as enjoined the gratuitous delivery of eleven copies of every published work to eleven public institutions, colleges, and libraries, of different towns in the kingdom. On the 13th of August, the following resolution was reported to the house of commons, and instruction given to the committee on the copyright bill, to carry it into effect:—"That annual compensation be made out of the consolidated fund of Great Britain and Ireland, to any of the public libraries which may sustain loss by reason of being no longer entitled to a copy of every book which shall be printed and published."

1836, April. Mr. RICHARD HARRISON produced a very correct and beautiful *fac simile* of *Magna Charta*. It is surrounded by the shields of twenty-five barons.

1836, May. *Died*, EDWARD BUDD, the sole conductor of the *West Briton* newspaper, published at Truro, in Cornwall, where he died, aged sixty-one years.

1836, June 3. *Died*, THOMAS VACHER, stationer, and publisher of Vacher's *Parliamentary Companion*, and other useful *vade mecum*s.

1836, July 2. *Died*, JOHN GARDNER, printer and bookseller, at Bolton, in Lancashire, in the seventieth year of his age. Mr. Gardner served his apprenticeship at Kendal, and had carried on the trade of printing and bookselling at Bolton, for nearly fifty years. He was some time in partnership with Mr. John Yates, who had been his apprentice.\* As captain of the grenadier company in the Bolton Local Militia, his remains were carried to the grave in St. George's church, Little Bolton, by ten non-commissioned officers of that corps.

1836, July 20. The printing establishment of the American Bible Society, was burnt at New York. Large editions of the Bible, in English, German, and Greek, with eighteen printing presses and a steam engine, were totally destroyed.

1836, Sept. 8. *Died*, BENJAMIN BOOTHROYD, D.D., pastor of the independent church, at Highfield Chapel, Huddersfield. He was born in Yorkshire, of very humble parents, and received little or no education; but was put to assist his father, who was a shoemaker, from

\* Mr. Yates afterwards commenced the *Bolton Express*, but it did not continue long to existence. He died at Bolton, in October, 1835.

whom he learnt some rudiments of the gentle craft. At an early age, he left his home to seek his fortune in the world, and found employment at Halifax, where after some time spent with riotous companions, he received a strong conviction of the necessity of religion: he abandoned his former course of life, and sought every opportunity within his means of improving his mind, and particularly with the scriptures. He soon obtained friends, who assisted him in the pursuit of knowledge, and by whose kindness and assistance he was sent to one of the dissenting colleges. Here, by intense application to the studies required, and the piety which he manifested, he was soon thought sufficient to undertake the charge of a congregation. Having been called to the ministry, his first permanent residence was at Pontefract, where his income being small, he commenced the trade of a bookseller and printer. In 1807, he published a *History of Pontefract*, 8vo. He now applied diligently to study the Hebrew language, which he ably accomplished, without any other assistance than a *Hebrew Dictionary, Grammar, and Bible*; with no other assistance, by dint of great exertion and perseverance, he acquired so thorough a knowledge of the language, that in 1810 he commenced the publication of a work issued in quarterly parts, entitled *Biblia Hebraica, or the Hebrew Scriptures of the Old and New Testament*, 4to. Upon this work, Mr. Boothroyd frequently worked at the press six or eight hours a-day, besides compiling the manuscript, and examining and correcting the proof sheets, in which his compositor only knew the letters. He was also much assisted by his wife, who compared the proofs with the manuscript, letter by letter. After this he began a translation of the whole *Bible* into English, the last sheet of which he corrected in the last week of his illness. Dr. Boothroyd was forty-two years in the ministry, twenty-four of which were passed at Pontefract, and the latter eighteen at Huddersfield; and at the time of his decease was sixty-eight years of age. His attainments were far from inconsiderable in many branches of learning. His manners were always open and obliging, and he ever maintained, with much urbanity of mind, a deep sense of religion.

1836, Sept. 15. Upon this day came into operation the reduction of the stamp duty upon newspapers, from *fourpence*\* to *one penny*. If the consumption of newspapers increased in defiance of taxes and restrictions, how much more will they multiply now that the duty is reduced to a sum, sufficient to defray their conveyance by post, and contributing considerably to the revenue, is shewn by an increase of about 18,000,000 upon the annual consumption; requiring for their annual supply 90,000 reams of paper. The operative and labouring classes of society can never read too much. Every facility that is afforded them to add to their stock of information, is, in a political point of view,

beneficial. The more they become acquainted with the theories and disquisitions of political writers, and the more intensely they muse over the arguments advanced in support of opposite systems, the less effect has declamation on their passions, and the less liable are they to be misled by, or made converts to the Utopian, but seductive schemes of fanciful and popular authors.

1836, Sept. Mr. PRICE, the patentee of the *Dublin Gazette*, surrendered his right on a superannuation of £1500 a-year. He is nearly related to the Castlereagh family, and about eighty-five years of age. No government advertisements in the *Gazette* are to be charged in future, and any profits over the expense of printing and management will be credited to the public.

1836, Nov. 5. Died, JAMES ROBINS, many years a bookseller and publisher, in Ivy-lane, Paternoster-row, London, also the author and editor of several works, among which was the *History of England during the Reign of George III.*, which he published under the assumed name of "Robert Scott."

1836, Nov. 9. Died, WILLIAM BLANCHARD, esq., for nearly sixty years proprietor of the *York Chronicle*. Mr. Blanchard was chosen a member of the York corporation, in Feb. 1780, and served the office of sheriff for that city in 1817. He had just completed his eighty-seventh year. Mr. J. Blanchard, his youngest son and partner, died June 14, 1814, aged thirty years.\*

1836, Nov. 26. Died, THOMAS CADELL, an eminent bookseller of the Strand, London. He was the only son of Thomas Cadell, esq. noticed at page 804, ante. In 1793 his father retired from trade, leaving the business, which he had made one of the first in London, to his son and Mr. William Davies, who jointly carried it on

\* William Blanchard, the eminent comedian, was a native of York, where he was brought up by his uncle, Mr. William Blanchard, who apprenticed him to the printing business, in his own office. At the age of seventeen, however, he left home, to join a company of comedians, at Buxton, where he made his debut under the assumed name of Bentley. In the part of Allen a Dale, in *Robin Hood*, and a favourable reception induced him to pursue his theatrical career. His success continuing, he was induced after a year or two to appear in his proper name. On the 1st of October, 1800, he made his first bow to a London audience, in the character of Acres, in the *Rivals*, and Crack, in the *Turnpike Gate*. His correct delineation of the numerous characters which he successively assumed in play, farce, and opera, made him an universal favourite. He died May 9, 1835, aged sixty-six years. He was twice married, and had several children.

"The printing-office," says a modern writer, "may almost be looked upon as the nursery of the stage. There are at least twenty actors of note, who have many a time put in type criticisms on others, ere they had those generally learned documents directed to themselves." Among the most eminent on the boards at this time, may be mentioned Robert Keeley, of the Olympic theatre, who was bound apprentice to Luke Hansard, and with whom he remained four years, when he evinced a predilection for the stage, and immediately obtained an engagement. He was born in London in the year 1796.

George B. Davidge, the active manager and actor of London, was born in Bristol, in the year 1793, where he served his apprenticeship to the printing business, and worked as a journeyman in Bath.

Mr. Wilson, the celebrated singer, was born in Edinburgh, December 25, 1801, was bred a printer, and filled for several years the responsible situation of principal corrector of the press in the house of Ballantyne and Co. He made his debut in his native city, March 17, 1830.

\* With an allowance of twenty per cent discount.

until the death of the latter, in 1820, since which time Mr. Cadell's name stood alone. Thus, for nearly half a century, Mr. Cadell followed his father's example, and preserved the reputation the house had acquired for liberality, honour, and integrity.\* In 1802 he married a daughter of Robert Smith, esq. of Basinghall-street,† by whom he had a numerous family; but we believe the name of Cadell, which has been eminent among publishers for the last seventy years, is no longer to exist in the list of London booksellers. Mr. Cadell died at his residence in Fitzroy-square, London, aged sixty-three years.

1836, Dec. 14. *Died*, WILLIAM PINE, formerly the proprietor and publisher of the *Bristol Gazette*. He died at London, aged sixty-eight.

1836, Dec. 20. THE BOOKSELLERS' PROVIDENT INSTITUTION, established in London, for the mutual assistance and support of decayed booksellers and booksellers' assistants, being members of the trade, and of their widows. For the support of this very laudable institution, all the principal booksellers, printers, and bookbinders of the metropolis became subscribers, either by donation or annual subscription.

1836. *The New Testament, published in 1526, being the first translation of it by that eminent scholar William Tyndale, reprinted verbatim; with a memoir of his life and writings; together with the proceedings and correspondence of Henry VIII., Sir T. More, and Lord Cromwell. By George Offer.* 8vo. London, 1836. This is a reprint of the first translation of the *New Testament* into English, in the year 1526, by that enterprising bookseller, Mr. Bagster, whose *Polyglott Bibles* will long render his name celebrated.‡

1836, Jan. 2. *The North Derbyshire Chronicle*. No. 1, printed and published by Thomas Woodhead and Richard Nall, Chesterfield.

1836, Feb. 3. *The John O'Grat Journal, and Caithness Monthly Miscellany*, No. 1, printed and published by Peter Reid, at Wick, price 2d.

1836, April 1. *The Dublin Review, a quarterly Journal of Religion, Politics, Literature, Science, and Art*; No. 1, edited by Daniel O'Connell, esq. M. P. the very rev. N. Wiseman, D. D. professor of oriental languages in the university of Rome; and Michael J. Quin, author of *A Steam Voyage down the Danube, A Visit to Spain*, &c. price six shillings.

\* The rev. Charles Simeon, senior fellow of king's college, Cambridge, and rector of Trinity church, in that university, received from Mr. Cadell the sum of £5,000, (the greater portions of which he gave to charitable institutions,) and twenty copies upon large paper, from the copyright of his works, which were published in 1832, in twenty-one large and closely printed octavo volumes, of 600 or 700 pages each, under the direction of the rev. Thomas Hartwell Horne. These works consist of 2536 sermons, and skeletons of sermons, which form a commentary upon every book of the *Old and New Testament*. Mr. Simeon died at Cambridge, Nov. 13, 1836, aged 77.

† Sister to the Messrs. T. and H. Smith, solicitors, London, authors of the *Rejected Addresses*, 12mo. 1810. Tenth edition, 1818, and other works.

‡ Mr. Bagster, with a spirit of liberality which we cannot sufficiently commend, has, as we understand, prepared, at some expense, a copy on large paper, with illuminated capitals, &c. exactly as the original, which he has presented to the British museum.

1836, June 1. *The Magazine of Zoology and Botany*, No. 1, edited by sir William Jardine, bart.\* P. J. Selby, esq. and Dr. Johnston.

1836, Sept. 15. *The Constitutional*, No. 1. The first daily newspaper published in London after the reduction of the stamp duty.

1836, Nov. 26. *The Newcastle Standard*, No. 1, printed and published by Charles Larkin, Newcastle-upon-Tyne. It ceased April 15, 1837.

1836, Dec. 31. *The Gardener's Gazette*, No. 1. edited by Mr. George Gleny, London.

1836. *The Singapore Free Press*, published weekly, and printed on European paper.

1836. *Chronica de Macao*, and the *Macaists Imparcial*. Two very respectable newspapers in the Portuguese language, published at Macao, in the bay of Canton, and quite equal in contents and appearance to anything which has been seen in the mother country. The first appears twice a-month: the latter is published twice a-week.

1836. *The Canton Press*, a weekly newspaper published at Canton, in China, and strongly advocates free trade.

1837, Jan. 21. *Died*, JOHN SYKES, late a bookseller at Newcastle-upon-Tyne, and author of a valuable compilation, which he published under the title of *Local Records*, in two vols. 8vo. Mr. Sykes died at Newcastle, aged fifty-six years.

1837, March 20. A fire broke out in the warehouse of the new printing-office of Mr. Spottiswoode, in New-square, Fleet-street, London, and literary property destroyed to the amount of £20,000: of the origin nothing was known.

1837, March 21. *Died*, JOSEPH BOOKER, bookseller, of New Bond-street, London. He had been for twenty-six years general secretary to the associated Roman Catholic charities in London. The business is now conducted by his sister and nephew.

1837, March 21. *Died*, WILLIAM KNIGHT, LL.D., professor of moral philosophy in the university of Georgetown, Kentucky, North America. Mr. Knight, was a native of Aberdeen, in Scotland, and served his apprenticeship to the printing business. Having received a good education, and being well acquainted with the classics, he published several well written pieces in the Aberdeen papers. Twenty-five years ago, as a journeyman printer, he emigrated to America in quest of employment, and by his superior attainments and moral rectitude arrived at the honourable distinction in which he ended his useful and laborious life.

1837, April 5. In the half year, ending on this day, the number of newspapers stamped in Great Britain, was 21,302,148; and the net amount of duty received, was £82,502. For the whole year the number of stamps issued was

\* The *Library of Natural History*, by sir William Jardine, has absorbed 23,400,000 impressions, every one of which has been printed individually by the hand. There are altogether about 650 plates of illustrations in the twenty volumes, folio, 12mo, of which the work is composed, engraved by Lizars. The work was commenced in 1833, with 500 number of the volume, but the sale rapidly increased to as many thousands, and of the twenty volumes, it may safely be affirmed, that 100,000 copies have been sold.

53,496,207, being an increase upon the year 1836 of 18,000,000. The number of periodicals taking out stamps for 1837 was eighty-five, being an increase upon the preceding year of fourteen. The total number of newspapers which passed through all the post-offices in the United Kingdom, in 1837, was 42,000,000.

Since the reduction of the stamp duty, Sept. 15, 1836, there were published one daily newspaper,\* one twice a week, twenty-three weekly, one fortnightly, and one occasional newspaper, in London; of which, eight were discontinued, and two incorporated with other papers. Within the same period, thirty-five weekly newspapers, and one three times-a-week,† were established in the country, of which, six are now discontinued or incorporated with other papers.‡

1837, April 7. *Died*, WILLIAM EUSEBIUS ANDREWS, printer and bookseller, Duke-street, Little Britain, London; editor of the *Orthodox Journal* and other works. He was born in the city of Norwich, Dec. 15, 1773, and served an apprenticeship to the printing business in the office of the *Norfolk Chronicle*, published in his native city. Having conducted himself with such perseverance and integrity, he was, when out of his time, speedily chosen by his employers to superintend their newspaper, the arduous and responsible duties of which he discharged for the period of fourteen years, when he commenced business on his own account in Norwich, but in a short time, being encouraged to seek a wider field of action, he removed to London. Mr. Andrews was the third of the London Catholic booksellers who had died within six weeks. He was succeeded in his business by his son and daughter, Peter Paul Andrews and Mary.

1837, May 22. *Died*, JAMES RUSHER, who had been in business as a bookseller, at Reading, Berkshire, for upwards of forty years, and was much and deservedly esteemed by all who knew him. He was exceedingly charitable, and had for many years devoted a large portion of his income to alleviating the necessities of the poor. He left about £1,000 in legacies to various charitable societies, and his servants and the poor. He died at Reading, after a few hours' illness, aged sixty-six years, leaving a widow, a son (Joseph Rusher, of Kingsdown, Bristol) and two daughters.

\* *The Constitutional*.

† *The Liverpool Mail*.

‡ *Whitstone*, the poet, divides the readers of a newspaper into seven classes. He says—

1. The ill-natured look at the list of bankrupts.

2. The poor to the price of bread.

3. The stockjobber to the lies of the day.

4. The old maid to marriages.

5. The prodigal son to the deaths.

6. The monopolizers to the hopes of a wet harvest.

7. The boarding-school and all other young misses, to all matters relative to *Gretna Green*.

An old pensioned marine, one who was present at the battle of Bunker's Hill, a second Corporal Trim, was very fond of reading the newspapers when he could get them. When repeatedly annoyed by inquiries as to his appetite on this subject, he once replied,—"Why, to tell you the truth, when I was in the corps, a *goat* was kept in the barracks, which was in the habit of eating the papers, and being killed, I was asked to partake of it.—I can give no other reason."

1837, June 28. *Died*, HENRY FISHER, senior partner in the firm of Fisher, Son, and Co. publishers, booksellers, and printers, Newgate-street, London, and Quai de l'Ecole, Paris. He was the son of Thomas Fisher, a timber merchant, at Preston, in Lancashire; and having lost his father at an early age, was placed at the free school of his native town, under the care of Mr. Shepherd, where he acquired all the education with which he began an active life of business. At the age of thirteen, he was articled to Mrs. Sergeant, who carried on the bookbinding, printing, stationary, &c. businesses. Here Henry Fisher acquired those habits of industry, regularity, and thoughtfulness, which accompanied him through life. Mrs. Sergeant allowed her apprentices task work, that is, to retain for themselves all they could earn above a certain stipulated amount. Henry Fisher exerted himself so assiduously, devoting only a few minutes to his meals, that his mistress objected to pay him the large sums he was entitled to, and said he must be tasked much higher than the other lads of a similar age—to this he peremptorily objected—and his mistress having offered them, he took his indentures, and quitted:—their friendship, however, was renewed in after life, and sincerely continued till her death. On leaving Mrs. Sergeant, after four years' service, Henry Fisher articled himself for the residue of his apprenticeship to Messrs. Hemingway and Nuttall, printers at Blackburn. At this period, when but seventeen years of age, he entered into the bonds of marriage, relying upon his indefatigable industry for the maintenance out of his overearnings of a wife and family. A dissolution of partnership taking place between Messrs. Hemingway and Nuttall,\* the latter removed to Liverpool, where young Fisher went with him, and having suggested the establishment of depots in the principal towns of the kingdom, for the more effectual extension of the sale of standard works in numbers, was himself appointed to the management of a station at Bristol. Here he passed three years with so much benefit to his employer and credit to himself, that he was, without solicitation, admitted to a share of the business, on conditions equally honourable to both; and so essential were his services soon found, that he was, independently of his share as a partner, allowed a salary of £900 per annum, for conducting the business. Thus, in his twenty-fourth year, Mr. Fisher found himself placed in a situation of responsibility and considerable emolument, for which he was solely indebted to his activity, his integrity, and his ability. During this ardent promotion of knowledge by the novel and unique business of number publishing—a system that has proved of the highest intellectual and moral advantages to the poorer classes of society, by enabling them to purchase various works by small periodical pay-

\* Jonas Nuttall, the original founder of the Caxton press, at Liverpool, was a native of Blackburn, and served his apprenticeship with Mr. John Ferguson, printer, Liverpool. He died September, 1837, at his seat, at Nat. Grove, near Prescott, Lancashire, which he had erected.

ments.) Henry Fisher formed an intimacy with the learned Dr. Adam Clarke\*—an intimacy which became closer in proportion as it was extended. Dr. Clarke made advances to his friend out of his rich store of learning, and was in return liberally and generously compensated by his friend and publisher. Dr. Clarke's first literary production was printed in Liverpool, by Nuttall,† Fisher, and Dixon. For many years reciprocal benefits and kindnesses were interchanged between Dr. Clarke, and the house of Nuttall and Co., who employed his services in numerous editions of standard and divinity works, which now issued rapidly from the Caxton press, the partners in which had, in 1815, been appointed printers in ordinary to the king. In 1818, Messrs. Nuttall and Dixon retired, having realized handsome fortunes. The printing office

\* Adam Clarke, L.L.D., F.R.A. was born in the village of Moybeg, in the county of Londonderry, Ireland, either in the year 1706 or 1709, and received a classical education from his father. On August 25, 1789, he left his home and country for Kingwood school, near Bristol; and, Sept. 20, of the same year, by the direction of Mr. Wesley, he entered on the duties of a minister of the Methodist connexion, at Bradford (Wills). At the conference of 1783 he was taken into full connexion, and from that time till his death, the length and breadth of England and Ireland, from the Norman Isles in the south, to the Shetland's in the extreme north, has acknowledged the sway of his master mind as a teacher of the people. But, it is not alone as a Christian teacher that Adam Clarke will be revered by posterity, but by his vast knowledge, and his elaborate researches in the vast field of philosophy and philology, that will stamp him as one of the most learned men that ever lived. The chief—the mighty work of his laborious hand, is his *Commentary on the Bible*—which may be said to be an encyclopedia of biblical science and literature, that will remain longer than the Egyptian pyramids—an appropriate monument of the wisdom, piety, benevolence, zeal, Herculean labour and indefatigable pains-taking, of its gifted and distinguished author. This work is found alike on the boards of the mechanic, and in the cabinets of the learned, on the shelves of the poor man's cottage, and in the libraries of the princes of the earth. By his constant attention in the printing-office during the publication of his *Commentary*, he had acquired a tolerable knowledge of the art, and went so far as to procure a composing stick, of wood, with other useful appendages, in which he arranged, tied up, and transmitted to the printer for insertion in the places marked—the words and sentences in the Samaritan, Syriac, Arabic, Persian, Hebrew, and the various foreign languages, which appeared in the original edition, so great was his anxiety to be correct. This eminent scholar and divine, died of cholera, at Bayswater, August 26, 1832, aged 73 years.—His widow died at Stoke Newington, Dec. 20, 1836, aged seventy-five years.

Dr. Clarke published *A Bibliographical Dictionary; containing a chronological account, alphabetically arranged, of the most curious, scarce, useful, and important books, in all departments of literature, &c.* Vols. 1, 2, and 3, 12mo. printed by Jonas Nuttall, Liverpool, for W. Baynes, London, 1803: vols. 4, 5, and 6, printed by Randall & William Dean, and Co. Manchester, for W. Baynes, London. *A Bibliographical Miscellany, being a Supplement to the above*, two vols. 12mo. printed by R. Edwards, Crane court, Fleet-street, London, for W. Baynes, Paternoster-row. In 1815, Dr. Clarke was persuaded by some of his friends, who had observed with solicitude the decline of his health, to relinquish, for a time, all public pursuits, and retire into the country. By their manifestation, an estate was purchased for him at Millbrook, in Lancashire, towards which Mr. Jonas Nuttall presented £1,000, and Mr. Henry Fisher, £200 towards building a library, having also his two sons under the doctor's tuition, at the liberal remuneration of £200 per annum.

† Thomas Nuttall, F.L.S., Professor of natural history in the university of Cambridge, U.S., Honorary member of the American philosophical society, and of the academy of natural sciences, &c. &c. was born at Long Preston, in the north riding of Yorkshire, Jan. 6th, 1798. He received the rudiments of his education at the endowed school of

at Liverpool was considered the largest establishment of the kind in Great Britain, and at one time they had at least one thousand persons in their employment. In 1818, Mr. Fisher established the *Imperial Magazine*, under the editorship of Samuel Drew, M.A. On the 30th of January, 1821, the Caxton printing-office was entirely destroyed by fire, the loss sustained being estimated at £40,000, considerably more than the stock was insured for. At this period, Mr. Fisher removed to London, accompanied by all his foremen, and a great number of those employed by him. The printing establishment was fixed in Owen's-row, Clerkenwell, where it has ever since continued; the publishing business being carried on in Newgate-street, whence have been issued those splendidly illustrated works—*The English Lakes; Syria; Devonshire; Cornwall; Ireland; Lancashire, &c.* which have stamped him as the most extensive publisher of such works in the kingdom. In 1825, he took into partnership his eldest son Robert, who at the time of the fire was studying at Cambridge, with the intention of entering the church, and Mr. Peter Jackson, his old and faithful London agent. Mr. Fisher had some years before leaving Liverpool, built himself a very handsome house, about eleven miles from that town, which he called "The Caxton Lodge." In private life Henry Fisher was respected, and much admired for soundness of judgment and kindness of heart. He was elected one of the common council for the ward of Farringdon-within; and the very year of his death had been urgently solicited to fill the high and honourable office of sheriff of London and Middlesex. Mr. Fisher was in politics a whig. He died at his residence at Highbury park, aged fifty-six years, leaving a widow, two sons, Robert, (appointed his sole executor) who succeeded him in the business, Seth Nuttall, a captain in the 51st regiment of foot, and one daughter, married to captain But-

that place; and whilst yet a child, a strong bias towards the pursuits, in the prosecution of which he has since so much distinguished himself, became evident; and he was frequently absent whole days, gathering flowers and plants, which he used carefully to preserve and assort as well as he was able, though totally ignorant of any botanical system. In the year 1799, Mr. Jonas Nuttall requested his nephew to reside with him, with a view to his acquiring a knowledge of the printing business. He accordingly was bound apprentice in the commencement of 1800. In this new sphere of action, however, his former propensities continued to influence him, and he was never so happy as when he could steal from what he considered uninteresting employment in which he was engaged, to ramble in the country. His apprenticeship expired early in 1807, when he at once formed a resolution so completely contrary to his pecuniary interests, as to astonish those of his friends who could not enter into his views. Indeed, to those with whom the "sacred flames" is the governing principle, it must have appeared little short of insanity, to leave the brightest prospects, connected with a most lucrative and extensive business, with every chance of succeeding to his uncle's fortune, for the apparently wild scheme of exploring the forests of America, in search of those treasures, which were, to him, "better than gold." Such, however, was the course which he chose to pursue: nature, was to him, "in every charm supreme;" and having collected his little patrimony, he sailed from Liverpool, for America, in the March of that year, where he has continued principally to reside. Nuttallite was discovered in 1834, by Mr. H. J. Brooke, of London, among some minerals brought to this country by Mr. Nuttall.

tanshaw, R. N. Mr. Fisher was interred at the cemetery in the Harrow road, being followed to the grave by his children, private friends, foremen, and the principal part of his workpeople, to many of whom he had been an indulgent master during a period of thirty-six years.

One of the latest works published by Mr. Henry Fisher was *A History of the County Palatine and Duchy of Lancaster*, edited by Edward Baines, esq.\* M. P. for Leeds, in four vols. 4to.

1837, July 12. The printers of Edinburgh celebrated the fourth centenary of the invention of the art of printing, by a social entertainment in the theatre-royal. Thomas Campbell, author of the *Pleasures of Hope*, and other poems, in the chair. In the course of the evening, the following song, written for the occasion by Mr. Alexander Smart, printer, was sung by Mr. Heatley, printer: the music by Mr. George Croall:

When liberty first sought a home on the earth,  
No altar the goddess could find,  
Till art's greatest triumph to printing gave birth,  
And her temple she reared in the mind.  
The phantoms of ignorance shrunk from her sight,  
And tyranny's visage grew wan;  
As wildly he traced, in the Volume of Light,  
The pledge of redemption to man!

All hail the return of the glorious day,  
When freedom her banner unfurled—  
And sprung from the Press the Promethean ray  
That dawned on a slumbering world;  
When Science, exulting in freedom and night,  
Unveiled to the nations her eye,  
And waved from her tresses, refulgent in light,  
A glory that never can die.

The mighty Enchanter, whose magical key  
Unlocked all the fountains of mind,  
The thoughts of the mighty in triumph set free,  
In cloistered confusion confined;  
The lay of the Poet, the lore of the Sage,  
Burst forth from obscurity's gloom,  
And started to life, in the wonderful page,  
The glories of Greece and of Rome.

Great ark of our freedom! the Press we adore—  
Our glory and power are in thee;  
A voice thou hast wafted to earth's farthest shore—  
The shout of the great and the free.  
The slave's galling fetters are burst by the might,  
The empire of reason is thine;  
And nations rejoice in the glorious light,  
Which flows from a fountain divine.

\* Edward Baines, esq., M. P. for Leeds, was born at Walton-le-Dale, Lancashire, in 1774, and was apprenticed to Thomas Walker, printer and stationer, at Preston; but before the expiration of his time he removed to Leeds, and was placed with Messrs. Binns and Brown. Immediately after the termination of his apprenticeship he formed a connexion in trade with Mr. John Fenwick, and carried on the printing business for about a year, under the firm of Baines and Fenwick, Leeds. This connexion having been dissolved, he succeeded, in the year 1800, after the death of Mr. Binns, to the proprietorship of the *Leeds Mercury*, of which he became the sole conductor. In the hands of Mr. Baines, the *Leeds Mercury* became a journal of extensive political influence in the north of England, which has been enlarged since he obtained the co-operation of his son, and partner in business, Mr. Edward Baines, in the year 1828. In 1799, he married Charlotte, the daughter of Mr. Matthew Talbot, known in the literary and theological world as the author of a very laborious work, under the title of *Analysis of the Bible*. The issue of this marriage has been six sons and five daughters, all of whom survive, except two sons, who died in infancy. It is curious that Mr. Fisher and Mr. Baines, authors of the same town, neither of them indebted to the favours of fortune in early life, but entirely dependent on their own exertions, should have both risen to such a rank in their respective occupations. On the ap-

1837, Aug. 14. FESTIVAL IN HONOUR OF JOHN GUTENBERG, the inventor of printing, held at Mentz, (Mayence) in Germany.\* The opposite engraving gives a correct view of the fine statue, by Thürowsden, which had been erected by a general subscription, to which all Europe had been invited to contribute. "We apprehend," says a writer in the *Penny Magazine*, who had witnessed the important ceremony, "that the English, amidst the incessant claims upon their attention for the support of all sorts of undertakings, whether of a national or individual character, had known little of the purpose which the good citizens of Mayence had been advocating with unabating zeal for several years;—and perhaps the object itself was not calculated to call forth any very great liberality on the part of those who are often directed in their bounties as much by fashion as by their own convictions. Be that as it may, England literally gave nothing towards the monument of a man whose invention has done as much as any other single cause to make England what she is. The remoteness of the cause may also have lessened its importance; and some people, who, without any deserts of their own, are enjoying a more than full share of the blessings which have been shed upon us by the progress of intellect, (which determines the progress of national wealth) have a sort of instinctive notion that the spread of knowledge is the spread of something inimical to the pretensions of mere riches. We met with a lady on board the steam-boat ascending the Rhine, two days before the festival at Mayence, who, whilst she gave us an elaborate account of the fashionable dullness of the baths of Baden, and Nassau, and all the other German watering places, told us by all means to avoid Mayence during the following week, as a crowd of low people from all parts would be there, to make a great fuss about a printer who had been dead two or three hundred years. The low people did assemble in great crowds: it was computed that at least 15,000 strangers had arrived to do honour to the first printer. In the morning of the 14th, all Mayence was in motion by six o'clock; and at eight a procession was formed to the cathedral, which was conducted with a

pointment of Mr. Macauley to the supreme council of India, the electors of Leeds bestowed upon Mr. Baines the highest mark of their confidence and esteem, by returning him to parliament on the 17th of February, 1834, as their representative, without solicitation on his part, without cost, and on those principles of purity of election which he had so long and so strenuously advocated.

\* To show that the important controversy for the honour of the invention of printing is not yet decided, the reader is referred to the following recent works:—

*Verhandeling van Koning over den oorsprong, de uitvinding, verbetering en ontwikkeling der Boekdrukkunst te Haarlem 1836, bij Looijen.*

*Gedenkzichten wegens het vierde eeuwigtijd de van de uitvinding der Boekdrukkunst door Lourens Jansoon Koeter van stadwege gevierd te Haarlem den 10 en 11 Juli 1823, bij overzameid door Vincent Loosje, te Haarlem 1824.*  
*M. Jacobus Schellema's geschied en Letterkundig Nieuwwerk vol. v.—vi.*

*Antologia di Firenze* vol. 41. Jan.—April, 1831.  
See also, *A Dictionary of the Anglo Saxon Language*, &c. by the rev. J. Bosworth, LL. D. London, 1838. Introduction, page xcii.—xciii.

† See page 130 ante.

quiet precision that showed they were engaged in a solemn act. The fine old cathedral was crowded;—the bishop of Mayence performed high mass;—the first bible printed by John Gutenberg was displayed,—that first bible the germ of millions of bibles that have spread the light of Christianity throughout the habitable globe.—The mass ended, the procession again advanced to the adjacent square, where the statue was to be opened. Here was erected a vast amphitheatre, where, seated under their respective banners, were deputations from all the great cities of Europe. Amidst salvos of artillery the veil was removed from the statue, and a hymn was sung by a thousand voices. Then came orations;—then dinners—balls—oratorios—boat-races—processions by torch-light. For three days the population of Mayence was kept in a state of high excitement; and the echo of the excitement went through Germany,—and Gutenberg! Gutenberg! was toasted in many a bumper of Rhenish wine amidst this cordial and enthusiastic people."

The basso-relievos on the pedestal of Gutenberg's statue exhibit a part of the process by which the mighty change has been produced by the discovery of the art of printing from moveable types by John Gutenberg, at Mayence.—The printer is examining a matrix for casting types, and comparing a printed sheet with a manuscript. If he could have foreseen the entire consequences of the apparently simple mechanical arrangements which he was perfecting, it is justly possible that Gutenberg might have become dizzy with the prospect, and negligent of some minute point upon which much depended, have left an incomplete discovery to another generation, instead of the perfect art which printing so soon became. Who can read of the invention of Gutenberg of Mayence—who can participate in the blessings of that invention—and not perceive the immense multiplication of the power of books which must have instantly followed the discovery of the art of multiplying their numbers by the printing press? It was the mightiest revolution which the history of the world had known—at least if measured as it ought to be, not merely by the tumult and crash of change which it occasioned at the moment, but by its enduring operation, and the far reach of its consequences. It might be said, indeed, to contain in its bosom the seeds of all future revolutions. The wave which it set in motion has been rolling on till now. But that wave has much further to roll.

"Tyrants! in vain, ye trace the wizard ring;  
In vain ye limit *mind's* unwearied spring;  
What! can ye tell the winged winds asleep,  
Arrest the rolling world, or chain the deep?  
No! the wild wave contemns your sceptred hand!  
It roll'd not back when Canute gave command."

Much as the art of printing has accomplished, its greatest triumphs, we believe, are yet to come. Mighty as are the benefits mankind have derived from this noble invention during the space of four centuries which it has been in operation, they

probably amount to but a small portion of the whole sum of good which in its ultimate extension it is destined to confer upon our race.

1837, Aug. Died, WESTON HATFIELD,\* who had been for upwards of twenty years printer and editor of the *Cambridge Independent Press*, and other newspapers. He died at Huntingdon, aged forty-two years.

1837, Sept. 5. Died, OWEN REES, late of the firm of Messrs. Longman and Co. booksellers, Paternoster-row, London. It was only at Midsummer that Mr. Rees, after a period of more than forty years of great responsibility, retired from the cares and anxieties of business, with the prospect of enjoying his remaining years in repose, at his beautiful residence at Gelligran, near Neath, Glamorganshire, South Wales, where he had done much, not only to improve his own estate, but to introduce valuable improvements in the surrounding country. Previous to his leaving town, an entertainment was given to him, as a tribute to his integrity and gentlemanly conduct; and above forty of his oldest friends and associates assembled to pay this gratifying compliment. Few men in the metropolis, perhaps, ever had larger opportunities of cultivating the acquaintance and intimacy of men distinguished in all the walks of literature, and in bringing forward their productions, and of the friendly intercourse which subsisted between them and him. Mr. Rees was a warm patron of the drama, and an acute and excellent dramatic critic. He had been unwell for a few weeks, and thought his native air might restore him to health and strength. But, alas for human hopes! he gradually declined, and at last yielded to his fate at the age of sixty-seven. He was unmarried. Mr. Rees was a constant benefactor of the necessitous and distressed.

1837, Sept. 7. Died, DAVID PRENTICE, who had been the printer, editor, and a considerable shareholder of the *Glasgow Chronicle*, from its commencement in 1810. Mr. Prentice was descended from a long line of honourable ancestors.† He was the only son of Mr. Thomas Prentice, of Lanark, one of the earliest burgh reformers in Scotland, and his mother was the niece of James Thomson, author of the *Seasons*, from whom he inherited much of his distinguished relative's fervent temperament, love of liberty, and overflowing benevolence. In 1810, Mr. Prentice published *An Essay on the Currency*, in which he showed talents of the first order, and which could not have failed to distinguish him as a writer on political economy, had he devoted him-

\* Mrs. Elizabeth Carter Hatfield, the founder, and up to her death the sole proprietor, of the *Huntingdon, Bedford, and Peterborough Gazette*, and *Cambridge Independent Press*. She died at Cambridge, May 4, 1838, aged eighty-three years.

† He was the nephew of Mr. Archibald Prentice, of Corrigton, a man whose extraordinary mental powers and sterling integrity placed him on a level with the first men of the country. He was the great grandson of Archibald Prentice, laird of Stone, who fought for the Covenant at Bothwell bridge, in 1679; and he was the great great grandson of sir John Prentice, laird of Thorn, who was deputy governor of Dunkirk, for the commonwealth, at the period of the restoration, in 1660.

self to the production of a connected work instead of being occupied with a newspaper. In *An Essay on Beauty* he also gave evidence of a fine taste in criticism, and of great metaphysical acuteness. His newspaper was always the promoter of general and local reforms, and for the part which Mr. Prentice took to procure negro emancipation, the anti-slavery society of Glasgow paid a just tribute to his memory. He died at Mainhill, near Glasgow, aged fifty-four years.

1837, Sept. 7. *Died*, WILLIAM SHERWOOD, one of the oldest and most respectable publishers and booksellers of Paternoster-row, London. He was born at Bristol, in the year 1776. At a very early age he engaged himself with Mr. Symonds, of Paternoster-row, whom he served with the utmost diligence and activity, when his employer was imprisoned for the publication of some political work. In 1806 he succeeded to the business of his employer, in partnership with Messrs. Neely and Jones. On the retirement of those two gentlemen, he entered into partnership with Messrs. Gilbert and Piper. No one could attend more sedulously to the duties of business than did Mr. Sherwood, during his whole career: for eighteen years he never indulged himself with a holiday; in fact, his close attention, and disregard of premonitory symptoms, in all probability shortened his valuable life. But Mr. Sherwood was not only a man of unwearying industry, but of the kindest disposition, courteous and affable to all around him; his valuable advice and assistance were never withheld from any who solicited them. In the year 1831 he, conjointly with some members of the medical profession, projected and commenced the publication of the *Cyclopædia of Practical Medicine*, which immediately took its place as one of the most important medical publications of the age. On its completion, in 1835, it was followed by a similar work on Anatomy, and in 1837 the *Cyclopædia of Surgery* was commenced, on the same plan. Mr. Sherwood enjoyed the personal friendship of many valuable members of the medical profession, whose works he published. He had been unwell for a short time, and the last day he attended to business was on the 17th of August. He died at Hollowell, aged sixty-one years, leaving a widow, with two sons and five daughters, to deplore the loss of an affectionate father, and his dependents a kind and considerate friend. He was buried in St. Paul's churchyard, in the burial ground of the parish of St. Faith.

1837, Sept. The Michaelmas catalogue, at Leipzig, comprised 3,480 new works, and fifty-eight maps, &c. The number of publishers who issued these works was 557.\* There were published in Germany 500 literary, scientific,

and religious periodicals, and 170 political journals, including thirty-six in the German cantons of Switzerland.

1837, Sept. 21. *Died*, BENJAMIN WHEATLEY, the well known book auctioneer, of Piccadilly, London. He was educated at the blue-coat school, Lincoln; and was for many years a confidential assistant in the old established book-selling house of Leigh and Sotheby, in the Strand. He succeeded to the business of Mr. Stewart, of Piccadilly, and, by his obliging disposition, was very popular with the public. His death was occasioned by the overturning of a phaeton at Willingham, by the furious driving of the post-boy. He was twice married, and left a widow and several children.

1837, Oct. WILLIAM HANCOCK, of London, took out a patent for an invention which, in all probability, will work a revolution in the art of bookbinding. Mr. Hancock's invention consists in attaching or binding the leaves of a book, by means of caoutchouc, thus dispensing entirely with the process of sewing. The superiority of Hancock's process over the method of stitching, consists in allowing the book to open perfectly flat, and without strain on the back. It also dispenses entirely with the use of paste, a substance which it is well known breeds those destructive insects which commit so many ravages in large collections.

1837, Oct. 19. *Died*, WILLIAM JUSTINS, for many years the superintendent of the printing of the London County *Herald* newspaper, in the sixty-fourth year of his age.

1837, Nov. 7. *Died*, THOMAS NOBLE, many years editor of the *Derby Reporter*,\* and other papers. Mr. Noble was the author of some poems of merit,† and of *Zelomer*, a romance, translated from the French.

1837, Nov. *The Author's Advocate, and Young Publisher's Friend*, by the author of the *Perils of Authorship*, &c.

1837, Nov. 7. *Died*, WILLIAM E. JONES, a respectable printer and bookseller at Southampton. Mr. Jones, with twenty other persons, fell a sacrifice to their endeavours in extinguishing a fire on the premises of Messrs. King, Witt, and Co. lead, oil, and colour, manufacturers, at Southampton, when, unfortunate to relate, more

editors in pay. He is the proprietor of the copyright of all the works of Goethe, Schiller, Herder, and Wieland. The next literary grandee of Germany, is Reimer, of Berlin, who owns the copyright of all the works of Jean Paul, Tieck, Kleist, Johannes von Müller, Novalis and Schlegel, and the third is Brockhaus, of Leipzig, proprietor of the *Conversations-Lexicon*, which alone occupies more than one hundred literary men. Brockhaus is also the publisher of a most colossal *Encyclopædia*, which when finished, will consist of at least 200 volumes, and is now (Oct. 1837,) on the point of commencing a new daily paper. The government of Prussia promulgated an ordinance, in Dec. 1835, which stated that every person who would obtain permission to edit a journal in that kingdom, must have acquired an academical degree.

\* 1833, Jan. 3, *Derby Reporter*, No. 1, printed and published by Walter Pike, Corn-market, Derby. In a few numbers the title was changed to the *Derby and Cheshire Reporter*, under which it continues to be published.

† See *Songs of the Press*, page 20, for a poem on printing, by Mr. Noble.

\* The book trade of Germany was at this time almost monopolized by three individuals, the most powerful was baron Cotta, of the *Allgemeine Zeitung*; besides the above paper, he is the proprietor of six literary periodicals of a high standing, and of several others of an inferior rank, and is said to have from three to four hundred

than twenty persons were buried in the ruins. Mr. Jones was the son of an eminent farmer, at Swindon, in Wiltshire, where his relatives still reside. He served a faithful apprenticeship to Mr. Ebenezer Heathcote, printer and bookseller, at Warwick; and had commenced business at Southampton only a few years preceding this melancholy accident, by which he was cut off before he had attained his thirtieth year, deeply and sincerely lamented by a large circle of friends.

1837, Nov. 9. *QUEEN VICTORIA\** dined with the lord mayor of London, at Guildhall, upon which occasion the corporation of London presented to her majesty a quarto volume, beautifully printed, and illustrated by Mr. George Woodfall, and superbly bound and gilt by Charles Lewis, containing the words of the vocal music, as sung at Guildhall, at the royal banquet, preceded by the following dedication: "To her gracious majesty the queen, this copy of the selection of vocal music, performed at the banquet given by the corporation of London, at the Guildhall, is presented with their dutiful homage." Only one other copy was printed with the dedication, which was deposited in the city archives.

1837, Nov. 27. *Died*, EDWARD SHACKELL, proprietor of the *John Bull* London newspaper. He died at his residence, at Wareham, Dorsetshire, aged forty-five years.

1837, Dec. 5. *Died*, J. O. ROBINSON, formerly a bookseller, at Leeds, and afterwards a partner in the large concern of Messrs. Hurst, Robinson, and Co., successors to Messrs. Boydell and Co., printsellers and publishers, Cheapside, and Pall Mall, London. Mr. Robinson was intimately connected with the Edinburgh house of Constable and Co.

1837, Dec. 16. The number of weekly periodical works, (not newspapers,) issued in London, on this day, was about fifty, of which the following is an analysis:—Religious, 6; literary criticism—*Literary Gazette*, *Athenæum*, 2; musical criticism, 1; medical, 4; scientific, 2; for the advocacy of peculiar opinions,—one advocating opinions similar to those in the works of Carlyle, and one by the friends of co-operation, 2; miscellanies, to which the most extensively-circulated weekly periodicals belong, and new ones are constantly added, which perish in a few weeks, 18; tales and stories, 5; attempts at fun, some of them called forth by the success of the *Pickwick* papers—mostly trash, 7; and sporting slang, 1. Out of this number twenty-one are published at 1d., eight at 1½d., and seven at 2d. Of the remainder the prices are higher, varying up to 8d. The monthly issue of periodical literature from London is unequalled by any similar commercial operation in Europe. Two hundred and thirty-six monthly periodical works are sent out on the last day of each month, to every corner of the United Kingdom, from

Paternoster-row.\* There are also thirty-four periodical works, published quarterly, making a total of 270. Of the monthly periodicals, including the weekly, issued in parts, there are fifty-eight devoted to general literature; forty-eight to various branches of science, natural history, &c.; forty-six religious and missionary—many the organs of particular sects; four histories of England, appearing periodically; seventeen works issuing in volumes—a few in parts; twenty to the fine arts—picture galleries—topography; six to the fashions. Of the remainder, many are very cheap periodicals, addressed chiefly to children. The weekly sale of *Chambers' Journal*, the *Penny Magazine*,† the *Saturday Magazine*, the *Mirror*, the *Mechanics' Magazine*, the *Lancet*, the *Church of England Magazine*, and of several others of the more important, amounts to little less than 200,000 copies, or about 10,000,000 copies annually. The periodical works sold on the last day of the month amount to 500,000 copies. The amount of cash expended in the purchase of these 500,000 copies is £25,000. The parcels despatched into the country, of which very few remain over the day, are 2,000. Such is the change which four centuries has made in the market of literature.

1837, Dec. 29. *Died*, ROBERT CHILDS, printer and publisher, at Bungay, in Suffolk. He and his elder brother, John,‡ had the merit of converting a business for the publication of very common works in numbers, into one of the best stereotype and printing establishments in the kingdom. Mr. Robert Childs, in a fit of insanity, unfortunately put an end to his existence.

1837, Feb. 4. *The Scotch Reformers' Gazette*, No. 1. Glasgow.

1837, May 20. *The Economist and Joint Stock Bankers' Journal*, No. 1. Published weekly, price sixpence.

1837, Oct. 21. *The Northern Liberator*, No. 1. Newcastle, printed and published by John Turnbull, and edited by Mr. A. H. Beaumont, the proprietor, who died in Brompton-square, London, January 28, 1838.

1837, Nov. 18. *The Gateshead Observer*, No. 1. Gateshead, printed by John Lowthian and William Douglas.

1837, Dec. 3. *The Weekly Christian Teacher*, No. 1. Price three-half-pence. Printed and published by A. Fullarton and Co. Glasgow.

1838, Jan. 27. *Died*, EDWARD WILLIAMS, bookseller, of 186 Fleet-street, London, and for many years the respected publisher of the *Eton Classics*, and bookseller to the college. Mr. Williams was the grandson, maternally, of Mr. Joseph Pote, bookseller of Eton, the author of the *History of Antiquities of St. George's Chapel*,

\* On the accession of Victoria, 1. June 30, 1837, the amount of literary pensions were £4,345, while the royal and noble pensions were £139,348.

\* *Magazine Day*, by the author of *Random Recollections of the house of commons, the Great Metropolis, &c.*

† The *Penny Magazine* is reprinted at Constantinople, under the direction, and at the expense of the grand seignor, and has a great circulation.

‡ Mr. John Childs is well known from his imprisonment, (May, 1836,) in consequence of his refusal to obey the summons of an ecclesiastical court.

*Windsor*; and was the son and grandson of two eminent booksellers, resident, during the greater part of last century, in Fleet-street. As one of the court of assistants of the stationers' company, and an active member of the committee of the literary fund society, Mr. Williams acquired the esteem and friendship of many distinguished literary characters. In his social hours he was ever an agreeable companion, and occasionally entertained his friends with several excellent and chaste songs of his own composition, which were much admired; particularly one allusive to the various branches of trade practised by the members of the company of stationers. The proximate cause of Mr. W.'s death was the very reprehensible practice of permitting slides to be made in the public streets. On the 11th of January, in passing along Orange-street, Leicester-square, he fell down on a slide, and received so severe an internal injury, that it eventually proved fatal. As a husband, parent, and neighbour, no man could be more highly respected and beloved. On the day of his funeral, most of the shops in Eton were closed, and about fifty of the tradesmen followed his remains to the grave. Mr. Williams left a large family; and the heads of Eton college promised a continuance of their patronage to his son and successor, Mr. Edward Pote Williams.

1838. *Feb.* A fire broke out at the Clarendon printing-office, at Oxford, and the damage was estimated at £2,000.

1838, *March 8.* *Died*, HENRY WINCHESTER, stationer, of London, alderman of the ward of Vintry in the city of London, vice-president of the society for the promotion of arts, manufactures, and commerce, president of the printers' pension society, &c. &c. He was the elder son of Mr. William Winchester, of the Strand, stationer, who died in 1820, and with whom he was brought up in business. He was elected alderman of Vintry ward in 1826,\* and served the office of sheriff in 1827. At the general election in September, 1830, he was returned to parliament for Maidstone, but the dissolution in the following year deprived him of his seat. He passed the year of his mayornity in 1834—5, in great unpopularity, in consequence of his refusing to hold political meetings in common hall. His commercial affairs had been long involved in difficulty; and, on the 1st of March, 1838, a commission of bankruptcy was issued against him. On that day week, he was no more. He died at a lunatic asylum, to which he had been removed, having unhappily brooded with such intense melancholy on his domestic calamities, as to have been bereft of his senses. He was sixty-one years of age. He married in 1803, Elizabeth, only daughter and heiress of John Ayerst, esq. of Hawkhurst, by whom he left several children.† Alderman Winchester built a handsome mansion at Hawkhurst.

1838, *April 12.* *Died*, JAMES ROUSSEAU, printer. He was apprenticed to the late John Nichols, esq. in whose employ, and that of his successor, he ever afterwards remained; and to whom he always proved himself a friend and faithful assistant. For the last twenty years he nightly superintended the printing the votes and proceedings of the house of commons; in which arduous duty, it was his pride and satisfaction to gain not only the approbation of his employers, but the patronage and good will of the principal clerks of the house of commons. He died in Canterbury-buildings, Lambeth, in the seventieth year of his age.

1838, *April.* *Died*, JONATHAN HENRY KAY, many years in the firm of Jonathan Kay and Sons, wholesale stationers, in Abchurch-lane, London, who had for some time retired from business. He was a member of the court of assistants of the stationers' company. He was the second son of the late Jonathan Kay, esq. of Hampstead, and uncle to sir John Kay, bart.

1838, *May 6.* *Died*, JAMES RIDGWAY, bookseller, and the well known pamphlet publisher, Piccadilly, London, aged eighty-three years.

1838, *May 8.* *Died*, JOHN CLARKE, the eminent law bookseller, in Searle-street, Lincoln's-inn, London, in the seventieth year of his age. He was many years in business with his late father and his brother Walter, under the firm of Messrs. Clarke and Sons. Mr. John Clarke was in the court of assistants of the company of stationers, and was much respected.

1838, *June.* The London newspaper press association held their first anniversary meeting.

1838, *July 6.* *Died*, ALEXANDER AIKMAN, late printer of the *Jamaica Royal Gazette*. He was born of respectable parents, at Borrowstownness, in the county of Linlithgow, Scotland, June 23, 1755. He left his native country for South Carolina, at the age of sixteen, having previously made a voyage to Dantzic. After his arrival at Charleston, he apprenticed himself to Robert Wells,\* a bookseller, and printer of a newspaper. The American revolution caused Mr. Aikman to leave that country; and after some wanderings, he fixed his residence in Jamaica; where, in 1788, he established a newspaper, called the *Jamaica Mercury*, which title, two years after, the government patronage having been obtained, was changed to that of the *Royal Gazette*, under which title it still continues to be published. He likewise became printer of the house of assembly, and king's printer; and having resigned those offices to his son Alexander, he was for many years a member of the house of assembly, as representative of the parish of St. George. After his son's death, in 1831, he for a

\* Robert Wells, bookseller and printer, was a man of high honour, tried integrity, and of considerable literary attainments. He was born August 10, 1738, and died July 12, 1794.

Charles Wells, M. D. F. R. S. &c. his son, was born May 21, 1757, and died September 18, 1817.

See *Gent's Mag.* vol. xci, page 505, for a tablet set up in St. Bride's church, London, to the memory of the above, (her father and brother) by Louisa Susannah Aikman.

\* His opponent was Mr. Wilde, brother to Mr. sergeant Wilde; and the legal defence of which, undertaken at the expense of the corporation, is said to have cost £6,000.

† See Berry's *County Genealogies*, Kent, page 80.

short time resumed his business, and the conduct of the *Royal Gazette*, but on a favorable opportunity occurring, he made his retreat from all commercial anxieties. He was a truly honourable, worthy, and charitable man, and his death was much lamented. Mr. Aikman visited Great Britain in 1765, in which voyage he was taken by a privateer, and had to repurchase his property at Philadelphia, in 1801, in 1802, and in 1814, but from that time had remained at home. He married at Kingston, Jamaica, January 14, 1782, Louisa Susanna, second daughter of his former master, Mr. Robert Wells. This lady had for four years been his fellow-clerk in her father's printing-office, at Charleston. She joined him from England after no little peril, having twice attempted the voyage. On the first attempt she was captured by the French, by whom she was detained three months, in France; and on the second, by a king's ship, in consequence of her taking her passage in a slave vessel. By this lady, who died November 29, 1831, he had two sons and eight daughters, of whom the only survivors are Mary, wife of Mr. James Smith, of St. Andrew's, Jamaica; and Ann Hunter, the widow of John Enright, surgeon, R.N. His younger son, Robert, died an infant. His elder son and successor in business, Alexander Aikman, died April 11, 1831, leaving a numerous family.

1838, July 2. Upon this day 175,000 newspapers were put into the London post office, to be forwarded to the provinces.

1838, July 22. *Died*, GILES BALNE, late of the firm of Gye and Balne, printers, Gracechurch-street, London. He died at Nottingham, aged 61.

1838, July 22. *Died*, WILLIAM SOTTABY, bookseller, and pocket-book manufacturer, of stations' hall-court, London. He died at Hastings, aged sixty-five years, highly respected.

1838, July. *Curiosities of Literature*, by I. D'Israeli, esq. doctor of civil law in the university of Oxford, and fellow of the society of antiquaries of London; illustrated by Bolton Corney, esq. honorary professor of criticism in the republicque des lettres, and member of the society of English bibliophiles. post 8vo. pp. 256. Second edition, revised and acuminated.\* To which are added, *Ideas on Controversy; deduced from the practice of a veteran; and adapted to the meanest capacity.*

In answer to this work Mr. D'Israeli published the *Illustrator Illustrated*. 1838, 8vo. pp. 81.

1838, July 31. An act for securing to authors, in certain cases, the benefit of international copyright.

1838, Aug. 11. *Died*, Mr. LEWER, the publisher of the American edition of the English magazines and reviews, at New York. He was one of the original proprietors of the London *Athenæum*, and of the *Sphinx* newspapers, and the *Oriental Magazine*. During his residence in North America, he was employed in the republication of the English magazines, and had

reduced that business, with the aid of steam presses and steam navigation, to so well ordered a system, that the public have received these periodicals within a month of their original appearance in Great Britain.

1838, Aug. 21. *Died*, HENRY FOX COOPER, many years connected with the *London press*, formerly editor of the *John Bull* newspaper, and in 1826, proprietor and editor of a newspaper under the title of *Cooper's John Bull*.

1838, Nov. 11. *Died*, CHARLES NESBITT, the eminent engraver in wood. He was a native of Swalwell, near Newcastle-upon-Tyne, and was apprenticed to Mr. Bewick at an early age. His talents in wood engraving were of the first order. He was awarded the gold palatte of the society of arts for his famous view of St. Nicholas's church, Newcastle, which he executed in no less than twelve distinct blocks of wood; and in 1802 he also received the society's silver medal. His illustrations of *Hudibras* and *Shakspeare*, and of sir Egerton Brydges' works gained him unqualified praise from every admirer of the arts. Mr. Nesbitt resided chiefly in his native village, and executed such work as was sent to him. It was during an absence from home, on a visit to the scene of his early labours, that he closed his useful life at Brompton, near London, in the sixty-fourth year of his age.

1838, Dec. 18. *Died*, JAMES MOYES, an eminent printer of Castle-street, Leicester-fields. During thirty-three years of active business, he produced many works, which confer great honour on his press; and the courtesy of his manners, and the zealous attention to business, constituted the friendship of a very extensive circle. He had for years printed the *Literary Gazette*. He was a native of Scotland. He left one son and three daughters.

1838, Dec. 29. *Died*, THOMAS KELLY, in the eightieth year of his age, and for upwards of forty years, a corrector of the *London press*. He died at Chorlton-upon-Medlock, Manchester.

1838, Jan. *The Hull and East Riding Times*.

1838, Jan. 3. *The Sunderland Beacon*, No. 1; published at Sunderland, by Mr. Kitchen.

1838, March 1. *The Monthly Chronicle*, a national journal of politics, literature, science, and the arts; royal, 8vo. price 2s. 6d. London: Longman and Co.

1838, Aug. 6. *The Lancashire Herald*, No. 1, printed at Liverpool. It ceased.

1838, Sept. 22. *The Manchester Journal*, No. 1; printed and published by Joseph Macardy.

1838, Nov. 3. *The Legal Guide*, No. 1, price sixpence; published by Richards and Co., law booksellers and publishers, Fleet-street, London.

Nov. *The Dublin Monitor*, a political library and commercial journal, published on Tuesday, Thursday, and Saturday.

1838, Dec. 4. *The Sheffield Patriot*, No. 1; printed and published by Ebenezer Havell Edmunds. "This is true liberty, when free-born men, having to advise the public, may speak free; what can be nobler in a state than this?"—*Milton*.

\* The first edition of this caustic little work was privately printed at Greenwich, [F. Shoberl, London] and appeared at the close of the year 1837, post 8vo. pp. viii, 160.

This work cannot be better concluded than by taking a retrospective glance on the subjects of so many years, in which we have, however imperfectly, endeavoured to trace the origin, progress, and present state of literature, as connected with the invention and utility of the art of printing—an invention which is the rock of civil and religious liberty; an invention which has been the means of establishing the liberty of opinion and the liberty of conscience, thereby ameliorating the condition of the great mass of the people. Wherever the liberty of the press has been permanently fixed, and the diffusion of knowledge has extended its blessings, mankind have become both happier and wiser.

Without retracing our steps upon the questions which form the early portion of the work, such as the origin of speech, or the figurative but highly expressive language of the Old Testament; the original use of hieroglyphics among the Egyptians; the kiln-burnt bricks of the Phœnicians; the picture language of the Mexicans; the knotted cord of the Peruvians;\* or the bark of the Scandinavians. Without rekindling the classic fire of the Grecian bard, or breaking the spell of Cicero's oration or Virgil's song, amidst the luxuries and the vices of ancient Rome. Without tracing the aboriginal Briton, from his dominion under the Druid priesthood, till taught the arts of civilized life by his northern conquerors, or receiving the blessings of religion and truth from Austin's lips, or till Alfred the wise and good laid the foundation of the future literary fame of his country. He

\* who first could feel  
For learning's pure delights a holy zeal;  
Who first the ever-wasting lamp renew'd,  
Wrapt in the joys of thoughtful solitude;  
And raised the temple on eternal base,  
To knowledge sacred and the human race."

It may be proper to show the state of knowledge during the middle ages, when "learning triumphed o'er her barbarous foes." When wandering stars, amidst the night of ages, shot through the settled gloom, emitting a faint light of the coming day of knowledge; when polemic schoolmen derived their ill-digested learning, wrangling about bubbles and atoms; or poets peopling their poems and romances with giants, dragons, and necromancers, or the more delicate progeny of fairies, gnomes, sylphs, and salamanders. But it must be allowed, that the noblest productions of the muse appeared in the middle ages; between gross barbarism and voluptuous refinement, when the human mind yet possessed strong traits of its primeval grandeur and simplicity; but divested of its former ferociousness, and chastened by courteous manners, felt itself rising in knowledge, virtue, and intellectual superiority.

Of the literature of these times it may gene-

rally be said, that it was "voluminous and vast." Princes, nobles, and even priests, were then ignorant of the alphabet. The number of authors was proportionally small, and the subjects on which they wrote were of the driest nature in polemics—such were the subtleties of the schoolmen; of the most extravagant character in the paths of imagination—such were the romances of chivalry, the legends and songs of the troubadours; and of the most preposterous tendency in philosophy, so called such were the treatises on magic, alchymy, judicial astrology, and the metaphysics. Few persons read but those who were devoted to reading, by an irresistible passion or professional necessity, and few wrote but those who were equally impelled by an inveterate instinct: great books were the natural produce of the latter, who knew not how to make little ones; and great books were requisite to appease the voracity of the former, who for the most part were rather gluttons than epicures in their taste for literature. The common people, under such circumstances, could feel no interest, and derive no advantage from the labours of the learned, which were equally beyond their purchase and their comprehension. Their only mode of instruction was by pageants, mysteries,\* and moralities,—by the recitations of wandering minstrels—by popular songs and ballads, or by common conversation. Then books of holy writ were chained in the cloister. Then

"Gorgeous fanes and palaces inclosed  
The sacred trust—for public use dispos'd."

The discovery of the mariner's compass, the invention of the art of printing in the middle of the fifteenth century, the revival of classic learning, the reformation, (that submerged the superstition of a thousand years,) with all the great moral, commercial, political, and intellectual consequences of these new means, materials, and motives for action and thought, produced corresponding effects upon literature and science, and from thence may be dated a new era in the history of mankind.

"And rising arts the wreck of Time survives."

Barren indeed was the state of English literature in the productions of native genius, when Caxton, our first printer, arrived with the new art, and immediately undertook to invest such foreign works with an English dress, that tended to form the minds and entertain the leisure of the great. Nor was he unmindful to furnish such books as would initiate the common people in the first elements of reading. The English nobility were, probably, for more than the first half century of English printing, the encouragers of our press: they required translations and abridgments of the classics—versions of French and Italian ro-

\* *A Prospectus of the Quipos, or an explanation of the Quipos now open for public opinion.* London, printed by J. Phair, Westminster, 1827, 64to. pp. 18. The reader is referred to vol. xi, page 329 of the *Westminster Review*, for a very interesting article upon this curious mode of communicating ideas before the invention of printing.

\* *Early Mysteries, and other Latin poems, of the twelfth and thirteenth centuries, edited from the original manuscripts in the British museum, and the libraries of Oxford, Cambridge, and Vienna.* By Thomas Wright, esq. M. A. F. S. A. of Trinity college, Cambridge, 4vo. pp. xl. 136. 1838.

mance—old chronicles, and helps to devout exercises; while, on the other hand, the people found a new source of employment in printing A, B, C's, or Absies, primers, catechisms, grammars, and dictionaries. Caxton and his successors, abundantly supplied these wants. The priests strove with the laity for the education of the people; and not only in Protestant, but in Catholic countries were schools and universities everywhere founded. By the influence of the press, men were soon taught the exercise of thought and reason, in which lies their greatest strength, and which power no external force can destroy. Many instances have we given of the rulers of the earth attempting to crush it, and in doing so, they have not only shut up men in prison, but burnt them at the stake; yet all the torments of the inquisition, or the powers of the star chamber, could not annihilate the energy of thought, or the liberty of the press. The activity of the press of England from the period of its introduction to the close of the sixteenth century, was very remarkable. Ames and Herbert have recorded the names of three hundred and fifty printers in England and Scotland, or of foreign printers engaged in producing books for England, who flourished between 1471 and 1600. The same authors have recorded the titles of ten thousand distinct works printed amongst us during the same period. Many of these works, however, were only single sheets; but, on the other hand, there are, doubtless, many not here registered. Dividing the total number of books printed during these one hundred and thirty years, we find that the average number of distinct works produced each year was seventy-five. The exclusive privileges that were given to individuals for printing all sorts of books, during the reigns of Henry VIII. Mary, and Elizabeth, were in accordance with the spirit of monopoly which characterized that age, and were often granted to prevent the spread of books. But it must be acknowledged, that Elizabeth was both learned herself, and had the art of filling her court with men qualified to shine in almost every department of intellectual exertion. The dissemination of the scriptures in the vulgar tongue in the reign of James, while it greatly affected the language and ideas of the people, was also of no small avail in giving new directions to the thoughts of literary men, and finding abundant labour for the press.

No sooner had printing taken firm footing in England but there immediately rose a phalanx of imperishable names, in poetry, philosophy, history, and theology, which have bequeathed to posterity such treasures of what may be called genuine English literature, that whatever may be the transmigrations of taste, the revolutions of style, and the fashions in popular reading, these will ever be the sterling standard. The first era of our modern literature, extending from the reign of Elizabeth to the close of the protectorate of Cromwell, has been justly styled the age of nature and romance, and ranked as "by far the mightiest in the history of English literature, or indeed of human intellect and capacity." A

succession of minds of all order, and hands of all work, which arose during the second grand era of our literature, extending from Dryden to Cowper, have raised the literature of England second to none in the world for a combination of originality, simplicity, elegance, and grandeur.

"It is in the issues from the periodical press," says Mr. James Montgomery, "that the chief influence of literature in the present day consists. Newspapers alone, if no other evidence were to be adduced, would prove incontrovertibly the immense and hitherto unappreciated superiority in point of mental culture of the existing generation over all their forefathers, since Britain was invaded by Julius Cæsar. The talents, learning, ingenuity, and eloquence employed in the conduct of many of these; the variety of information conveyed through their columns from every quarter of the globe to the obscurest cottage, and into the humblest mind in the realm, render newspapers not luxuries, which they might be expected to be among an indolent and voluptuous people, but absolute necessities of life—the daily food of millions of the most active intelligent labourers, the most shrewd, indefatigable, and enterprising tribes on the face of the earth." Macneil justly observes

"But in this reformed nation  
Who can speak without the News."

Nothing is more demonstrative of the great "march of intellect," which has taken place in the existing generation, than the improvement in the newspaper press of Great Britain within the last twenty years; but more particularly in the provincial press, which in point of literary talent and mechanical execution, is an honour to the British empire. The editors of the greater portion of them are men of education, of no ordinary talent, and possessed of extensive information. If we look back upon the newspapers published about fifty years ago, the step which refinement has made in the interval will at once appear, not only in matter, but size and circulation; from the small "folio of four pages," to the gigantic dimensions of a square yard; from the mere detail of local events, to articles which may vie with the common run of essays which appeared in the *Tatler*, *Spectator*, *Guardian*, and their successors, increasing an eager relish for elegant literature, as well as rendering the most useful and popular kinds of knowledge accessible to every individual, from the palace to the remotest cottage in the empire. Of higher rank, though far inferior potency, are magazines; a few of these, indeed, have considerable sale; but they rather reflect the image of the public mind, than contribute towards forming its features, or giving it expression. Reviews not only rank higher than magazines in literature—rather by usurpation than right—but they rival newspapers themselves in political influence, while they hold divided empire with the mightier classes of literature—books of every size, and kind, and character, on which, moreover, they exercise an authority peculiar to the present age,

and never dreamed of by critics in any past period since the alphabet was invented. Formerly reviews were, on the whole, what they professed to be—critical essays on new publications; and they filled a respectable office in the republic of letters. The commencement of the *Edinburgh Review* (1802) was the discovery of a new world in criticism, to which all authors were liable to be transported as criminals, and there dealt with according to laws made on the spot, and executed by those who made them. The *Quarterly Review*, the *Westminster Review*, the *British Critic*, the *Literary Gazette*, and the *Athenæum*, have flourished no less than their prototype, and in their respective departments, exercise no small influence over respectable classes of readers. On the whole, periodical publications of every order may be regarded as propitious in their influence to the circulation of knowledge and the interests of literature. Cyclopedias without measure, compilations without number, besides original treatises, which equally show the industry, talent, and acquirements of authors in all ranks of society, and every gradation of intellect. Nor are there wanting works of history, voyages and travels, divinity, law, and physic, of sterling value, and worthy of the British nation.

From the era of the French revolution, much of the prosperity and greatness of England is to be dated. Commercial enterprize received an impetus from the war, unexampled in the history of any nation. Newspapers increased with the national prosperity and independence. An elegant writer, and liberal statesman of the present day, speaking of the daily and the weekly press, says,

"Good: yet no base compliances we try;  
Courteous, we thank them; churlish, we defy;  
Their sway may reach o'er statesmen, senators, kings—  
No craven fear shall curb the muse's wings;  
On the pure breeze of heaven she booms her flight,  
Her course is freedom, and her track is light;  
Above the din of strife, the frown of power,  
Neglects slow chill, or fashions transient hour;  
With joyous ease, and native strength, she moves  
Superior even to the praise she loves."

Contrasting the present state of our periodicals with what they were a century ago, will strikingly illustrate the extension of this description of our literature. In the year 1731, when the *Gentleman's Magazine* commenced its monthly course, about four hundred half sheets were sufficient for the demand of the whole empire; now above fifty millions of sheets find eager purchasers. In 1770 there were only four circulating libraries in London, where there are now above one hundred, and nearly one thousand scattered through the

kingdom; besides these, there are about two thousand book societies, and other means, distributing large masses of information on history, voyages, and every species of science by which the sum of human knowledge can be improved.

Newspapers, or some kind of periodical publication, answering the purpose of newspapers, are slowly spreading themselves all over the world; but they can hardly be said to have taken root anywhere but in Europe, or in countries peopled by Europeans; in fact, with the single exception of China,\* (even the jealous vigilance of the celestial empire has not been able to shut out this "barbarian" feature) all the newspapers in the world owe their origin to Europeans. Few, if any, of the British colonies are without a newspaper. In the vast regions of Hindostan several journals in the native dialects have appeared within the last few years; and, without doubt, owe their origin to the labours of the missionaries, who have imparted a spirit of inquiry to the half-civilized natives. Where the rude and uncultivated state of the population is not attended to by the government, or where the press is under the strictest surveillance, and a censorship, as is the case in most of the continental kingdoms, true freedom of opinion can be but little appreciated.

Returns of the number of newspapers to which stamps were issued, and of the number of stamps issued to newspapers, in the years ending 15th September, 1836 and 1837; distinguishing the number issued to London newspapers, to English provincial newspapers, and to Irish and Scots' newspapers respectively, and showing the total number and amount each year; also, the amount of newspaper stamp duty received in each of the above periods.

\* When Paul came to Athens, he perceived, that all the Athenians and strangers which were there spent their time in nothing else, but either to tell, or to hear some new thing.—Acts xvii. 21. At a period, more early, perhaps, than the time of Paul, the government of China distributed, through that most extensive empire, a written paper, containing alist of the mandarins, who were appointed to rule in every province. Yet, this Chinese *Red Book*, which was afterwards printed, and for a long time distributed, can scarcely be deemed a newspaper.

"To thee, oh Press! let despots quail,  
Oppressors crouch, and tyrants fall,  
And own thy righteous sway;  
On thy predestinated course  
Religion's handmaid! virtue's nurse!  
Hold thy appointed way,  
Till every soul the "light within,"  
Chase every form of grief and sin  
From every heart's recess;  
Thy goal is reached—thy race is run—  
The cause of God—the rights of man—  
Shall crown 'the Press! the Press!'"

## ADDITIONS AND CORRECTIONS.

"Sir, it is the great excellence of a writer to put into his book as much as his book will hold"—JOHNSON.

"Let it be book'd with the rest"—SHAKESPEARE.

P. 66. William Young Ottley, F.S.A. was born Aug. 6, 1771, and died May 20, 1836.

P. 856. For Joseph Athias read Tobias Athias.

P. 647. On a marble tablet fixed against the west front of the Methodist meeting at Edmonton, supporting an urn, like a covered dish on a foot, is this inscription, commemorating the relict of Mr. deputy Kent:—"Near this monument lie the mortal remains of Mary Kent, who exchanged this world of sin for the realms of peace and joy, March 3, 1803, aged one hundred and four years."

P. 668. Dr. Edward Young died April 12, 1766, aged 84.

P. 713. Jeremy Bentham died June 6, 1832, aged 84.

P. 742. Sir Charles Wilkins died May 13, 1836, aged 85.

P. 747. Lord North died Aug. 6, 1792.

P. 764. Thomas, lord Erskine, died Nov. 17, 1817.

P. 776. James Bowden, editor of the *Oracle*, was born at Whitehaven, in 1769, and died Feb. 16, 1839. He was the author of the *Life of J. P. Kemble, Mrs. Siddons, &c.*

P. 777. Rev. William Beioce was born at Norwich, in 1736, and died April 11, 1817.

P. 784. Dr. John Walcot died at Somers Town, London, Jan. 13, 1819, in his 81st year. Perhaps hardly any poet since Shakespeare illustrated his works with more abundant allusions derived from the sources of nature, or a more original genius. He retained his faculties to the last.

P. 789. Thomas Bowden died Feb. 26, 1836, aged 68.

P. 793. George Longman, esq. died Nov. 33, 1829.

P. 793. William Godwin, was born at Wisbech, Cambridgeshire, March 3, 1744, and died April 7, 1836. He received for his work on *Political Justice*, £700; *Calculus Williams*, £84; and *St. Leon*, four hundred guineas.

P. 793. Hannah More was born 1748, died Sept. 7, 1833.

P. 795. *delete* the two lines concerning newspapers at Constantinople.

P. 796. John Mackinlay died in Southampton-street, London, June 13, 1831, aged 78 years. He was the father of Mr. Mackinlay, formerly a bookseller in the Strand.

P. 803. Matthew Wilkes died Jan. 29, 1829, aged 83.

P. 831. Joseph Mawman died Sept. 13, 1827, aged sixty-eight years. He was a very intelligent man, and spirited publisher; also an author, having published in 1805 an 8vo. volume, entitled *An Excursion to the Highlands of Scotland, and the English Lakes, &c.*

P. 832. For Harriot Hart read John Harriot Hart.

P. 840. Markham Craig died during his imprisonment.

P. 854. Mrs. E.C. Knight died at Paris, Feb. 1838, aged 84.

P. 856. Dr. John Trusler died June, 1820, aged 83.

P. 876. The note, John Briggs, should be placed last, and marked thus †

P. 893. The rev. R. Polwhele died March 4, 1838, aged 78.

P. 949. John Talbot, son of Matthew Talbot, and brother-in-law of Mr. E. Baines, died March 37, 1839, in his sixty-sixth year. He had occupied a confidential situation in the office of the *Leeds Mercury* for thirty-five years. His son, the rev. Edward Talbot, resides at Teetoven, Kent.

1839, *May*. The Dublin Printers' Asylum instituted.  
1839, *March 20*. Died JAMES TALL, who held a responsible situation in the Pitt Press, Cambridge, aged fifty years. Mr. Tall served his apprenticeship in that establishment. In Feb. 1805, he was appointed superintendent of the stereotype foundry, and in July, 1820, overseer of the press department, which he held till his death. His assiduity, fidelity, and pleasing deportment, gained him the esteem of a large circle of friends. He left a widow.
